In one eastern city there is what has been referred to as a "slave market," where both Negro and white girls gather on the street corners in the hope of securing a few hours' work in wages ranging from 15 to 20 cents an hour. Unemployment naturally breeds discontent and provides opportunities for activities in some cases outside of the law, which serious condition of unemployment among our youngsters is probably attributable to the fact that about one-third of all the crimes committed in America are by the unemployed youth of our land. In the city of New York alone 35 percent of the arrests are young people. We must at this hour give attention to the youthful element of our population, because the boys and girls of today are the men and women of tomorrow, and it is upon them and them alone that we base the future of America. We must not only provide employment for these youngsters of America, gainful employment and employment beneficial to themselves and to the respective communities in which they reside, but we should provide the educational facilities and opportunities to which they are entitled as the sons and daughters of American fathers and mothers. In one eastern city four out of every five unemployed youths have no vocational education, and this is attributable to the fact that there are not a sufficient number of schools to accommodate those who seek opportunities for preparation in vocational instruction. Thousands of American children today are forced to limit their school hours only to part time because in many sections of the country our public schools are overcrowded.

Some time ago I had the honor to talk at length with a lady of our Capital City interested in governmental affairs and who is vitally interested in any movement to preserve America for Americans, and who suggested at the time that we should have now as our slogan, "Our citizens, our country, first." I was delighted with her suggestion, and since then at every opportunity I have, by word of mouth and otherwise, passed this slogan on to many throughout the length and breadth of our land. Today, in speaking of the youth of America, I am more impressed than ever that this slogan should be broadcast from every housetop, because never before in the history of our country have we found a greater opportunity and a more rightful cause for the employment of such a patriotic battle cry, particularly for the fathers and mothers of America, because they are interested in the future of their own flesh and blood, their sons and daughters, the children of America. America's children are truly America's problem and that statement will bear repetition.

My honored colleague, United States Senator ROBERT F. WAGNER, of the Empire State of New York, has introduced a resolution calling upon our National Congress to authorize for permanent residence in the United States 20,000 German refugee children. These 20,000 to be an addition to the regular annual quotas—that is to say, in addition to the number of immigrants permitted under the law to enter the United States annually from Germany. I might add that similar resolutions have been introduced in the House by Congresswoman EDITH NOURSE ROGERS, of Massachusetts and Congressman JOHN H. DINGELL, of the Commonwealth of Michigan. These bills must be defeated. America's first duty is to feed, clothe, and educate her own millions of ill-fed, ill-clothed, and ill-housed American children, the sons and daughters of American fathers and mothers.

As a matter of fact, this is not the first time that such ill-advised proposals have been introduced in Congress. And in my opinion, of all times this is the most ill-advised time for such a suggestion as carried in the afore-mentioned bills, and certainly the most ill-advised time for the introduction of such bills in Congress when we take into consideration the fact that 80 percent of all unemployment in the entire world is to be found within the confines of the United States of America. In many sessions of Congress since the World War similar bills have been introduced from time to time in an effort to capitalize on the sympathy of the American people and for the one and express purpose of breaking down restrictive immigration.

For years those who have opposed our immigration laws have been endeavoring to place a wedge by which our immigration gates might be opened wide, and here is another attempt wherein the sympathies of the American people are being appealed to with a view to opening wide these gates to the refugee children of the world. I contend that our first sympathies should be given to American children.

In connection with these attempts made heretofore by way of the introduction of bills, I am happy to be able to report to those whom I reach at this hour that in every case so far the common sense of the American people has prevailed; not one such proposal has ever been enacted, and I am confident that at this critical hour the common sense of the American people will continue to prevail and that they will oppose the passage of a bill that would authorize the admission of 20,000 German refugee children into the United States at this time when the unemployment situation is so very, very serious.

Now, let's look at the grim fact. Every single State in the Union, as the records will reveal, has a tremendous number of children in want of proper food, clothing, medical attention, and better school facilities. For instance, let's turn our eyes southward to the children of the sharecroppers. Millions are ill-nourished or starving, improperly clothed or half naked—the sons and daughters of 8,000,000 sharecroppers live in hovels. They are here at home. Their tumble-down shacks have no windows; they sleep on rags. Their clothes are tattered and torn and filthy. They derive their meager nourishment from thickened gravy and biscuits as a year-round diet. They have no medical care. They fall easy prey to disease. They are unschooled. From out of these dingy huts of tragedy comes a reeking army of destitution, while the false idea of humanitarianism and internationalism is wailed by many.

Shall we first take care of our own children, our citizens, our country first, or shall we bestow our charity on children imported from abroad. What is American citizenship worth if it allows American children to go hungry, unschooled, and without proper medical attention while we import children from a foreign country? We'd better look after our own. Let the sympathies of the American people be with American children first and then—

I have spoken of children of the sharecroppers. Now let us turn to the children of the cities. Slum children live in sullen poverty.

In hundreds of American cities millions of American children are growing up in squalor and poverty huddled together in cramped quarters. These American children of every race and foreign extraction cry for the right to breathe fresh air, eat good food, and for the right to play and live in the American way. Shall we sentence these slum children to crime, poverty, and hoplessness while we import children from a foreign country, or from foreign lands? Well, the Wagner-Rogers-Dingell bills propose to import 20,000 refugee children from Germany. They argue that all are under the age of 14, but I answer that 5 years from now the great majority of them will have attained the age of 19, and then they will be competing with the sons and daughters of America. How many of your sons and daughters today are without employment? How many of them have prospects of employment? Are you interested in the future of your sons and daughters, or is it that your sympathies provide you with more interest for the sons and daughters of foreign countries who, if admitted under these bills, will be providing more competition for your children?

They say that these refugee children are to be placed in American homes. Organized minorities who are interested in bringing in these foreign children state that homes have already been provided for them by applications now on file. If that statement be true, then this is my answer, your answer, and America's answer: If homes are available for the adoption of alien children, Americanism demands that needy American children also be adopted into these American homes.

My heart beats in sympathy for those unfortunate children across the seas, but my love and duty belongs firstly to our children here at home.

And in conclusion, ladies and gentlemen, may I repeat that America's slogan at this critical hour should be: Our citizens, our country, first.

I thank you.

Veterans of Foreign Wars Radio Hour

EXTENSION OF REMARKS

OF

HON. HOMER T. BONE

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Thursday, March 16, 1939

RADIO ADDRESS BY HON. BENNETT CHAMP CLARK, OF MISSOURI, FEBRUARY 15, 1939

Mr. BONE. Mr. President, on February 15 the Senator from Missouri [Mr. CLARK] delivered an address over a Nation-wide radio hook-up on the eighth annual Veterans of Foreign Wars "Hello America" radio hour. I ask unanimous consent that the address, which is very brief, be published in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a rare privilege for me to again be permitted to participate with the commander in chief in welcoming into the Veterans of Foreign Wars so many thousands of our old comrades long eligible to our ranks but now coming for the first time into our ranks to stand with us for the principles to which this organization is dedicated.

I am proud to be a member of this great gold-chevron organization, proud of the intelligent and patriotic interest which its members have taken and now take in the public affairs of the Nation, fulfilling in peacetimes, as they did in wartimes, to the fullest degree their duties as citizens of the great Republic. I am infinitely proud that this organization, the very terms of whose eligibility insures that its members shall all have been personally familiar with the grim visage of war, is today one of the very greatest forces in our Nation for the prevention of war.

I am sure that no one will misunderstand me when I indulge the hope that we are a dying organization. It has never reached a greater height of influence and usefulness. I should like to see the day when every American qualified to membership shall be in this organization and contribute to its increasingly widespread influence for citizenship and peace.

But since the fundamental requirement for membership is service overseas, I hope that this great organization may die with the death of the last person now qualified for membership. I hope that in the time to come our sons and grandsons may be proud to know that we were eligible to membership in the Veterans of Foreign Wars, but my fervent prayer is that no more American boys may ever become eligible to fight or die on foreign fields. To bring this to pass has been the tremendous effort of this organization.

The Veterans of Foreign Wars has been in the forefront of those who have sought to prevent the involvement of the United States in a possible new and more dreadful conflict by the adoption of a settled and reasoned permanent neutrality policy designed to keep us out of war, even if war should develop abroad. This law—imperfect though it be and in need of strengthening and extension—is now on the statute books. It should be made permanent and mandatory and steps taken to insure its application in every proper case, which has not been done under the present law. No less important is the valued support of the V. F. W. for the measure designed to take the profits out of war.

Our membership looks upon the twin questions of neutrality and the taking of profits out of war with the hard practical realism of men who in times of national stress have been prepared to bare their breasts to the storm, who understand from actual experience what war is, who lost any romanticism on the subject in the the bitter crucible of war itself, who realize that the desperate disaster of depression from which the country has been suffering is but the aftermath of the last war. They look upon current events from the standpoint of men whose personal loyalty to our Government and our institutions cannot ever be questioned but who are firmly resolved to save this country from needless involvement in future wars and to save our sons or nephews or grandsons from the sacrifices, either physical or economic, which our generation made in the last war.

The V. F. W. stands for the proposition that every sacrifice compatible with national honor and national safety should be made and must be made to prevent our Nation from being involved in the quarrels of foreign nations which do not concern us. But the V. F. W. stands with equal firmness for the proposition that if war should again come to us—which God forbid—it is essential that there should have been made provision in advance for any automatic system of taxation which will insure in the future what has not been true in the past, that there shall be equality of sacrifice, at least of wealth as well as blood.

In the hearings before the Senate Munitions Committee a few years ago I heard the head of two of the great munitions plants passionately testify that he thought it would be an act of unspeakable infamy for the Congress of the United States to provide for the payment of a debt long overdue to the service men of this Nation by the payment of the bonus at that time. And then in the same breath he admitted that for safe civilian services as far behind the line as Bethlehem, Pa., in the manufacture of munitions for sale to the Government at exorbitant rates in a time of great national crisis, in addition to a princely salary he had received bonuses of about $3,000,000. Many of us could not reconcile this with the sacrifices of the doughboys who went forth to do or die for the glory of the Old Flag at a dollar and a quarter a day.

Accordingly, as a result of the munitions investigation, a measure was reported by the old Munitions Committee designed to tax the profits out of war by steeply graduated income and other taxes in order to provide for an effective national defense, to promote peace, to encourage actual neutrality, to discourage war profiteering, to distribute the burdens of war, and to keep democracy, and for other purposes. In the last Congress this measure was introduced into the Senate by 27 Senators, of whom I am proud to have been one. It received the undeviating support of the Veterans of Foreign Wars. In my judgment, it could have passed the Senate.

But under the Constitution tax bills may not originate in the Senate, and since the House did not send us a bill to which our proposal could be attached as an amendment, the measure died with the Congress. But in this Congress it is being reintroduced by our able and splendid former commander in chief, JIMMY VAN ZANDT, now a Congressman from Pennsylvania, and in the Senate will be introduced by an even larger number than in the last session. The V. F. W. are pledged to its support. We appeal for the whole-hearted support of our comrades and of the public at large, to the end that we may establish it in advance as a fundamental principle of government that if war shall come—which God forbid—wealth shall be compelled to make sacrifices comparable as far as sacrifices of material things can be with the sacrifices in human suffering and blood which will undoubtedly be demanded. I can conceive of no greater deterrent to war. I can conceive of no more patriotic enterprise than the support of this measure.

I thank the commander in chief for the opportunity of participating in this memorable initiation.

Kappa Alpha Dinner

EXTENSION OF REMARKS

OF

HON. SHERMAN MINTON

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Thursday, March 16, 1939

EXCERPTS FROM ADDRESS BY HON. CLAUDE PEPPER, OF FLORIDA, JANUARY 19, 1939

Mr. MINTON. Mr. President, I ask unanimous consent to have printed in the RECORD excerpts from the address delivered by the distinguished Senator from Florida [Mr. PEP-

PER] at a Kappa Alpha dinner at Baltimore, Md., on January 19, 1939.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

The United States is in the process of making one of the most important decisions in its history relative to what the foreign policy of this country is going to be. There are some who contend that we should ally ourselves with the British Empire and all times protect, defend, and maintain that Empire because it, in the opinion of some people, is the greatest stabilizing agency in the world today, and the greatest guarantor of the integrity of South America and the United States. They contend that by the conjunction of the British power with ours we would be able to be the world's policemen, maintaining stability. They contend that we have no appreciable economic conflict with England, and having as we do the same traditions, the same language, the same historic background, we are natural allies.

There are others who contend that our course should be one of complete detachment from any other world power; that we should trade with all who will trade with us, be the friend of all who will be our friend; that we should not concern ourselves about the form of government within any foreign state, that being a matter for the people of that country to determine; that we should not concern ourselves about the changing boundaries of European nations, because the boundaries of those countries have been changing from the beginning of history according to the ebb and flow of deep, dynamic forces; that we should not decline to execute trade agreements with Italy because she has conquered Ethiopia, because that is a matter with which we are not concerned, and that a doctrine that we will not recognize territory gained by conquest conceived of in relation primarily to South America is not applicable to other parts of the world. These people say that our military and naval strength should be such that we should stand entirely upon our own feet, giving no aid to others, expecting no assistance from others.

There is yet another school of thought which contends that the roll that England has played for decades of being the world's greatest arbiter, and in fact the world's policeman, she can no longer play, first because she has not the physical and economic strength to continue to play that role. Second, because she is not a mobile power. That is to say, one which through the action of a small number of officials constituting her responsible Government can throw the British Empire to one course or another within a short time; that this lack of mobility is due to the fact that the British Empire in many respects has become an instance of the tail wagging the dog; that the far-flung dominions who are having their own geographical distinctiveness will not permit the British Parliament to throw them either to an alliance or to a war without their individual consent, which if war is involved would be most reluctantly given and will be given in no case where the very integrity of the British Empire is not in question.

Those of this school say further that where England once was geographically isolated by the English Channel, this isolation has been destroyed by the modern airplane, and that in fact the Atlantic ocean is no wider to the modern airplane than the English Channel formerly was to the ship in the preairplane days; that the United States is the only nation in the world which can succeed to England's ancient role of the world's strongest power the world's acknowledged arbiter, the world's policeman. We do have military and naval power sufficient to sustain this role. We do have economic strength adequate for this position. We do have mobility. Ours is the compact nation, and only the concurrence of the Congress and the President all assembled together in Washington are necessary to determine this Nation's course. Those who have this thought, therefore, say that destiny has given us this duty to play this part upon the world's stage, which we cannot shirk, as no outstanding nation has ever been able to shirk its responsibility for the trend of world events.

We therefore, they say, should fearlessly and courageously assert our world position for the purpose of bringing about and maintaining in the world those things which are a part of our faith. That means that we would go into world affairs as an aggressor, that, on the contrary, we want nobody's land. What we get we are willing to pay for, and pay for in the best currency in the world. We merely want to stop brigandage in the world. We want to stop the world's bullies from cowering peace-loving mankind into a corner with a waving club. We want to give whatever aid, encouragement, and protection we can to the right of freemen to live free lives. We want to abide by and to maintain in world affairs law and order instead of anarchy and the highwaymen. Our objects, they say, are peaceful, and will always be peaceful, but not peaceful at the price of letting a few willful nations with scornful disdain of all human rights run rough-shod over a timid world which shrinks from violence and wants only to be able to live in peace.

Whether we know it or not, whether we intend it or not, we are determining our course—we are making our place. This very Congress will, in my opinion, make the most far-reaching decision we have made about our international policy since the resolution of 1917 by which we entered the World War. We at least need to discuss the matter fully and candidly. We should at least know where we are going and determine what we are willing to do. It leads to nothing but confusion in what we do to be confused in what we think. Therefore we should search our minds and hearts; we should search our traditions; we should examine our interests; we should weigh and balance the advantages and the disadvantages; we should contemplate the awful responsibility either of action or inaction, and in the counsels of a free government arrive at a decision which befits a free people.

Practical Patriotism

EXTENSION OF REMARKS

OF

HON. CHARLES L. McNARY

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, March 16, 1939

ADDRESS BY HON. ALEXANDER WILEY, OF WISCONSIN, MARCH 9, 1939

Mr. McNARY. Mr. President, on March 9, 1939, the distinguished Senator from Wisconsin [Mr. WILEY] delivered a very interesting address before the Kiwanis Club of Alexandria, Va., on the subject of Today's Practical Patriotism. I ask unanimous consent that the address be published in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Speaking before men, I always feel a challenge. This is particularly true when I speak to service clubs. In each one of you there is so much that can be aroused into action, so much that should be aroused into action. In this age, with all its convictions and bewilderment, and yet, this age with all its opportunities for development and success—you leaders are called upon to do a job. You know that the Gethsemane that America has gone through, and is going through, presents a challenge to you—a challenge that you cannot afford to let go, a challenge that you must meet head on. I'm sure you will not lay down on the job. You will breathe new life by your thoughts and deeds into the economic structure; you will overcome the suffering born of our economic fever; you will reinstate the faith that we have in America; you will establish harmonious relationships between capital and labor. For I believe that business, labor, and professional men are beginning to ask for guidance and direction from the only source—God. In other words, men aren't so self-sufficient as they were. They are getting more receptive; they are tuning in and developing selectivity in that they are more considerate and kindly. They are getting rid of the rubbish in their minds, consisting of prejudice, hate, false thinking, and gossip. For they know that God will never set a mind full of rubbish "on fire." Men are looking—yes, actually reaching out—to get hold of great convictions that they may be tools in the hands of this age to solve its problems; and they are finding great joy and exultation in doing the job. Yes, men, there is a big job up ahead for you to do; and, as Justice Holmes used to say, any job is big that is worthily done. This job calls for service to God and country. I don't think anyone here will let either down.

The subject of my talk is Today's Practical Patriotism. Speaking to the Press Club in Washington the other night, I told them that there were three rules that I was applying to my life in Washington. I could see no reason to change those rules, because I applied them out in the Middle West and found that they worked. The first one was to keep and build up a reservoir of humor. In other words, develop a sense of humor. The second one was not to take yourself too damn seriously. The third one was to build perspective.

I think if this remedy were applied seriously to each individual of the Nation, we would commence to get out of the mess we are in. I believe this is part of the practical patriotism that is necessary before we can "go places." That is, each one of us must develop a little sense of humor—not take ourselves too seriously—and get a perspective on life. Thus will man glimpse the meaning of life and the relation of things to each other and find the way out.

I illustrated my third point by telling the story of the gentleman who, in 1933 in Boston, had lost everything in a material way and was contemplating suicide. He had been a millionaire; and now, as he walked across Boston Common toward the river, he met another friend whom he knew had also lost everything. Within the eyes of the second friend there was a light—something that gave this first man courage. He said to him, "John, you've got something that I haven't. I know that you have lost everything, but what is it?" John looked into the deep, discouraged eyes of the first man and said, "You really want it?" "Yes." "Well, then, you go out to Harvard Conservatory tonight and I'll arrange that you get what I've got." And out there the first man went. He took his place before the great instrument. By his side stood a young man, the assistant to the great Shapely. This young man came from my own town. He showed him the glories of the heavens. He turned the telescope to Arcturus. He told him that the light that he saw from that star had been traveling some 25 years. He turned the telescope to another speck of light and said that star was a million times larger than the sun, and the sun was a million times larger than the earth. Back and forth through the heavens he took this tired, discouraged, broken businessman—back and

forth—showing him the glory of the handiwork that was God's; and as he showed it to him the ruffled brow of this man unruffled itself, the discouraged eyes were filled with light, and after an hour's treatment he came forth a healed man. He no longer talked of the river as a cure-all. He went forth, renewed, rebuilt because he had found perspective. He saw he had lost nothing—just some worldly goods. His real wealth—wife, children, love of music, great books, philosophy, religion—he still possessed. He still had his health, he had the sunrise and the sunset, and he had America. Today this man is again a successful businessman just because he had obtained perspective. Through this experience he laid aside the things that would have destroyed him. He got "light." He saw things in their true relationship. He realized that man has a habit of making mountains out of mole hills; but through his experience in looking up at God's candles he retraced the process and made mole hills out of mole hills, and the mountains he saw as a place whereon he could get "light" and direction and guidance. He learned through perspective to hold in check and conquer fear and lack of vision and their effects. You and I must see that we are not bullied by these twin evils.

Life is a battle for a cause, for a loved one, for a family, for a nation, for liberty. A great psychologist has said that none of us uses over 10 percent of the mental equipment that we are endowed with. Just think what it would mean if we were to use 20 percent of our ability (which lies dormant) and then give this added power guidance and direction. Think what this would do toward giving us "sight" to discern between the true facts and what is propaganda.

Speaking of guidance and direction, that is what the world needs now. Sorely does it need them. We have gone up many "blind alleys," and today we find ourselves politically and economically in a stalemate. So we ask, "Whither shall we go to find light?"—the light that will lead us out of the gloom, out of the economic morass, out of the political mix-up. No man has the complete answer, and no group of men can provide that answer. We can think about the problem rationally. We can try to get above the mist of the petty and the small, above class hatreds and misunderstandings, and then perhaps we will get the perspective that will lead us to the promised land. Glorious results individually and nationally will be accomplished if we seek the answer in faith and hope.

As practical patriots, you and I must first realize that, consciously or unconsciously, willingly or unwillingly, we are molders of human clay into the "soul stuff." We are teachers of men. It's a great job to lead men on. Teachers don't just exist in schools. How shall we teach youth? How shall we teach the people we contact? Shall we make these people leaners, chiselers, grafters; or shall we take them up on the heights and show them the glorious way of life? Will it be to make them creatures who are dependent upon material values? Or will it be to show them—our children and our neighbors' children and friends—that life here is but an interlude, and that out there, beyond, are other opportunities for great adventure? Will it be to show them—the people that we contact—that the lost horizons are not lost; that within their souls can be found the greatness that is God's? The Persian puts it this way: "I was common clay until rosebuds were planted." And our own poet puts it this way:

"Two men looked through prison bars.
One saw mud; the other, stars."

The practical patriotism of the day requires we realize that the well-being of the Nation in the future depends upon the clear thinking of the individuals who constitute the Nation. You can't make a good omelet out of bad eggs.

I call upon you as leaders in thought and leaders in the economic and political fields of the Nation to stop the trend that would make defeatists out of our people—that would make them creatures of fears and worries. Bring to the people you contact, to the youth whom you see everyday, to the discouraged man and woman who look to you for help—bring to these people the need of faith and industry, hope, and mental perspective. If there is one thing in life that provides a real thrill, it is to watch a human being come into being, come into life, as it were; to see this human being break his narrow shell and grow into the consciousness of power. Yes; we are all in bonds. It is a great relief to feel them breaking—to be released from the prison of small thinking, of small living. It is great to see the hardness vanish from people that we know. It is great to see the pettiness and the cynicism depart, and in their places to see strength and power and sympathy and love and faith come into being. In practical patriotism of today we would get rid of our differences, get rid of every "ism," except Americanism, with its foundation composed of the great freedoms the fathers wrote in letters of flame in our organic law.

In New York a few weeks ago I heard Raymond Massey portray the Life of Lincoln in Illinois. I can hear him say, when interrogated by the clergyman, "I believe in that doctrine that man should love his God with all his heart and all his mind and all his soul and his neighbor as himself." It's a great play. See it if you can, and Massey has done a great job. When you and I have a genuine love for our neighbor in our hearts and remember who our neighbor is, then life, individually and nationally, will be kept under control. When men have the "light" within, then the world will be better.

I know that some who are listening to me are saying, "Now that's an impractical talk." What I am trying to get across on this angle of my talk is this—that you and I have a job to do, and that job is to recreate ourselves, sluff off the accumulation of things that limit us, and make ourselves creatures to serve our country in this crisis. You remember that Moses was out in the wilderness, and the word came to him that he should go down to Egypt to free his people, and he said: "Who am I, Lord?" That's what you say every day, when a problem comes up. Only, you put it in a different vernacular. You simply say: "Well, who am I? I can't do that job." Something happened to Moses. It happened to Lincoln. It took that man who came from the backwoods of Kentucky and made him the savior of the Nation. With Moses, what was it? Well, at your radio you can tune in to the great symphonies and to the fine choruses, and feel the joy and the strength and the power and the exaltation come into your being. Or you can tune in to the trashy programs and feel almost the nausea affect you. Perhaps here we find something that points to us the way. Moses made contact with reality. He got hold of something that made him do something great. He did the job by becoming fearless instead of fearful.

If you want to be a practical patriot, you've got to arm yourself. You've got to be competent to meet the situation. I remember last spring, when I was up to my farm in Wisconsin, I saw the old cat climb up a tree and on to the branch toward a nest. I saw the mother robin fly at it and dart past it, keeping the cat interested, at least. The cat approached nearer and nearer, and then, at the last, I saw the mother robin strike that cat, and down it went, and the robin, too. But the little robins, the young, were saved. There was something there—something elemental. There was something that gave that robin power. You and I have to get into action soon against some of these group exponents of foreign political notions—and show them America needs straight thinkers, who believe in democracy.

Today our world, our country, our State, and each community need men and women who can see straight and think straight. The real need is for Christian men and women who understand, who are willing to give of their time and their energy, to bring light to those who dwell in a darkness of fear and hate. You cannot build an ideal state by simply passing laws to regulate life's activities. Making people dependent upon the state is not building the state or the individual. To make man self-sustaining, adventuresome, a builder reaching out to find self and his Maker, that is practical patriotism.

May we come to understand just what America really is. She isn't made up of big buildings, well-kept farms, and large cities; she isn't made up of her Grand Canyon, her mountain ranges, her million lakes. America is not a stretch of land with geographical borders. No! To me, particularly now in this world of conflict with the old hydra-headed monster of absolutism, which has captured a large portion of this earth, America is a spiritual thing. You can see the conflict that is being waged between the ideas of absolutism and democracy. You are needed to save this thing we call America. I said it was a spiritual thing. There are 130,000,000 of us who compose her. Thank God, we have not, with our confused thinking, yet lost the meaning of America. We have here freedom of worship, freedom of speech and press, the basic ideas of the Bill of Rights, the right to private ownership of property.

Much as I love this Nation—and I've seen a lot of it—if we should lose "this America of ours," this spiritual thing, the geographical boundaries of the Nation would have little or no value for me. If in my time I should see this spiritual thing leave this continent, and my children and I become intellectual and political slaves—as I have seen occur in other lands—then will the light have gone out, and I shall be more than ready to say farewell to life.

I believe, my friends, you feel the same way. If America is in danger it is due to our complacency, our lack of alertness. The forces of reaction (disguised sometimes as liberals), the forces of tyranny and bigotry—right here in America—raise their heads. You and I must be on guard like the Greeks at Thermopylae to preserve our heritage. If you fail, then like Esau you despise your heritage.

But I know that you will combat and win for America, if you just get perspective. And remember, the man who gets perspective is not complacent and self-satisfied. He is not living in a sleeping condition, apparently unaware of the needs which America has to meet. Over a generation, certain of our politicians have builded up barriers between labor and capital, with the result that today labor and capital, instead of cooperating and building, have in many places—due to the agitation of these false prophets—literally prepared themselves to spring at each other. Then there are those false prophets who have been inoculating us with hate of certain races. The result is apparent. Ten million unemployed; foreign products coming into America which American labor and American capital should be producing, destruction of our capital in practically every segment of our capital structure, a reduced national income, a broken morale.

Seeing this misunderstanding, seeing these barriers, is not enough. We have to stem that misunderstanding. What have you done to bring courage to the fear-ridden, unhappy, hatred-filled minds that are involved in this war of classes? What have you done to antidote the poison of race hatred? You and I know that there are certain political philosophies in America that want this thing to go on—these philosophies would like to see 20,000,000 more unemployed. Then they feel that their philosophy would find fertile resting ground.

Practical patriotism requires that "with malice toward none and with charity for all" (in the words of Lincoln) we approach the reconstruction days which are up ahead; that we teach and preach and know that the old way of work, initiative, invention, cooperation, reasonable profit is the right way; and that we are going to

get rid of the demagog who separates us. The old slogan applies: "Eternal vigilance is the price of liberty." It is the price and part of practical patriotism that you and I must apply. The story is related that every morning one of the great men of Europe was awakened by his servant with this salutation: "Awake, sir. You expect to do great things today." May I paraphrase that statement and say: "Awake, sirs. You no longer will sleep the sleep of complacency and self-satisfaction; from now on you will do great things, for your country needs you."

Gentlemen, Browning says: "Life has meaning, and to find its meaning is my meat and drink." Our way is the way of "practical patriotism."

"God send us men with hearts ablaze,
All truth to love, all wrong to hate;
These are the patriots nations need,
These are the bulwarks of the state."

Dismemberment of Czechoslovakia

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, March 16, 1939

EDITORIAL FROM THE NEW YORK DAILY NEWS

Mr. REYNOLDS. Mr. President, I ask unanimous consent that there be published in the Appendix of the CONGRESSIONAL RECORD a most able editorial—with which I agree—from the columns of the New York Daily News of yesterday and reprinted in the Times-Herald of Washington, D. C., entitled "Hitler Grabs Again." I call special attention to these lines in the editorial:

We can't get so excited about it, and don't see why other Americans should—

And—

All this, to Americans, should be merely an interesting show to watch; not a fight to mix in.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Daily News]

HITLER GRABS AGAIN

"What's Hecuba to him, or he to Hecuba,
That he should weep for her?"
—*Hamlet, Act II, Scene 2.*

Czechoslovakia has come undone, following a slight push from Adolf Hitler.

After a couple of days of simulated war scares, artificial riots, and gestures at invasion by the German Army, Slovakia quietly detached itself from Czechia, and the Praha Government formally announced dissolution of the Czechoslovak state. Carpatho-Ukraine, eastern tag end of what used to be Czechoslovakia, has been under Hungarian domination for some days—which means under German domination, since Hungary is dominated by Germany.

There is a great deal of breast-beating among the local "reds" and their fellow travelers over the latest development. As we get it, the "red" interpretation is that Chamberlain and Daladier are to blame, and that Czechoslovakia's blow-up is felt to be another move in a British-French plot to sick Hitler on Russia.

AN ARTIFICIAL BUFFER STATE

We can't get so excited about it, and don't see why other Americans should.

Czechoslovakia was an artificial country, put together after the war, at the instance of France, from fragments of the old Austro-Hungarian Empire. There were Czechs and Germans in its western end, and Russians, Hungarians, and Poles in Carpatho-Ukraine.

We will now tell about the Slovaks, having just found out about them by looking in the Encyclopedia Britannica. For the benefit of those who haven't yet had time to consult their encyclopedias—the Slovaks are a Slavic race (so are the Czechs) who inhabit the southern exposures of the northern Carpathian mountains. Their bailiwick was in northern Hungary until 1918. The Slovaks speak a different language from that of the Czechs. The Slovaks came under Magyar rule about 900 A. D., while the Czechs founded the Kingdom of Bohemia—a deed which has been felt by the Czechs ever since to have given them a certain superiority over the Slovaks. The Slovaks disagree.

Anyhow, these nationalities and others were lumped together after the war to make the artificial state of Czechoslovakia. The French object was to set up a state for the continued suppression of Germany. That was also the object of the resurrection of Poland after the war, Poland having been divided up in the late eighteenth century by Prussia, Russia, and Austria. The Poles are reported much worried over the collapse of Czechoslovakia; and well they may be.

NO FIGHT OF OURS

The old Austro-Hungarian Empire was an artificial creation, too—but it was somewhat less artificial, more nearly an economic natural, than Czechoslovakia. It was keyed to the Danube River to a great extent; and the Danube is the economic jugular vein, so to speak, of Central Europe.

Europe's multitude of troubles are to be solved, according to most impartial analysis, only by eventual formation of a United States of Europe. To which we would add, by adoption of one language to replace the 40 or 50 languages and dialects now spoken in Europe. The common language might be German, French, Italian, or English; it wouldn't matter what.

It seems to us that Hitler, in smashing some of these frontiers and consolidating German economic power over larger and larger areas, is restoring Central Europe to something of its pre-war logical arrangement. We have no love for Hitler; but Central Europe before the war was happier than it has been since.

All this, to Americans, should be merely an interesting show to watch; not a fight to mix into. See the Hamlet quotation heading this editorial.

Discussions Concerning Arrangements Between the United States and Brazil

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Thursday, March 16, 1939

NEWS RELEASE ISSUED BY THE DEPARTMENT OF STATE ON MARCH 9, 1939

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a news release issued on March 9, 1939, by the Department of State, containing discussions between Senhor Oswaldo Aranha, Minister of Foreign Affairs of Brazil, and officials of the Government of the United States, touching the agreement which was entered into between the two Governments.

There being no objection, the document was ordered to be printed in the RECORD, as follows:

[Department of State, March 9, 1939, No. 84]

DISCUSSIONS BETWEEN HIS EXCELLENCY SENHOR OSWALDO ARANHA, MINISTER OF FOREIGN AFFAIRS OF BRAZIL, AND OFFICIALS OF THE GOVERNMENT OF THE UNITED STATES

The Minister of Foreign Affairs of Brazil reached Washington last month, in response to an invitation extended to him on January 9, 1939, in which reference was made to the close and friendly ties which have traditionally united Brazil and the United States and to the various questions of importance in which the two Governments are equally interested. Senhor Aranha's visit has been especially gratifying to the Government of the United States. His distinguished service as his country's Ambassador in Washington is recalled with particular pleasure, and he returned to the United States as a friend visiting friends.

During the past several weeks a series of discussions on all topics of mutual interest has been held between the Minister and the officials and experts of the Government of Brazil accompanying him, and officials of the Government of the United States. In these conversations the area of possible collaboration has been carefully explored, and important decisions on matters of mutually beneficial cooperation have been reached.

The Government of Brazil plans to free the exchange market for commercial transactions and to facilitate the transfer of an equitable return upon investments made in Brazil by United States citizens under normal conditions in the Brazilian balance of international payments. In order to facilitate this improved exchange situation the Export-Import Bank will extend appropriate acceptance credits to meet amounts due American exporters for imports from the United States. Moreover, the Minister has indicated that it is the desire of the Government of Brazil to observe a general policy which will encourage the cooperation of United States citizens who have invested or who in the future may invest their capital and technical experience in the development of Brazilian resources and national economy.

Arrangements have also been made by the Export-Import Bank for the extension of credits which will facilitate the purchase by Brazil of American products, the importation of which will assist in improving Brazil's transportation facilities and the development

of her other domestic undertakings designed to increase the productive capacity of the Brazilian Nation and her trade with the United States. These facilities will at the same time aid American manufacturers and exporters in extending the market for their products.

It is anticipated that the Brazilian program of national development may likewise benefit by plans for surveys of tropical agricultural possibilities by experts of the United States Government and by the subsequent loan, should the Government of Brazil so request, of experts available under the terms of Public, No. 545, enacted last year. In that connection views have been exchanged relative to the development in Brazil of complementary, noncompetitive products for which a substantial market is believed to exist in the United States, provided an assured supply can be developed. In the development and expansion of complementary trade it is believed that the two Governments may find a field for increasingly effective cooperation.

The Government of Brazil has indicated its desire to organize and operate a central reserve bank, and the Treasury Department is prepared to lend appropriate assistance to that end. Moreover, the President has stated that he is prepared to make a recommendation to the Congress for suitable authorization to place at the disposal of the Government of Brazil gold up to the amount of $50,000,000 to serve as possible supplementary assets in case of need, such amount as is drawn upon to be repaid from Brazil's future production of gold.

There are attached copies of notes exchanged between the Minister of Foreign Affairs of Brazil and the Secretary of State, with accompanying texts.

Cooperation in many other fields of activity not taken up in the above-mentioned exchange of notes was also profitably discussed with the Minister and the officials and experts of the Brazilian Government who accompanied him to this country.

The Minister has likewise engaged in discussions with the Foreign Bondholders Protective Council, Inc., relative to the status of the Brazilian dollar debt, and has announced that the Government of Brazil intends to resume payments on July 1, 1939, on account of interest and amortization on such debts in accordance with a transitional arrangement the details of which will be made known following his return to Rio de Janeiro. The Minister has also stated that it is the hope and expectation of his Government that, with the improvement in its foreign commerce which it now foresees, a permanent settlement which will be equitable and satisfactory to all interests involved will follow upon the expiration of the temporary arrangement.

Enclosures:

1. Translation of a note dated March 8, 1939, from the Minister of Foreign Affairs of Brazil to the Secretary of State; appendix A, communication dated March 8, 1939, from the Minister of Foreign Affairs of Brazil to the Export-Import Bank of Washington; appendix B, communication dated March 8, 1939, from the Minister of Foreign Affairs of Brazil to the Secretary of the Treasury.

2. Note dated March 9, 1939, from the Secretary of State to the Minister of Foreign Affairs of Brazil; appendix A, communication dated March 9, 1939, from the Secretary of the Treasury to the Minister of Foreign Affairs of Brazil; appendix B, communication dated March 8, 1939, from the president of the Export-Import Bank of Washington to the Minister of Foreign Affairs of Brazil.

[Official translation]

BRAZILIAN EMBASSY,
Washington, March 8, 1939.

To His Excellency CORDELL HULL,
Secretary of State of the United States of America,
Department of State, Washington, D. C.

MR. SECRETARY OF STATE: The Brazilian Government presents through Your Excellency to your Government its thanks for the courtesies which were extended to me and to my companions during my visit to your country.

Your Excellency may be assured that my grateful recollection of the period during which I had the honor of being my country's Ambassador to the United States, and that the amity of my people toward the American people and the mutual confidence that exists between our two Governments, have been enhanced by the repercussion of the new and expressive demonstrations of cooperation and of friendship toward Brazil which we have witnessed during the course of this visit.

With a desire to foster continued mutually beneficial economic relations between Brazil and the United States and to develop the national economy and natural resources of Brazil, the Government of Brazil, after due deliberation and the considered discussion of its authorized representatives with the authorized representatives of the Government of the United States of America, is undertaking or intends to undertake in the near future the following policies and actions to attain the objectives mentioned:

I

It is the decision of the Government of Brazil to issue a decree law freeing the exchange market for commercial transactions. This will insure the provision of funds in payments for imports from the United States in accordance with the note of the Brazilian Ambassador to the Secretary of State of the United States of February 2, 1935. This measure will also facilitate the transfer of an equitable return upon investments made in Brazil by United States citizens under normal conditions in the Brazilian balance of international payments. The Brazilian Government will give further study to this matter. I believe that, as a result of the discussions between the authorized representatives of our respective Governments during the course of my visit, a substantial accord has been reached as to the basis of these provisions and for the necessary cooperation between our institutions.

In order to proceed with this proposed facilitation of exchange transactions, the Government of Brazil finds it necessary to provide dollar exchange to meet amounts now due American exporters. To make this provision, my Government has addressed a communication to the Export-Import Bank of Washington with a view to obtaining the extension of appropriate acceptance credits for this purpose by that organization. A copy of this communication is enclosed as appendix A.

II

The Government of Brazil has decided to create a central reserve bank which will have the functions of regulating the internal and external value of the milreis, and of controlling credit and the money market. The central reserve bank will endeavor to eliminate unusual fluctuations in the balance of international payments and those arising from the irregular timing of in- and out-payments by a policy of adapting the balance of payments to normal exchange resources. To this end a line of credit in American currency, intended exclusively for this purpose, would be desirable in order to insure relative stability in the value of the milreis within the policy described. A copy of a communication addressed by my Government to the Treasury Department regarding this matter is enclosed as appendix B.

III

With particular view to the systematic economic development of the Brazilian Nation, my Government, in its communication to the Export-Import Bank of Washington, a copy of which is enclosed as appendix A, took up the question of obtaining longer-term credits to finance Brazilian purchases of industrial goods in the United States, and the terms of repayment of such credits. These credits are believed to be necessary to the proper utilization within a reasonable period of the known resources of Brazil, for the benefit of the Brazilian people and the further stimulation of Brazilian-American trade.

IV

The Government of Brazil is especially desirous of stimulating the systematic large-scale production of agricultural products native to Brazil or capable of successful introduction to Brazil which will complement production and find a market in the United States. The Government of Brazil will, of course, appreciate the cooperation of the Government of the United States in the study and development of such products which may provide the United States with assured sources of supply.

V

In connection with all of the phases of economic relationships between the United States and Brazil, my Government has given renewed thought to the dollar bond indebtedness of the Government of Brazil and of the Brazilian states and municipalities. The decision has been reached, as part of its general economic program, to resume payment on July 1, 1939, on account of interest and amortization on these external dollar debts. A transitional arrangement for a brief period to effect this has been discussed with the Foreign Bondholders Protective Council, Inc. These discussions in regard to the scale and amount of payment will be continued after my return to Rio de Janeiro and subsequent announcement will be made by my Government. It is the hope and expectation of my Government that with the improvement in its foreign commerce which it now foresees a permanent settlement which will be equitable and satisfactory to all interests involved will follow upon the expiration of this temporary arrangement.

VI

Still with the desire of giving to the friendship between our two countries economic and juridical bases commensurate with the purpose of promoting cooperation between our two peoples, I wish to emphasize that my Government intends to observe a general policy which will inspire the confidence of United States investors, giving them no more restrictions than those to which Brazilian investors may be subjected. I can assure Your Excellency that my Government has decided to encourage in any way and means the valuable and desirable cooperation of United States citizens who have invested or who in the future may invest their capital and technical experience in the development of Brazilian resources and national economy.

Renewing my expressions of appreciation to your Government and to all the officials of the various departments who have given us inestimably valuable assistance during the period of our negotiations, believe me,

Your sincere friend,

OSWALDO ARANHA.

[Enclosure]

APPENDIX A

BRAZILIAN EMBASSY,
Washington, March 8, 1939.

EXPORT-IMPORT BANK OF WASHINGTON,
Washington, D. C.

GENTLEMEN: In order to increase trade between the United States and Brazil, the Government of Brazil would like to meet without delay all present and future trade obligations to United States firms and nationals, an arrangement that will be mutually beneficial to the United States of America and the United States of Brazil. My Government also contemplates the improvement

and extension of Brazil's existing transportation facilities and the establishment and expansion of basic industries essential to the domestic economy of Brazil. To accomplish this, credits will be required, credits extending in some instances as long as 5 and possibly 10 years, depending upon the character of the purchases for which the credits will be used.

These objectives can be greatly facilitated by the establishment by your bank of acceptance credits in favor of the Banco do Brasil in order to permit the Brazilian Government to meet amounts due to American exporters to Brazil and to enable the prompt remittance of dollar exchange for future purchases of industrial and agricultural products of the United States of America. Such acceptance credits, if extended, will be utilized from time to time as required during the remainder of the calendar year 1939; and will be reimbursed in quarterly installments over a period not exceeding 24 months for any individual item.

Suitable steps will be taken by the Government of Brazil to insure the acquisition by the Banco do Brasil of the dollar exchange required to extinguish the obligations as they mature.

The Government of Brazil is undertaking the economic development of the Brazilian nation and proposes, among other things, to assist in the establishment of certain basic industries, improve transportation facilities, and to undertake other projects designed to increase the productive capacity of the nation. The cost of the activities contemplated will be met by revenues other than those presently allocated to meet the normal expenses of the Government.

Substantial quantities of industrial goods produced in the United States are urgently needed to accomplish the purposes envisaged, but the acquisition of such goods against cash payments would seriously affect the ability of Brazil to continue normal purchases from the United States and would strain my Government's foreign exchange resources. To obviate the inconvenience of restricting normal trade and the danger of too rapidly depleting Brazil's supply of foreign exchange, the Brazilian Government will need the longer-term credits indicated, all of which will be used for the purchase of American products.

The amount of such credits and the time within which they can be most advantageously utilized, and repaid, will depend largely upon the progress of developments in Brazil. The tenor of individual credits will naturally be governed largely by the character of the product to be financed, but it is hoped that provision can be made in certain instances for payments over a period of 10 years from the date of purchase.

It is our understanding that industrial credits approved by the Export-Import Bank ordinarily require the cooperation of the interested American manufacturers or financial institutions. We further understand that under existing law the Export-Import Bank is not empowered to advance funds subsequent to June 30, 1941.

We will welcome an expression of your attitude toward the two proposals we have outlined herein.

Very truly yours,

(Signed) OSWALDO ARANHA.

[Enclosure]

APPENDIX B

BRAZILIAN EMBASSY,
Washington, March 8, 1939.

The Honorable HENRY MORGENTHAU, Jr.,
Secretary of the Treasury, Washington, D. C.

MY DEAR MR. SECRETARY: The Brazilian Government has decided to create a central reserve bank which will have the functions of regulating the internal and external value of the milreis and of controlling credit and the money market.

The creation of a central reserve bank is desirable first and foremost in order to coordinate under the direction of one competent board of directors all the functions and operations of a central bank—many of the elements of which already exist in one form or another in the several departments of the Bank of Brazil and of the Brazilian treasury—so that that body may guide and carry out effectively the monetary and banking policy of Brazil. At the present time these functions, insofar as they exist, are carried on by the virtually uncoordinated exchange and rediscount departments of the semiofficial Bank of Brazil (the commercial department handling fiscal agency operations) and the note issue section of the treasury.

In addition to this major objective of coordinating the external and internal aspects of monetary policy, there are a number of specific ways in which an efficient central reserve bank may be of assistance in the development of the Brazilian economy, including: (1) it may regulate the issuance of notes, removing this function from the direct exigencies of public finance; (2) it may be instrumental in the establishment of an effective money market and in improving techniques for its control, as have been the recently created central banks in other American countries; (3) as a consequence of (2) it may facilitate the regular issuance of Treasury bills, notes, and bonds, and aid in the development of additional banking and credit services for the financing of Brazilian industry and agriculture; and (4) it may establish efficient methods for collecting economic data necessary for the proper determination of external and internal monetary policies.

The draft organic law for the proposed central reserve bank is outlined below. The Minister of Finance of Brazil, during his visit to the United States in 1937, explained the subject to the Secretary of the Treasury and American technicians, and he then had the opportunity of discussing and clarifying details for the project.

The capital of the bank shall be 60,000 contos of reis, one-third to be subscribed by the Government, one-third by banks operating in Brazil, and one-third by public subscription. The bank shall be governed by a board of directors consisting of a president and vice president appointed by the Government and additional directors elected by the shareholders.

The principal activities of the bank shall be:

(a) To issue notes.

(b) To hold the monetary reserve deposits of the banks of Brazil.

(c) To buy and sell, discount and rediscount bills of exchange.

(d) To make advances guaranteed by gold bullion, bills of exchange, or Federal securities.

(e) To buy and sell gold.

(f) To buy and sell foreign exchange.

(g) To engage in open-market operations in certain Federal securities as well as in gold, exchange, and commercial bills.

(h) To act as fiscal agent.

(i) To act as clearing house.

The bank shall be required to maintain minimum reserves of 25 percent of the total of its outstanding notes and sight obligations. This reserve will be composed initially of gold holdings, of balances abroad in free currency, and of public-debt certificates of the national treasury. As gold holdings are increased (such increase being insured through purchases of gold produced within the country) the bank will reduce by an equivalent amount the part constituted by bonds.

The Treasury already possesses 30 tons of gold worth about $35,000,000, or, at prevailing exchange rates, about 13 percent of the currency in circulation. Purchases of domestically produced gold may be estimated at an average of 8 tons annually; thus it may be foreseen that within 5 years the gold reserve will have attained 70 tons (about $80,000,000), or, in other words, more than 32 percent of the present note circulation.

Until the minimum reserves of the bank can be constituted entirely in gold and exchange and until the economic position of Brazil attains a definitely favorable level, the central reserve bank will endeavor to eliminate unusual fluctuations in the balance of international payments and those arising from the irregular timing of in-and-out payments by a policy of adapting the balance of payments to normal exchange resources. To this end, in the manner of an exchange equalization fund, the bank will resort to the sale of Federal securities in the open market whenever it becomes necessary to prevent inflows of capital from having their full effect on the domestic money market. In the opposite circumstances, the bank would find it necessary to draw against available funds abroad. To this end a line of credit in American currency, intended exclusively for this purpose, would be desirable in order to ensure relative stability in the value of the milreis within the policy described.

Believe me,

Sincerely yours,

OSWALDO ARANHA.

DEPARTMENT OF STATE,
Washington, March 9, 1939.

His Excellency OSWALDO ARANHA,
Minister of Foreign Affairs of Brazil.

EXCELLENCY: I have received with genuine appreciation Your Excellency's very friendly note of March 8, 1939, with reference to the matters which I have had the privilege of discussing with you during your visit to Washington. I need not assure you of the personal satisfaction which it has been for me to cooperate with you in a comprehensive survey of all phases of the questions interesting our two countries, and I am convinced that the traditionally close and cordial relations which have always existed between the people of Brazil and those of the United States will be materially strengthened as a result of the decisions taken during your visit.

I have noted with especial satisfaction that in your communication under acknowledgment you have enumerated policies and actions which the Government of Brazil, after due deliberation and the considered discussion of its authorized representatives with the authorized representatives of the Government of the United States, is undertaking or intends to undertake in the near future in order to foster continued mutually beneficial economic relations between the United States and Brazil and to develop the national economy and national resources of Brazil. As you well know, my Government is keenly desirous of taking any steps possible in order to continue and expand the economic cooperation between Brazil and the United States.

My Government is pleased to note that it is the intention of the Government of Brazil to establish and maintain a free exchange market for commercial transactions and to facilitate the transfer of an equitable return upon investments made in Brazil by United States citizens under normal conditions in the Brazilian balance of international payments. I am informed that the Export-Import Bank of Washington has found it possible to assist in the facilitation of exchange transactions by extending appropriate acceptance credits in order to provide dollar exchange to meet amounts due American exporters for imports from the United States.

I am also informed that the Treasury Department finds itself heartily in sympathy with the objectives stated in your communication to it regarding the establishment of a central reserve bank, and will be glad to assist your Government in the establishment of such a bank and in its operations, by placing at your disposal its advisory facilities and by the extension of a line of credit.

In the latter connection, I understand that the Secretary of the Treasury, with the approval of the President, is informing you that the President is prepared to make a recommendation to the Congress for suitable authorization.

I am further informed that the Export-Import Bank, with a view to cooperating in the facilitation of trade between the United States and Brazil and in the development of Brazilian natural resources, has agreed to consider the arrangement of suitable longer term credits to finance Brazilian purchases of economic equipment in the United States.

Copies of communications in regard to these matters addressed to you by the Secretary of the Treasury and by the president of the Export-Import Bank are enclosed as appendixes A and B.

The Government of the United States is interested in cooperating with the Government of Brazil in every practicable way in the study and development of agricultural products and production which will complement production in the United States. In this regard, as you are aware, legislation has already been enacted which authorizes the loan of experts of the Government of the United States to assist the Government of Brazil in specialized agricultural studies and developments. Plans have also been formulated for surveys of agricultural possibilities, including the development of tropical hardwoods, rubber, and other products, which surveys could readily include the coincidental study of many additional native products of Brazil. Draft legislation which would provide authorization for these surveys is now before the Congress.

In relation to this general program of economic cooperation between the United States and Brazil, I welcome the information that your Government plans to resume payment on July 1, 1939, on account of interest and amortization of the external dollar debt of the Government of Brazil and of the Brazilian states and municipalities, in accordance with a transitional arrangement, and that it is the hope and expectation of your Government that with the improvement in its foreign commerce which it now foresees a permanent settlement which will be equitable and satisfactory to all interests involved will follow upon the expiration of this temporary arrangement.

I likewise welcome with sincere gratification the assurance that it is the intention of the Government of Brazil to observe a general policy which will encourage the participation of citizens of the United States in the economic life of Brazil.

In reiterating to Your Excellency the assurances of my most distinguished consideration, allow me to add my sincere thanks to you and to the officials of the Brazilian Government accompanying you for the close and valuable cooperation invariably accorded throughout the period of our important negotiations, and to wish you all a safe and pleasant journey in returning to Brazil.

CORDELL HULL.

(Enclosures:

Appendix A: Communication dated March 9, 1939, from the Secretary of the Treasury to the Minister of Foreign Affairs of Brazil.

Appendix B: Communication dated March 8, 1939, from the President of the Export-Import Bank of Washington to the Minister of Foreign Affairs of Brazil.)

[Enclosure]

APPENDIX A

THE SECRETARY OF THE TREASURY,
Washington, March 9, 1939.

MY DEAR MR. MINISTER: I have before me your letter of March 8, 1939, containing an outline of the plan which the Brazilian Government has under consideration for the establishment and operation of a central reserve bank.

Our discussion appears to me to bring out plainly the soundness of the objectives envisaged in this plan and of the useful results that may be attained both for the Brazilian economy and for the future development of Brazilian-American trade and monetary relationships.

I am, therefore, instructed by the President to advise you that when and as the Brazilian Government may decide to move forward in this matter, this Government will be glad to assist it by placing at the disposal of your Government the advisory facilities of the Treasury Department. Moreover, if the Brazilian Government in its further examination of the question decides that, as part of the plan of cooperation between the financial and monetary authorities, it can usefully be assisted by the according of loan facilities to the new institution, the President will be glad to present to Congress a request for authorization to place at the disposal of the Government of Brazil, under such terms and conditions as deemed wise, gold up to the amount of $50,000,000, to serve as possible supplementary assets in case of need. This fund, I understand from you, might or might not be drawn upon, but it would be certain to be helpful in the event that the new institution should have to deal with special situations of a temporary character. You have informed me that in the event this amount is drawn upon, the Government of Brazil would plan to make repayment from its future production of gold.

I would also like to recall our discussion of last week with reference to the maintenance of a financial attaché by your Government at the Embassy in Washington. I think the work of such an official in Washington would be helpful and would doubtless serve to extend the field of cooperation between the two Treasuries. This will be particularly true since this Government intends to maintain at the Embassy of the United States in Rio de Janeiro an officer fulfilling a similar role and the officer so designated will proceed to Rio de Janeiro in the immediate future. The appointment of these officials should facilitate and expedite the course of further discussion of the objectives above mentioned.

Believe me,

Sincerely yours,

H. MORGENTHAU, Jr.

His Excellency, OSWALD ARANHA,
Minister of Foreign Affairs of Brazil,
Brazilian Embassy, Washington.

[Enclosure]

APPENDIX B

EXPORT-IMPORT BANK OF WASHINGTON,
Washington, March 8, 1939.

MY DEAR MR. MINISTER: Reference is made to your communication of March 8.

The Export-Import Bank will undertake to establish acceptance credits for the Banco do Brasil in order to assist the Government of Brazil in its purpose to discontinue official control over foreign-exchange operations insofar as such control affects commercial relations between Brazil and the United States. Such credits will be provided directly or through American commercial banks satisfactory to the Banco do Brasil and ourselves, and shall be repayable in installments over a period not exceeding 24 months.

To permit the Banco do Brasil ample opportunity to liquidate its obligations under the credit, it is suggested that each original draft shall be payable at 3 months' sight and may be satisfied at maturity by the payment of 10 percent of the face amount thereof and the delivery of a renewal draft payable at 3 months' sight for the balance; and thereafter at 3-month intervals, similar transactions shall take place, except that the two last installments shall each represent 20 percent of the face amount of the original drafts. The total amount of such credits outstanding at any one time, whether representing original or renewal drafts, shall not exceed $19,200,000. The discount, including the acceptance commission, shall be nine-tenths of 1 percent flat upon each draft or acceptance—equivalent to an annual rate of 3.6 percent. The details of the transaction will hereafter be arranged between the Export-Import Bank, or the approved commercial banks, and the Banco do Brasil, but it shall be understood that all drafts shall be liquidated on or before June 28, 1941.

To aid in improving Brazil's transportation facilities and the development of her other domestic undertakings designed to increase the productive capacity of the Brazilian nation and her trade with the United States, the Export-Import Bank will cooperate with the American manufacturers and exporters in supplying the requirements for these developments by participating with such manufacturers and exporters, to the extent that its funds may be available for such purposes, in the extension of credits of a tenor calculated to enable the Government of Brazil and the Banco do Brasil to create the necessary exchange without disrupting normal purchases from the United States, or too rapidly depleting Brazil's supply of foreign exchange.

The Export-Import Bank understands that credits of the kind under consideration will be of a commercial character and will bear a rate of interest commensurate with the individual transactions, not in excess of 5 percent per annum. Accordingly, we would prefer that any advances should be against the obligations of the Banco do Brasil or other qualified banking institutions, and that adequate assurances be made by the Brazilian authorities that the requisite dollar exchange will be available for repayments. It is suggested likewise that provision be made for periodic payments to the end that no single payment will occasion any serious depletion of your country's exchange reserve.

Within the period during which the bank is in position to assist in providing these credits, and to the extent that its funds may be available for this purpose, we will consider any specific proposals as they may develop.

Sincerely yours,

WARREN LEE PIERSON, *President.*

The Honorable OSWALDO ARANHA,
Minister of Foreign Affairs.

H. R. 3840—The Bandmaster Bill

EXTENSION OF REMARKS

OF

HON. JAMES A. SHANLEY

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 15, 1939

ADDRESS BY CAPT. HOWARD C. BRONSON, FEBRUARY 27, 1939

Mr. SHANLEY. Mr. Speaker and my colleagues, I have asked unanimous consent to extend and revise my remarks on H. R. 3840, the so-called bandmaster bill, introduced by my distinguished colleague from Connecticut, the Honorable

J. JOSEPH SMITH, and to include therein a very pertinent and helpful address of Capt. Howard C. Bronson, president of the United States Army and Navy Bandsmen's Association, at the American Bandmasters convention at Fort Dodge, Iowa, on February 27. I have also asked permission and unanimous consent to extend therein the resolution adopted by the American Bandmasters Association on March 6, 1939.

The address and resolution are as follows:

Honorable President and fellow members of the American Bandmasters Association, it is indeed an honor to bring you greetings from that organization, which it has been my privilege to serve during the past 4 years, the United States Army and Navy Bandsmen's Association. May I at this time express our deep appreciation to the American Bandmasters Association for the sympathetic and active interest the membership, collectively and individually, has shown in the problems of the service musician? In behalf of the United States Army and Navy Bandsmen's Association I wish to take this opportunity to thank the American Bandmasters Association for the invaluable assistance it has rendered in our struggle for the betterment of conditions surrounding the bands of our Army and Navy. And I should be remiss indeed were I to neglect to thank those individuals who have taken of their time and lent their influence to the cause of better service bands—Dr. Goldman, Dr. Simon, President Karl L. King, Dr. Harding, Herbert L. Clarke, A. R. McAllister, and many others, who, because the list is too long to permit their inclusion, we nonetheless appreciate their work and sincerely thank them for the valuable and fine work they have done in our behalf.

There is a wide difference between the personal status of the membership of the American Bandmasters Association, composed, as it is, of men outstanding in their field, free agents, if you please, capable of exercising their right of franchise and possessing in varying degrees prestige outside the circle of their profession, and the membership, broadly speaking, of the United States Army and Navy Bandsmen's Association, in which a considerable number are not free agents, have no status of citizenship, and oftentimes are subjected to reprisals from those in power should their voices carry into the holy of holies. Yet our purposes are identical—the advancement of music.

Better bands are the result of better conditions under which music is produced. Better pay, better administration, provides the playing difference between the Army, Navy, and Marine Bands at Washington and the regimental and ship bands of the line. This is as true in the service as it is in civil life.

The United States Army and Navy Bandsmen's Association is the sole representative organization of the musicians of the military service. Its purpose is the procurement of better conditions for the service musician, to the end that we may have better military bands.

Last fall our secretary-treasurer, Lt. A. R. Teta, attended as a delegate the annual National Guard officers' convention, which was held in San Francisco, Calif. En route he visited practically every section of the central, south, and western United States. Regional conventions of our association were held in Chicago, Fort Worth, Phoenix, Los Angeles, and Portland, Oreg.

Our national organization now consists of a president, secretary-treasurer, an executive council with a representative in each corps area, and a department in each State, presided over by a vice president. A constant flow of bulletins goes forth from our secretary's office to each vice president, whose duty it is to transmit the information to the membership within his department. Our own publication, the Army and Navy Musician, does not have a regular schedule, but issues are printed not less than four times yearly. It carries all pertinent, new information and it is sent to every band leader and every noncommissioned officer member of this association in the Regular Army, National Guard, Navy, and Marine Corps.

We have a liaison officer in Washington, D. C., whose duty it is to maintain close contact with the War Department, Navy Department, and Congress.

No member of the association receives any remuneration for his services. A part-time stenographer and clerk is employed from time to time. The distribution of information and the necessity of frequent conferences with officialdom, at Washington, creates a heavy financial obligation which is oftentimes difficult to meet. While our potential membership is very large, there are still many who do not belong. However, as the rank and file become familiar with what is being accomplished in their behalf, their interest in becoming active members increases.

May I explain that the three great military bands at Washington, the Army, Navy, and Marine Bands, and the academy bands are separate and apart from the other bands of the service? They operate under special enactments of Congress; their leaders have received commissioned status; the pay and rules governing these bands are entirely and peculiarly for just those organizations. They are the favorite sons of military music. The line band is an animal of distinctively different breed. It has no fairy godfather in the way of this or that admiring Member of Congress—yes; even a proud President. It has no representation whatsoever on the General Staff of the Army; and, may I add, the musician is the only professional man who does not have representation on the General Staff of the Army or the Bureau of Navigation of the Navy, as the case may be. Each regimental band is designated as a section—a part of that heterogeneous unit of the Army, the service company, composed of clerks, cooks, truck drivers, mule skinners, and what not.

The leader of the band section does not command his organization. Yet he is responsible for its training and efficiency. Conditions of pay, administration, and social status are such that few, except the economically pressed, enter the service as bandsmen. The advantages of education and promotion are too ephemeral to attract the young talent of our Nation.

Fed upon that horrendous falsification that the musician is unstable, unfit for responsibility, flighty, and temperamental, it is not difficult to secure sufficient opposition in each Congress to defeat those measures which have been regularly submitted by us each year which, if enacted into law, would provide the machinery for the beginning of a constructive, intelligent, and American program of development for our bands of the line, thus permitting the art of music to secure that degree of recognition within the service which is its due, as well as to provide military bands of a caliber that would allow the citizens of our Nation, including the soldiers in the rank, to point with pride to them and say, "That's our regimental band."

The opposition to commissioned status for Army band leaders is deeply imbedded into the social fabric of the military service. Because the position of band leader has been a sinecure in the past, largely sidestepped by American-born and educated musicians, it is not difficult for the senior officers of the service to recall to memory certain leaders who did not possess elegant drawing-room manners and whose personal traits were not all that a paragon of virtue should have, but, by the same token, who were there among the rough and readies of the early days to cast a critical eye upon the polish, or lack of it, of those who were willing to "woo the Muse" with a ten-, twelve-, or, glory be, a twenty-some-piece aggregation of artists who often found it difficult to converse, except musically, for the want of a common language.

Is it not strange, gentlemen, a line of reasoning which denies that a man capable of training and directing a group of musicians does not exercise the function of command, but sees no inconsistency in commissioned status for the dentist, the chaplain, the judge advocate, the nurse, and the veterinarian?

The United States Army and Navy Bandsmen's Association has at the present time two bills before Congress. One, sponsored by the Honorable JOSEPH SMITH, of Connecticut, provides commissioned status in the grades of second and first lieutenant for band leaders. This is known as the bandmasters bill, H. R. 3840, and S. 1306, sponsored by the Honorable ELBERT THOMAS, of Utah. It does not accomplish our objective in rank, nor does it provide for a chief bandmaster of the Army. However, if passed, it will be a decisive step in the right direction. The second bill, sponsored by Senator LISTER HILL, powerful member of the Military Affairs Committee, provides for the rank of warrant officer for the assistant band leader, master sergeant for second assistant band leader, the addition of several other noncommissioned ratings and specialist grades which will, if enacted into law, make possible a more equitable distribution of rank and pay within the band.

While the American Bandmasters' Association should encourage that which is designed to improve the musical qualities of bands of the military, because of its interest in better music, there is, I believe, perhaps a more practical reason for your support, and that is to provide an attractive career for a portion of the fine, young musical talent now being developed in our public-school systems, universities, and colleges. Whatever we may do to brighten the future course for those who are ambitious to continue in the realm of music after school days is surely worth while. Under present conditions, that for which they are seeking is lacking in our military structure. The prestige of the American Bandmasters' Association and the influence of its members exerted in their behalf will do much to bring about those conditions which must prevail if our ambitions are to be realized.

Each of you gentlemen possesses the power to help materially in making certain the passage of these two bills. When you return to your own localities, urge the music clubs, service clubs, unions, and public-spirited citizens to write or wire your Members of Congress in both the House and the Senate to actively support these measures. Let us remove the stigma of mediocrity which has always been placed upon our bands of the military. We cannot passively tolerate a condition of inferiority for our brothers of the service; and I do, therefore, on behalf of those whom it is my privilege to represent, ask for your full and unqualified support of the "bandmaster" and "bandsmen" bills now before Congress.

I thank you for this opportunity to present our cause to this distinguished group and the courteous manner in which you have received me.

Resolved, That the American Bandmasters Association, in convention assembled at Fort Dodge, Iowa, on the 27th day of February 1939, does now urge and petition those in authority that a commission be created composed of three Regular Army band leaders of the line, three National Guard band leaders, the leader of the United States Army Band, the leader of the United States Military Academy Band, and three bandmasters who are members of the American Bandmasters Association and not connected with the military service. The members of the commission to be selected as follows:

(a) Members of the Regular Army and National Guard to be selected by the executive staff of the United States Army and Navy Bandsmen's Association, secretary, Mr. A. R. Teta, post-office box 1826, New Haven, Conn., to conduct an election for that purpose.

(b) Members of the American Bandmasters Association to be appointed by the board of directors of said organization. The commission to meet at a determined time, not later than May 1, 1939,

in the city of Washington, D. C., for a period of 5 days, during which time a proposed administrative plan for the operation of the musical branch of the Regular Army and National Guard of the United States shall be formulated and submitted to proper authority for consideration.

Military members of the aforesaid proposed commission shall receive pay, as well as regular travel and subsistence in grade. Civilian members of the commission shall receive per diem pay of $20, plus actually incurred travel and living expenses, beginning the date of departure from their respective home cities until their immediate return thereto at the close of the aforesaid meeting in Washington, D. C.; and be it further

Resolved, That the American Bandmasters Association does hereby recommend the passage of the so-called bandmasters bill and the bandsmen's bill, now before the Congress of the United States, and that these be enacted into law during the present session of the United States Senate and House of Representatives and, further, that said bill be received favorably by the President of the United States to the end that bands and the leaders of the bands of the Armies of the United States may assume a position of equality among the bands of other nations, as well as to attain a degree of efficiency comparable to that which is now regarded as standard for the class A bands of the high schools, universities, and colleges of our Nation.

Wanted—A National Conservation Program

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 16, 1939

RADIO ADDRESS BY HON. KARL E. MUNDT, OF SOUTH DAKOTA, MARCH 11, 1939

Mr. MUNDT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by me in Baltimore, Md., on March 11, 1939, at the occasion of the annual dinner of the Maryland State Game and Fish Protective Association:

Good evening, ladies and gentlemen, one week ago today America commemorated the one hundred and fiftieth anniversary of the first session of Congress, and citizens in every walk of life gave thanks for the fact that organized and successful self-government in this country looks back over a century and a half and gets new courage and revived inspiration to meet the challenges of the future. Compared to the hazards of the past, the dangers of the present seem not so important, and a nation which has successfully solved the problems of 150 years can approach with confidence the solution of the problems yet remaining.

One of these unsolved problems of today is the matter of working out and putting into practice a national conservation program so that the natural resources of America, which for 150 years have pretty much had to shift for themselves, can be safeguarded against the exploitation of population pressure, of industrial inroads, or sheer neglect, and of careless oversight. In our normal desire to gain profit at the moment we have grossly failed to protect our country from the world-old rule that once a nation has sufficiently exhausted its natural resources, all the king's money and all the king's men cannot restore that nation to leadership again.

WANTED—A NATIONAL CONSERVATION PROGRAM

America has made sporadic attempts at conservation, to be sure; but the development and the practice of a comprehensive national conservation program still remains as the golden opportunity for some national leader to accept and for some wise administration to achieve. By abrupt starts and sudden stops our progress toward systematic, Nation-wide conservation has resembled a car on a busy street stopping for traffic lights every few blocks; only our progress in conservation has been even more uncertain than that, because we have not always jerked along in the same direction, and much lost energy is found in a wilderness of detours where well-meaning but ill-timed and poorly planned excursions of conservationists have gone astray. So the picture in 1939 to a very sorry extent resembles the picture confronting our First Congress—those charged with the national responsibility of conserving the greatest natural resources in the world have fumbled their opportunity and have dodged their responsibility.

A DRAMA OF INCONSISTENCIES

We conserve a wilderness area in one place and destroy it by commercializing a national park some place else; we engage in reforestation in one State and reward rapacity in some other natural forest area; we reclaim grasslands in one section and permit overgrazing to denude the mountain slopes of our public domains; one State sets up effective antipollution laws and another beckons to its industries with regulations so lax as to amount to public prostitution of Nature for the benefit of private gain; we pass laws regulating the shooting of wild game while permitting the destruction of its natural habitat to the point that an army of boys with slingshots can annihilate what remains unless we rebuild breeding grounds and resting areas; we decrease hours of labor and increase leisure time while decreasing recreational opportunities and increasing the potentiality for crime.

ALERTNESS MUST CHANGE TO ACTIVITY

America has become alert to these problems after 150 years of wishful hoping that isolated intelligence could solve a national problem, and America must now become active in a unified effort to build at least the rudiments of a national conservation policy.

The present session of Congress has at least two opportunities to make its influence felt in the development of national conservation; unquestionably the present Congress has many other chances to help conserve America for future generations, but in these two instances pending legislation affords it the occasion to record itself for or against putting the creatures of Nature and the resources of the public above the greed and the lure of private profit and selfish preferment. And just as Congress has this opportunity to divide itself between those who would conserve and those who would corrupt the resources of Nature, so, too, has everyone at this dinner and in this radio audience tonight a similar opportunity. Because, good friends, this is your Government and it is only temporarily held in trust by your representatives and your President.

In America these officials are elected to serve you and to represent and reflect your wishes—they are never chosen to hand down to you from imaginary mountain tops of political power such laws, regulations, and proclamations as you oppose. Your Government is what you make it, and in America we always get the type of government which we deserve. If we sulk in our tents when things do not please us, we have no right to complain if somebody comes along and steals away the tent pole—ours is the glorious privilege in America to take an active part in influencing the trends of government. When and if we make our influence felt vigorously enough, we always can bend the trends of government in conformity with our influence.

These two opportunities to serve conservation, therefore, come knocking at the doors of each of you tonight. The first has to do with the development of recreational areas all over America, the production of better fishing and more abundant hunting, the preservation of wildlife, and the protection for future generations of privileges which most of us can still happily enjoy. Congress is soon to decide whether the full amount of the excise tax placed upon ammunition for the alleged purpose of protecting and propagating wildlife is to be used for that purpose and be distributed to the various States in full amounts as the spirit of the Robertson-Pittman law directs or whether only a part of this excise tax shall be so used and the remainder thrown into the general fund to disappear in the giddy arithmetic of trying to meet the astronomical expenses of government as you are now ordering it.

DO NOT BLAME YOUR CONGRESSMAN

In the general fund, the part shaved from this special tax to promote conservation would not pay the expenses of present-day government for a single minute of the day and could not at most avert such disasters and dangers of wild Federal spending as inflation or repudiation or bankruptcy for more than the time it takes to blink your eyes. But in this special conservation fund, it can help avert the disasters and dangers of national despoliation of nature for all eternity. Your Government should do your bidding in this connection. If you want to help save this money from the Robertson-Pittman Act for the purposes for which the tax was levied you can write or wire your own Congressman and Senators, urging them so to represent you. If you oppose this conservation program, you are equally charged to make your wishes known, but if the last fish and the last duck and the last tree in America go the way of the last heath hen, the last buffalo, and the last passenger pigeon, do not blame your Congressman or your President unless and until you do your part to prevent such a catastrophe.

OPPORTUNITY KNOCKS TWICE

Your second opportunity tonight concerns clean streams and pure drinking water and wholesome recreation. In this session of Congress are two antipollution bills which the conservationists of America have helped to write and which Senator CLARK of Missouri has introduced in the Senate and which I have introduced in the House. These bills simply have as their purpose the outlawing of pollution as an American privilege and the protection of public waters in the interests of the public health. They would make it illegal to dump human sewage and industrial wastes into the drinking water of the general public and would put a stop to the wholesale pollution and despoliation of the navigable streams of America. They provide the machinery of enforcement through the United States Army engineers and the courts and make provisions for helping communities and industries to correct their pollution practices. My bill is H. R. 4170 and was introduced on February 15; the Senate bill is S. 1691 and was introduced by Senator CLARK of Missouri on March 3. The bills differ somewhat in detail but are companion bills in that both aim at the objectives above outlined. Usually, referred to as the Mundt bill and the Clark bill, these bills have incurred the displeasure of all polluting industries who have lobbyists in Washington working against their enactment.

YOU ARE THE GOVERNMENT

Here again, however, you are the Government. America is not run by its lobbyists any more than by its Representatives, its

Senators, or its President. The people rule America * * * only when the people fail to function do officials who would serve the people flirt with the illusion that they are the people's rulers. If you share with me the thought that pollution should stop, you can advise your Congressmen and Senators to support the two bills I have named. And it is most important that you do so because both the House and the Senate have before them other so-called antipollution bills which not only would not prevent pollution but which approach the problem so courteously and so apologetically that the very industries whose pollution practices are the most offensive have sent lobbyists to Washington to lobby in favor of these other bills. To my thinking, no stronger indictment could be offered of a corrective piece of legislation than the enthusiastic support of the culprit which it seeks to correct.

THE TIME TO CONSERVE IS NOW

Sooner or later America must develop a national conservation program if it is to survive.

We have traveled a long way down the trail marked despoliation * * * it is my hope that now that we have passed our one hundred and fiftieth birthday we shall have the courage to attack the problems of conservation to the end that those who commemorate our three hundredth birthday may be able to do so in a land in which clean waters flow, in which trees abound, and in which such ancient and honorable diversions as hunting and fishing shall not be included among the lost arts. The time to conserve is now—let us now begin a program of conservation.

First, the Wounded Man

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 16, 1939

RADIO ADDRESS BY H. A. CHURCH, MARCH 10, 1939

Mr. VAN ZANDT. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address delivered over the radio on March 10, 1939, by Mr. H. A. Church, national legislative chairman, Military Order of the Purple Heart:

The recent report of Gen. Frank T. Hines, Administrator of Veterans' Affairs in Washington, in which he states that the average compensation received by veterans not injured in combat service is $40.79 per man, whereas the average received by men wounded or gassed on the front is but $37.33 a month, is startling news, inasmuch as the condition undoubtedly has existed for some time and should have been "spotlighted" long ago. After 20 years this information becomes public property. Why hasn't the American public been told before now that wounded and gassed men have been the victims of spurious legislation and have been brutally treated in their search for health and subsistence? This quiescent attitude on the part of the Federal Government has led the average taxpayer to believe that all veterans' legislation was designed primarily to aid those who saw service on the front, but was not intended as a vehicle for the creation of a perpetual gratuity to men whose only claim to disability is a post-influenza cough, flat feet, hernia, stomach ulcers, or a long list of such illnesses. It should be remembered that these illnesses were suffered also by our wartime civilian population engaged in the manufacture of war materials, and other occupations vital to the maintenance of war, and for which no benefits have ever been asked. This erroneous impression does not end here. The public has a right to know that, according to figures released by the Veterans' Bureau in June of 1938, there were 192,369 men wounded in action on the front. Of this number—and this is startling information—only 69,335, or 36 percent, are now in receipt of Federal compensation; 123,034 men or 64 percent of these wounded in actual combat with the enemy are drawing no compensation whatever.

More revealing is the statement that at the present time 346,775 veterans are drawing compensation for service-connected disabilities—despite the fact that only 69,335 of this number were actually wounded in action. When it is realized that but 20 percent of those drawing compensation were injured on the "front" and 80 percent or 277,440 were never injured in combat service, a condition exists that needs immediate public attention and condemnation. The public should also know that immediately after the close of hostilities in 1918, the American people, anxious to show their appreciation to their war-disabled veterans, caused to have enacted certain legislation, the purpose of which was to rehabilitate and compensate for physical losses suffered in actual combat with the enemy. It wasn't long, however, before all those wounded boys were called in by the Veterans' Bureau, perfunctorily reexamined and rerated. Many of them with gas-scared lungs, tuberculous chests and other respiratory diseases, who had been drawing compensation checks for 4 or more years, and who paid $6.50 a month for insurance against such possibilities, were told that their condition had so far improved that they were no longer entitled to compensation and that, henceforth, would be dropped from the Federal pension rolls. Hurried individual appeals were made through friends and politicians but, because of post-war reconstruction work and the voluminous legislation speedily created to cope with the tempo of the times, these appeals were lost in their journey for want of significance. Concerted action, in an effort to reestablish former disability ratings, proved futile. Sickly, disillusioned men cannot fight, and it appeared to them that their only recourse to justice was affiliation with military organizations. The combat membership represented a minority group, consequently, as far as the politician was concerned, their cause was secondary to one which would benefit a much larger number of the military organizations' membership; hence, disability allowance, a piece of legislation intended to aid any veteran who could show a 10-percent disability regardless of time or place of service. It can be said with impunity, that while the military organizations were sincere in their desire to aid their wounded comrades, this legislation alone, successful as it was, because of the powerful vote at the command of its sponsors, was responsible for the sad plight in which the worthy gassed or wounded man found himself. Those who at first appeared to be benefactors of the wounded man turned out to be sadly misguided friends.

Mr. Roosevelt, prior to his last election, had the courage to kill this selfish piece of legislation because he was fully aware of its demoralizing influence on present and future veterans' benefits, but he failed unfortunately to encourage a probe of veterans' affairs, especially as they referred to the changed status of those battle-scarred men who lost their compensation after being "sold out" by mercenary politicians who were alert enough to recognize the voting weakness and inarticulate appeal at the command of this minority group.

This is not the kind of treatment the American public intended its wounded men should have. Selfish legislation of this type is a sad commentary on American generosity—an inconclusive and unsatisfactory method of adjudicating rightful claims. And it must always stand indicted as such. It is a matter of common knowledge and, indeed, personal observation, that if an appeal is brought by a politician or influential civic leader, favorable action is likely to be received. The American people should insist that the personnel of the Veterans' Bureau give every consideration to nervous, wounded, and gassed veterans appealing their cases in an attempt to regain that which was taken from them. They should urge that these men should not be "tossed around" promiscuously, nor made to run the gantlet of interdepartmentalism—a subtle subterfuge calculated to dissuade renewed effort and encourage neuropsychiatric bewilderment. The American public should insist that there be no repetition of Government indifference manifested so flagrantly in 1924.

The case of the three veterans, illustrates the manner in which wounded men are being "tossed around"—because of Government indifference, and failure to recognize legitimate disabilities. The story would be ludicrous were it not for its serious implications. Frank was a gassed veteran of the World War, having served his country on four fronts in France. In his appeal for compensation it was admitted by the Veterans' Bureau that the effects of gas were apparent, yet not serious enough at that time to rate compensation. Subsequent appeals for disability recognition were futile and no further check-ups on Frank's physical condition were ever made. Joseph, a navy man, never out of American waters, suffered from an arthritic condition of the right knee and was awarded $28.50 a month compensation. John, who remained in a local camp during the period of war, was awarded $100 a month compensation for ulcerated condition of the stomach, a latent weakness, perhaps, that manifested itself prematurely. The three men, along with 15 others, took a civil-service examination for two vacancies that existed in the office of the local welfare department. Frank, the gassed veteran received 96.4 percent, John 81.5 percent, and Joseph 80.3 percent. A statutory law of the State in which the examination was taken makes mandatory the appointment to the position of any veteran who receives 70 percent or more and who is in receipt of a pension or compensation from the Government. Thus, Joseph and John were appointed to the vacancies leaving the gas-seared veteran, because of the Veterans' Bureau's refusal to recognize his disability, figuratively, "out in the cold." The good people of the community, not knowing the true facts of the case, believe that the ends of justice have been served.

This case is typical of thousands of similar cases in which wounded and gassed veterans suffer because of Government indifference and political chicanery. The wounded veteran has never been presented to the American public in his true light. He has been branded a Treasury raider and an exploiter of patriotism. But the fact remains and, indeed, authentic figures substantiate the statement, that the wounded or gassed veteran has never received adequate compensation for his physical and mental losses suffered at the hands of the enemy.

It was inevitable that sooner or later, men imbued with the spirit of Christianity and high purpose, would lead the way for those whose appeal to righteousness seemed so inaudible; inevitable, too, that men, bound together by a common complaint, would submit to modern regimentation as a means of expressing their displeasure at Government indifference. And so, in an attempt to emulate their more numerous comrades, the Military Order of the Purple Heart was born. The Military Order of the Purple Heart is an organization composed exclusively of men

actually wounded and gassed in combat service on the lines. The membership of this organization is limited and, consequently, has no appeal to the politician because of such limitation. But it has on its side the good will of every liberty-loving American man and woman in the country, willing, and even anxious to take up the cudgels in behalf of these wounded men. This organization, through its legislative committee in Washington, will soon introduce legislation which has for its purpose the restoration of benefits to wounded and gassed veterans. It is hoped that on the witness stands before congressional committees, ill-treated and disillusioned veterans will be given an opportunity to tell the good people of these United States how, for 20 years, they have suffered at the hands of conniving politicians and at the same time, have an opportunity to set up a defense to the charges of "chiselers" flung at them by those who have been purposely misinformed. It is earnestly hoped that out of the exposé will come the authority for a congressional investigation that will startle the American public into a realization of its obligations to wounded and gassed veterans and a renewed attempt to see that justice is done.

The membership of the Military Order of the Purple Heart believes fully in the integrity of the people and the Government of these United States, and feels that it will never be necessary to hang on the doorbell of any of its citizens the oft-quoted line from William Shakespeare, "He jests at scars that never felt a wound."

The Townsend Plan—H. R. 2

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 16, 1939

LETTER OF A. A. AKERS, OF PUYALLUP, WASH.

Mr. COFFEE of Washington. Mr. Speaker, the merits of H. R. 2 have appealed to tens of thousands of people in my district. More and more are the voters coming to realize that stop-gaps and palliatives are not the remedy for continuing distress among the plain people. They are insistently demanding that a recovery plan which contemporaneously will condignly furnish to the elderly of America a decent pension, free from any niggardly attributes, deserves passage now. Their Representatives have been importuning the Ways and Means Committee of the House to report out H. R. 2, which incorporates the principles of the Townsend Plan. There are likewise sincere Representatives who advocate H. R. 11, known as the General Welfare Act. With these I have no quarrel, though I prefer the former bill.

Mr. Speaker, there is no stronger issue before the American people today. They demand action. They no longer can be deluded by words, promises, delays, or mirages. We exhort the members of the Ways and Means Committee to report out H. R. 2, with or without recommendation. Let the Members of the House debate this bill on the floor fully and vote upon it that the people may know upon which of their Representatives they can depend in this crisis.

Because one of my constituents, Mr. A. A. Akers, of Puyallup, has incorporated in a letter the sentiments entertained by many thousands of my people at home in the State of Washington, I am appending hereto, through the courtesy of my colleagues, his epistle in which he discusses ably and eloquently that very issue and points out the transcendent need for the passage of H. R. 2 now in the interest of justice and fair play for the plain people of America.

The letter is as follows:

PUYALLUP, WASH., *March 5, 1939.*

Hon. JOHN M. COFFEE,
United States Congress, Washington, D. C.

DEAR MR. COFFEE: I desire to thank you for the information contained in your letter of February 28 relative to H. R. 2, known as the "Townsend bill." I also wish to assure you that I appreciate the copy of your speech, which was, beyond the shadow of a doubt, a gallant defense of the principles for which we both stand.

I fully recognize the fact that it is impossible to "ramrod" any bill through Congress, and I wish you to know that I fully appreciate your position there.

Personally, I am not interested in any pension scheme. They are practically all alike, and all demand something for nothing. But having had my ear to the ground for 10 years in the hope against hope that I would hear the voice of someone competent and with a plan that would solve this question of unemployment and destitution among our people, I feel that I am justified in saying that Townsend is the only man so far who has offered anything that could not be concocted by, possibly, any high-school graduate.

What is the trouble with the country? Why so much unemployment and destitution in a land of plenty? The preachers say we need more religion; the lawyers say we need more laws. Both are incorrect. What we need is more purchasing power in the hands of the people. It does not take a professor of some big university to figure this out. Simply get the money into the hands of the people. They will then buy the goods and start the wheels of industry. Townsend is the only man so far who has offered anything like a solution. If his scheme is no good, then it is up to the Congress to prove that it will not work, and offer something that will work.

Regardless of all the billions that have been dumped into the W. P. A. and other relief schemes, the fact remains that we still have close to 10,000,000 unemployed people in this country. What do we propose to do with them?

There are no jobs in private industry for them and never can be. Private industry is now dumping onto the market more goods than can ever be consumed, simply because the people have no purchasing power. We have taxed everything that we can lay our hands on, and yet we are just as far from the solution of the problem as we were 10 years ago.

Do you know that it is costing us over $1,000,000 every 24 hours to enforce the laws against crime in this country? Are you aware that the majority of criminals are made criminals by circumstances over which they have no control? Are we to continue to punish criminals and at the same time do nothing to remove the cause of crime? If man is a social animal, as claimed by society, then he will reform himself if provided with decent employment whereby he may be able to purchase the necessities of life—such as food, clothing, and shelter.

Are we destined to head again into the Dark Ages simply because we refuse to solve the problem of unemployment and consequent crime among our people?

I wish you could see the never-ending line of unemployed and ragged people wending their way to relief offices in this State. Do you know what they get? The sum of $6.40 per person per month. Out of that amount of money they must purchase groceries, clothing, pay doctor bills and house rent, and so forth. And all who receive that $6.40 per month must be citizens of the State and county and, of course, are all voters.

If you ask a man for a job he will look at you as though he thinks you are crazy, while at the same time the berries, of which the Puyallup Valley is famous, are drying out simply because the growers cannot find a market and thus cannot afford to hire labor to tend the vines—all this in the year of the grand jubilee of the State of Washington.

Do you wonder that the people back home are flocking to the Townsend recovery plan? The eyes of America have been on that Ways and Means Committee ever since Congress met. They are now being weighed in the balance.

I am glad that H. R. 2 will be brought out on the floor for debate and vote, as only in this manner will a possible 15,000,000 voters be able to determine just who their friends are. With this information in hand, this vast army of voters, possibly augmented by five or ten million more, can march to the polls in 1940 and "do their stuff."

The people are flocking to the Townsend plan simply because there has been nothing else offered in its place, and they do not elect to stand idly by and see the country go completely on the rocks for the want of a system that will provide a purchasing power for all.

This letter is written in a spirit of cooperation and helpfulness, and I hope you will keep me informed regarding the contemplated action on the above matter.

Sincerely yours,

A. A. AKERS.

Neutrality

EXTENSION OF REMARKS

OF

HON. JAMES A. SHANLEY

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 16, 1939

Mr. SHANLEY. Mr. Speaker and my colleagues, in all this talk about foreign policy there seems a woeful absence of understanding of the term "neutrality." May I suggest

that the definition of Prof. Edwin M. Borchard, one of the world's best-known international authorities, be taken as a starting point for the word:

Neutrality is an old institution, which finds its source in candor, in the obligation to hold the scales even, to remain a friend of both belligerents, to lend support to neither, to avoid passing judgment on the merits of their war. It assures both belligerents that they are dealing with a friend, not a disguised enemy. The belligerents must know who is in the war and who is not. In return for obligations assumed by a neutral, the belligerents undertake to respect his rights as a neutral, including the right to remain out of other people's wars.

To use an expression that was employed by Edmund Burke in the Preface to Brissot's Address the cold neutrality of the impartial judge is meant.

The Way to Governmental Economy

EXTENSION OF REMARKS
OF
HON. CLIFFORD R. HOPE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 16, 1939

LETTER OF HON. CLIFFORD R. HOPE, OF KANSAS

Mr. HOPE. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit herewith a letter which I have written on the subject of governmental economy:

HOUSE OF REPRESENTATIVES,
Washington, D. C., March 15, 1939.

Mr. DON RICKSECKER,
Chairman of the Board, Westport Avenue Bank,
Kansas City, Mo.

DEAR MR. RICKSECKER: I am in receipt of your letter of recent date in which you express your approval of the economy talk which is now going on in governmental circles. I say "talk" because up to date that's all it is. As a matter of fact, if this Congress keeps up the scale of appropriations that it has maintained this session, it will appropriate more money than was appropriated the last session. Frankly, therefore, I do not look for much in the way of economy unless the President takes an active interest in the matter. My 12 years' experience in Congress has convinced me that under ordinary circumstances the only way economy in government can be obtained is for the urge to come from the executive branch. This is not only because Congress as a whole is susceptible to the influence of well-organized groups demanding increased spending but also because every Member of Congress is firmly convinced that economy ought to start elsewhere than in his own district. The explanation for this conviction is that every Congressman's constituents feel the same way about the matter and every Member is under intense pressure to support all demands for appropriations from his own district.

If the people of the country generally would make up their minds that economy begins at home and that governmental economy is possible only when Members of Congress start voting against projects for their own districts, then it will be possible to depend upon Congress to initiate economy measures. Until then such measures will have to originate with the Executive, who is in a position to take a national rather than a local viewpoint on spending. Unfortunately, during this administration, Executive leadership has all been the other way and still is, as far as I am able to ascertain.

With this thought in mind, I am going to suggest that if the people of this country want Congress to really go in for economy, instead of writing general letters on the subject, they write their own Congressman something like the following:

"Believing that economy begins at home and that you should have the cooperation of your home folks in bringing about a reduction in governmental expenditures, I am writing to tell you that we do not want the Federal Government to make any expenditures in our community except in those that are absolutely necessary. I feel that until times get better and our Federal Budget is balanced that you ought to do everything you can to reduce Federal spending in our own district, no matter what goes on elsewhere.

"We can make our present Federal building do until a new one can be built without paying for it out of the deficit. We would prefer not to have any further P. W. A. projects, and feel that expenditures for the W. P. A. can be cut very materially.

"Too much money is being spent in our district on roads and highways, and expenditures for flood control and rivers and harbors work can very well be cut by as much as 50 percent. I believe also that the various Federal agencies operating in this community can do a good job and yet get along with a considerably smaller number of employees. I am sure also that this community can and should take care of a larger part of the relief burden than has been the case in the past.

"In addition, Federal expenditures for the following purposes in this community can be materially reduced:

(Fill in here all of the other Federal expenditures which you feel can be reduced)

"Trusting that you will be able to reduce Federal expenditures in this particular community at least 50 percent, and assuring you that you will have my complete cooperation in your efforts to do so, I am,

"Very truly yours."

However, let me caution you that if you send a letter of this kind to a Member of Congress, I hope you will give him some warning in advance. Half a dozen such letters would make the average Congressman begin to wonder whether it was he or his constituents who were crazy, and a dozen such letters all at once would likely cause him to drop dead. However, administered in homeopathic doses and after due warning, such a course of treatment would have surprising results.

The above, of course, is written in something of a facetious spirit, but nevertheless I seriously propose it as the quickest and most effective way for bringing about governmental economy.

Very sincerely yours,

CLIFFORD R. HOPE.

Congress—Showmanship and Statesmanship

EXTENSION OF REMARKS
OF
HON. LEE E. GEYER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 16, 1939

RADIO ADDRESS BY HON. T. V. SMITH, OF ILLINOIS, MARCH 7, 1939

Mr. GEYER of California. Mr. Speaker, under leave to extend my remarks I insert a radio address over the Columbia Broadcasting System by Representative T. V. SMITH, of Illinois, in a debate with Senator TAFT. This was the third broadcast in the Columbia Broadcasting System series Foundations of Democracy. The topic was Congress—Showmanship and Statesmanship. The address is as follows:

Kinsmen in Texas, neighbors in Illinois, friends in Massachusetts, where at last the Bill of Rights is ratified—men and women of America—greetings from Washington!

Though I'm only on ignorant man and a politician, I can see that a century and a half is a long, long time. That's the life span thus far of our National Congress, whose birthday we celebrated Saturday. This week we legislators have settled to our one hundred and fifty-first year of competitive talk. Thrilled over the week-end as I was by the magnificent ceremony, I came back Monday to my seat in the House to hear a visitor from our gallery exclaim, "God must be with America for any progress to come from a bedlam like that." Her companion, referring to the vacant seats, replied: "It was more like noise in a vacuum," adding: "They certainly are frivolous to be engaged on such serious business."

Truth to tell, my fellow countrymen, Congress is and has been both frivolous and serious. It is so frivolous that I myself can hardly practice proper mirth control when I think of it. In the House of Representatives there have been, and are, lean men and fat men, tall men and short men, bald men and Beau Brummels, old men and young men, sober men and smiling men, modest men and mere men, rich men and poor men, college men and self-trained—men, indeed, of every sort and condition. Yes; and women, too—with their own color, warmth, and shrewdness.

The Senate, the same, unless my good colleague Mr. TAFT, from over there, wishes to amend my impression.

The men of the Senate who will tell average 58 years of age; the men of the House 51. As for the five women in both, I don't know; your guess is as good as mine. Of the 96 Senate Members, the Congressional Library tells me, 66 are lawyers (68 percent), 9 are businessmen (10 percent), 8 are journalists (9 percent), and 5 are listed as farmers (5 percent). Of the 435 House Members, 239 are lawyers (55 percent), 84 are businessmen (20 percent), 20 are journalists (5 percent), and 10 are medical doctors (2 percent), with an honorable horse doctor or two thrown in. You may be surprised that only about 60 percent of national lawmakers are lawyers. That's double, too, the proportion of State legislators who are lawyers. If surprised, be also pleased. Lawyers tend to make two laws grow from the spot where only one grew before, and I suspect, to let the juice of life be lost by attending too closely to the letter of the law. Lawyers are fine, but law to be living must grow from life rather

than merely from previous law. (Let the figures be a warning to farmers, who send less than 6 percent of Representatives to speak for more than a third of the Nation that's agrarian.)

Now I ask you, how could you get such human variety together without a lot of frivolity? It wouldn't be natural, nor, as a matter of fact, wholesome, either. The American way of life is a way of humor, and we are the official representatives of the American way. It's not merely that much horseplay goes on in Congress; it's also that one side of politics is necessarily showmanship. Abraham Lincoln, of Illinois, for instance, used during his single term in the House to prance up and down the aisles, waving his ungainly arms while pouring out stories that barely passed the bar of good taste. But he's dead now, and so a statesman. The more ordinary way of exhibiting ourselves is merely—

* * * to set our tongue a-going
And forget to stop it
When our brain has quit
A-thinking thoughts to furnish it.

If you've ever watched monkeys chattering, you know how funny speech can be from the gallery of any zoo, human or simian. A talkfest is funny enough even when you know what it's all about. Nobody can talk much without outtalking his information; and to see a grown person doing that, especially if he doesn't know it, is always funny, unless you're sympathetic with the person whose show-off it is that's taking up the logical slack. Easy as it is to laugh at the other fellow, however, each of us, you see, is "it" in turn. We'd as well admit it; we all frequently talk, not to say something, but to see what it was that we were going to say, if anything. You'll remember, too, that the exhibitionist is only the fellow who tells you all the things about himself that you were going to tell him about yourself, if he'd given you a break.

Let Congress, then, plead guilty to an overproduction of talk, but we represent you—in nothing more than in this. You force us to get elected on the verbal easement of oratory. We swell the flood of wind and word during our terms of talk. And we pass, when pass we must, upon the gentler receding flow of elegaic whisperings, "too full for sound or foam." While we live, however, and represent you, we must dignify as best we can the larnyx, demonstrating to you daily from the galleries (whether we listen to one another or not) that "we also serve who only stand and talk" (White and Smith, Politics and Public Service (New York, Harpers, 1939), pp. 343–344).

You really expect it of us, you know; and we succumb to nothing like temptation, especially when it be temptation to talk. We know that you oftentimes think ill of us for our much speaking; but we also know that you'd not forgive us if we didn't do it. Indeed, this curious quirk in you builds in us defenses that protect us personally but impair the serious work of Congress, to which I must shortly turn.

As long as we outtalk our information you brand us as politicians. You don't like politicians. So we must become statesmen to please you. This consists, while men are still living, in talking big about the same little subjects. Pomposity is a prerequisite for a living statesman. Simplicity and good humor count for statesmanship only after a politician's dead. So we must pass as rapidly as is possible from the despised cocoon of sensible silence to the soaring wings of magniloquence. We must become statesmen or cease to be politicians the next election. All of us, your own kith and kin in Congress, are therefore on the verbal up and up from the first day out. This irresistible temptation you offer us to jump the guns on statesmanship impairs the apprenticeship of those who like myself are ignorant; it hampers the legislative effectiveness of other new members who are already knowing; and it cramps the style of older members, who are of course uniformly sagacious, efficient, and genuinely statesmanlike.

Of course, Senator TAFT has some advantage in this regard, for over in the Senate where he sits there are only 96 talkers to divide the time. Still he has his own problem, for the Senators divide the precious hours as in a marathon rather than a relay race. Effectiveness of action even in the Senate has been known to bog down in laryngeal liquidity of the filibuster. But I'd better leave his branch of Congress to the Senator, as also to him largely the heavy side of Congress as a whole. (Our sedate Senator TAFT is frowning at me already for my own frivolity.)

Having, however, told you the truth about our frivolity, perhaps you'll believe this, my closing tribute to the more serious aspect of our legislative craft.

The legislator is of all men the man who knows for certain that he's not God. His personal preferences count for no more than the personal preferences of several hundred others, each responsible to his sovereign constituency with no one in Congress responsible to anyone in Congress. Nor does the legislator's deepest convictions boot him anything unless he can get others to share them. Each representing interests equally legitimate and regions equally precious, each must come to terms with all the others, or nothing's done.

Men who think they're God, caught in such a situation, call their equals devils and depart, like Lucifer, for fairer fields out of preference to rule the roost rather than to serve the Nation in Congress. Congressional government crushes weak men, makes cynics of men more proud than patient; but rewards sagacity with an overview of conflicts in which cooperative endeavor can prevail. Those who all too naturally suppress conflict, all too inexorably crucify cooperation. The extremity of individual Congressmen becomes thus the opportunity for Congress itself.

This magnificent institution has ever been and today still stands as the Nation's most trustworthy training school for tolerance. Wherever you find our retired graduates you'll find men who know what man's life together is all about—its pains, its precariousness, its preciousness. A country with Congress at its core creates men, not puppets; builds morale not terror; fortifies the souls of men against their own baser undertows. Congress socializes the fanatical conscience and turns the raspy will to power toward what our fathers called "the perfectibility of mankind."

You see I think well of Congress and believe profoundly in the remedial work of Congressmen—in their showmanship no less than in their statesmanship. After all a simple thought will tell you how central Congress is to our constitutional system; it makes the laws which the Court interprets and which the President applies. Where does that leave Congress, last or first? First, if I could have my way. But I've learned from Congress that I cannot have my way. History has given the Court first place by giving it the last say; and the cumulative initiative of our greatest Presidents—Washington, Jefferson, Jackson, Wilson, and the two Roosevelts—has given the Executive a strategic advantage over the legislative in the eyes of the country.

Many legislators complain at this. But complaint is not enough. (Congress lacks even a congressional council to bring it abreast of progressive States, like Kansas and Illinois, that are attending to their leadership through legislative councils.) Republicans in Congress who are set to oppose executive reorganization without doing anything to facilitate legislative efficiency do but advertise to the Nation that what they want is inaction, which in dynamic times like these means reaction. If I myself do not complain at executive and judicial dominance in our present constitutional system, it is because I am too much a humorist to quarrel with history about the judiciary, too much a realist weakly to envy in the executive what we cannot produce in the legislative, and too much a patriot to wish my country to drift leaderless in a world attuned to vibrant leadership. I know, alas, that leadership cannot be complained into existence; nor can it be legislated, not even by Congress for Congress. "Leadership is," I repeat, "as leadership does." * * * Moreover, I see work enough left for Congress to do, work that it can actually do and honorably do—and work that it is doing today.

This work is not the finished product which Congress turns out, important as that is in all conscience. Its major work is but the finishing process which it applies to its Members and dramatizes to the Nation. (Here, indeed, whatever must be done gets done—and little else, save the continuous "lathering of one another's ego.") Though not all wrongs get righted in Congress, all needs do get aired, all subjects debated, all dissident voices heard. To inform the public mind through public debate, to allay private aggressions through public hearings, and to adjust collective tensions through public compromise—this is Congress at work; this is the work of Congress. Not less talk but more, more debate and better—this is the manner in which the very principle of revolution is peaceably preserved in our American institutions and the spirit of evolution is made the deepest law of our land. Thus Congress saves the Constitution from cultism, and thus it furthers civilization through the high art of continuous consultation and accommodation.

Men and women of America, you may still think Congress "the cave of the wind" where puny men do but mouth their way to eminence. But I tell you that it is a gentle wind; it blows few people ill and it clears of mustiness the vasty corridors of our national life. Touched with mirth and not untouched by greatness, Congress is our people themselves incorporated. (We representatives, your own board of directors, are bone of your bone and sinew of your sinews.) Combining as best we may the ridiculous and the sublime, the comic and the urgent, we labor for a cause that cannot be ever wholly lost nor ever fully won. We work, indeed, to make America the homeland of brave men, of free women, of happy children.

You may not like the way the cards are shuffled,
But still you like the game and want to play.
So through the long, long night will we unruffled
Play what we get until the break of day.

Mr. TAFT. I propose a toast to our honorable body: "Showmanship and statesmanship; long may they live, united, as in the Congress of the United States."

Threats to Our Constitutional Form of Government

EXTENSION OF REMARKS
OF
HON. DONALD H. McLEAN
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1939

ADDRESS BY HON. DONALD H. McLEAN, OF NEW JERSEY, FEBRUARY 28, 1939

Mr. McLEAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me at the 1939 George Washington Birthday

celebration of William Byrd Chapter, Daughters of the American Revolution, at Richmond, Va.:

It is appropriate on this occasion that we revere the memory of Gen. George Washington, not only because of the recurrence of his birth date but because at this particular time we so much need to be reminded of his philosophy of government. Any phase of that great life would be an appropriate guide to our present-day activities. Washington was the soul of America, and he lives with us today. His hopes and aspirations for his countrymen were without the taint of selfishness. He craved no financial remuneration or position in return for his services to his country, and consequently his contributions are enduring.

Some will say that the doctrines for which he has credit were not of his own creation, but were prepared by his advisers. Such conclusion need not be regarded as in derogation of Washington. It is a smart man who will surround himself with wise counsel, and it is a great man whose character justifies his leadership. These things must be said of Washington. It was his character that inspired the hopes and aspirations of the American people and fortified them against the sacrifices necessary that we might today enjoy the privileges which come with being citizens of a free country.

The commemoration of the birthday of so great a man would be entirely without purpose if it were not made the occasion for a rededication of ourselves to principles which are the foundation of our Government and which were made so by his influence. We are inviting disaster in disregarding his advice in certain phases of our international relations and in the application of principles intended to guide us in the development and preservation of a system best suited for the government of a free people.

We live in a troubled world. Recent events have made us anxious as to our part in it. George Washington advised that we "observe good faith and justice toward all nations and cultivate peace and harmony with all." He warned against "inveterate antipathies against particular nations and passionate attachments for others," and urged that "just and amicable feelings toward all should be cultivated." When that was written conditions were somewhat the same as they are now. William Pitt was saying, "England, having saved herself by her energy, would save Europe by her example." If Washington were speaking to us now he would probably say that we are indulging in too much talk about impending war, in too many antagonistic references to our neighbors. He would, perhaps, repeat what he said to posterity in his Farewell Message: "Antipathy in one nation against another disposes each more readily to offer insult and injury, to lay hold of slight cause of umbrage, and to be haughty and intractable when accidental or trifling occasions of dispute occur. * * * The peace, often, sometimes perhaps the liberty of nations, has been the victim."

He would probably say the place of America in world affairs is as an example; that our successful existence as a free people should be an object lesson for the people of the world to follow if they would enjoy the blessings of liberty which are ours.

Interference with the affairs of another nation tends to solidify its people in the support of their government, whatever the form and no matter how dictatorial it may be. We seem bent on creating fear and anxiety among ourselves, and, whether designedly or not, we are engendering the suspicion and unfriendliness of other nations. It is not necessary to agitate a war, or circulate rumors of war, to obtain the necessary support for any program of preparedness. The adequacy of our national defense must be determined by the trusted leadership of the experts of our armed forces. The American people will follow that leadership with unanimity when occasion requires. Washington admonished us "to keep ourselves, by suitable establishments, on a respectable defense posture." The world will not criticize us for following that precept. The American people will have less enthusiasm for it if, as an excuse for providing adequate national defense, we fool them with the specter of an imaginary foe, and nations made unfriendly by such tactics will not recognize our virtues, and, therefore, cannot be expected to profit by our example.

Our danger at the moment is not to be found in an attack from a foreign foe. Our real danger is from the threat to our constitutional form of government. In any system of preparedness we must be certain that our own Government is sound and secure, and we need to evaluate our internal situation in terms of national security. We are told that Communists and Fascists and other organized groups would overthrow our Government by force. Serious as we know that threat to be, there is a more serious challenge beyond it. We, who are charged with the responsibility of government and its preservation, may ourselves provide the machinery by which these elements may attain the object they seek. There are weakening practices which should be avoided by those entrusted by the people with the administration of their Government.

One of these is the development of a centralized government through the machinery of which all of our State and National affairs may become concentrated in the control of one man or group of men. It was the intention of the framers of the Constitution to avoid this. A system of restraints and denials of power was provided to prevent the Government from getting too far beyond the direct control of the people. Our Government was intended to be a government of principles, not of individuals. The controversy for supremacy between the States and the Federal Government began the moment the Constitution was sent out of the Convention to the States for ratification. It has continued ever since. The desire to preserve the liberty which had been won at so much sacrifice and hardship was the basis for most of it. Increase of population, development of means of transportation and communication have intensified the struggle and have weakened the resistance of the States to the encroachments of the Federal Government. The inadequate revenue system of many States has made it difficult for them to finance the numerous activities of present-day demands. The Federal Government, taxing on a national basis, with tremendous resources made available by the system of direct taxation, under the sixteenth amendment, is called upon to assist in various enterprises alleged to be for the welfare of the Nation as a whole; and there has developed, as a direct result, a system whereby subsidies are granted to the States. By accepting these subsidies the States must conform to certain requirements laid down in the Federal statutes, admitting a degree of supervision and control which does violence to State independence.

The practice of granting subsidies is not new, but until recently it has been predicated on some element that found justification within the scope of the activities intended for the Federal Government. The improvement of navigable waters was as an adjunct to interstate commerce and national defense; likewise the grants of public lands to States for maintaining colleges required of the students a limited amount of training and the study of military science. Lands were granted to railroads, but these were with the idea of developing lands not yet divided into States which belonged to the United States; subsidies granted for the purpose of building ships and the development of the merchant marine provided that the ships should be used as a part of the national defense and in the transportation of the mails.

The practice of granting subsidies to the States for public works and essential State activities has expanded rapidly in recent years with the idea that the public health, public roads, and education were matters in which the States had a common interest, and because their importance transcended State boundaries, and, most recently, with no other justification than the necessity of assisting the States in granting relief and in aid of economic recovery. These suggestions for Federal aid uniformly come from States less fortunate hoping to benefit through the medium of Federal taxation out of the resources of others.

In 1925 during the administration of President Coolidge the appropriations for those purposes amounted to $110,000,000 annually, as compared to billions now being appropriated annually. The dangers incident to the practice have frequently attracted attention. On January 13, 1921, the Governor of Wisconsin, in his annual message to the legislature, referred to it as a "species of bribery" and recommended that every project presented under the pretense that the State would receive the bounties of the Federal Government be "closely scrutinized." On April 9, 1924, the General Assembly of the State of Maryland memoralized Congress by a joint resolution requesting and urging the repeal of all laws which authorized appropriations to the several States in the form of Federal aid on condition that similar appropriations be made by the respective States, the reason given being that under this system a State was compelled to undertake work which it might not wish to undertake, or lose its share of the Federal appropriation, in which case it would be compelled to contribute in taxes to the work of other States of which its people disapproved and from which they derived no benefit.

The enactment of the sixteenth amendment is responsible for the rapid increase in the practice. It was more difficult when the requirement was that taxes had to be raised by apportionment among the States. The sixteenth amendment gave the Federal Government the power of direct taxation, and there seems no limit to which that power may be exercised. Congress is so far removed from direct contact with the people that it does not suffer the restraints which accompany the power to tax by local or State Governments, which are constantly and directly under the watchful eye of the taxpayer.

There can be no quarrel with the States marshaling their resources under emergency conditions, but there should be a return to normal conditions as soon as the emergency is passed. My anxiety is toward the movement that would make these alphabetical relief agencies a permanent responsibility of the Federal Government. We are told, for example, that it is contemplated to have a permanent Board with a reservoir of approved public works always available so that when a downward economic trend threatened the Federal Government could take quick, effective measures to halt the downward curve and bend it upward before economic harm were done. Maybe so. But any observer of the idiosyncracies of human nature and political partisans knows that some way would be found to open the floodgates of that reservoir around election, even in prosperous times.

The obvious political significance makes it easy for those in control of the purse strings to comply with the demands. Thus the power of the Federal Government is increased. Power once attained begets power. Bureaucracy once established expands itself. The political mind, in its desire for perpetuation in office, is ever ready to yield to those influences which will provide for a constituency benefits which otherwise might not be enjoyed by those possessing the voting power. These elements are peculiarly active at this time, and they direct our thoughts to a day when the States will no longer be separate, independent entities, possessing their own sovereignty, but will be mere administrative agencies of a strong central government.

It has been demonstrated how under our system of government it is possible for the legislative branch to become subservient to the will of the Executive; how a program of "must" legislation may be carried into effect by his dictation, and how large sums of money may be appropriated annually to be spent at his discretion without earmarking or other designation, the

form of the legislative enactment being a mere subterfuge to ease the conscience of legislators and administrative officers, and an ostensible compliance with law to avoid popular criticism. This power to raise money, and to spend it without restraint, can create the instrumentality by which America may become a totalitarian state, entirely within the law.

In times of economic distress people look to their Government for aid. The plea of necessity results in shortsightedness as to the consequences of these Federal contributions. Under the measures enacted by Congress to provide relief and bring about recovery from depression conditions, contributions were made on condition that like amounts would be contributed by the States; also, that working conditions dictated by the Federal Government should govern the operation, and specified materials should be used. There is pending in Congress a bill, pursuant to which the Federal Government is to make contributions to the States for educational purposes, but, in order to obtain such contributions, the State must conduct its educational system according to the dictates of the Federal Bureau of Education.

Congress has also provided for making large contributions of money to the farmers, but to obtain such contributions, the farmer must comply with the dictates of the Federal Government as to the kind and extent of the crop he can produce. We have seen that large amounts of money may be appropriated and spent without restraint at the discretion of the President and his advisors; we have seen how easily this money can be raised by the power of the Federal Government to tax directly the individual and business, and we have seen the evils that can flow from such practices and how men entrusted with such power have yielded to the temptation to serve their self-interest. As proof of this, reference need only be made to the public expenditures which were largely increased during the few weeks immediately preceding recent elections, and it is no secret that this happened where it would best suit the personal interests of those in authority. It is the weaknesses of human kind we must guard against. They are not peculiar to any one political party. We would probably find like evils in Government no matter what party happened to be in power.

With the advancement that has come through science and invention there has developed an expansion in the power and jurisdiction of the Federal Government. The general welfare perhaps requires that the people of Maine have reason to think more of the needs of the people of Texas, and that such things as the care of the underprivileged, the aged, and infirm should be provided through the medium of social security laws which can be most efficiently managed through a government in which all of the States have an interest, even though it acts directly upon the individual. There is a tendency to permit means of transportation, communication, flood-control, and electric-power development to come within the jurisdiction of the Federal Government because of the manner in which they touch the lives of the people, and because they are essentially interstate services. The operation and control of these services is the power of which I spoke, when once attained begets power, the bureaucracy which enlarges itself.

As developments have come, new conditions have arisen, but dangers of concentration of power in a strong central Government should give us as much concern as they gave the founders. The demand for its enlargement cannot be denied. Some suggest division of the country into groups of States, but this is only a step toward ultimate concentration of power in one place.

The stronger the Federal Government becomes the more our everyday life is directed from Washington, the further will the Government be removed from direct popular control. Until it shall be definitely determined that the Government founded by Washington and his advisors has failed to serve its purposes, it is the obligation of every American to conform to it. Our Government has met every emergency which has arisen for 150 years, and, although the country has grown in size, and its activities have become more numerous than in the days of Washington, there is no immediate danger of its disintegration so long as the principles upon which it was builded direct its operations. The experiences of the past are an assurance of the future. We are only concerned with present abuses. "The habits of a thinking people in a free country," said Washington, "should inspire caution in those intrusted with its administration, to confine themselves within their respective constitutional spheres, avoiding in the exercise of the powers of one department to encroach upon another. The spirit of encroachment tends to consolidate the powers of all the departments in one, and thus to create, whatever the form of government, a real despotism. Let there be no change by usurpation; for though this in one instance may be the instrument of good, it is the customary weapon by which free governments are destroyed."

In what I have had to say it has been my hope that I might stimulate your faith in our American institution of government. While pointing out to you tendencies of the times to drift away from fundamental principles, and by drifting weaken the safeguards of liberty, or because of necessity and exigencies to consciously disregard the safeguards of the Constitution, and by so disregarding, weaken or destroy the purposes of Washington to establish and preserve a government which would be the best government ever devised for a free people, I would not have you believe that I have any apprehension of any immediate change in our situation. Our Constitution has been described by Sir William Gladstone as the most wonderful document ever struck off at a given time by brain and purpose of man. It will endure so long as its fundamental principles are properly observed and applied. It is the obligation of every citizen, particularly those of us in public life and of our patriotic societies, to constantly observe and participate in directing the trend of the times and the attitudes of those who possess the power to preserve or destroy that which has come to us out of the experience of the ages. "Eternal vigilance is the price of liberty."

Extension of the Social Security Act to Puerto Rico

EXTENSION OF REMARKS
OF
HON. SANTIAGO IGLESIAS
RESIDENT COMMISSIONER FROM PUERTO RICO
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 16, 1939

Mr. IGLESIAS. Mr. Speaker, during the last session of Congress I devoted a great deal of time and effort to have the Social Security Act extended to Puerto Rico. Unfortunately I was unsuccessful because of the desire on the part of Congress not to open the law to any amendment at that time.

Inasmuch as the Ways and Means Committee is now considering recommendations from the Social Security Board and from groups and organizations which are deeply interested in having the benefits under the act flow more freely and more generously to all American citizens who come within its scope, I want today to again renew my efforts on behalf of Puerto Rico.

Mr. Speaker, as Resident Commissioner for Puerto Rico, representing 1,800,000 loyal American citizens, I ask for my constituents the same consideration and the same treatment which Congress has already extended to American citizens in every other area in the United States, including the Territories of Alaska and Hawaii and the District of Columbia. To further deprive Puerto Rico of many of the benefits of the Social Security Act would be not only unjust but unfair to the million of American citizens who reside in the island.

Before taking up the specific titles of the Social Security Act which are most important to the people of Puerto Rico, I want to call the committee's attention to the fact that notwithstanding our limited financial resources, we have been deeply interested for many years in the health and welfare of our people, and that we have today a health department which compares most favorably with those of many of the States which lead in this field of work.

In order that this House may better understand the work that Puerto Rico has been doing in trying to improve the condition of her people, I would like to call your attention to the department of health appropriations for the fiscal year 1939, which are as follows:

Department of health

Office of commissioner of health:	
Office of the commissioner of health	$40,265.00
Insular board of health	5,212.25
Child welfare board	2,370.00
Division of property and accounts	22,895.00
Public health review	812.25
General expenses, department of health	80,097.79
Total, office commissioner of health	151,652.29
Division of public health:	
Bureau of epidemiology and vital statistics, central office	160,371.25
(Emergency fund for control and suppression of epidemics $10,000)	
Hospital for contagious diseases	25,289.00
Insular leper colony	31,786.00
Total, bureau of epidemiology and vital statistics	217,446.25
Bureau of general sanitary inspection, central office	15,630.00
Division of foods and drugs	15,570.00
Division of milk supplies	9,880.00

Department of health—Continued	
Division of public health—Continued.	
Bureau of general inspection of construction and plumbing	$11,970.00
General expenses	2,500.00
Total, bureau of general sanitary inspection	55,550.00
Bureau of sanitary engineering	88,725.00
Bureau of infant hygiene	29,476.75
(Additional authorization to match Federal grants for maternal and infant health service, $76,175.50.)	
Bureau of tuberculosis	13,245.00
Public-health units and other field personnel	463,266.75
(Additional authorization to match Federal grants for extending the services of the public-health units, $46,000.)	
Biology laboratory, San Juan	46,784.75
Auxiliary laboratory, Ponce	9,862.00
Auxiliary laboratory, Aguadilla	7,900.00
Chemical laboratory, department of health	24,840.00
Total, division of public health	957,096.50
Division of public welfare:	
Section of public welfare, central office	61,974.00
Bureau of social welfare	24,000.00
(Additional authorization to match Federal grants for aid to crippled children, $52,110.52.)	
(Additional authorization to match Federal grants for work in cooperation with the Federal Children's Bureau, $10,000.)	
Insular home for boys	84,195.20
Insular home for girls	70,575.50
Institute for blind children	25,746.00
Blind asylum for the indigent of Puerto Rico	33,082.00
District hospital, Ponce	43,842.00
Antitubercular sanatorium in Rio Piedras	152,849.50
Care of tuberculous patients, San Juan	10,619.00
Maintenance of tuberculosis hospitals under the control of the department of health	68,000.00
Insular insane asylum	238,350.50
Total, division of public welfare	813,233.70
Total, department of health	1,921,982.49

Mr. Speaker, on February 14, 1939, I introduced bill H. R. 4082, which is now before the Ways and Means Committee. The purpose of this bill is to extend titles I, V, VI, and X of the Social Security Act to Puerto Rico so as to enable the island government to extend its health and welfare activities through the Federal assistance and cooperation provided for under the Social Security Act.

Under title V of the Social Security Act the Secretary of Labor, through the Children's Bureau, is authorized to administer an annual appropriation of $8,150,000 for grants to States, which is apportioned as follows: (1) $3,800,000 for maternal- and child-health services; (2) $2,850,000 for services for crippled children; and (3) $1,500,000 for child-welfare services.

Miss Katherine F. Lenroot, Chief of the Children's Bureau, United States Department of Labor, states the primary purpose of the maternal- and child-health services to be as follows:

> The primary purpose of this portion of the Social Security Act is to extend and to strengthen services for mothers and children in rural areas, in areas suffering from severe economical distress, and among groups in special need. These are the people who have been hitherto and for the most part outside the reach of health and welfare services that have been more generally available in cities.

Miss Lenroot also explains that a uniform allotment of $20,000 is to be made to each State, plus an additional amount proportionate to the number of live births and to the financial need of the State.

In connection with this part of the Social Security Act, I wish to point out that the Department of Health of Puerto Rico is in the position to improve and to extend the maternal- and child-health services, child-welfare services thrcugh its bureau of infant hygiene. The standard of this bureau has been approved by the Children's Bureau, and the island bureau is so organized as to be in a position to comply with any anticipated future requirements. In connection with maternal and child-health and welfare services, and in anticipation of my bill being approved by Congress, the insular government has already authorized the expenditure of $76,175.50 to match the Federal grants under parts 1 and 2 of title 5.

With reference to that portion of the social-security program which relates to child-welfare services, Miss Lenroot makes the following statement:

> The appropriation of $1,500,000 for child welfare, to be allotted $10,000 to each State and the remainder on the basis of rural population, is made available for the purpose of cooperating with State public-welfare agencies in establishing, extending, and strengthening, especially in predominantly rural areas, public-welfare services for the protection and care of homeless, dependent, and neglected children and children in danger of becoming delinquent. These grants are to be used for payment of part of the cost of district, county, or other local child-welfare services in areas predominantly rural, for developing State services, and for the encouragement and furthering of community child-welfare organizations in rural areas and in areas which have a special need for this type of work.

The Bureau of Social Welfare of the Department of Puerto Rico has been engaged in child-welfare work for some time. Although it has been somewhat handicapped because of financial limitations, it is sufficiently well organized to be able to extend these services without any serious change in its present organization. All that is needed is additional field personnel to aid the specialists now in charge. In preparation for extending child-welfare work, and in order to match the Federal grant, the insular government has authorized the expenditure of $10,000. The insular government has also authorized the expenditure of $52,110.50 in order to match the Federal grant for aid to crippled children, which services are also administered by the bureau of social welfare.

Title VI of the Social Security Act provides for a comprehensive Nation-wide health program through an annual appropriation of not more than $8,000,000. This appropriation is to be allotted to the several States and Territories by the Surgeon General of the United States Public Health Service. In order to participate in the plan, it is understood that the States and/or Territorial organizations must have a health department which complies with the following requirements: (1) A qualified full-time State or Territorial health officer; (2) an acceptable vital-statistics service; (3) an acceptable State public-health laboratory service; (4) adequate service for study, promotion, and supervision of maternal and child health; (5) adequate services for study, promotion, and guidance of local activities, for control of preventable diseases, and for health promotion; and (6) services for study, promotion, and supervision of environmental sanitation.

Furthermore, the following conditions are required for participation of a local State service through the State or Territorial organization: First, the public health service of the city, county, or district should be under the direction of a full-time health officer; second, the personnel of the city, county, or district health department should include, in addition to the full-time health officer, such medical assistants as public-health nurses and sanitary officers or clerks as will insure at least the minimum of effective health service commensurate with the population and health problem of the area concerned.

In connection with this title of the Social Security Act I want to call the House's attention to the fact that Puerto Rico is now engaged in an extensive public-health program. Her appropriations for the fiscal year ending June 30, 1939, for health work amounts to more than $1,100,000. There can be no question but that her department of health is sufficiently well organized and equipped to carry on the work contemplated under this title and to cooperate with the United States Public Health Service. My purpose in asking that the benefits of this title be extended to Puerto Rico is so that we may improve and expand the work now being done by insular departments of health. The island government has authorized the expenditure of $46,000 to carry out this part of the Federal health program.

Mr. Speaker, while our problem of old-age assistance is not a serious one, nevertheless we feel that the time has come when we must take care of persons who have reached the age when they can no longer engage in useful employment. On

May 15 of last year the insular government approved legislation creating a commission for old-age assistance and creating a special fund to assist them. While the returns under this act are not yet sufficient to match the Federal grant under title I, we nevertheless desire that this title be now extended to Puerto Rico so that we will be in a position to give old-age assistance as soon as the island treasury permits it. To postpone action at this time would only mean that we would have to wait so much longer once our financial position will enable us to match the Federal grant. I therefore urge that favorable consideration be given to Puerto Rico with respect to this title.

Title X of the Social Security Act provides for grants to the States and Territories for aid to the blind. For many years the insular department of health has done extensive work in the care, treatment, and education of the blind. As I have already explained, the annual expenditures for this purpose amount to more than $48,000. With the aid of the Federal grants Puerto Rico will be in a stronger and better position to help out these poor unfortunates who in most cases are practically helpless and in need of care, treatment, assistance, and training. The extension of this title of the act to Puerto Rico will be a blessing to hundreds of blind persons who are now receiving but little of the help and assistance which they need so badly.

Mr. Speaker, it is not the purpose of my short talk to outline all of the work of the insular department of health. I have briefly taken up only those activities which have a definite relationship to the Social Security Act. From my statements you will agree that the Department of Health of Puerto Rico is a well-organized branch of the insular government, that it has carefully provided for the health and welfare of the people of Puerto Rico in the past, and that it is in a position to comply with the provisions of the Social Security Act. Besides it is in a position to furnish all the skilled personnel necessary to administer the additional funds which will become available under the several titles of the Social Security Act. The effective work done by the department of health in the past is a sufficient guaranty that its high standards will be maintained with the additional funds which she will receive from the Federal Government. As to the need for expanding the health and welfare work in Puerto Rico, there can be no question, and the Federal grant which Puerto Rico will receive from the Federal Government will put her in a position to further expand her work in this field.

I sincerely trust that the House will give favorable consideration to my bill, H. R. 4082, when the social-security bill be favorably reported.

AUTHORITIES AND PERSONALITIES FAVORING THE EXTENSION OF THE SOCIAL SECURITY LAW TO PUERTO RICO

EXCERPTS FROM LETTERS

President Roosevelt has said that his attention has been called to the omission of Puerto Rico from the provisions of H. R. 7260, although Alaska, Hawaii, and the District of Columbia are included.

I very much regret this omission. However, you will be interested to know that as soon as the original draft of the bill was prepared, the Division of Territories and Island Possessions of the Department of the Interior took up this matter with solicitors of the Department and is submitting an amendment which, if adopted, will rectify this situation insofar as Puerto Rico is concerned.

The president of the American Federation of Labor, Mr. William Green, stated in a letter to Mr. ROBERT L. DOUGHTON, chairman of the Ways and Means Committee, "that he wishes very much that the provisions of the social-security legislation recommended by the Ways and Means Committee would be extended to the people of Puerto Rico."

The House Resolution 4120, as originally introduced, provided that "As used in this title the term 'State' shall include Alaska, Hawaii, Puerto Rico, and the District of Columbia." I understand that the social-security measure as recommended by your committee does not include the Territory of Puerto Rico in its definition of the United States, notwithstanding that its provisions are extended to Alaska, Hawaii, and the District of Columbia.

There does not seem to be any good reason why the people of Puerto Rico should be excluded from the benefits of the social-justice provisions of this legislation herein referred to. May I ask, in the name of labor and of the organization of labor in Puerto Rico, that you favor the inclusion of Puerto Rico in the provisions of the social-security legislation recommended for enactment by the House Ways and Means Committee.

Hon. Harold L. Ickes, Secretary of the Interior, in a letter to Hon. MILLARD E. TYDINGS, enclosed a draft of a proposed amendment to H. R. 7260, the social-security bill.

The amendment related to titles I, IV, V, and VI, dealing with grants for old-age assistance, aid to dependent children, maternal and child welfare, and public-health work. The bill in its present form provides for grants for these purposes to the States, the District of Columbia, Alaska, and Hawaii, but not to the insular possessions. The proposed amendment would extend the definition of the term "State," where used in those titles to include Puerto Rico and the Virgin Islands.

The need for aid of this sort in those possessions is at least as great as in the States and Territories. It is demonstrable by figures that in the case of Puerto Rico actual need per capita is very much greater than in any State of the Union. Puerto Rico has suffered particularly from legislation designed to benefit the American people as a whole to the cost of which Puerto Rico has contributed, but the benefits of which were not applicable to its citizens. There seems to be no just reason for discriminating against these possessions. Indeed, because of their lack of representation in Congress, it seems to me that we should be particularly solicitous that they do suffer economically through their lesser political status.

In the original economic security bill—H. R. 4120—Puerto Rico was included among the States entitled to grants under the titles corresponding to titles I, IV, and V. In the present bill—H. R. 7260—Puerto Rico has been excluded and the amounts authorized to be appropriated have been somewhat reduced. The proposed amendment would restore the amounts authorized to be appropriated in those titles in the original bill, in order to make some provision for the needs of the island possessions.

I am advised by Mr. A. J. Altmeyer, Second Assistant Secretary of Labor, on behalf of Miss Perkins, the chairman of the President's Committee on Economic Security, that "the Committee on Economic Security has never given specific consideration to the question of whether the security legislation should cover the Territories and possessions of the United States," and that he believes, therefore, that I am free to make such recommendations on this subject as I deem proper.

In view of the urgent need for aid of this sort, so essential to social security in these possessions, I strongly recommend that this amendment be given favorable consideration.

The bill to which I am referring is as follows:

Be it enacted, etc., That subsection (a) of section 1101 of the Social Security Act, approved August 14, 1935, is hereby amended to read as follows:

"SEC. 1101. (a) When used in this act—

"(1) The term 'State' (except when used in titles V and VI) includes Alaska, Hawaii, and the District of Columbia. When used in titles V and VI (except when used in section 531) it includes Alaska, Hawaii, Puerto Rico, and the District of Columbia. When used in section 531 it includes Hawaii.

"(2) The term 'United States' when used in a geographical sense (except when used in titles V and VI) means the States, Alaska, Hawaii, and the District of Columbia. When used in titles V and VI it means the States, Alaska, Hawaii, Puerto Rico, and the District of Columbia.

"(3) The term 'person' means an individual, a trust or estate, a partnership, or a corporation.

"(4) The term 'corporation' includes associations, joint-stock companies, and insurance companies.

"(5) The term 'shareholder' includes a member in an association, joint-stock company, or insurance company.

"(6) The term 'employee' includes an officer of a corporation."

The Enslavement of American Authors and Composers by Unfair Copyright Legislation

---

EXTENSION OF REMARKS

OF

HON. WILLIAM I. SIROVICH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1939

ADDRESS BY HON. WILLIAM I. SIROVICH, OF NEW YORK, IN THE HOUSE OF REPRESENTATIVES, MARCH 3, 1936

Mr. SIROVICH. Mr. Speaker, under leave granted me to extend my remarks in the CONGRESSIONAL RECORD, I include

the following speech which I delivered in the House of Representatives on March 3, 1936:

Mr. BLANTON. Mr. Chairman, I yield 40 minutes to the gentleman from New York [Mr. SIROVICH].

Mr. SIROVICH. Mr. Chairman, ladies and gentlemen of the Committee, the subject of copyright is one of the most intricate and complicated problems that confronts the Members of Congress today.

In the time allotted to me I shall endeavor to trace the history of copyright legislation so that any Member of Congress may be in a position to comprehend all the complexities and ramifications involved in this extremely technical subject.

Mr. Chairman, you may search through the writings of ancient and medieval times and not find a word indicative of any right possessed by the author of a book to control the multiplication of copies.

During the Dark Ages of civilization all books were written by hand with colored initial illumination, sometimes taking years to produce one book. This method made it difficult and expensive to multiply copies. In the year 1454 Guttenberg invented the movable type of printing, which made the multiplication of copies extremely easy and brought the printed text within the reach of all the people of Europe. It was this great invention, accidentally discovered, that brought about the Renaissance of literature and made it possible for learning, culture, and education to be disseminated amongst the peoples of the world.

In the year 1533 King Henry VIII requested the Pope to grant him a divorce from his wife, Anne Boleyn. Clement the Seventh, the supreme pontiff of the Catholic Church, refused to grant his request. Henry VIII severed all spiritual relationships with the Catholic Church and founded the religious reformation in England and named the Archbishop of Canterbury the supreme power in all ecclesiastical matters of Great Britain.

In order to control the publication of pamphlets opposing his action in regard to the differences between himself and the Pope of Rome, Henry VIII, King of England, issued special exclusive licenses to 20 printers of his kingdom, granting them a monopoly to print such books as passed his censorship. The shrewd Henry required all printers to serve an apprenticeship of 7 years, thus assuming control of the printing craft from all angles.

After the death of Henry VIII in 1547, up to the year 1776, an acrimonious controversy raged between printers, booksellers, and lawyers as to whether the right to multiply copies of their books was a privilege or an inherent property right. The courts finally decided this function to be a property right.

During the subsequent reigns of Elizabeth, James I, Charles I, the protectorship of Cromwell, the reigns of Charles II, James II, William and Mary, up to Anne, the controversy raged without abatement. In Anne's time Scottish printers were flooding the English market with their piratical publications, underselling the English printers in their own land. The English publishers appealed to Parliament for relief, and Dean Swift is reputed to have drawn the so-called Statute of Anne granting the English publishers protection against the infringement of the Scots. This act was probably the first copyright law ever enacted in the history of the civilized nations of the world.

The tragedy of the Queen Anne statute was that it placed copyright in the name of the publisher instead of the author. This made the author the intellectual slave of the publisher, and this grievous error has been perpetrated in every copyright law of our Nation up to the present time.

The Queen Anne statute provided that the person breaking that law should be fined a penny a page, one-half the fine to go to the Crown and the other half to the printer or bookseller whose rights had been infringed.

The Queen Anne statute further provided that if a bookseller charged too high a price for the publications he sold, on complaint before named officials he was haled before the bench and fined 5 pounds sterling, and Anne got half of that. Books in Latin, Greek, or other foreign languages were exempted from the effects of the statute of Anne.

George I and George II reigned and passed on. Under the regime of George III revolution broke out in the American Colonies of Great Britain, and culminated in the establishment of a new nation. The colonies, and later the States, had passed separate copyright laws, which were limited to their own territories. Connecticut led off and New York was last. Delaware never passed a copyright act. To the Second Continental Congress were submitted a series of petitions for a clarification of the various State copyright laws. These petitions were turned over to a committee of Congress composed of Madison, Williamson, and Izard. Congress took action in a resolution dated May 2, 1783, which read:

"*Resolved*, That it be recommended to the several States, to secure to the authors or publishers of any new books not hitherto printed, being citizens of the United States, and to their executors, administrators, and assigns, the copyright of such books for a certain time not less than 14 years from the first publication; and to secure to the said authors, if they shall survive the term first mentioned, and to their executors, administrators, and assigns, the copyright of such books for another term of time not less than 14 years, such copy or exclusive right of printing, publishing, or vending the same, to be secured to the original authors or publishers, their executors, administrators, and assigns, by such laws and under such restrictions as the several States may deem proper."

When the Constitution of the United States was drawn there was much discussion as to how the accepted rights of authors and inventors should be protected; and finally, under the inspiring influence of the leading author, inventor, and scientist of the United States, Benjamin Franklin, who was a member of the Constitutional Convention in 1787, Pickney, of South Carolina, moved the adoption of article I, section 8, paragraph 8, of the Constitution, which states:

"Congress shall have the power * * * to promote the progress of science and useful arts by securing for limited times to authors and inventors the exclusive right to their respective writings and discoveries."

The First Congress under the Constitution, in its second session, on May 31, 1790, passed the original Copyright Act of the United States. This act was a digest of the basic elements of the Copyright Act of Great Britain and the copyright acts of the various States. The phrase "sole right and liberty" of the Copyright Statute of Anne was used twice in reference to the first term of 14 years and "exclusive right" of the Constitution for the second term of 14 years.

The Copyright Act of 1790 applied to maps, charts, and books. The new immigrants needed maps to indicate the routes they might take toward the free land in the new country; charts to show the water routes; copyright on books to protect the future development of American authors, since there were few American authors at that time. The majority of the immigrant families had only two books, Shakespeare and the Bible. It might interest my distinguished colleagues in the House to know that the first American history written by an American over 200 years ago was the work of Cadwallader Colden, of colonial days. Cadwallader Colden was one of the forebears of Congressman CHARLES J. COLDEN, of California, a member of the Committee on Patents. The title of the work was "A History of the Five Tribes" and was written for the purpose of arousing the sympathies of the English people to protect the New York colonies engaged in the fur trade of New York and the Great Lakes against the encroachments of the French fur traders who operated from Montreal. Judge Charles S. Colden, of Queens, N. Y., and other Coldens are descendants of this early pioneer, historian, botanist, scientist, and Lieutenant Governor of New York. The Copyright Act of 1790 lasted, unamended, until April 1802, when the benefits of the first act were extended to the arts of designing, engraving, and etching historical and other prints. In 1819 an act was passed by the Congress extending the jurisdiction of the Federal circuit courts in law and equity to original cognizance of suits, actions, controversies, and cases "arising under any law of the United States, granting or confirming to authors or inventors the exclusive right to their respective writings, inventions, and discoveries."

Note the use of the words "granting" and "confirming." In the Constitution the word used is "securing."

In 1831 an act was passed by Congress "to amend the several acts respecting copyright." Between that time and the present, 26 amendments of the law on copyright have passed Congress. Copyright to dramatic productions was accomplished by the act of 1856, which encouraged and protected the latent capacities of potential dramatists of that time and the future, and to photographs by the act of 1865, due mainly to the extraordinary photographic work of the famous Brady. The Copyright Acts of 1870, 1874, 1891, 1897, and 1909 were of major importance, particularly the Copyright Acts of 1871, 1897, and 1909, in which was inserted the manufacturing clauses, which compelled books in English to be printed in the United States whether written by Americans or foreigners, thus protecting the American printing industry and printers from the importation of foreign books printed in English and manufactured abroad by European cheap labor; only under these conditions would American copyright be granted.

From 1909 up to the present time, 1936, a period of 27 years, no important amendments have been passed by Congress that change the basic elements of the copyright law. Revolutionary developments in communications, such as radio broadcasting, wired wireless, and the application of the spoken word or dialog to motion pictures have brought entirely new phases to the transfer of thoughts from the author to the auditor. To these accomplished facts must be added television, which, although just out of the research laboratory, has progressed far enough to competent observers to be ready for public performance reaching into every household in the country, challenging the future stability of radio, motion pictures, theaters, newspapers, magazines, periodicals, and publications.

All of these methods of communication far removed from type, lithography, or the later methods, require protection, and that protection can only be given through the copyright bill that I have introduced in Congress.

For 225 years, from 1709 to 1936, the author, the creator of intellectual offspring, has been demanding the right to copyright in his own name instead of the name of the stepfather—the publisher. The copyright bill that I have introduced in the House of Representatives, H. R. 11420, emancipates the author from his bondage to the publisher and releases him from intellectual peonage. For the first time in the history of our Nation copyright is granted to the author in my copyright bill.

Everyone, including the publishers, now seem agreed that, starting with the author as the copyright owner, all rights, titles, and interest derived in any part of his work will be clearer, better protected, and more easily traced. Let us shatter the millstone that has been hung around the neck of the author since the time of Henry VIII, due to Henry's sinister intention to control free

print by monopolies granted to publications. In patents, the letters patent is granted to the inventor and not to the manufacturer. Then, why should not the author be given the same right to have copyright in his own name as the inventor has letters patent in his own name? Why make flesh out of the inventor and fish out of the author?

Under the provisions of my bill the author can never lose copyright except by his own act, either by assignment through sale or by granting a license to print. Under my bill the author has the right to the divisibility of copyright. That means that every author has complete legal right to convey any and all privileges to licensees. As an illustration of this provision, the author of a novel may legally license the serial rights to a magazine, book rights to a book publisher, theatrical rights to a manager, motion-picture rights to a producer, and radio rights to a broadcaster. My bill further protects the licensee to the same extent as the present act protects the copyright proprietor. Without looking to anybody else, the licensee has the absolute legal right to enforce and protect his license. This again makes for clarity of titles, and clarity of title is as essential to the author as it is to the licensee.

My bill protects the innocent infringer. The present law, except in the case of certain infringements by motion-picture producers, takes no account of innocence in infringement. My bill takes account of innocence; for instance, innocent printers who act merely to print a work and have no other interest in it are subject only to injunctions against future printings.

Aside from these specific instances, all innocent infringers are treated alike under the provisions of my bill, and are protected by provisions which limit the amount of recovery and the character of the remedy when the infringement is innocently performed.

The Sirovich copyright bill provides a single term of 56 years in place of the present dual terms of 28 years. I believe the long single term to be better for the author than two split terms. Once his or her copyright is granted, it is granted for the full term and no further attention by the author is required to protect his rights under the grant.

In European nations which are signatories to the Bern Convention, which convention was created for the protection of literary and artistic works, no formalities whatever are necessary to secure copyright. In our country for a period of 146 years we required registration, notice, and publication. The author is required to place upon his work a copyright notice and to register his work in the Copyright Office in Washington and deposit copies of his work with the Register of Copyrights. The European method of copyright is known as the automatic copyright, because no formalities whatsoever are required. In America we demand registration notices and publication, in order that everyone may know the names of the author, the publisher, and the fact that the work has been copyrighted.

To my mind, the automatic copyright method, which is the European system, is a most dangerous one. It is conducive to countless suits of infringement and rackets, which would bring chaos and confusion to the author and publisher. The American system is simple and well understod by authors and publishers, and has worked to the satisfaction of the American people, as is evidenced by the fact that only about 800 suits for infringement of copyright have been brought in the last 100 years, most of these in the last decade.

If Congress adopts the European method of copyright, as set forth in the Bern Convention, while most of the nations of Europe are under the absolute dominance of dictators, where freedom of press, freedom of speech, freedom of action, and freedom to worship God is denied to the inhabitants of these countries, and the works of the greatest scholars are being burned in the fires of bigotry, America will be false to the democratic traditions embodied in the Declaration of Independence and concentrated in the Constitution of the United States of America. [Applause.]

If the United States of America declines, through legislative action, to enter the Bern Convention, my bill endows the President of the United States of America, if he should find in any foreign country any prohibitions or limitations of any sort detrimental to American copyright holders, with power to apply to those countries the same prohibitions or limitations that they have applied to American citizens and such additional measures as he may deem appropriate. The President, by proclamation, may fix the methods by which aliens can obtain copyright in the United States of America and the President may revoke any retaliatory proclamation against a foreign country when such country has removed the causes that led to such retaliation.

Mr. Chairman, ladies, and gentlemen of the committee, in order to indicate the significance of the Bern Convention, let me give you the history of the formation of this so-called intellectual league of nations.

In 1878 an international literary and artistic society was formed in Paris under the presidency of Victor Hugo, with the purpose in view of extending copyright protection beyond national frontiers. It held annual meetings in various European capitals.

The project of a general convention for world-wide copyright protection and the formation of an international copyright union was advanced at the meeting of 1882; the Swiss Government issued invitations to an official conference, which was convened in 1884 and followed by a larger one in 1885, the latter including a consultative delegate from the United States.

This original Bern Convention creating an international union for the protection of literary and artistic works was ratified and entered into force in 1887. By its terms the contracting States were "constituted into a union for the protection of the rights of authors over their literary and artistic works." Authors in one of the countries of the union were to enjoy in the others the rights which the respective national laws granted or might subsequently grant to natives, such enjoyment to be "subject to the accomplishment of the conditions and formalities prescribed by the law of the country of origin of the work." The term of enjoyment in other countries could not exceed the term granted in the country of origin.

Thus the keynote of the convention was the national treatment of literary and artistic property, provided the owner had complied with the requirements of the law of copyright in his own country or the country where he first published his copyrightable work.

The convention was applicable to all such works, which, when it came into force, had not fallen into the public domain of the country of origin. The countries parties to it were, however, left free to regulate the manner of application of this principle, each by its own domestic legislation.

The union was provided with an international office or bureau, charged with the collection and publication of useful information and preparation for subsequent conferences, contemplated in order that the convention might be periodically revised and amended.

The first such revision took place through the signature at Paris, May 4, 1896, of an additional act and declaration which undertook to clarify certain of the articles of the convention of 1886 and to increase its protective influence. An officer in the United States Diplomatic Service was designated to attend the conference at Paris.

A complete revision was prepared by a conference meeting at Berlin in 1908, at which an observer for the United States was present. The revised convention was signed on November 13.

The latest revision of the convention creating an international union for the protection of literary and artistic works took place at Rome in 1928. The revised instrument was signed June 2 on behalf of 33 countries. The delegates of the United States were not authorized to sign.

Compared with 1908, the developments of 1928 are few and unimportant. There are, however, three new articles and changes in half a dozen others. Protection of the author against mutilation of his work in such a way as to be prejudicial to his honor or his reputation, the term of copyright in the event of two or more collaborators, and the specified right of authors to control the use of their works in radio broadcasting, form the principal additions. The convention as revised in 1908 permitted adhering countries to substitute for any provision the corresponding provision of the original convention or the revision of 1896. As revised in 1928, such privilege was limited to certain stipulations regarding the translation of literary works.

The Rome revision entered into force August 1, 1931, among the countries which had deposited ratifications. Other countries remained members of the union by virtue of participation in an earlier form of the convention. Preparations for the next conference, to meet at Brussels in 1936, are in progress.

The international union is now composed of 45 countries. The office of the union remains at Bern and continues to exercise much the same functions as were stipulated for it in the beginning.

Mr. Chairman, ladies and gentlemen, revolutionary changes have taken place in these European countries, adherents to the Bern Convention. The constitution of many of these governments have been destroyed and an entirely new system of alleged government, in which force, terror, and other forms of coercion have been substituted for the forms of legislative control which were in operation in the early days of the Bern Convention. The situation today is vastly different throughout all Europe than it was when Victor Hugo first proposed his ideal solution for the protection of the artistic and literary creations of authors. Today, throughout these governments that have been made safe for dictators through the destruction of democracy, authors, composers, novelists, and poets have become the social, economic, and political derelicts upon the ocean of uncertainty. American newspapers, magazines, periodicals, publications, and books are not permitted to enter many of these countries controlled by dictators because their views are in conflict with the autocracy of the dictators who control these governments.

There is no means of enforcing any of the provisions of the Bern Convention. The Bern Convention, as revised at Rome, is a league of nations with reserve power to each of the signatory countries to apply sanctions. It is merely a league of nations applied to the literary and artistic creations. In theory it is intended to protect the authors of literary and artistic works (art. 1).

Article 4 of the convention as revised at Rome grants the following protection:

"(1) Authors who are nationals of any of the countries of the Union shall enjoy in countries other than the country of origin of the work, for their works, whether unpublished or first published in a country of the Union, the rights which the respective laws do now or may hereafter grant to natives, as well as the rights specially granted by the present convention."

The obvious purpose of this article is to prevent discrimination in one country against the copyrighted works of authors who are nationals of another country. If the convention prevented such discrimination, it would have accomplished the object of the International Union. Since the adoption of the convention as revised at Rome, however, the signatory powers have adopted one form of discrimination after another against the copyrighted works of nationals of other countries. This has been particularly true in the field of copyrighted motion pictures, but it also extends to other

fields of literary endeavor, such as newspapers, periodicals, books, and music.

The copyrighted works of nationals of other countries have been discriminated against in almost every country of the Union. Foreign nations have enacted a variety of oppressive and discriminatory regulations and special laws applying only to nonresidents, to harness the motion-picture industry, and to curtail the importation of American films. There are special regulations such as quotas, "kontingents", and other economic and legal restrictions under separate laws governing copyrighted works that hamper the free and unfettered distribution of American pictures abroad. There are oppressive taxes on royalties accruing from copyrighted works payable to nonresidents of such countries. There are importation duties, taxes, censorship laws, and blocked currency restrictions that tend to destroy our foreign market. Newspapers, periodicals, and magazines protected by copyright which do not print the news that some countries in which they circulate wish them to carry or whose editorial policies touch the national sensibilities of some of the countries, or which do not conform to the principles of the dictatorships ruling some of the nations are suppressed and banned from such countries.

Foreign nations are clamoring that we join the Bern Convention in order to eliminate the so-called manufacturing clause from existing copyright laws. This will enable some of them to successfully carry out their policy of "dumping" their printed works in the English language for circulation in cutthroat competition with American labor.

It has been the time-honored policy of this Nation, commencing with the Copyright Act of 1891, as a condition for granting copyright to foreign and native authors, to require them to manufacture their books in the United States. That is, each and every book in the English language copyrighted and circulated must be set to type, printed, and bound wholly within the United States. (Sec. 15 of the existing law.)

The genesis of the act was the exportation to the United States of cheaply made foreign editions of books in the English language intended for the American market. The Senate Committee on Foreign Relations in its report recommending, advising, and consenting to the adherence by the United States to the International Convention of the Copyright Union, as revised and signed at Rome on June 2, 1928 (to accompany Executive Report E, 73d Cong., 2d sess.), strongly recommends "the repeal of the manufacturing clause and the ratification by the United States of the Copyright Convention." The repeal of the manufacturing clause is a condition to this country's adhering to the Bern Convention. The purpose and object of the convention is to eliminate all formalities, conditions, and notices, in order to secure copyright protection in all countries adhering to the convention. The elimination of "the manufacturing clause" will mean the throwing out of employment of many persons engaged in the printing and bookbinding trades in the United States.

Wallace McClure, connected with the Department of State, in hearings before the Committee on Foreign Relations, United States Senate, Seventy-third Congress, second session, part 2 on Senate bill 1928, a bill to enable the United States to enter the International Copyright Union, testified on May 28, 1934:

"There were in 1931 a total of 254,461 wage earners in the printing and publishing trades, of whom 134,302 were in the book printing and publishing trades.

"For the year 1929 the corresponding figures were, for the printing and publishing trades as a whole, 289,119, and in the book publishing and printing trades alone, 150,649."

Mr. M. J. Flynn, representing the International Allied Printing Trades Association, in opposing the bill, testified (pp. 10, 12):

"The present copyright law calls for according copyrights to books that are printed and manufactured in the United States. This bill, without saying so, would repeal those provisions of the law. With 45 percent of the printing trades of this country unemployed at the present time, we cannot very well see our way clear to going along with a policy which may further increase that unemployment. * * * We do not believe, with conditions as they exist today, that we ought to add further to the unemployment at a time when the country is spending its utmost in an attempt to get people back into industry.

He further testified that tariff duties do not meet the situation and do not afford complete and adequate protection to American labor because of the many devices resorted to by foreign exporters to circumvent and defeat tariff regulations (p. 12).

William Green, president of the American Federation of Labor, declared on February 6, 1936:

"The federation estimate shows 11,401,000 out of work in December (1935) * * *. The vast majority have no assurance of anything but continued joblessness and dependence on relief and Government work projects. (New York Times, February 7, 1936.)"

The "manufacturing clause" bars the United States from adhering to the Bern Convention.

In the hearings above mentioned, the following colloquy took place between Dr. McClure and Senator PITTMAN (p. 11):

"The CHAIRMAN. I would like to ask the representative of the State Department at this point whether the retention of the manufacturing provision of the present law as it relates to the printing provision, to which Mr. Flynn has directed attention, would in anywise conflict with the principle laid down in the treaty before us and recognized in the treaty? [for adherence to the Bern Convention].

"Mr. MCCLURE. I think it would; that is, the treaty itself, regardless of the act, would repeal that provision, should the treaty come into force, because the treaty would grant copyright regardless of whether the publication took place in the United States. Under the manufacturing clause we do not permit copyright in this country of books in English unless manufacture takes place here.

"The CHAIRMAN. It would not be in harmony, then, with the principle upon which this treaty has been negotiated?

"Mr. MCCLURE. It would not."

Thorvald Solberg, former Register of Copyrights, in his article on The Present Copyright Situation, 40 Yale Law Journal 184, says at page 203:

"The Copyright Act of 1891 brought into our legislation for the first time the requirement of American manufacture as a condition precedent to obtaining copyright in the United States. It was carried over into the act for the general revision of our copyright statutes of March 4, 1909, although that act released from the typesetting stipulation books of foreign origin printed in a language or languages other than English. This requirement is the principal obstacle which prevents the entry of the United States into the International Copyright Union, whose articles of convention provide that copyright protection shall not be conditioned upon compliance with any formalities."

During the debate on the Duffy bill, the manufacturing clause was offered by Senator Trammell and unanimously adopted as an amendment to the bill (CONGRESSIONAL RECORD, 74th Cong., pp. 12756, 12917), and is now section 11 of such bill.

The obvious purpose of the incorporation of the manufacturing clause in the bill was to protect labor. But this provision only lulls labor into a false sense of security. The amendment will fail of its purpose because its inclusion in the bill defeats the very purpose sought to be accomplished by the treaty; that is, to abolish all conditions, formalities, and notice in order for foreigners to secure United States copyright.

The following colloquy at the above-stated hearings shows the inconsistency between the Trammell amendment and the Bern Convention (p. 35):

"Mr. EDWIN P. KILROE. Dr. McClure, it is your contention that the ratification of this treaty by the Senate would supersede existing copyright laws, so far as the treaty terms are concerned?

"Mr. MCCLURE. That is the belief; yes, sir. * * *

"Mr. KILROE. Is it your contention that if the Senate ratifies this treaty foreign authors get automatic copyright in the United States without any formality?

"Mr. MCCLURE. If this treaty should go into effect by adherence, after the Senate has given consent to adherence, then automatic copyright would necessarily be a part of the law of the United States."

The social, political, and industrial conditions with cheap labor, cheap money, and modern machinery prevailing in some countries threaten not only American workingmen, but American industries dependent upon copyright material.

"Dumping" in the book trade has already become a menace. The New York Post (August 13, 1935) says:

"NAZIS PUSH BOOKS ABROAD

"BERLIN, August 13 (Havas).—The book-publishing industry today moved to encourage foreign sale of Reich books by offering a 25-percent discount abroad as compared with domestic prices. The difference will be made up to publishers under a book-dumping fund created by the Minister of Economy, Dr. Hjalmer Schacht."

The sponsors of the Duffy bill contend that adherence to the Rome Convention will materially benefit American authors, and will protect our exports abroad of copyrighted material. The Senate report on the Duffy bill (report to accompany S. 3047), states:

"Partly because of the demand for American motion pictures, growing out of their technical perfection, but also because of the inherent literary and musical worth of American fiction, songs, and drama, the United States has become a great exporter of copyrighted works, which contribute measurably to the wealth of the Nation. The problem of adequate protection of copyrighted works in other countries has, accordingly, assumed proportions never hitherto reached.

"* * * the protection to American exporters accorded by the treaty promises to stimulate the manufacture of books and so to increase employment in this country."

The much-proclaimed blessing that would flow to American industry dependent upon the use of copyright material by our adherence to the Rome convention is a snare and a delusion.

The treatment that has been accorded to such industries by some foreign nations is most conclusive proof that instead of promoting American industry it would further enable foreign governments to fetter, shackle, and put in strait jackets such industries and disable Congress from retaliatory laws, regulations, and restrictions.

N. D. Golden, chief, motion-picture section, Specialties-Motion Picture Division, United States Department of Commerce, in an article entitled "Film Outlook Abroad at the Turn of the Year", Film Daily Year Book, 1935, points out that American producers dominate the motion-picture screens of the world because of the international appeal of their product; that "the typical American feature is excellently suited to foreign markets because of its universally human qualities—whether of laughter or romance or sweeping dynamic power."

Says the Daily, London, January 1, 1936:

"America captured the world film market by a deliberate policy of internationalism. In Hollywood a man's art has mattered and his nationality has not.

* * * * * * * *

"* * * A good film is the flag with which a country tries to hold a territory which is more difficult to conquer than any land or sea; it is the territory of the heart. A good film achieves a great deal for the country whence it comes. Each good film is an ambassador of its country."

America's dominance of the world motion-picture market has contributed largely to discriminatory regulations, confiscatory taxes, excessive tariffs, unreasonable censorship demands, and special laws, which, while in form applying to all countries, have been in fact enacted to curb the United States as far as possible in this field. (New York Times, November 24, 1935; Hollywood Reporter, December 24, 1935.)

Mr. Golden states at page 1013:

"Film quotas and import restrictions still remain the bugaboo of American exporters of motion pictures. No less than 12 major countries have quota or contingent laws restricting or limiting the number of foreign motion pictures allowed to be shown during a given period, and another half dozen countries are clamoring for legislation which will adversely affect imports of American motion pictures."

Says Motion Picture Herald, November 2, 1935:

"The pressure to 'keep the home fires burning' and maintain a favorable balance of trade, expressing itself in drastic restrictions and regulations, is making it increasingly difficult for American film companies to do business abroad."

And in the November 23, 1935, issue, page 61, it is said:

"Behind this nationalism is the fight to keep foreign competition from swallowing the domestic markets and the press for international business. Since Americans are the heaviest exporters, with 60 percent of the world's playing time to their credit, the decrees place the brunt of the burden on the United States.

* * * * * * *

"ARTISTRY HAMPERED

"Artistic development of motion pictures is considerably hampered, too, by the objections to the filming of books and plays which may run afoul of national sensitiveness. * * *

* * * * * * *

"In addition to quotas, dubbing, and taxation regulations, European countries are quick to impose censorship on films which have a political tinge or are considered offensive to national customs and traditions.

* * * * * * *

"Quotas against American films are imposed by Germany, Great Britain, Italy, Austria, Hungary, Czechoslovakia, New South Wales, and New Zealand. France has no specific quotas with respect to American pictures, but foreign language films can be shown in only 5 theaters in Paris and 10 in the provinces. * * *

"Dubbing must be done locally in France, Italy, Germany, Austria, and Czechoslovakia, and those governments exact a dubbing fee ranging from 9,000 marks in Germany to 25,000 lira in Italy and 20,000 kronen in Czechoslovakia on each film. Besides there are import duties, censorship cost, distribution charges, and other taxes. No subtitles are permitted, such as are seen in foreign-language films in this country.

"Of 315 foreign pictures released in France in 1934, 224 were American. These figures clarify attempts to pass drastic decrees governing the film industry which would be so stringent as to drive American film companies out of France, imposing as they did a 30-percent quota requirement, forcing French theaters to show a minimum of that number of feature films made domestically, giving in return an advantage in taxes to exhibitors.

* * * * * * *

"European countries might regard our nominal footage duty on importations as a 'restriction,' but aside from this the United States is a wholly free and open market subject only to investment and entertainment values. The progress made by European distributing companies in this country is pointed to as evidence of that American policy."

Restrictions against the importation of American films into foreign countries have increased by introduction of quality in addition to quantity quotas.

In the past American producers have met local quota requirements either by producing pictures in foreign countries, or by purchasing local pictures for as low a price as possible so as to keep the additional cost at a minimum. This is no longer feasible, however, because of a "quality quota," under which the foreign producer may not satisfy quota requirements where the local picture acquired is held to be inferior:

"* * * on the ground that their artistic or photographic merit, or their appeal to the interest of the public generally, or their general quality, is not sufficient to warrant their being taken into account for the purposes of computing the distributor's quota or the exhibitor's quota * * *." (Australian Quota Act, 1935, sec. 3 (1) (g).)

The foreign producer is compelled to give up local production because there is no assurance that his pictures will come within the "quality quota." To satisfy quota requirements he is compelled to buy native product at a price that may be fixed by the Government (sec. 7 of Australian act).

To satisfy the exhibitor's quota, any exhibitor may reject foreign films (i. e., films which are neither British nor Australian) contracted for before the act was passed (sec. 8). He may also reject 25 percent of all such foreign films contracted for (sec. 9).

Foreign films imported and exhibited in the United States in 1933 totalled 113; in 1934 there were 147 and in 1935 the number increased to 190. Such importations for the past 2 years originated in the following countries (Variety, Jan. 1, 1936):

	1935	1934
German	59	59
Spanish	38	20
British	33	33
French	19	7
Russian	16	12
Hungarian	12	4
Swedish	5	4
Polish	3	4
Italian	3	1
Yiddish	1	3
Armenian	1	0
Total	190	147

The Daily (London, Jan. 1, 1936), recognizing the handicaps of American producers in foreign countries as contrasted with the equality of foreign and American producers in the United States, says:

"The foreign producer, having to pay an import duty to bring his negatives and prints into this country, finds himself the only element in business life which is then subject to another duty—the requirements of the Films Act.

* * * * * * *

"On the other hand, when the British producer—or, for that matter, the producer of any other country—sends his product to America, he is only asked to pay the customary import duty, thus allowing him a free market for the distribution of his pictures."

Foreign nations, by means of suppression and censorship of the press, books, and motion pictures, are seeking to interfere with our democratic process of free inquiry, discussion, and expression in respect of all matters of public interest.

Unlike other countries, we have no national censorship laws. In the States and municipalities where we have censorship, it does not interfere with freedom of speech. Our censorship laws are limited generally to prohibiting obscene, indecent, immoral, inhuman, and sacrilegious matter, or matter of such a character as tends to corrupt morals or incite to crime.

It is the duty of Congress to safeguard our free system from the strait-jacketing influences of alien doctrines of suppression and censorship. Congress can protect our citizenry by appropriate retaliatory amendments to our copyright law. Once we adhere to the Bern Convention, Congress surrenders that power.

INTELLECTUAL SANCTIONS

Notwithstanding the Bern Convention, Italy by way of reprisal has banned copyrighted newspapers, books, and motion pictures, and has forbidden performance of plays of the nationals of the powers that voted for the sanctions against it as the aggressor in the Italian-Ethiopian conflict.

Says the New York Times (December 10, 1935):

"BRITISH NEWSPAPERS BANNED

"Italy has inaugurated a policy of much greater severity toward newspapers that by unguarded comments on the Anglo-Italian and general European situations are deemed to increase rather than allay international tension. It was revealed today all British newspapers had been banned from Italy, with only four exceptions, including the Morning Post, Daily Express, Daily Mail, and Sunday Observer.

"The question is now being examined whether subscribers to banned newspapers shall be allowed to receive their copies. They have not been doing so hitherto.

"This ban on British newspapers is declared temporary, and it is said the advisability of repealing it will be examined every week.

"Replying to an inquiry, the Ministry of Press and Propaganda said there was at present no idea of repealing the ban against the New York Times on account of its editorial policy."

The New York Times of January 3, 1936, reports:

"ITALY ADMITS THE TIMES—LIFTS BAN ON NEWSPAPER—ENDS CURB ON CHICAGO TRIBUNE, TOO

"ROME, January 2.—The ban on the New York Times, applied last June, was officially lifted today and the Ministry of Home Affairs has been instructed to cease seizing copies that come in through the mails. The Chicago Tribune, banned at the same time, is also again permitted to enter the country.

"The initiative for today's action was attributed to Capt. Galeazzo Ciano, Minister of Press and Propaganda, who is in Rome on a brief leave from the Eritrean front. After having consulted the Italian Embassy in Washington he proposed to Premier Mussolini that the order be rescinded, and the Premier immediately agreed.

"Under a new policy the government will decide week by week on the strength of the editorials and the news each paper publishes which will be allowed to enter the country and which will not. It is understood all Italian diplomatic representatives abroad have been instructed to send their recommendations in this regard to the Ministry of Press and Propaganda."

There is a possibility that sanctions will be applied against American copyright owners if Congress forbids oil and other

articles capable of being used for war purposes to be exported to Italy under any new neutrality program. (New York Times, January 4, 1936.)

Gayda, editor of the Giornale d'Italia, unofficial press spokesman for Premeir Mussolini, opened the campaign of condemnation of President Roosevelt's stand on neutrality by the declaration (New York American, January 7, 1936)—

"Roosevelt's proposal (neutrality) would signify not only clear intervention by the United States in conflict against every principle of neutrality, but also their adherence to a League policy in direct submission to British policy."

Continues the New York American:

"Premier Mussolini's approval of the bitter attacks [against President Roosevelt] was seen by observers because the Government suppresses newspapers when it disapproves what they say."

Says the Hollywood Reporter, January 4, 1936:

"ITALY BAN HITS U. S. PIX—EDICT AGAINST ALL FILMS WITH BRITISH FLAVOR—PARAMOUNT'S "BENGAL LANCER" FIRST KILLED

"LONDON.—Many American pictures will be banned by Italy as a result of its newest edict on films, resulting from the League of Nations sanctions and the current friction with Great Britain.

"The newest order issued not only bans British-produced pictures but also any others which are of British nationalistic flavor, no matter where or by whom made. The first victim of the ban is Paramount's Lives of a Bengal Lancer.

"Film observers here say that the new ban will seriously hurt the American companies, so far as the Italian market is concerned, on account of the unusually large number of Hollywood films produced recently which extol British institutions and background and can be considered of a propaganda nature in the eyes of other countries.

"Some of the recent pictures which have not yet played Italy and which are predicted to fall under the ban are Mutiny on the Bounty, Captain Blood, Perfect Gentleman, and the two Dickens' pictures, David Copperfield and Tale of Two Cities.

"London film men look upon the situation as more serious than would be assumed on the surface, especially in view of the plans of American companies to come to England to make pictures for the European market."

RACIAL DISCRIMINATION—THE "ARYAN" DECREES

Germany, openly and notoriously in defiance of treaty obligations, discriminates against the literary, cultural, and scientific works, including drama, motion pictures, music, and the plastic arts of non-Aryans.

The ban on the public pursuit of a person's artistic or cultural activities has been made to apply to foreign non-Aryans. (New York Times, Feb. 2, 1936.)

The New York Post (January 16, 1936) reports:

"RACE BANS ALSO HIT ALL FOREIGN CITIZENS

* * * * * * *

"The Ministry of Propaganda has informed foreign consulates that the anti-Jewish laws apply to all Jews in Germany, including foreign nationals.

"The statement was made in reply to protests by the consulates to the ministry against an order requiring all Jews, German and foreign, to dispose of printing plants and publishing houses * * *."

"ULTIMATUM TO PUBLISHERS

"The Propaganda Ministry's order gave the publishers the alternative of either liquidating their businesses or selling them to Aryan citizens. The order hits a number of publishing houses of international reputation."

This destroys one of the fundamental rights granted under all copyright laws, namely, the right to publish and vend. American "non-Aryans" are barred from printing and selling their own copyright works in Germany.

To eliminate non-Aryans from the "intellectual and cultural life of Germany," foreign newspapers, books, music, and motion pictures have been barred from that country.

The New York American, January 30, 1936, states:

"Hans Frank, minister without portfolio, told the German Academy's economic counsel: 'We do not care what the world says about our Jewish legislation. * * * The Jew may do business in Germany unhampered, but he must under no circumstances deposit his intellectual excrements with us.'"

There is a law forbidding the publishing, selling, performing, or broadcasting of "Jewish music" no matter if it is Mendelssohn, Offenbach, or Gilbert, and in addition thereto there is a ban on "Negro jazz" (Variety, January 1, 1936). "Negro jazz" is essentially the creation of American composers.

The American-made pictures starring the American comedian Eddie Cantor—Whoopee, The Kid from Spain, and Roman Scandals—have been banned by the Nazi Government.

Concerning such bannings and wholesale censorship of American pictures abroad, the Hollywood Reporter of December 24, 1935, says:

"DEFY FOREIGN CENSORS—INDUSTRY UNITED ON STAND AGAINST EUROPEAN MEDDLERS; WILL APPLY OWN "SANCTIONS"

"The film industry is all set to take a firm and united stand against the foreign countries which have recently been making unreasonable censorship demands on American films.

"With bannings and wholesale censoring of pictures growing, the industry leaders, both here and in New York, realize the serious situation that will arise unless some means are taken to curb the practice. They have now reached a uniformity of mind not to knuckle down in future on any censorship demands that are at all unreasonable.

"Officials of the various companies, both in the distribution and producing ends, have tacitly agreed to make an issue of the next flagrant case that arises, with talk of withholding all American pictures from the particular country involved in the same way that the industry stood together in withdrawing films from Mexico over the recent tax squabble.

"The stand taken by Spain over the Paramount picture, the Devil Is a Woman, was the first indication to the industry of just how serious a country's dictatorial policy could be. This, in conjunction with the Turkish stand on M-G-M's Musa Dagh, the Italian attitude on Warner's Stiletto, and the French dictates on Paths of Glory has aroused the top industry executives to a point where they are ready to stand together as a unit and fight the next flagrant issue with a boycott of the country involved."

A number of the nations have entered into alliances for mutual reciprocal action on films claiming to offend national sensibilities. So that if one nation declares itself to be offended on whatever slight grounds, all other nations are bound to apply sanctions against the aggressor picture company. The situation is reviewed in Variety, January 1, 1931:

"INSULTS

"Spain became worried about censorship and 'insults' in films. Made alliances with Mexico, Nicaragua, and practically all the South American countries for mutual reciprocal action on films when 'affronted.' If any country anywhere makes a picture that any of the participant nations dislike, all of them mutually act against the offender. It's the first international film pact of the sort and affects all the Spanish-speaking countries of the world. Censorship was increasingly tough around the world but continued its curiously haphazard way, making decisions for producers difficult. Thus, a film which was banned in one spot was accepted with open arms in another. Hungary turned thumbs down on I Cover the Waterfront (UA), Caravan (Fox), Merry Widow (M-G). Madrid didn't like Don Juan (UA). Cuba objected to Rumba (Par.). China banned Bengal Lancer (Par.). Budapest also banned Whoopee (UA) and Rain (UA). Algeria banned Lancer. Sydney wouldn't let in G-Men (WB) or Let 'Em Have It (UA). Copenhagen nixed Little Miss Marker (Par.). Capetown refused Let 'Em Have It entrance. There were many more in many parts of the world.

"It all wound up in one big scrap over Devil Is a Woman (Paramount) which Spain resented to the point that it threatened Paramount with a ban from the country of all its products if this picture wasn't removed from the world market. Paramount held out until the last minute. This all broke heaviest as Major Herron (Hays office) was in France on the decree law trouble. He rushed to Madrid, but the matter couldn't be straightened out easily. Only way out was to give in, and Herron used the phone to convince Paramount in New York. Picture was withdrawn from the world market."

Some nations have been charged with using the power of censorship as a means of mutilating American pictures for no other purpose than to destroy their box-office value. Says the Hollywood Reporter (January 8, 1936):

"AUSSIE CENSORS CHARGED WITH KNIFING UNITED STATES FILMS—MALICIOUS CUTS TO HELP OWN INDUSTRY

"Increased evidence of foreign censors unreasonably cutting and eliminating American films in order to help their own picture industries has extended to Australia, according to producers. They notice a growing tendency there to mutilate American pictures since the Antipodes became active in building up its own film production.

"Australian censors, it is claimed, are following the procedure of some European censors in ordering cuts for which there can be no excuse on the grounds of morality, politics, or injury to national pride; and to which no reason can be ascribed other than a malicious intent to lessen a picture's box-office popularity.

"As a result of this growing tendency on the part of the censors of almost every country, it is no secret that the producers are growing more and more befuddled as just what will be or will not be accepted abroad. A check-up has shown that the same censors will allow one thing to be shown in one picture and yet delete it from another. This is proof to the American picture makers that censorship abroad is a hit-and-miss affair, almost wholly aimed at crippling American business.

"One of the most flagrant instances lately of alleged unreasonableness in censorship in Australia is reported on Alice Adams, a Radio picture that got a 100-percent clean bill here from the Hays office, yet which has been ordered severely cut in that country.

"Cuts were ordered in minor scenes, such as the moving of furniture around the room; Katherine Hepburn powdering her nose; Hepburn in a party dress; and other footage that had not the least sex implication or any connection with other legitimate reasons for deletion. One of the orders was to shorten certain dialogue between Hepburn and her leading man, a matter purely editorial and not within the legitimate scope of a censor."

These discriminations are of great concern to the American picture industry.

"Two years ago American films averaged 60 percent of their net from the foreign markets. At one time it was higher, some countries being as high as 75 percent." (Variety, January 1, 1936.)

But this has been badly cut by the various devices resorted to by foreign governments to restrict and curb American pictures.

These measures are very costly to American citizens because the cost of motion pictures varies from $15,000 to $2,000,000; for example, Mutiny on the Bounty. The average cost of producing a feature picture is $250,000 (U. S. Department of Commerce Reports in Motion Pictures Abroad, May 15, 1935).

The situation has been so critical that in some countries, notably Czechoslovakia and Mexico, American film companies withdrew from those markets.

GERMANY

Germany was the first country to adopt a quota law or "kontingent" (contingent licenses) directed against foreign films, particularly those coming from the United States. A German law of February 15, 1925, provided that no foreign films should be given a permit entitling them to be censored unless the importer agreed that it would distribute one German film of the same length as the foreign film for each foreign film imported.

As a result a traffic grew up in the purchase and sale of inferior German-made pictures which had no value, which were never distributed or exhibited but shelved. Their only use was to meet the "kontingent" requirement. These films could be bought for approximately $4,000—a sum really paid for the privilege of importing one foreign picture.

In addition to the purchase of a German picture to meet the "kontingent" picture requirement, a decree was issued in November 1934 by the Nazi government fixing the price of "Kontingent" licenses payable to the Government at RM20,000, effective immediately.

The Film Daily Year Book of 1935 states at page 1055:

"This price in effect places the German market for American films in the prohibitive class and may ultimately result in forcing a decision from the American companies either for a greater participation in domestic production, through producing themselves or distributing locally made products or shut up shop."

The Motion Picture Daily of November 13, 1934, carries the following article:

"New tax may mean United States to quit Berlin.

"Twenty thousand mark levy apt to prove last straw.

"Withdrawal of American companies from Germany is a strong probability unless a new tax of 20,000 marks (approximately $8,000) on all features sent into that country is reduced or made noneffective. * * *

"Several foreign managers were stunned by the news and at the outset refused to credit the information. While all of them declined to talk for publication, their remarks, made in private and independently of each other, hit it off in complete unanimity. Typical of the comment was:

" 'This looks like the last straw. This move appears to be a deliberate step to crowd us out of that market, which is O. K. with us. We can't get our money out of Berlin anyway, so what's the difference?'

"Universal some months ago disposed of its German business. Warners are virtually cut of the market, having been in the process of liquidation since the early days of the Hitler regime.

"* * * Fear was expressed that the Berlin decision may influence identical action on the part of neighboring nations, such as Austria and Hungary."

All but three of the American film companies have discontinued their branches in Germany.

The New York Times, February 2, 1936, states that the severe restrictions placed upon foreign films through contingent regulations admit not an inch more of the celluloid strip than is absolutely necessary to fill the gap left open by the realm's own industry.

With the introduction of sound and talking films, it became necessary for American film manufacturers to remove the sound track containing dialogue in English and to substitute a sound track containing dialogue in the language of the country into which the film was imported. In order to accomplish this substitution, it is necessary to have the speeches of all actors duplicated in the particular foreign language, so that the substituted sound track will coincide with the lip movements of the actors whose original speech was in English. This process of substitution is called "dubbing."

Since 1932 Germany has required that all dubbing of films into German must be done in Germany, and that only 50 percent of the number of permits issued for importation of films may be used for the release of such dubbed films in Germany.

Permits may be issued for foreign educational and cultural sound films only on the basis of a simultaneous distribution of twice the length of German educational and cultural sound films.

Before contracts are closed granting the right to exhibit foreign films to German exhibitors, the film must be once publicly shown in Germany. This provision does not apply to domestic German productions. (Sec. 4, decree of June 28, 1932.)

The law provides that import permits may be refused for films, the producers of which distribute on the world market, films whose tendency or effect is detrimental to German prestige. The same applies to films in which actors appear who have appeared in other films that were adjudged detrimental to Germany.

The effect of these restrictions on the exportation of American pictures to Germany is reflected in the following tabulation showing imports of films into Germany since 1926:

1926	229
1927	192
1928	205
1929	142
1930	97
1931	80
1932	43
1933	68
1934	37
1935 (8 months)	22

Even if a film is admitted into Germany, there is no guarantee that the film can be distributed. It must be first approved by the censor, who may reject the film at his whim or caprice. Under the guise of censorship many foreign films are kept out, notwithstanding the fact that the exporter has committed himself to the distribution of one German film for every foreign film imported and for which "Kontingent" he has paid $4,000.

According to the United States Bureau of Foreign and Domestic Commerce, the German censor approved films of the following origin for the first 8 months of the year 1934–35:

Feature films

Germany	87
United States	22
France	6
Austria	6
Czechoslovakia	5
England	3
Hungary	2
Denmark	1
Poland	1
Switzerland	1

In startling contrast with the German importations of 22 American pictures in 1935 are the importations of American films to other non-English-speaking countries for the same year:

	Total	American
Egypt	300	250
Greece	300	200
Palestine	200	150
Poland	600	300
Rumania	350	250
Yugoslavia	300	200

The requirement that foreign-made films are admitted into Germany against "kontingents" costing $4,000, together with the cost of "dubbing" and the cost of securing a permit to censor the film, coupled with the fact that there is no assurance that the film will be approved, is sufficient to keep all but a few very profitable American pictures out of Germany. These requirements make the importation of the average American picture unprofitable and prohibitive.

A film that has passed the censor may subsequently be barred under section 12 of the German film law of February 16, 1934, "in order to exclude from German film theaters all films which are not in harmony with the spirit of the new time" (Nazi regime). The law gives the Reich Minister for Culture and Propaganda the power to cancel any decision of the censorship bureau by ordering a reexamination of any film and prohibiting the exhibition of the film pending the new decision of the censor. Where a reexamination for the censor is ordered, the ultimate fate of the film is a foregone conclusion. Such fate was meted out to Eddie Cantor's picture The Kid From Spain.

Retroactive laws have been passed revoking all licenses for importations granted prior to January 30, 1933. The revocation of such importation licenses is made, notwithstanding the fact that the distributor has been compelled to pay the cost of acquiring a German film for each foreign film imported and to pay the cost of the censorship and "dubbing" in Germany.

All films admitted to Germany prior to January 30, 1933, must again be submitted to the censor, and a new fee paid, with a great likelihood that the film will be banned from Germany.

If a foreign (American) producer employs a non-Aryan writer, composer, director, or player for a picture for world-wide distribution and exhibition, he runs the risk of having the picture banned from Germany. The reason for this is given by the special deputy for supervising the cultural activities of non-Aryans, Hans Hinkl (Frankfurter Zeitung, August 11, 1935; Geistiges Eigentum, vol. 1, No. 3, p. 323):

"The question as to our attitude toward the foreign film, in which Jewish artists are employed, is very simple and can be answered without equivocation. In the first place, our measures for the elimination of the Jewish influence on our cultural and artistic life are entirely an internal German affair which is not to be confused with questions of international film economy; secondly, in a foreign country the Jews do not in intellectual and artistic

fields hide behind straw men because they may there express themselves openly and unhindered. On the contrary, if in other film-producing countries Jewish artists are employed, that is solely an internal affair of the respective countries."

Following out this view, the importer of a foreign film is required to furnish an affidavit to the German film censor listing each participant in the picture as to his being Aryan or non-Aryan—manifestly to assure the elimination of non-Aryans "from intellectual and cultural life."—New York Times, December 30, 1935.

"The most far-reaching measure to bend the cultural life of Germany to the purposes of an exclusive racialism was the establishment in September 22, 1933, of a Reich Chamber of Culture, with subdivisions devoted to literature, the press, broadcasting, the theater, music, and the plastic arts. * * * Exclusion from membership in the Chamber of Culture invoked a ban on the public pursuit of a person's artistic or cultural activities. * * * The Minister for Enlightenment and Propaganda ruled that non-Aryans were not entitled to admission to the Chamber, because non-Aryans did not possess the necessary reliability and capacity for cultural work (Annex, McDonald letter of resignation, p. 9)."

Manifestly having excluded its own from engaging in these pursuits, the Nazi government will not permit non-Aryans from other lands to disseminate in Germany their cultural, intellectual, and artistic works despite their copyrights.

The Motion Picture Daily (March 18, 1935) states:

"German censors do not permit the importation of German-language talkers made in Budapest [Hungary] into Germany, on the ground that too much non-Aryan talent is employed."

Dr. Kurt Zimmereimer, court assessor in Berlin, states—Geistiges Eigentum [copyright], May 1935, volume 1, pages 56, 69:

"Any film which represents concepts at variance with the fundamental doctrines of the nationalist-socialist movement as expressed, e. g., in the 25 points, in the programmatic speeches of the leader, and in the writings of Alfred Rosenberg, are held to offend against National Socialist concepts. Films have been held to offend where the principal characters are played by Jewish performers, whatever their nationality, and where these performers are portrayed as heroes of sports and moral victors or where German emigrants are employed as leading players."

Even after a film has been imported and approved by the censor and has met all other requirements, there is no chance of securing payment owing to foreign exchange restrictions, such as "blocked" marks, bartering, and other restrictions intended to prevent the exportation of German currency. American producers secure payment for films shown in Germany in marks, good only for the purchase of German-made goods.—New York Times, January 9, 1936, page 30. This results in "dumping."

"Dumping" has caused price disruptions, creating havoc in our domestic market and tending to break down our wage scales and our standards of living (New York American, February 10, 1936).

If our Government permits this practice, the United States will be swamped with German industrial products, sold necessarily at "dumping" prices, in competition with legitimate American industries, while the last ounce of financial advantage is being extracted by Germany from the large sums which American distributors must pay for the privilege of distributing their pictures in Germany.

This scheme was devised by Germany to assist German exports. If successfully pursued, other nations will follow the example.

An editorial in the New York Times of December 11, 1935, states:

"* * * No country in the world within the last few years has shown half as much ingenuity in devising new methods of blocking the free flow of world trade as Germany. She has taken the leadership in quotas, complicated "blocked" currency, bilateral dickering, and the requiring of special licenses to import. * * *

"* * * This drastic reduction of purchases from the United States was achieved by the German official policy of not permitting imports without special license.

"* * * All her ingenuity and lack of scruples in recent years in repudiating debts, rigidly controlling imports and subsidizing exports, have not helped her in creating an export excess."

The supreme court of Naumburg, Germany (January 5, 1935) held that a native of Germany need not pay an uncontested debt to a foreign non-Aryan, on the ground that it would result in taking money out of Germany and placing it in the hands of such foreign non-Aryan (New York Post, August 22, 1935). The decision reads:

"According to the actual purified conception of the law, a debtor is entitled to refuse execution of an obligation, even if that which is to be performed is neither contrary to law nor to morals, if it could be used, without cogent reason, for bringing parts of the national property, particularly immovables, into the hand of a non-Aryan foreigner and thereby deprive the national community."

Under this theory, any German could infringe at will the copyright of any non-Aryan American without making any payment for the piracy.

James G. McDonald, in resigning his League of Nations post as High Commissioner for Refugees Coming from Germany, pointed out this and similar decisions "explain why Jews and other 'non-Aryan' elements can no longer look to the law for protection of their elementary civil rights." (Annex accompanying letter of resignation, pp. 29–30.)

The term "non-Aryans" is not limited to Jews but is "a more comprehensive term which has disqualified numerous persons who are Christians and have had no relations with the Jewish community." (New York Times, December 30, 1935.) Of the treatment of non-Aryans by the German courts, Mr. McDonald states:

"This development of their function has been made possible through the avowed abolition by the Nationalist Socialist regime of the three cornerstones of judicial morality: Equality of all men before the law, independence of judges, and the doctrine that only those acts are to come under the prohibitions of the law for which the law specifically provides (the maxim, in criminal law, nullum crimen nulla poena sine lege).

"These fundamental guaranties of civilized justice have been rejected as non-German, 'non-Aryan,' and as Judeo-Roman in origin. * * *

"Under the new Nuremberg legislation, the courts are bound to apply as a fundamental law the principle of the inequality of race and blood as a decisive judicial rule in all cases brought before them. The rights of a German 'Aryan' citizen must, necessarily, be accorded the greatest weight in any judicial proceeding, and must be given precedence over those claimed by 'non-Aryan.'

"This method of administering justice is in conformity with the definition of the law given by Alfred Rosenberg, leader of the department of foreign affairs of the National Socialist Party: 'Law is what the "Aryan" man deems to be right; legal wrong is what he rejects.' The protection of the rights of the 'Aryan' against the 'non-Aryan' is, therefore, the principal purpose and function of the law and the courts. * * *

"On the basis of these declarations, it may be concluded that apart from any specific legal disabilities imposed by legislation, the judges of Germany are bound by law and by the terms of their office to regard "non-Aryan" as a dangerous and fundamentally criminal element, devoid of morality, biological and intellectual inferiors, and deserving of no protection for whatever civil or legal rights they may still dare to claim. * * *

"Whatever small minimal rights might still be claimed by Jews or non-Aryans, however strong the evidence presented, or clear the terms of the laws to which appeal was made, the courts of Germany have on racial grounds denied those rights, overlooked the evidence brought to sustain them, have, wherever possible, rendered the laws more harsh or have, wherever necessary, on their own authority filed the lacunae in the system of legislative discrimination."

What measure of redress can an American non-Aryan secure in the German courts against a German Aryan literary pirate? Of what earthly value is a copyright in a country where such shocking doctrines are practiced?

The German Government has excluded certain American, British, and other important newspapers from Germany, on the ground that at one time or another they carried news items or editorials not in harmony with Nazi doctrine and ideology.

Unless foreign non-German newspapers, books, and motion pictures are in sympathy with the Nazi doctrine and ideology and willingly goose-step to Nazi music, despite their copyrights, they are in danger of suppression in and exclusion from Germany.

The New York Post—December 24, 1935—reports the following penalties for importing foreign newspapers:

"Nuremberg: A 20-year-old Catholic was sentenced to 15 months' imprisonment for importing foreign newspapers.

"Cologne: A member of the Convent of St. Lazarus has been sentenced to 5 months' imprisonment for importing foreign newspapers."

Germany is notorious for ignoring treaty obligations. Says the New York Times, February 10, 1936, in article headed "Munich Cardinal Assails Nazi Press 'Lies' ":

"The cardinal declared it was time for responsible officials to see to it that the Government's (Germany) signature was honored."

He referred to the concordat with the Vatican.

SPAIN

The Premier announced the Government's intention of setting up a quota system for foreign films; exempting all domestic film activity from any class of tax, direct or indirect, and requiring each exhibitor to present a certain proportion of native films.—Motion Picture Herald, December 28, 1935.

In March 1934 a proposed bill was submitted to the Council of Ministers placing restrictions on the importation and distribution of foreign films and providing for a 5-percent quota on exhibitors which may be increased every 6 months; prohibiting foreign-language films in Spain 6 months after promulgation as a law; requiring that foreign films be dubbed in Spain with 90 percent Spanish personnel; and taxing first- and second-run theaters one-half centimo per meter on foreign films and subsequent-run theaters one-quarter centimo per meter on such films. The Minister of Industry and Commerce will be empowered to adopt such complementary measures as he deems convenient.

There is now a discriminatory turn-over tax against motion pictures produced in foreign countries. The tax on foreign pictures was 7½ percent as against the tax of 1½ percent on pictures produced in Spain. Commencing January 1, 1936, the tax on foreign pictures is reduced to 3 percent, while the tax on pictures produced in Spain remains 1½ percent.

All foreign exchange is controlled by the Spanish Government, and permits to export money are granted only as and when foreign currency is available.

Foreign companies must make application every week for permission to transfer money abroad. The delay in allocating foreign currency is very great and steadily increasing. The delay is now

more than 11 months, such delay increasing at the rate of about 3 weeks every 2 months.

Under a decree published in the Gaceta de Madrid on October 27, 1935, the Minister of the Interior of Spain has been authorized to prohibit the exhibition of all motion pictures produced by companies which within or outside of Spain distribute pictures which tend to misrepresent historical facts, or to impair the prestige of Spanish institutions or personalities.

Prior to the pronouncement of this edict, Spain had barred the American picture The Devil Is a Woman on the ground that an officer of the civil guard was shown drinking in a cafe. (See New York Times of November 24, 1935; Motion Picture Daily, November 1, 1935.)

Spain threatened to keep all Paramount pictures out of that country and to confiscate Paramount's prints unless The Devil Is a Woman was withdrawn from world circulation. Paramount was forced to withdraw the picture from world circulation and to destroy the master print because of the threat to ban all of its pictures from all Spanish-speaking countries, as well as from Spain, by reason of an agreement between such countries that if one Spanish-speaking country objects to a certain film, the producer company's product will be barred in the whole Spanish-speaking world.

The Motion Picture Herald (November 23, 1935, p. 61) reports:

"The Spanish Government issued an ultimatum threatening to confiscate all of Paramount's prints in that country and to bar the company's pictures from exhibition in Spain if the company refused to discontinue world circulation of the Marlene Dietrich picture and destroy the prints.

"The American State Department interceded and, taking cognizance of the official protests over the 'insults to the Spanish armed forces,' advised Adolph Zukor, Paramount chairman, 'to withdraw the film as soon as possible.' While the Madrid Government described the edict as 'very satisfactory,' it has advised its embassies throughout the world to observe the progress of the withdrawal of the film and to expedite it where possible.

"Paramount is taking steps immediately to comply with the demand and will negotiate individual settlements with exhibitor accounts who had the picture under contract but have not played it. The master print was burned last Thursday in the presence of the Spanish consul general in New York."

TURKEY

Turkey, following the example set by Spain, has threatened to bar the Metro-Goldwyn-Mayer picture, The Forty Days of Musa Dagh, which portrays Turkish maltreatment of Armenians during the Great War. The New York Times of November 24, 1935, says:

"The case of Musa Dagh is engaging us at the moment, and it may be the final protest that will set off the explosion and force the Government to take some action. * * * If Turkey does bar American films because Metro makes Musa Dagh, the loss in itself will be slight. But one film must be made an issue. The feeling in Hollywood is that this picture, which gives evidence of being one of the greatest the industry has made, should serve as the means of bringing the whole thing into the open. There is nothing objectionable in the script. It is pro-Armenian rather than anti-Turkish. The studio has done everything it can, without distorting history, to put the Turks in as favorable a light as possible. But it does present facts."

Martin Quigley, editor of the Motion Picture Herald says (Motion Picture Herald, December 7, 1935):

"This incident of The Forty Days of Musa Dagh brings into sharp focus an exceedingly difficult problem which confronts motion-picture producers. The very existence of the motion picture is dependent upon the picturization of suitable story material. Such material is exceedingly scarce. There are instances of stories which contain excellent dramatic situations which must be sacrificed because of lack of suitability for the general audiences which comprise the patronage of motion-picture theaters. There are other stories which are essentially acceptable but for which no suitable treatments are to be found. In Musa Dagh, however, the material is of right character and it is a story that readily lends itself to motion-picture treatment. In addition, it has been one of the famous best sellers of recent years. But the Turkish Government says 'no.'

"The objection of the Turkish Government is based on the fact that the story portrays Turkish persecution of the Armenian people—a historical fact which is about as plain as, say, the German invasion of Belgium in 1914. Yet the Turkish Government, brushing aside the plain facts of history, ignoring the essential truth of the story, simply introduces arbitrary objection to which, of course, is added at least an intimation of exerting the full measure of its influence against the producer in event the story is produced.

"In view of the negligible importance of the Turkish market and other markets directly influenced by Turkish authority, it would be easy for M-G-M to ignore the protest and proceed with the picture. But the complication does not end here. * * * Every foreign government which is friendly to Turkey might also accept Turkish representations and exclude the picture.

* * * * * * *

"It is not too much to say that if existing circumstances are allowed to go on indefinitely, it will not be long before the producer becomes so hemmed in in his selection of story material that the result will be a severe curtailment in the interest and entertainment value of the motion picture."

FRANCE

The Hollywood Reporter of November 14, 1935, says:

"WASHINGTON SEES FILMS AS FOREIGN-TREATY FOOTBALLS—FRANCE, TURKEY IN 'MUSA DAGH' PACT

* * * * * * *

"According to State Department representatives in Europe, the matter of harnessing American films now quite often figures in political agreements between countries. It is reported that in a recent trade and political treaty between Turkey and France the matter of the filming of Musa Dagh by M-G-M figured prominently to the extent where France is said to have agreed to ban the showing of such a picture in that country if it is made into a picture.

"MUSA DAGH TRADE

"Musa Dagh treats of Turkish atrocities on Armenians during the regime of a former Turkish Government, but in no way could give offense to France. If the picture is made and France should ban it as called for in the reported agreement it would be further proof to Washington that Hollywood-made films are to be used for bartering purposes in diplomatic negotiations between countries.

"Similar agreements as to films exist between Spain and Spanish-language countries in South and Central America. If any one of these countries should object to anything in a picture, then, according to treaties, the picture is subject to banning by all the countries."

Only 94 "dubbed" films may be shown in France for each 6-month period. All "dubbing" must be done in France, within a period of 4 months from the date the request to "dub" is made, coupled with the payment of the required tax. Foreign pictures cannot be exhibited in their original version except in 5 theaters in Paris and 10 in the rest of France.

When pictures are "dubbed," American copyrighted songs and musical scores must be eliminated and French musical scores and songs substituted.

It costs about $20,000 to launch a "dubbed" film even modestly, including "dubbing" and printing costs.

Although American citizens have invested huge sums in engaging French studios and French labor, there is no assurance against further restrictions and burdens that may force them to withdraw from France.

In 1934 the duty on foreign films was increased 100 percent.

A decree formulated in 1935 required foreign producers of film to send to France a complete version of the film as made in the United States in English. Changes are often made here after a picture is completed and oftentimes after its first public showing. Notwithstanding such changes, the complete film would have to be imported into France, only to have further changes made there. The decree would require all "dubbed" pictures to bear all the original English titles, together with an exact translation into French. Exact translations, especially of idioms or colloquialisms, often make little or no sense in a foreign tongue. This requirement can have no other object than to handicap films of foreign origin.

This decree also provided for the exclusion of all pictures of any producer, actor, or author who at any time or in any place might publish, write, or produce anything that might be regarded as contrary to French national interests.

Article 36 of the decree would prohibit American as well as other foreign producers from distributing their own films in France.

Articles 39 and 40 of the decree required that 30 percent of all films exhibited must be made in France by French producers, actors, and authors.

The decree was finally held in abeyance, but there is now a movement to revive it.

The Film Daily of September 24, 1935, reports the temporary demise of this decree, as follows:

"Last week they nearly pulled a fast one in France. A bill was hurried through and on the verge of signature that would have practically closed the industry to American product."

The Motion Picture Herald (November 30, 1935) points out the possibility of the danger of the new decree, as follows:

"While the Government has permitted the decree for regulation of the industry to die, by refusing to give its approval, the menace has not been permanently removed. A law for governmental control will be proposed when the new Parliament comes into session, but for the present, at least, the industry has recovered its breath.

* * * * * * *

"The sponsors of the measure had expected to begin by forcing all cinemas to show a minimum of 30 percent French films.

"Americans would have been restricted on importations and a newly established national agency would have collected all the money due American companies for rental and the Americans might have been called upon to finance production of French films.

"The unanimous protests caused Mario Roustan, Minister of National Education, to eliminate some of the most severe proposals, such as the national agency.

"Even after compromise, however, the decree would have been a blow to American companies.

"PETSCHE TO PRESENT NEW BILL

"With the report that Maurice Petsche will present a new control bill before the new Parliament, there is every need of maintenance of the united front displayed by film interests."

The Motion Pictures Daily (December 24, 1935) has the following article:

"SEE NEW FRENCH LAWS

"PARIS, December 23.—French producers supported by labor and reform elements are planning new legislative assault on American film importations. The new measure which will probably be introduced at the winter session of Parliament is expected to parallel the provisions of the attempted decree law which was blocked last fall by French distributors and exhibitors working in conjunction with American film interests."

If the decree, which was suspended in October, should be reenacted, American motion-picture producers would be compelled to withdraw from France.

The French quota system was criticized by N. B. Golden in Film Outlook Abroad at the Turn of the Year—Film Daily Year Book, 1935, page 1013—as follows:

"In July 1934 the French quota, which formerly was on an annual basis, became a semiannual affair, and in November of 1934 a decree was published extending the regulations of July for the first 6 months of 1935. Short-term contingents of this type handicap American exporters in setting their sales program, as there is no telling what the next law will bring forth to curtail imports of American films."

ITALY

Italy forbids the showing of any film in any language other than Italian. Even film with Italian written subtitles but with foreign spoken dialog are forbidden. The result is that the track of all American films must be completely removed when imported into Italy and a complete Italian version substituted. This "dubbing" must be done in Italy by an exclusively Italian artistic and executive personnel.

For each film "dubbed" in Italy, a tax of 10 percent of the gross receipts must be paid. Originally, the maximum tax was 25,000 lire (about $2,025), and there was no tax for "dubbing" of short subjects. Recently, however, the maximum was removed, so that on a film that grosses 500,000 lire, a "dubbing" tax of 50,000 lire (about $4,050) must be paid.

On all films greater than 1,000 meters in length, a minimum tax of 15,000 lire (about $1,200) for each film must be paid, in any event.

Although the "dubbing" tax imposed upon foreign pictures was increased, there was a prohibition against passing this tax on to the exhibitor.

The Motion Picture Herald, March 31, 1934, says:

"There are 300 foreign films needed in Italy every year at present. The cost of 'dubbing' runs around 50,000 lire so that the total cost of 'dubbing' 300 foreign films would be about 15,000,000 lire, of which 60 percent, or 9,000,000 lire would be paid by American companies.

"ONE MILLION ONE HUNDRED AND TWENTY THOUSAND COST TO AMERICANS

"Adding the cost of 'dubbing,' 9,000,000 lire, to the total of the new tax of 5,000,000 lire, we have a total of 14,000,000 lire (about $1,120,000), which American companies will have to spend in Italy to carry on their business.

"Of course, the probable answer will lie in the direction of reduced American film exports to Italy. Only the big first-rate films, for which high rentals can be charged, will be exported. The reduction of film imports here generally considered likely will be from 25 to 40 percent."

All Italian theaters must show one Italian picture for every three foreign films. Film Daily Year Book, 1935, page 1061.

The recent increase in the "dubbing" tax imposed an additional financial burden upon American film producers.

In October 1935 the importation of foreign films was further restricted by limiting them to 25 percent of the footage imported the preceding year. This applies only to films imported from America, Germany, Austria, and Hungary, since films from all other countries are barred by the application of Italian sanctions.

In applying "sanctions," Italy has banned all British-made pictures, as well as American pictures dealing with British subjects. Among the American pictures banned by Italy are Lives of a Bengal Lancer and Clive of India.

CZECHOSLOVAKIA

On April 23, 1932, Czechoslovakia promulgated a decree retroactive to November 13, 1931, requiring of importers of film two permits for each film brought in, until a sufficient number had been acquired to cover features imported since November 13, 1931. The permits could be bought only from producers of domestic features at a price of 21,000 crowns ($840) each. Domestic producers were given seven permits by the Government for each sound feature produced in Czechoslovakia (not more than 120 foreign films to be imported into Czechoslovakia).

This regulation made the cost of importing pictures into Czechoslovakia prohibitive, with the result that all American film companies withdrew from that country. Prior to 1931 American film companies received $700,000 annually from distribution of pictures in Czechoslovakia.

Sam E. Woods, the American commercial attaché at Prague, states in the Department of Commerce publications of motion pictures abroad (February 15, 1935):

"AMERICANS LEAVE THE MARKET

"As a result of the high prices charged for 'kontingentscheine' (quota permits), the five American companies maintaining distributing organizations in Czechoslovakia found it unprofitable to bring in their products and stopped importing on May 5, 1932.

"The shortage of American pictures was not serious during the first half of 1932, but it became more noticeable later in the year.

"In 1933 the absence of American pictures resulted in serious disturbances, and local exhibitors approached the Government on several occasions, requesting that imports of American pictures be made possible."

On November 16, 1934, a new system was introduced, which is described as follows by Mr. Woods:

"Under the new regime the quota system was abandoned and imports put on an unlimited basis. The erstwhile 'kontingentscheine,' were replaced by a registration fee of 20,000 crowns ($800) payable through the Czechoslovak Association of Film Industry and Trade into a special fund with the Provincial Bank of Bohemia, the fees to be used for subsidizing domestic production to the extent of 140,000 crowns ($5,600) per feature picture produced in the Czech language and an additional 40,000 crowns ($1,600) for each foreign language version of the film produced locally. Further provisions of the instruction stipulated that for every five sound features brought in during a 12-month period the importer was required to offer for distribution one cultural propaganda short produced according to the suggestion of the film advisory committee created under the new system. Imports of pictures were permitted only in the language of the country of origin and 'dubbing' of imported pictures to be shown locally was permitted only in the Czechoslovak language. Importers of news reels had to include Czechoslovak subjects in a minimum of 20 percent of the total length."

Even this concession did not warrant the return of the American film companies, and a further concession was made enabling American companies to bring in one picture "dubbed" in German for every eight American features (for which a total registration fee of $6,400 must be paid). This gave American companies a limited market for pictures compulsorily "dubbed" in Germany.

All films imported into Czechoslovakia must be registered at the Association of the Film Industry and Commerce in Prague. The films must pass a precensorship board, which determines whether or not a film is suitable for the Czech market. If passed, a fee of 20,000 crowns, plus a "handling fee" of 200 crowns, must be paid for each film.

HUNGARY

The quota law of Hungary is similar to that which prevailed in Czechoslovakia from 1932 to 1934.

The quota is applied by requiring that at least 15 percent of all films exhibited must be Hungarian speaking. One-third of such pictures must be entirely Hungarian-made, and the remaining two-thirds may be produced in foreign countries but must be "dubbed" in Hungary.

All films must be censored. Feature films will be censored only upon presentation of import licenses. These licenses are issued only to those who produce or "dub" films in Hungary.

For every film produced or "dubbed" in Hungary, seven import licenses are issued. These licenses or permit tickets can be bought at a price between 1,000 and 1,300 pengös (about $300).

It says (Motion Picture Herald, October 26, 1935):

"The second edict rules that features over 1,200 meters of length may be admitted only on presentation of one permit ticket. In other words, the producer of one Hungarian film or Hungarian language synchronization is entitled to import seven foreign pictures on the basis of the tickets received as a premium. Thus the local branches of American producing firms, which do not produce or synchronize pictures here, are compelled to buy the permit tickets from the local distributors who also go in for production. The market price of these permit tickets is between 1,000 and 1,300 pengös (roughly, $300), meaning that local producers get a premium of 8,000 pengös for each picture made or synchronized here, while importation expenses for nonproducing firms are increased on the average by 1,000 pengös a picture."

The duties on the importation of films are as follows (Film Daily Yearbook, 1935, p. 1014):

"In further modification of the original decree of 1932, Hungary in October 1934, raised the duty on films for which titles were prepared abroad from 50 fillérs to 1 pengö per meter. In addition there is charged a regular censorship fee of 4 fillérs per meter on films made in Hungary and 10 fillérs if made abroad. These funds are turned in to the Hungarian film fund, which is used to subsidize Hungarian production in competition with American films."

Says Motion Picture Herald (January 4, 1936):

"This is an extremely difficult market, owing chiefly to the strict currency decree which makes it almost impossible for local branches of American companies to take money out of the country. The other difficulty which American film companies have to cope with the decree in accordance with which 10 percent, and from January on 15 percent, of the films shown must be Hungarian or locally synchronized in Hungarian. American distributing companies are collectively against such synchronization for two

reasons. For one thing, it does not pay to have films synchronized for Hungary only. Then, again, Rumania, Czechoslovakia, and Yugoslavia refused, for political reasons, to admit films synchronized in Hungary, even though the Hungarians living in these countries would gladly welcome them. Secondly, if American companies should start synchronizing their pictures in Hungarian, other smaller countries would demand the same thing, citing the Hungarian example."

AUSTRIA

The quota system in Austria is similar to that in Hungary. The Motion Picture Herald (January 4, 1936) states:

"* * * The import is free except for the kontingent tax to be paid on distributed prints, which costs 1,560 schillings if the titles are made abroad, and 1,200 schillings if they are made in a local laboratory. In case of two prints, 2,160 schillings and 1,800 schillings are to be paid."

BELGIUM

It is proposed to establish first a quota—at first small, to be gradually increased—on Belgium cinemas, forcing them to show a fixed percentage of Belgian films.

GREAT BRITAIN

Great Britain has a quota law requiring at least 20 percent of the pictures distributed by any company to be British made. This means that for every four pictures imported into England one British picture must be acquired by the distributor.

Says the Motion Picture Daily (December 23, 1935):

"The quota situation means that one-fifth of available dates are compulsorily filled with British films. The American distributor has open to him, for American films, only 80 percent of the market; the practical effect is much the same as if he were allowed to book only to 3,200 of the Kingdom's 4,000 houses. He approaches this artificially restricted market with a product compulsorily diluted by 20 percent of British films. To these difficulties of marketing are added the further one that, whereas the earning powers of big pictures tend to increase, due to the public's willingness to patronize them even in very late runs, the programmer becomes a more and more difficult problem. Where it is a question of just filling a date, the second-rate British picture is apt to get the business; it is not much worse as entertainment than the American, and it helped the exhibitor with his quota."

In addition to the quota on imports, there is a further quota applying to exhibitors. At least 20 percent of the pictures exhibited in each motion-picture theater must be British-made. As applied to smaller theaters, the actual operation of the quota requires that approximately 33 percent of the pictures shown be British.

Says the Daily (London, January 1, 1936):

"To qualify for quota at present, exhibitors practically have to rely upon features. As the act applies to the entire program, and we are unable to get sufficient good British shorts, it necessarily follows we must book that amount of features to come within the act. To the small hall which is showing 104 pictures a year at 2 a week, the quota is almost 1 in 3 in their features, which, on the face of it, is more than 20 percent."

No film may be exhibited in Great Britain unless it has previously been registered with the board of trade.

After a film has been registered it must be trade-shown before any contracts can be made for the licensing of the picture.

NEW ZEALAND

In New Zealand there is a 20-percent-quota law on the importation of films and a 20-percent quota on the exhibition of films.

AUSTRALIA

As of October 1, 1935, New South Wales adopted an import quota requiring the distribution of 5 percent of domestic films the first year and ranging up to 15 percent in the fifth year. Exhibitors are required to show 4 percent domestic pictures the first year, rising to 12½ percent in the fifth year. All quota films must be registered by the distributor within 7 days of the date of acquisition.

A similar law has been passed in Victoria, and it is expected that a similar bill will be introduced shortly in Queensland.

Says Motion Picture Herald (May 11, 1935):

"British films receive preferential treatment under the provisions of the bill, as do the distributors of British films. British distributors in Australia are not obliged to release Australian-produced quota films, and exhibitors are not allowed to reject British pictures to make room for their Australian quota films, British product being exempted from the rejection clause."

Variety (January 1, 1936) states:

"AUSTRALIAN FILM QUOTA IN EFFECT JANUARY 1 IS TOUGH ON AMERICAN PICTS

* * * * * * *

"That [film quota] doesn't make things easy for the Americans down here. They must have pictures, but if there aren't any they must make them. And, of course, the majority of American distributors don't want to go into local production. They feel that it is unnecessary expenditure and will tie up a lot of money which may or may not be returnable to them.

* * * * * * *

"What makes it even tougher from the standpoint of Americans down here is that even the production of a local film for quota purposes isn't enough. After a film is produced it must be submitted to a governmental jury, which rules on its quality and has the right to reject it for quota or any distribution purposes if it doesn't figure the film 'good enough.' In other words, after spending coin for the production of a local film the film might be thrown on the scrap heap and still not qualify for either coin-return or quota-law satisfaction.

"Another angle that distribs here point out as inequitable is that films acceptable in England for quota purposes there are not acceptable here. England, of course, will accept locally made films for the quota in England, but Americans are afraid that if they switch their production of British quota productions down here, England will reciprocate with some sort of tougher quota in London and complicate the problem even more."

BRAZIL

All exhibitors must show a minimum of 100 meters of Brazilian-made film at each performance.

All films must be censored, the fee being 400 reis per meter for foreign films and one-half that sum for domestic films.

There is also a law requiring 50 percent of the music broadcast by Brazil stations and played in Brazil theaters, cafes, and restaurants to be by Brazilian composers.

MEXICO

High duties on the importation of foreign films and taxes on remittances to foreign countries have compelled American producers to withdraw from Mexico.

Film Daily (December 17, 1935), states:

"DEADLOCK OVER TAX CAUSING UNITED STATES FIRMS TO QUIT MEXICO

"In view of their deadlock situation with the Mexican Government in negotiations designed to modify that country's excessive taxes, major American distributors have decided to shut up shop completely in Mexico and are giving their employees there the usual 2 weeks' notice. These companies suspended film deliveries on September 30, but retained their staffs."

There is a duty ranging from 25 to 75 pesos per kilo for each print of sound film imported.

A tax of 2 percent must be paid on all remittances to persons outside of Mexico. In addition, there is a 10-percent tax on the gross income of foreign motion-picture companies.

CANADA

In addition to all other taxes imposed by the Canadian law, a tax of 5 percent is imposed on all persons who are nonresidents of Canada in respect of all royalties payable to such nonresidents on account of the use in Canada of the copyrighted works of such nonresidents. The amount of the tax is required to be deducted by the Canadian debtor from the amount paid or credited to such nonresidents. Specifically, the tax applies as payable on royalties accruing from the sale of books, music, periodicals, newspapers, motion pictures, etc.

TRINIDAD

An ordinance was enacted in 1932 requiring that 20 percent of ordinary films and 50 percent of the newsreels exhibited shall be of British origin.

CONCLUSION

Americal film companies have a capital investment of $2,500,000,000. Twenty-eight thousand people are regularly employed in the production of motion pictures in the United States in addition to 25,000 extras or supernumeraries. Hollywood's annual pay roll is $75,000,000. The industry spends $120,000,000 annually for supplies and other requirements. (U. S. Department of Commerce Reports on Motion Pictures Abroad, May 15, 1935.)

The importance of the motion picture has been emphasized by President F. D. Roosevelt in these words:

"You have done important work in an important field. Your program for the enhancement of the average quality of motion pictures, and particularly for their heightened usefulness in the educational and juvenile spheres, is to be commended. Intelligent friends of the motion picture should strive to direct its influence toward ends that are recognized as socially desirable.

"While necessarily conforming to the normal requirements of entertainment, I believe that our motion pictures should be sane and salutary, enlightening and mentally stimulating, expressive of the best ideals of our community consciousness. This undoubtedly can be accomplished without subjecting the industry to onerous restrictions." (New York Times, February 9, 1936.)

The production schedules for the 1935–36 season provide for 443 feature pictures. (Variety, January 15, 1936.)

The burdens now imposed upon the motion-picture industry in the form of quota laws, restrictions, prohibitions, and so forth, show that it is of the greatest urgency that the House of Representatives should not adopt any bill designed to give foreign nations a stranglehold on this industry.

The frantic appeals of our Government officers to the offending nations to remedy these practices are met by the stereotyped and almost universally used diplomatic phrase, "Interference in internal policies and affairs by outside nations cannot be permitted."

Congress should be free from the restraints of the Bern Convention, so that it may place restrictions upon the protection afforded under the Copyright Act to the nationals of any country enacting discriminatory or oppressive measures against owners of American copyrights. The only power Congress has to effectively safeguard American copyrighted works against discrimination abroad is by amendment of the copyright laws if, as, and when the occasion arises. Adherence to the Bern Convention bars Congress from the exercise of this salutary power. Congress should not obligingly surrender this power and thereby lead foreign nations to believe that their discriminatory practices against

American copyrighted works may continue with increased intensity and even multiply.

A refusal to pass the enabling act (the Duffy bill) for the avowed reason that the discriminations practiced against American copyrighted works by some nations are intolerable will be more effective than the futile and feeble protests of our foreign representatives. Defeat of the Duffy bill will make the nations which are so anxious for us to join the Bern Convention rudely awake to the fact that there is a limit to which these discriminations can go. [Applause.]

Mr. DALY. Mr. Chairman, will the gentleman yield?

Mr. SIROVICH. I yield to my distinguished colleague from Pennsylvania.

Mr. DALY. Am I correctly informed that the Copyright Act of 1909 contains the manufacturing clause the gentleman refers to, which compels the printing of all of these works in American printing establishments?

Mr. SIROVICH. That is right.

Mr. DALY. And that clause is in the Duffy bill as well?

Mr. SIROVICH. That is right; but Senator TRAMMELL offered the manufacturing clause on the floor of the Senate. It was not in the original Duffy bill. It is now in the Duffy bill, but I call attention to the fact that in order to enter the Bern Convention it must be taken out, otherwise we cannot be parties to that convention.

Mr. DALY. That is just the point I wanted to raise. The Duffy bill also would compel us to go into the Bern Convention.

Mr. SIROVICH. Yes.

Mr. DALY. And that would nullify the manufacturing clause.

Mr. SIROVICH. Yes; an the American Federation of Labor is for the manufacturing clause to protect 250,000 American printers, and is against going into the Bern Convention.

Mr. DALY. I would also like to ask the gentleman from New York if the Copyright Act of 1909 does not contain the punitive damage clause of $250 to be paid to an association of composers known as the American Association by anyone who pirates or violates their copyright?

Mr. SIROVICH. That is true. Let me give you the history of the American Society of Composers, Authors, and Publishers. In 1909 the Supreme Court of the United States, through Judge Oliver Wendell Holmes, rendered a decision in the case of Victor Herbert, the great musical composer, against Shanley's Restaurant, in which he stated that anyone who used music for the public performance for profit must pay a royalty to the author and composer whose work he uses.

After that great decision was rendered by Judge Oliver Wendell Holmes most of the great authors and composers of our country assigned their copyrights to an organization which they founded and which they called the American Society of Composers, Authors, and Publishers. The purpose of this organization was to give the cumulative works of all these talented creative geniuses to anyone who is desirous of using their musical and artistic creations.

It was impossible for one author or composer to ascertain who was using his compositions in the different cities of our Nation. The cost of detecting those pirates who used music without having a license to do so would be beyond the financial resources of any author or composer. It is, therefore, the duty of this American Society of Composers, Authors, and Publishers to license every user of music in our country. The collected funds are then divided among the 45,000 authors and composers. Accordingly the 15,700 motion-picture houses pay royalties of 5 cents, 10 cents, and 15 cents a year for each seat and can use the millions of copies of music in their theaters. A theater that has 300 seats would pay 10 cents a year for a seat which would give a license of $30 a year to use the entire repertoire of this organization.

From all these motion-picture houses the American Society of Composers, Authors, and Publishers collected $860,000 during the fiscal year 1935. Most of the hotels of the United States use music for the public performance for profit. People come there to eat and dance. The total amount of money collected from all the hotels of the United States for the utilization of the music that is in the catalog of the American Society of Composers, Authors, and Publishers is the sum of $186,000 a year for the fiscal year of 1935. Any hotel that has no orchestra pays no royalty.

If a hotel, restaurant, cabaret, tavern, or saloon has only a radio set to bring in music no fee is charged by this society. It is only when an orchestra of more than two pieces with or without vaudeville entertainment is used in any of these hotels, restaurants, or taverns that a license fee is charged to collect royalties for the use of the compositions of 45,000 authors and composers. The minimum fee charge for a tavern is $20 a year. The average hotel pays $60 a year and can use all the music of these 45,000 authors and composers. The highest amount of money paid as a license fee to the American Society of Composers, Authors, and Publishers is paid by the Waldorf-Astoria Hotel, that has eight large dance restaurants, wherein music is used for public performance for profit. This hotel pays $1,400 a year license fee. The 616 radio stations that use music from early morning, through the afternoon and late into the night, which have collected over $100,000,000 in advertisements, have paid to this society during the fiscal year 1935 the sum of only $2,500,000. So that the sum of between three million and a half and four million dollars represents the total amount that has been collected by the American Society of Composers, Authors, and Publishers to be distributed amongst 45,000 authors and composers who have contributed to the entertainment of our American people in the homes, hearths, firesides, motion-picture theaters, hotels, and restaurants of our Nation.

When Congress in 1909 passed the last Copyright Act it inserted a statutory damage fee amounting to $250 as a minimum damage to anyone who would steal or pirate the music and infringe upon the rights of authors and composers. In 27 years since this copyright law was passed, in spite of all the propaganda which has saturated the offices of most of the Members of Congress, the amount of $8,800 has been levied against those who attempted to steal the music of our authors and composers. This statutory damage fee of $250 was placed upon the statute books simply to deter anyone from using property that did not rightfully, legally, and justly belong to him.

The CHAIRMAN. The time of the gentleman from New York has expired.

Mr. SIROVICH. May I have more time, Mr. Blanton?

Mr. BLANTON. Mr. Chairman, how much time does the gentleman want?

Mr. SIROVICH. I would like to answer any question from any Member, and I think I need 20 minutes.

Mr. BLANTON. Mr. Chairman, I yield the gentleman 15 minutes more.

Mr. DALY. Am I correctly informed, I ask the gentleman from New York, that the Duffy bill eliminates that $250 punitive clause and substitutes a clause to the effect that the composer whose copyright has been violated and whose music has been stolen may have recourse only to what damages he can prove?

Mr. SIROVICH. The question that my distinguished friend from Pennsylvania has propounded to me contains the real meat in the coconut. The $250 minimum statutory fee, which is not contained in the Duffy bill, would be instrumental in destroying the only rights and protection that an American author and composer today possesses. This minimum statutory law was expressly put into the copyright bill to prevent thieves from stealing the copyrighted works of artists, composers, and writers. If you eliminate the $250 fee from a congressional bill, there would be no way of proving damages in any Federal court. Federal judges have decided over and over again that there is no way to prove damages an author would entail when his musical compositions are stolen. Honest men protect the property rights of their fellow citizens. This statutory fee of $250 is intended to protect the innocent composer against the deliberate thief who would illegally steal property that does not belong to him.

I appeal to the loyalty and to the justice of every Member of Congress when I say to you, help and protect the author by not abolishing the $250 minimum fee. It is the only thing that he has that will protect him from making the great pilgrimage over the hill to the poorhouse.

Several Members rose.

The CHAIRMAN. Does the gentleman yield further, and to whom?

Mr. SIROVICH. I yield to my friend from Washington, Mr. Zioncheck.

Mr. ZIONCHECK. Mr. Chairman, the gentleman made a statement a moment ago to the effect that under the Duffy bill an author who would produce a creative work, as the gentleman would—he is a dramatist and an author—would get only 2 cents, or at least would get only 1 cent, and someone else would get the other cent. Does not the Duffy bill provide that they must go to court if there is an infringement and prove damages, and if the damages are $20,000, then the author can recover $20,000, whereas under the present law the author can get only $5,000.

Mr. SIROVICH. Mr. Chairman, I yielded for a question and not for a speech.

Mr. ZIONCHECK. Then I will ask the question.

Mr. SIROVICH. Oh, the gentleman has asked the question. He has placed several questions in there, and which one does the gentleman want me to answer?

Mr. ZIONCHECK. This one.

Mr. SIROVICH. The first question that the gentleman asked was absolutely irrelevant to the second, because it dealt with compulsory licensing. In 1909 Congress inserted a section in the copyright law to the effect that when one manufactured a phonographic record, all the author could collect from the producer, the manufacturer of the record, was 2 cents, and one of those cents went to the author and one of them went to the manufacturer of the record. Mr. Chairman, that compulsory license of 2 cents was absolutely unconstitutional, because article 1, section 8, paragraph 8, of the Constitution states that Congress shall have the power to promote the useful arts and sciences by securing to every author and every inventor for a limited number of years the exclusive right to his writings and discoveries. Therefore, if he has an exclusive right, then we have no right to hang a millstone of 2 cents around his neck, which is being used today in the greatest little Ethiopian joker in the Duffy bill, which protects mechanical reproduction through television and wired wireless records that will destroy the royalties of every author.

When television comes out you can take the work of any great orchestra or band and send it over the wired wireless, and give the author only 2 cents; and that is what, unconsciously, the gentleman from Washington is advocating, because I know Brother Zioncheck, and I know that he is not a bad-hearted fellow and is kind-hearted, generous, and fair, but he is being used as a tool today by exploiting and commercial interests against the greatest creative geniuses in our Nation.

Mr. ZIONCHECK. Mr. Chairman, will the gentleman yield further?

Mr. SIROVICH. I gladly yield further to my good friend and colleague.

Mr. ZIONCHECK. The present copyright law, which has not been changed since 1909, provides for $250 minimum damages, regardless of how much damage is proved; and now let me ask a question. Has not the Ascap Corporation—or Association—used that particular provision as a club to blackmail people into damages?

Mr. SIROVICH. Let me answer that question. I want to say here and now that I resent once and for all the calling of the greatest writers of our country racketeers, gangsters, and crooks because they are fighting for justice and protection of their legal and constitutional rights. [Applause.] It is an outrage. These men, who are today the greatest writers——

Mr. ZIONCHECK. I never said anything about authors. I referred to the Ascap Corporation.

Mr. SIROVICH. The Ascap is an organization known as the American Society of Composers, Authors, and Publishers. They have such men on their roster as Victor Herbert, John Philip Sousa, Irving Berlin, George Gershwin, Gene Buck, Sigmund Romberg, Rudolph Friml, Rudy Vallee, George M. Cohan, Carrie Jacobs Bond, Fritz Kreisler, Rachmaninoff, and countless other men who are as eminent in their respective lines of endeavor as we are Members of Congress. They are working for their livelihood. They ought to be protected by you, and you ought not to do what your State is doing in violating the law that was put there by Congress to protect the copyright rights of the creative talent of our Nation.

Mr. KRAMER. Will the gentleman yield?

Mr. SIROVICH. I yield.

Mr. KRAMER. Does the gentleman know that in Germany Hitler has forbidden the showing of Charlie Chaplain's picture because there is a similarity of his mustache to Hitler's mustache? [Laughter.]

Mr. SIROVICH. Apropos of that question, it might interest my distinguished friend from California, since he visited Germany recently, to know that Adolf Hitler is the president of the Ehar Publishing Co., of Munich, Germany, which controls the largest printing plant of books, pamphlets, and periodicals in Germany. He is hoping our country will join the Bern Convention so that he can send English books printed in his printing establishment to the United States, flooding the markets of our country and putting more unemployed printers upon the dole and relief.

It is estimated that Hitler draws at least $1,000,000 profit out of this business every year and invests this money in securities of foreign nations.

I want to call the attention of my distinguished colleague to the fact that in Germany and other of these dictatorial governments they insist on dubbing out of every selection of American authors and composers. They displace and take out the pictures of American men and women who may not be the Aryans that the German people want. The German Government wants you to join the Bern Convention. You Members of Congress who represent the greatest nation of the world are asked to vote your country into the League of Nations that is using vicious, cruel, and brutal sanctions against helpless men and women, whose only crime is the crime that they are using their brains to make the world better in which they live.

Mr. ZIONCHECK. Will the gentleman yield?

Mr. BLANTON. Mr. Chairman, I ask that the rules be obeyed, that Members do not interpolate remarks unless they have the recognition of the Speaker.

Mr. ZIONCHECK. Will the gentleman yield?

Mr. SIROVICH. I yield.

Mr. ZIONCHECK. The gentleman from New York was very much interested in the prohibition question. Now, there is some inconsistency in the question I am going to ask. This Ascap Corporation has sued beer parlors for using phonographic records, and has put a lot of them out of business. How can the gentleman reconcile his previous action?

Mr. SIROVICH. I reconcile that in the same way. For 10 years I stood upon the floor of this House, as a man who never drank and never smoked, fighting for the liberty and freedom for those who wanted to have an opportunity of having the eighteenth amendment repealed.

I spoke scientifically on the basis that you could accomplish what you want through education and not through legislation. Let me send this message to the fine, honorable people of the State of Washington. In behalf of the American Society of Composers, Authors, and Publishers, I challenge any Member of Congress, at the expense of this society, to bring any owner of a tavern, beer saloon, hotel owner, or restaurant keeper before our committee to prove that one penny has been charged to them as a license fee unless they used an orchestra of two or more pieces for the public performance for profit. I repeat again, Mr. Chairman, I challenge you to bring any witness before the Committee on Patents and let him prove he has ever been called upon to pay one cent unless it was for a public performance for profit, in which an orchestra was used. I leave that to you, Mr. Zioncheck, and to any Member of Congress. We will have hearings for the next 3 weeks. Bring us one person to prove these allegations and the society will pay the expense.

Mr. ZIONCHECK. Will the gentleman yield further for a question?

Mr. BOILEAU. Will the gentleman not yield to me? He has yielded several times to the gentleman from Washington.

Mr. SIROVICH. I must yield to some other Members. I gladly yield to the gentleman from Wisconsin.

Mr. BOILEAU. I would like to say to the gentleman that in Wisconsin in the last several years the American Society of Authors, Composers, and Publishers, through their attorney in the State, arbitrarily places an assessment upon all dance halls and other places of public amusement in the State who play this copyrighted music. It is an arbitrary figure. They will ask for $100 from some little isolated dance hall out in the country. When this payment is refused there will be an offer to accept $50, and probably they will compromise at $60, or something like that.

It is an arbitrary system of collecting fees. I think the authors and composers should be protected, but I do not believe they should have the absolute right to say to a user of their music, "You pay what we ask you for this music, regardless of the number of dances you have," and give to the user or property owner no protection whatever. I know of one case where they sued a man operating a country dance hall for playing copyrighted music. They were unable to prove their case in court. The man came to me and asked me as a public official, more or less, to make an offer for him to the Society of Authors and Composers. I offered a certain amount—I think $25—for a year's license. They said they would not give him the privilege to play that music unless he paid $101 and some cents, which was the cost involved in the case they lost. They tried to highjack this man. That was not the authors and composers themselves, but it was done through their organization.

Mr. SIROVICH. Let me answer the gentleman's question as sincerely and earnestly as he has brought it to my attention, because we have had this testimony every day, and the gentleman knows what a personal esteem I have for his statements. Now, let us get the true facts.

The State of Wisconsin has contributed to the American Society of Composers, Authors, and Publishers, for all of its hotels, restaurants, taverns, the sum of $10,000.

Mr. BOILEAU. Is that what goes to the attorneys or to the association?

Mr. SIROVICH. That goes to the society.

Mr. BOILEAU. That is, after the attorneys' fees are deducted?

Mr. SIROVICH. Let me answer the question. I will bring out the point the gentleman has in mind so clearly and fully that the gentleman will appreciate my answer.

Mr. BOILEAU. I thank the gentleman.

Mr. SIROVICH. The American Society of Composers Authors, and Publishers in the State of Wisconsin have hundreds of tavern keepers. In New York we call a tavern keeper a beer-saloon keeper, who sells sandwiches, beer, refreshments, and whatever may be sold in an ordinary tavern. The tavern pays for its gas; the tavern pays for its electricity; it pays for its food; it pays for the liquor it sells.

All that these authors and composers say to any tavern, not only in the gentleman's State but in all the country, is, in substance, this: "We want nothing from a tavern which uses no music. Neither do we want anything from it if it uses music that comes in on the radio for dancing and for entertainment. If it has one musician playing a violin or an accordion, we do not want anything from it. But, in God's name, if it uses five or six pieces of music to lure people in to hear a fine musical entertainment or to dance, and keeps on playing music that these creative geniuses have given to our country, it is no more than the right and the duty of that place to pay for the music it uses, the same as it pays for its beer, wine, or food." The minimum charge is $20, and the highest amount paid by any hotel in the United States is paid by the Waldorf-Astoria in New York, which pays $1,400 a year. This hotel has eight large music auditoriums and pays Rudy Vallee $5,000 a week and Paul Whiteman $4,500 a week. It assesses cover charges to all of its patrons.

This great big hotel that uses more music than any hotel in America pays for all these things for a whole year only $1,400.

Mr. BOILEAU. Does the gentleman think it is fair to charge a little fellow $20 for holding one or two dances a year and probably not making $20 profit out of both of them? Notwithstanding this, they have the arbitrary power of saying to the little fellow: "You must pay $20." They usually ask $100, but compromise on $20.

Mr. SIROVICH. I think the gentleman is absolutely right, but the great hotels have organized, they are here en masse now. They refuse to pay their just share to the authors and composers. A large hotel like the Waldorf-Astoria ought to pay at least from $5,000 to $10,000 a year. The little fellow ought to pay in conformity with his means; but what are these helpless authors and composers to do when they have an octopus, the greatest organization of America, united against them, flooding Members of Congress with all kinds of letters opposing them?

When a tavern keeper or hotel man is convicted of violating the copyright law, and fined the minimum statutory fee of $250, the American Society of Composers, Authors, and Publishers does not take this money. All they ask the offender to do is to take out a license which will enable him to use the music and compositions of the greatest and humblest composers. In addition to the license fee they make the offender pay the actual disbursements the society has made to the clerk of the court and to the marshal. They do not take any other fee from the hotel owner or restaurant or tavern keeper.

Mr. Chairman, as an author and dramatist, God reveals Himself to me and to my colleagues in three mysterious, mystical, and inexplicable ways: First, through the life of the universe, which we term "nature"; second, through the thoughts of man, which we term "art"; third, through the precision and exactness of the mind in correct thinking and observation, which we term "science."

The cumulative contributions of everything that has been written regarding nature, science, and art constitutes the culture and civilization of the world.

Mr. Chairman, I appeal to you and through you to the membership of this House to help protect and aid the great scholars, authors, writers, and composers who have contributed to science, to art, to literature, to philosophy, and to statesmanship—to all those beautiful ideals that ennoble mankind—to give them adequate copyright protection that will enable them to bequeath to posterity those magnificent contributions in the realm of literature and letters that will make the twentieth century stand out as the great literary age, where writers have been ennobled and mankind bettered for their having lived in it. [Applause.]

[Here the gavel fell.]

The Return of the Flag of the Republic of Alabama by the State of Iowa

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Friday, March 17 (legislative day of Thursday, March 16), 1939

ARTICLE FROM THE MONTGOMERY (ALA.) ADVERTISER AND AN EDITORIAL FROM THE DES MOINES (IOWA) TRIBUNE

Mr. HILL. Mr. President, I ask unanimous consent to place in the Appendix of the RECORD an article from the Montgomery Advertiser written by my able friend, Mr. Grover C. Hall, Jr., telling of the gracious return of the flag of the Republic of Alabama by the State of Iowa.

I also ask consent to place in the Appendix of the RECORD an editorial, Iowa-Alabama, by Mr. William W. Waymack, the distinguished editor of the Des Moines Tribune. Mr. Waymack was most helpful and influential in securing the return of the flag.

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

[From the Montgomery (Ala.) Advertiser of March 10, 1939]

FLAG TIES BOND OF AMITY 'TWIXT ALABAMA AND IOWA

(By Grover C. Hall, Jr.)

A ceremony memorable for its depth of cordiality and sentimental appeal attended the formal restoration yesterday of the flag of the "Republic of Alabama."

The emblem, made by the hands of Montgomery women 78 years ago, was first unfurled in the chamber of the house of representatives in the short period in which Alabama was a "nation"—just before it became a member of the Confederacy. After long and divers wanderings, the flag was again unfurled in the house chamber yesterday—come home to stay through the gracious gesture of the State of Iowa.

The flag, cherished the more because of its decaying, dusty brown nondescriptness, will be placed on view in the department of archives and history.

Governor Dixon received the flag yesterday as an earnest of "the kindness, thoughtfulness, and courtesy" of Iowa. This was in response to the presentation by Senator B. C. Whitehill, of the Iowa Legislature.

CORRECTING A MISTAKE

"Iowa comes today, not bearing a gift, but to correct a mistake made many generations ago," Senator Whitehill said.

The house chamber was festooned with greenery and bedecked in Confederate and American flags. Senate members sat with house colleagues and the gallery overflowed. Many stood in the lobby to hear, though they could not see.

All stood as two Confederate veterans—Gen. J. R. Kennedy, of Tuscaloosa, and Paul Sanguinetti—walked to the speaker's rostrum. Then came Governor Dixon, followed by his lady; Senator Whitehill; J. A. Lucas, representative in the Iowa Legislature; Thomas Jefferson Noll, Union Army veteran, of Iowa; and Mrs. Marie Bankhead Owen, director of the department of archives and history.

Lt. Gov. Albert Carmichael, who presided, sketched briefly the history of the battered emblem and introduced Senator Whitehill.

"In 1864," began Senator Whitehill, "you were in the midst of a great war; the enemy was abroad in your land; a member of the Eighth Cavalry (Wilson's Raiders) came upon this flag and took it back with him to his home in Iowa.

"How, when, or where he found it we do not know. Why he took it, we can but conjecture; he was a soldier, and like all soldiers in any war, he took whatever he found, regardless of ownership. * * *

TILL ITS THREADS MOULDER

"In a joint resolution, passed unanimously by both branches of our legislature * * * it was ordered that this flag be returned to you. * * * It is yours by all that is historical and sentimental. It links up a part of our history and we sincerely hope that its travels are over and that it will safely rest in your archives until its silken threads have mouldered into dust * * *."

Mrs. Owen, who perhaps gloried more in the occasion than any present, sat on the speaker's rostrum, eyes fixed on the senator, She hung on his words like, if Mrs. Owen will permit, Grant hung on to Richmond.

Governor Dixon prefaced his acknowledgment with the observation that he was "moved by the same sentiment that moves every man and woman here." In his next words were observed a thread that has run through most of his addresses on solemn occasions:

"The most important things in life are not material, they are the intangible, spiritual things—the love of a man for his wife, the love of a parent for his children, the love of a people for their State. * * *

"They say we are a sentimental people in Alabama. We are. We go into the depths of sentiment on things like this. * * * In the war in which this flag was taken, we of the South were the defeated people. Perhaps that is why we treasure this emblem so.

"We love all such things. I think a defeated people love these things more than things with which they associate victory. * * * Most of the people in this hall had grandfathers who fought in the defeated army. * * * Iowa realizes how near and dear these things are to us. * * * We will always remember with a depth of sentiment the fine, gracious gesture of our Iowa friends * * *."

Those who heard the Governor and sensed his own feeling could not but be moved. Those in attendance felt the ceremonies had been gloriously appropriate.

NOT RUNNING AWAY

The solemnity of the occasion ebbed as the Governor and his party filed out. G. A. R. Veteran Noll, pert as a robin, walked with Mrs. Dixon. He chortled, "Boys, don't worry—I'm not going to run away with the first lady of your land."

Senator LISTER HILL, who played an important part in effecting the restoration, and Senator JOHN BANKHEAD sent telegrams expressing regret that they were unable to attend because of congressional business strongly affecting the welfare of the South.

Senator HILL, who had accepted an invitation to speak at yesterday's ceremonies, sent Col. W. P. Screws a telegram expressing regret that important business detained him in Washington.

In his telegram Senator HILL explained how the flag was finally secured by the State and said Alabama should always be grateful to those responsible for its return. The junior Senator added that the people should also be grateful to the Legislature of Iowa because of whose action the flag returned home yesterday.

FIRST OVERTURES

He explained that after the unsuccessful efforts of those representing this State to secure the return of the flag. H. M. Stanfill, president of the Mobile Chamber of Commerce, asked him to help in the matter. "I immediately contacted Senator Clyde Herring, of Iowa; Mr. William Waymack, editor of the Des Moines Register; Frank Dillon, secretary of the Des Moines Y. M. C. A.; John D. Adams, secretary of the Des Moines Chamber of Commerce; Mr. William Riley, one of the leading lawyers of the State, and my brother, Luther L. Hill, of Des Moines, and they constituted themselves an unofficial committee to contact the Governor, the legislature, and the Grand Army of the Republic, and to do all possible to secure the return of the flag," Senator HILL explained.

"The success of their efforts," he added in his message to Colonel Screws, "speaks for itself. Alabama should ever be grateful to them as well as to the Legislature of Iowa because of whose action the flag comes home to us. I am disappointed, indeed, that I cannot be with you to welcome the distinguished representatives from Iowa, who are our honored guests, and to join with you in expressing to them and through them to the people of Iowa our deep and heartfelt appreciation for the return of the flag.

"The gracious and gallant act of the Legislature of Iowa in returning the flag is an earnest of the fact that just as men of Iowa and Alabama, as fellow soldiers of the Rainbow Division on the battlefields of France, mingled their blood and heroically fought the common enemy, so today Iowa and Alabama with common interest with common problems, and with common purposes stand side by side in friendship and fraternity striving together for the happiness of their peoples and the welfare of our common country," the telegram closed.

Senator HILL is a member of the subcommittee of the Senate Committee on Interstate Commerce, which is now considering the confirmation of the President's appointment of Haden Alldredge, formerly of this city, to the I. C. C.

[From the Des Moines (Iowa) Tribune of March 7, 1939]

IOWA-ALABAMA

The historic flag of the "Republic of Alabama" has been sent back to Montgomery, by a fine and gracious gesture of the State of Iowa, to be kept in the archives of the Alabama Historical Society.

A delegation from the Iowa General Assembly has taken it there.

The formal presentation is scheduled to be made at a joint session of the two houses of the Alabama Legislature Wednesday.

With the Iowa delegation is a representative of the Iowa G. A. R. And the Iowa G. A. R. took a delightfully generous part in bringing

about the flag's restoration, which our legislature voted unanimously.

At Montgomery to receive it will be, besides the State officials and Historical Society people, some Confederate veterans.

And some notice will be given, we understand—very appropriately given—to the fact that Iowa and Alabama troops fought together in the Rainbow Division in the World War.

They were not merely in the same division: they fought side by side, at times intermingled, and they left many dead together in the Argonne and elsewhere.

This restored flag, as has been explained before, was taken from the Alabama capital after the Civil War by an Iowa Union soldier.

It had not been a Confederate battle flag, and was not taken in battle.

It is of great historic interest in Alabama, and was of little here.

The handclasp of the States that its return signifies is a contribution to national unity which we need to build today as truly as it had to be preserved in the sixties.

The act is a symbol of good will. Good will is essential to the search for understanding. There are problems of the old South that we in the North need to understand much more than we do.

Our channels of communication have tended to be East and West.

Too few of us are even aware of conditions that make it possible for many an intelligent southerner to say today that not yet has the old South been readmitted to the Union—that reconstruction, which was so tragically boggled, has never yet been completed—that the old South, through discriminatory transportation rates and blighting national tariff policies and various other things, has been treated in reality as a "colonial appanage" of the East and North.

As we warm to the spirit of the return of the flag let us open not only hearts but our minds.

Let us recognize that the States of the old Confederacy are part of our national oneness.

Let us recognize that their basic economic and social problems are of tremendous ultimate importance to us and to the whole of our national society.

Let us perceive that a fuller sharing in the Nation's economic progress is the right of the old South, and not only the South's right but also the essential condition of a sound democratic national society, made up of healthy, educated, reasonably prosperous people—with a prosperity that is ever better diffused, eliminating "unfavored regions."

The old South has special problems, complex and difficult ones.

We of the western Corn Belt cannot solve them for her.

It is our duty to ourselves and the country no more to set ourselves thoughtlessly in the way of their solution.

Our regions must come closer together.

In our continent-wide economic empire they are all members, one of another.

National Labor Relations Act

EXTENSION OF REMARKS

OF

HON. EDWARD R. BURKE

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Monday, March 20 (legislative day of Thursday, March 16), 1939

RADIO ADDRESS BY HON. EDWARD R. BURKE, OF NEBRASKA, SATURDAY, MARCH 18, 1939

Mr. BURKE. Mr. President, I ask to have printed in the Appendix of the RECORD an address delivered by me over the Columbia Broadcasting System on Saturday, March 18, 1939, on the subject What Shall We Do With the Wagner Act?

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Three opinions are expressed in answer to the question as to what we shall do with the Wagner Act. There are those who say, "Do nothing." Holding this view are the C. I. O., the Labor Board, the Secretary of the Department of Labor, and most radicals of the extreme type who have little love for the American economic system. Together they comprise but a small minority of the people of this country. They argue that in the past, labor has been the under dog. The scales have been weighted against the worker, they say, because of his unequal bargaining power. If now the act and its administration are one-sided, if the employer is in a strait jacket, it is well for a time to have the tables turned. The goal of industrial peace is forgotten. Ignored, also, are the consequences of the policies pursued—millions of workdays lost; expansion of industry checked; more idleness; increasing relief rolls; the threatened danger of collapse and chaos.

The second answer is that the law is so faulty and its administration has been so biased that the best thing to do would be to wipe the slate clean by outright repeal. Those who take this position are not necessarily opposed to the principle of collective bargaining. They point to England, where voluntary collective bargaining produces results far more satisfactory than those attained by our attempt at statutory compulsion. There is much to be said in favor of limiting Government interference in this labor relationship in which good will, mutual confidence, and cooperation are prime essentials. In any event, the proponents of repeal contend that it would be better, if we are to have a law, to make a fresh start rather than to try to draft healthy twigs on the diseased trunk that we call our national labor relations policy.

In my judgment, neither of the positions outlined is well taken. Certainly we cannot continue under the law as it is. It is a disrupting influence. It multiplies instead of diminishing the causes of labor disputes. From one end of the country to the other it has shaken the confidence of investors, disheartened business management, put fear and doubt into the hearts of millions of workers. There must be a change, and that without delay. But it need not be repeal. Only if the forces persist that oppose any change in the law and in the agency that enforces it is there danger that they may defeat their own purpose. Look to Wisconsin, Michigan, Oregon, and other States, and read the answer as to what the public may do when fully aroused.

The sensible action to take is to follow the third course. Let the law be improved. Not in haste, not in passion, but with the vision of real statesmanship this law may be rewritten to accomplish its lofty purpose. Begin with the preamble which sets forth the declaration of policy. Strike out the language which prejudges and condemns the employers of the country as being solely responsible for industrial strife. There has been fault on both sides. Forget the past and plan for the future, for an era of industrial peace. Amend the act so as to make it clear that the national policy is to encourage the development of friendly and mutually fair relations between employer and employee. Nowhere in the law now on the statute books, and certainly not in any conduct of the Labor Board, will you find the slightest emphasis upon the necessity of fostering good will between workers and management. In drafting this law and enforcing it, there seems to have been a complete failure to recognize that unless business and industry can be given a chance to succeed, there is no hope for higher wages, shorter hours, better working conditions, or a fair return on capital. The correct policy is set forth in an amendment, which reads in part as follows:

"It is hereby declared to be the policy of the United States to eliminate such causes of substantial obstructions to the free flow of commerce and to mitigate and eliminate these obstructions when they have occurred by encouraging the development of friendly and mutually fair relations between employers and employees, by protecting the practice and procedure of voluntary collective bargaining, by protecting the exercise by workers of full freedom of voluntary association, self-organization, and designation of representatives of their own choosing for the purpose of negotiating the terms and conditions of their employment or other mutual aid or protection, and by imposing reasonable restraints in the public interest upon certain improper practices, by whomsoever engaged in, in the employer-employee relationship."

The amendment offered defines and prohibits improper practices that interfere with the freedom of voluntary association and self-organization of workers for the designation of bargaining agents of their own choosing—improper practices by whomsoever engaged in. It will be an unfair labor practice for anyone—let it be employer, employee, or labor organizer—to interfere with the right of a worker to join or refrain from joining any labor organization, to continue or to cease employment, to select according to his own free will representatives to bargain for him. The employer will be within his rights in advising and counseling with his employees, provided that he refrains from every form of conduct that could be construed as threatening, interfering with, or intimidating them. The labor organizer or fellow employee would likewise have complete freedom in selling the benefits of unionization by argument and persuasion, but further resort to methods of intimidation or violence would be outlawed.

The check-off system of collecting union dues has no proper place in a program that aims to leave the worker his own master in the matter of joining and continuing membership in any organization. It is not a proper function of government to encourage, promote, or coerce unionization of industrial workers. If that is permitted today, we may find tomorrow a government that will discourage and prohibit such organization. One is as bad as the other. To carry out this principle, government must cease its efforts to spread the doctrine of the closed shop. If all of the workers in a unit are of a mind to voluntarily join and remain members of a union, that is well. They should be protected in that right. It is abhorrent to freedom-loving Americans that an honest workman should be denied employment because he does not choose to join. That is as bad as discriminating against him because he does belong.

The right to participate in a lawful strike must be preserved. There should be no strike except upon majority vote by secret ballot, and none in violation of a valid contract. When there is no dispute between workers and management over wages, hours, or working conditions, but only between rival groups of employees, there should be no interference with the conduct of the business. In order to speak as the bargaining agents of all of the workers in an appropriate unit as determined by the Board, representatives should be selected by the free choice of a majority of all of the employees entitled to vote in that unit. Since the employer must deal with the representatives of the majority, he should have

the right to call upon the Board to hold an election to determine what is that majority. The will of the employees should be supreme in determining all questions as to the bargaining unit and the bargaining representatives.

Certain minimum standards should be required of any labor organization that asks to be recognized for collective-bargaining purposes. An amendment specifies that such organization should keep on file with the Labor Board a copy of its constitution and bylaws, the names of its officers, and of the individuals who will serve as bargaining agents, all of whom must be American citizens. A current financial statement should be in the hands of the Board, and a copy furnished to each member of the union.

The act provides for a Board of three members. No qualifications are specified. Enormous powers and almost unlimited discretion are vested in this body. It has a free hand in selecting its agents, attorneys, economic advisers, and trial examiners. There is a widespread belief that the present Board has abused these vast powers; that it has been partisan and biased; that a general house cleaning is in order. An amendment is offered to abolish the present Board. In its place the President would nominate and, by and with the advice and consent of the Senate, appoint a Board composed as follows: One member would be selected because by temperament, training, and experience he has demonstrated his ability to deal with the delicate problems of labor relationship with full understanding of the situation from the standpoint of industrial workers. A second with like qualifications on the employers' side. The third would have the wisdom to enable him to view all questions in the light of the interests and rights of the general public.

If an unfair labor practice is charted against anyone, he should be notified in plain terms of the grievance and afforded a reasonable chance to correct it. If that is not done to the satisfaction of the aggrieved parties, then the Board may proceed by complaint setting forth the details of the accusation. Upon the trial the rules of evidence that prevail in courts of law and equity shall be substantially followed. All parties shall have equal treatment in the matter of costs, in the issuance of subpenas, and otherwise. The findings of fact of the Board shall be final on review if supported by the weight of the evidence, except that in the case of an order requiring affirmative action the findings shall be prima facie evidence only.

If, despite these precautions, it is still not posssible to have fair trials and unbiased judgment, provision is made that any person complained against may, within 20 days thereafter, have the cause removed to the United States district court for trial. Adequate regulations are specified that will prevent undue delay. It is felt that the existence of the right of removal will be sufficient to insure fair trials before the Board.

I have outlined a few only of the numerous amendments on file. What is now desired by the sponsors of all the proposed changes is the opportunity to call witnesses to establish the need of amendment and the evils that must be corrected. The Senate Committee on Education and Labor has voted to hold hearings. The question remains when they will start. On next Tuesday the committee will decide. There are powerful voices that will urge delay. Postponement much beyond the 1st of April will mean no action at this session. Citizens have the right of petition. If you are strong in the conviction that full hearings on the question of proposed amendments to the Wagner Act are essential, and that they should be promptly held, word to that effect should be given to Senator ELBERT THOMAS, chairman, to your own Senators, or to me. Results will follow.

Radio Address on Twentieth Anniversary of American Legion

EXTENSION OF REMARKS

OF

HON. JAMES J. DAVIS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Friday, March 17 (legislative day of Thursday, March 16), 1939

RADIO ADDRESS BY STEPHEN F. CHADWICK, NATIONAL COMMANDER OF THE AMERICAN LEGION

Mr. DAVIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the speech of Stephen F. Chadwick, national commander of the American Legion, delivered over the network of the National Broadcasting Co. on the occasion of the celebration of the twentieth anniversary of the Legion, on March 15.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

THE LEGION COMES OF AGE

The American Legion tonight enters upon its twenty-first year. The Legion has come of age—rich in the memories of its early years, proud of the accomplishments of its vigorous youth, hopeful of its future, as it seeks to give of its knowledge and experience in service to the Nation.

Tonight in 11,538 posts a million men and women who served in the Army, Navy, and Marine Corps in 1917 and 1918 are gathered together in the spirit of reunion and celebration.

The American Legion presents a spectacle of constructive service in peace such as has been presented by the veterans of no other country. Let us appraise that service. It will renew our strength for the years that lie ahead and at the same time acquaint our friends and fellow countrymen with a knowledge of our aims and purposes.

Who are we? We are citizens, largely men, but with a considerable number of women, who saw service in the World War. We are of an average age of 46 years and 8 months. Aside from our individual character as veterans, we are the citizens of our communities, our States, and of our Nation. We are the fathers and mothers of children of another generation. We have been the beneficiaries of an enormous experience—an educational experience. We were, through the necessities of our Nation, called upon to matriculate in a school of experience, from which we have at all times desired to save our children and all the children of the Nation. Many of those who were the children of our generation were called upon during the war to make the supreme sacrifice for their country. Others, as a result of the hazard and exposure of their service, were rendered sick in mind and body.

Those of us who escaped the experience, sound in mind and body, felt it our first duty to minister to the needs of the dependents of those who did not return and to those of our comrades who were handicapped through wounds, sickness, or disease for the continuing struggle which is life. With this in mind, the American Legion throughout the years of its existence has been faithful to the interests of our deceased and disabled comrades.

Our mothers, wives, sisters, and daughters, through the American Legion auxiliary, have joined us in this, our first concern, and through it we have all found a means of satisfying our souls in beneficent labor. We will continue in this work; it is meet, right, and our solemn duty so to do. We have sought through our organization to interpret to all citizens of the Nation, the appreciation, which we realized during the years of our service, of the great values which exist in these United States of America of ours.

Through the battle deaths and casualties of the men of our own generation who responded to the Nation's call, without thought of color or creed or circumstances of birth, we received a first-hand lesson in the great virtue of tolerance—seeing and appreciating in all men who respected the liberties which had been won for them by the sacrifices of their fathers, values which are sometimes overlooked and can only be fully appreciated when two strong men meet face to face or move into common danger side by side.

In the Legion there is no distinction of race or creed or rank. All are considered equal by virtue of a common service. It was one of the purposes of our organization to preserve and transmit to posterity our appreciation of this revelation. We abhor religious and racial intolerance as unworthy of the spirit of free men.

Likewise, as reasoning men we realized that the war had not made the world safe for democracy. We felt, and have continued to feel, that if the lessons of the war are properly appreciated here at home, then we did perform a great service in making democracy safe for and in America.

We recognize that there have been throughout recorded history the autocracies of individuals and the autocracies of classes, and so at the inception of the Legion, we declared ourselves as in opposition to the autocracy of both the classes and the masses, and we dedicated ourselves to make right the master of might, and to promote peace and good will on earth. In going about it to accomplish our purposes we have relied upon the intelligence of our citizens. We have fostered every movement designed to develop within the citizen, both young and old, the faculties of a reasoning mind. We have combated every group which has sought to exist upon a spirit of racial, religious, or class hatred. We have denied, and will continue to deny, that there is in this Government of freemen any room for classes or for what is known as class struggle.

In constructive programs for the Nation we have fostered the elementary and secondary schools as institutions in which the great genius of the free American Government should be so ingrained in the hearts and minds of youth that they may, in institutions of advanced learning, be prepared to compare them favorably with all of the other systems of government which man from time to time has set up for himself.

We have supported academic freedom and the inquiring mind, but we have denied the right of any man or group of men to tell our children that they are incapable of their own self-government, incapable of solving their problems in reason, and as a consequence should surrender their liberties to the dictation of either a class or of an individual. We have sought to preserve for our children and for the Nation the great advantages which come from free opportunity—opportunity which permits every citizen, free from regimentation, to make his finest contribution to the welfare of the country.

We have given to the country a program for the rehabilitation and care of the veteran excelled by no other nation. We have presented to the legislatures of our States and the Congress of the Nation programs for the welfare of the children of America which have advanced the interests of the Government in its youth far beyond the laissez faire conditions which existed with reference to youth's problems at the time of our return from service.

For those who do not know the Legion as do its members, may I call your attention to some of the ventures which the Legion has established as institutions?

The schoolboy patrol that sees your children across the street was the brain child of the Legion. The junior baseball program, which challenges the interest of youth up to the age of 17 and each year keeps in this healthful activity a half million boys, is a Legion endeavor. The school award, presented throughout the Nation for outstanding citizenship and designed to encourage just that quality among high-school students, began in the American Legion. Boys' state, now in active operation in 27 departments and probably this year to serve 10,000 boys in 33 of our States—a summer camp of applied citizenship for high-school juniors—is a Legion development. The national oratorical contest, conducted each year by the Legion to stimulate thought along constructive governmental lines, and the coordinating counsel to solve the community's problems of juvenile delinquency are Legion conceptions.

In community service, ambulances in isolated communities, iron lungs, oxygen tents, wading pools, playfields, parks, summer camps, orphans' homes, rest billets for people recuperating from disease—a thousand and one various types of endeavors evidence the applied energies of America's veterans for the welfare of the communities in which they live. They are accomplishments of the American Legion.

Organized upon a national basis, through the State department headquarters, is the Legion's emergency-relief set-up. Designed out of the order and discipline which we learned to be so necessary in time of war, it brings men who were trained in such discipline into immediate action wherever disaster strikes. Outstanding has been the service in instances of flood, earthquake, fire, and other disasters which from time to time strike portions of our country. Always and subject to instant call, the Legionnaire organized for this service is standing by, prepared to drop matters of his immediate and personal concern and respond to the Legion's call to civic duty.

The Legionnaires as they see their organization come of age are grateful to the American people for the high appreciation in which the American Legion is held throughout the length and breadth of our land. We are a last man's organization. A few short years, measured in the life of the world, and the last World War veteran will have gone to his reward. The time is short, my comrades, in which we can fully impress the lessons which we have learned upon the citizenry of our Nation.

As we seek to promote peace and good will on earth, we must lend the best of our thought to the defense of our Nation from the dangers which continue to beset it from without and, particularly, to the dangers which, through the ignorance and lack of appreciation of some of our citizenry, beset it from within. Many years of vigorous strength lie ahead of us. In those years we should develop a national-defense establishment which will each year and every day be at a peak of efficiency.

Too often we have surges of support for the national defense, and then let our interest wane. This is not a sensible procedure. The Legion has for 20 years warned against it. The present laws for the national defense which we are advocating should overcome this condition, and if they do, we must be constantly on the alert to see that we do not again fall into a state of obsolescence or insufficiency as to our national defense.

In the years that lie ahead we must lend our best efforts to the solution of our domestic problems of unemployment. We cannot long be boastful of the success of our democracy if millions of our people are permitted over long periods of time to be without gainful employment. For this reason we must continue to be insistent, as the Legion has been insistent, that we raise the bar to immigration to this country until such time as our domestic problems of unemployment have been solved.

It is regrettable, but it is a fact, that we no longer in this country have a public domain into which we can invite the liberty-loving peoples of other lands. We have vast numbers of unemployed in our manufacturing cities, and we have people located on marginal lands where they cannot gain their subsistence by their own labor. These conditions must be remedied, and until they are remedied, regardless of the feelings of our heart toward oppressed peoples in other lands, we must devote ourselves first to the distressed peoples of our own Nation.

While the veterans of other nations returned to their home countries to march with sword and gun, we of the Legion, through the years of our existence, have worked with the weapons of reason, constantly seeking to build a better America and to impress the benefits of our knowledge upon those who must assume the responsibilities of citizenship.

We want our children better prepared not only for the normal life, but for life's emergencies. We seek to impress that responsibility which exists in the words of our preamble—"a sense of individual obligation to the community, State, and Nation." This, in a measure, we have done. We are recognized throughout the Nation as a significant force.

In recent conversation with Gen. John J. Pershing, General of the Armies of the United States in the World War, I asked him if out of his experience he had any criticism to offer of the American Legion. He told me that he had none to offer; that he felt that the mind of the Legion, as expressed through its mandates arrived at through its democratic processes, was a great and constructive force in the Nation. I asked him if he had any suggestion of future course to be pursued, and his only suggestion was that the Legion carry on in the spirit in which it had carried on as a constructive force, doing its utmost to impress its reasoned conclusions upon the generations which would follow after.

Such commendation from the man who led us during the years of our service should be appreciated. We know not what the verdict of the great Commander of all may be when the last of the American Legionnaires have been called to their reward. We know not what the memory of our children will be of those of us of our generation, but it is my sincere hope that out of the unselfishness of our service, out of the intelligence of our thought, out of the visible evidence of our endeavors, generations yet unborn will remember the American Legion as an organization devoted in its service to its country and its God.

To the development of this appreciation, I invite the continued activity of every post and of every Legionnaire, and particularly I invite the activity of those who have not yet seen fit to join us.

Through what other avenue can we, as ex-service men, hope to keep our children from the necessity of learning the things that we have learned in the same painful way we learned them? Through the avenue of our combined efforts alone can we impress our thoughts as men who knew the days of war upon those whom we would hope to save from the necessity of learning in the same cruel school of experience. May the Legion, with the coming years, grow stronger and may its accomplishments be even greater in the years that lie ahead than during the days of its lusty youth. May its manhood as it passes 21 be all that we who have been a part of its infancy and its growth have hoped and wished and worked that it might be.

May the future enshrine the American Legion in the hearts of all citizens as a constructive force of unselfish, devoted, appreciative, and patriotic veterans serving in peace as its members served in war.

Philippine Independence

EXTENSION OF REMARKS

OF

HON. ERNEST W. GIBSON

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Monday, March 20 (legislative day of Thursday, March 16), 1939

EDITORIAL FROM NEW YORK HERALD TRIBUNE

Mr. GIBSON. Mr. President, I ask unanimous consent that there may be printed in the CONGRESSIONAL RECORD an editorial from the New York Herald Tribune dealing with the Philippine problem and the situation in the Orient.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE LUCKIEST OF ORIENTALS

With its usual aptness in phrase making, Life, in its number of February 13, devotes several pages to the Filipinos, whom it describes as the "luckiest people in the Orient." Their luck resides in the fact that 40 years ago the American Government took them under its wing, and that so long as this protectorate lasts they are safe from foreign invasion, they are permitted to run their own affairs with almost no restrictions, and they are helped to maintain the highest living standard of any people in the Orient.

All of this has been done gratis by Uncle Sam. As a matter of fact, money and advantages of all sorts have been showered upon these people during the last four decades. Living conditions in the islands have been greatly improved, public health has been put on a high standard, illiteracy has been cut in half, all under the impetus of the Government of the United States. Hundreds of millions of dollars have been poured into the defense of the islands. Foreign commerce, largely with the United States, has been consistently encouraged. The result is that the mass of the Filipino people today are infinitely better off than they were in 1899.

What next? That remains the great question. Independence, complete and absolute, was voted a few years ago, effective as of 1946. Today in the islands a movement is growing to continue indefinitely the present relationship of guardian and ward. Recently Senator GIBSON, of Vermont, introduced a bill which had as its purpose to give the Filipinos the advantages of preferential trade through a treaty, at least until 1960. Others are now talking in favor of changing the provisions of the independence bill so as to establish a sort of indefinite protectorate over the islands.

Certainly, if there is anything in the Chinese theory that a man who saves another's life becomes responsible for the maintenance of the man whom he saved, Uncle Sam should continue to support the Filipinos. As Life well shows, the benefits which the Filipinos have derived from American rule are enormous. It is the hope of the Filipinos that a situation can be created in which the Filipinos will continue indefinitely to be helped and protected.

The one factor which, more than any other, has changed sentiment in the Philippines from support of complete and immediate

independence to an indefinite prolongation of the protectorate is, of course, fear of Japan. Certainly the constant expansion of the Japanese cannot be ignored by those who believe in Philippine independence. Already there are many Japanese in the Philippines, and there can be little doubt that they will send back to Japan information which can be of value if ever Japan decides that it wants to take over the Philippines for its own use.

As between domination by Japan and by the United States there can be no doubt which the Filipinos would prefer. In theory, of course, they would like to be dominated by neither nation, but despite the fact that they are arming quickly and developing a large corps of good soldiers, they are not—and cannot be for years—strong enough to stand by themselves. The grim logic of world events is thus making the complete separation of the islands from America impractical and unlikely. The eloquent words in which Senator GIBSON concluded his admirable speech recently deserve the thoughtful consideration of every American. After watching and studying the Philippine adventure for more than a quarter of a century, he had reached a profound feeling that "the great Philippine Commonwealth will yet remain with us, not under us, on their own volition and with our own concurrence, with Filipino self-respect intact, Filipino security insured, and Filipino self-government assured under the American flag."

Radio Regulation and Monopoly

EXTENSION OF REMARKS

OF

HON. BURTON K. WHEELER

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Monday, March 20 (legislative day of Thursday, March 16), 1939

STATEMENT BY S. HOWARD EVANS, SECRETARY, NATIONAL COMMITTEE ON EDUCATION BY RADIO, AT THE MONOPOLY HEARINGS HELD BY THE FEDERAL COMMUNICATIONS COMMISSION DURING THE WEEK OF MARCH 14, 1939, AT WASHINGTON, D. C.

Mr. WHEELER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by Mr. S. Howard Evans at the monopoly hearings of the Federal Communications Commission during the week of March 14, 1939.

There being no objection, the statement was ordered to be printed in the RECORD as follows:

I have some hesitation in appearing before this committee because definition of the term monopoly is very inexact and any statement made concerning its application to radio must be highly tentative. However, there seems to be, between the processes of Federal regulation and certain of the practices existing in broadcasting, relationships which may help to explain the charges of monopoly so freely and so frequently made. There is at present a vicious conflict between conditions under which stations are licensed by the Communications Commission and conditions under which these stations are used in competition for commercial advertising. This results in a complete invalidation of the present system of station allocation and a severe limitation on any possible opportunity for freedom of speech on the air.

The purpose of my appearance, then, will be to describe these relationships and indicate why their implications are so grievous.

Authority for the kind of regulation now in effect in broadcasting was created originally by the Radio Act of 1927. That act established the Federal Radio Commission and gave it certain powers among which were the following: (1) to classify radio stations, (2) to prescribe the nature of the service to be rendered by each class of stations and each station within any class, and (3) to assign bands of frequencies to the various classes of stations and assign frequencies for each individual station and determine the power which each station shall use and the time during which it may operate.

Under these powers the Radio Commission established a pattern of allocation which has been continued by the Communications Commission without substantial change, and which has determined in large measure both the structure and operation of broadcasting as an industry. This close connection between the regulatory body and the stations licensed by it puts the Communications Commission in a position where it can claim credit for much of the improvement which has taken place in American radio and where it cannot escape some of the criticism for unsatisfactory conditions which have developed.

In both the Radio Act of 1927 and its successor, the Communications Act of 1934, the right to classify stations, to assign frequencies, and to make grants of power was conferred subject to the requirement that such authority be used in the "public interest, convenience, and necessity." This requirement was in effect a limitation on the broad powers of discretion delegated by these acts and it made necessary, as a basis for licensing facilities, some determination of the factors which might have an important bearing on the public interest in broadcasting and some attempt to give proper weight to these factors.

In the beginning of Commission regulation no group of human beings could have made a perfect selection of factors. Trial and error had to play its part. Mistakes were inevitable. Their correction had to be a slow process which is not as yet complete.

However, the former Federal Radio Commission and the present Communications Commission might have made a more complete study of the results of their actions, both positive and permissive. Had they done so they would have discovered long ago that there is a fundamental conflict between two basic practices in broadcasting. One of these practices was instituted by the Commission. The other was allowed to develop privately with the blessing of the Federal Radio Commission, as will be indicated later. Each practice, considered by itself, is perfectly sound and defensible. Between the two a conflict has developed which, in my judgment, is responsible for most of the current charges of unsoundness, unfairness, and monopoly.

The first of these practices is the procedure established by the Commission in connection with the allocation of facilities. While details of this procedure have been changed, the allocation continues to be made in accordance with a classification of stations recommended by engineers in 1928. That classification divided the 90 available broadcasting frequencies into 3 types of services, namely—

(1) Forty frequencies were set aside for use by high-powered stations on cleared channels. This was in order to serve rural and remote areas.

(2) Forty-four frequencies were set aside for use in regional areas.

(3) Six frequencies were designated for strictly local stations.

From a technical point of view, all the inequalities made possible by this classification of stations and by its modifications are entirely justifiable. It is only when they are considered in connection with the uses to which radio has been put that the unsoundness in the present system of regulation becomes evident. These uses constitute the second set of practices to which reference has been made. The theory behind them seems to have been built on four fundamental principles, which may be stated somewhat as follows:

(1) The Government shall license to private interests that number of stations which can make most effective technical use of the comparatively few air channels available for broadcasting.

(2) Station owners shall be allowed to create among themselves a system of commercial competition for advertising revenue. This private competition can be depended upon to keep them operating in the public interest.

(3) The public as the listening audience will determine the outcome of the competition by tuning its receiving sets to stations according to the excellence of their programs.

(4) Under such a system broadcasting will achieve a greater freedom and usefulness than is possible under more stringent Government regulation.

Now, let us consider where the conflict develops between what is admittedly a sound system of allocation and what seems to be a sound and reasonable theory of commercial competition in the use of facilities. The conflict grows out of the fact that the Communications Commission allocates the facilities to be used but has no adequate control over the use to which they are put. For example, it licenses a broadcaster to operate a high-powered station, technically designated for the service of rural and remote areas, and then, under the theory of private competition, is powerless to prevent him from using that station to sell advertising to listeners in the immediate vicinity of his transmitter.

Perhaps such commercial use of broadcasting facilities is desirable. Perhaps it is the only way or the best way to finance American radio. Nevertheless, it puts this Commission, as the representative of the Federal Government, in the position of giving 50,000 watts' power to one person and 100 watts' power to another person with the knowledge that these two stations are going to compete directly for advertising revenue. By making these unequal grants of power the Commission—the Government—is favoring one station owner as against another. It is helping to determine the outcome of commercial competition before it begins and thus is destroying the principle of fair competition on which the system of American radio is supposed to rest.

What I am saying does not imply that the Commission should destroy the present structure of broadcasting in order to eliminate the present unequal competition. It means much less than that. It may mean simply introducing into the process of regulation new factors designed to compensate for the unfair advantages which certain stations now enjoy. It cannot mean anything more than a determination of all the factors which have an important part in the total picture of broadcasting and the making of such an adjustment among those factors that the "public interest, convenience, and necessity" is completely protected.

Such a step is necessary to establish a defensible system of regulation. To say that it is a move toward Government ownership is to indicate either complete ignorance of the functions of regulation or a willingness to engage in deliberate misrepresentation. To say that it should be delayed until all of its possible effects upon the industry have been determined is to argue that the maintenance of the industrial status quo with all its instability is more important than the establishment of a sound basis of regulation to which the industry can adjust itself and on which alone the industry can build a stable and secure future.

There never has been any comprehensive statement from the Commission indicating the factors entitled to consideration in the regulation of broadcasting. Instead a policy has been adopted under which the Commission takes up individually the cases before it and makes a separate decision for each case. While this practice has ample precedent, it has not created an entirely fair basis for regulation of the new field of radio. It has left the Commission free to give great weight in certain cases to factors which it has scarcely considered in other cases.

It is common knowledge that the Commission, in the exercise of its official discretion, has placed more emphasis on the mechanical and technical aspects of broadcasting than on its social and economic implications. In the area of technical regulation the Commission has developed rather exact standards which are a matter of public record and which are completely defensible in the courts. So far as the social and economic aspects of radio are concerned, the Commission has no objective standards. The most positive move in that direction was the report of the special committee on the proposed new rules and regulations, which in January 1939 recommended the development of program standards, although it took the position that such standards could not be rigidly defined.

This lack of any scientific basis on which to deal with certain of the factors known to have a bearing on the public interest in the granting of broadcast licenses puts the Commission in an unenviable position. The Commission has to depend for the justification of all of its acts, some of which have strong social implications, largely upon the standards which have been developed for technical operation. In every case it must emphasize the importance of the technical aspects and minimize the social and economic factors, because this is the only practical way to support a decision with the objective factual evidence necessary to sustain it if taken before the courts.

Legitimate criticism can be directed at the Commission for its failure to develop objective standards for every factor to which it gives weight in any of its decisions. Without standards there is almost certain to be inequality, however unintentional, in the treatment of those who come before the Commission. There is also the possibility of deliberate discrimination and unfairness. How completely the Communications Commission has left itself open to such charges is indicated by Mr. Robert J. Landry, radio editor of Variety, in an article which appeared in the October 1938 issue of the Public Opinion Quarterly. Mr. Landry said:

"By July 1938 the number of challenges of F. C. C. authority had increased notably. One of the points made by aggrieved broadcasters in 1937 was that the Commission made its decisions, then passed the matter to the legal department to write an opinion. This, it was charged, amounted to a determination of the issues on undisclosed reasons followed by a leisurely thinking up of an official explanation after the fact."

While I am not asserting that deliberate discrimination or unfairness has been practiced by the Commission, there are cases on record which suggest such a possibility. I will cite two which have to do with educational broadcasting. The first was a news release issued by the former Radio Commission in December 1931. Its opening paragraphs read as follows:

"The following statement was today authorized by the Commission:

"In re the use of radio broadcasting stations for advertising purposes.

"The Commission believes that the American system of broadcasting has produced the best form of radio entertainment that can be found in the world.

"This system is one which is based entirely upon the use of radio broadcasting stations for advertising purposes. It is a highly competitive system and is carried on by private enterprise. There is but one other system—the European system. That system is governmental. Under that system broadcasting is conducted either by the government or by some company chartered by the government. There is no practical medium between the two systems. It is either the American system or the European system."

What place was there, under the terms of that release, for the educational broadcasting stations then operating in the regular broadcasting band? How could such stations expect due consideration from a commission which had gone out of its way to say that the "American system" of broadcasting was one "which is based entirely upon the use of radio broadcasting stations for advertising purposes"? Apparently the noncommercial stations in the United States could anticipate no real acceptance by the Federal regulatory body and could only hope to be tolerated as part of a system of commercial operation to which they were foreign.

As a second illustration, I quote from Examiner's Report No. I-671, in re the applications of the Agricultural and Mechanical College of Texas and the State Capitol Broadcasting Association as entered in dockets 4928 and 5011. The report was submitted to the Commission under date of June 7, 1938. On page 11 occurs the following paragraph:

"The frequency involved (1120 kilocycles) is designated by rule 120 as a regional frequency and allocated for use by regional stations in the regular broadcast commercial field. On January 26, 1938, the Commission allocated certain frequencies to broadcast stations to be known as 'noncommercial, educational broadcast stations,' to be licensed to organized nonprofit educational agencies for the purpose of transmitting educational and entertainment programs. In accordance with the rules governing such stations, the broadcast service to be rendered must be primarily of an educational character and no sponsored program of any character may be broadcast (release of January 28, 1938). The applicant, station WTAW, propcses a service primarily devoted to educational and entertainment matters, and hence falls within the purview of the 'noncommercial, educational broadcast stations' provided for as indicated (rules 1057–1059)."

Please note that the examiner refers to the regular broadcast band which contains both commercial and noncommercial stations as "the regular broadcast commercial field." This strongly suggests that the philosophy of the 1931 press release still exists within the Commission.

Much more significant is the attempt to apply in the regular broadcast band rules designed specifically for one set of ultra-high frequencies. Quite apart from the fact that the examiner had no legal authority for such an application of the rules, there is another implication to which attention should be called. He is setting up a double standard. To one applicant for the frequency of 1120 kilocycles he would apply one set of rules, and to another applicant he would apply a set of rules which contained additional requirements.

If the Commission were able, in licensing facilities, to make its decisions entirely on the basis of mechanical or technical evidence, the evidence which I am submitting would have little validity. The Commission's predicament grows out of the fact that almost none of its decisions can be confined to questions on which it is prepared to pass objectively. When a station applies for 500,000 watts power, the mechanical and technical problems can be disposed of readily. The really important questions center around the economic and social implications of the application. Will it tend to create unfair competition? Will it tend to create a monopoly of power in the hands of one man or a few men?

The same is true of most of the other applications which come before the Commission. It is even more true of the cases which are appealed from the decision of the Commission to the United States Court of Appeals for the District of Columbia. The magazine Variety, in its July 13 issue, made an analysis of the more significant questions then on appeal to the court. It stated five issues, as follows:

(1) If the Commission can consider ancient history in punishing stations for violations of law or failure to serve public interest.

(2) If economic considerations should be weighed in deciding whether to grant a newcomer's plea.

(3) Whether local monopolies should be considered in deciding on requests for new facilities.

(4) Whether other occupants of a shared channel shall have a crack at time vacated by a transmitter going off the air.

(5) Adequacy of F. C. C. findings. This matter was involved in most of the outstanding cases settled by the courts last year.

While I hold no brief for the analysis as Variety has stated it, I believe that it serves to emphasize my point; namely, that by the very nature of radio, the Commission cannot confine its decisions to the mechanical and technical matters on which alone it is prepared to render an objective judgment.

Every area to which the Commission gives consideration, but for which it has no objective standards of measurement, is a no-man's land where law breaks down and all sense of security and stability in broadcasting is destroyed. It makes possible the playing of favorites so long as that fact is not evident in the legal record. It invites the use of economic pressure and political pull. It fosters the development of conditions which may lead to monopoly.

Ideally the remedy for this condition would be the development of standards which could be applied to every phase of regulation with the same exactness that mechanical standards are now being applied to certain technical aspects of radio. Unfortunately the social and economic implications of broadcasting do not lend themselves to that kind of measurement. As a practical matter, therefore, standards of a different type have to be developed for these areas. While this may require additional authority from Congress, it is a job that must be done before the Commission can extricate itself from its present vulnerable position.

The best method of developing standards for social and economic regulation is still a matter for debate. However, there seems to be increasing agreement among students of radio that, for all areas in which standards cannot be determined mathematically by experts, they should be determined democratically through the participation of responsible civic, educational, religious, farm, labor, and other interested groups, which would constitute a cross section of organized public opinion. These groups would cooperate actively with the broadcasting industry under the supervision of the Federal Communications Commission. Experience seems to indicate that in such cooperation each participating group should select its own representatives rather than allow those representatives to be appointed or invited by either the radio industry or the Federal Communications Commission.

The only proposed alternative to this democratic procedure is to have standards in these areas determined arbitrarily either by the Federal Communications Commission or by the radio industry through some system of self-regulation. To this alternative I am unalterably opposed and on the grounds that such control over this great instrumentality of communication, with its power instantaneously to reach and to influence millions of people, cannot safely be entrusted to either of these groups. Each has limitations which make it unsuitable as an agency to function for this purpose.

The great objection to the Federal Communications Commission is that it is created by and is subject to the control of the Federal Government. Recent experience with radio in European countries suggests that there is a real danger to democracy in turning over to any central government more than the necessary minimum of authority over what shall be spoken on the air. As a result the indications seem to be that few Americans would favor any attempt by the Commission itself to set social and economic stand-

ards. This attitude represents a philosophy of government and is no reflection on either the Commission or its personnel.

There is less popular objection to the proposal that the additional standards which are needed should be developed by the industry through self-regulation. This is because many people believe that self-regulation offers the best way to establish and maintain freedom of the air. If this belief were well founded it would create an overwhelming reason for leaving the entire matter to the broadcasters.

Unfortunately the facts are on the opposite side. They indicate that, while some of the elements of freedom may be present, at least one grave danger exists. This danger grows out of another conflict between the conditions under which stations are licensed and the conditions under which they are used.

Under the conditions of each broadcasting license issued by the Federal Government, the individual station is given full authority and has to assume full responsibility for its operation. Under present conditions of use many individual stations become part of broadcasting networks and carry programs which may originate hundreds of miles away. This network relationship creates a divided responsibility and, in the handling of controversial issues, at least, opens the door to serious abuses of the freedom of the air.

Generally speaking, controversial issues on the networks are handled in accordance with a carefully worked out formula. This formula provides that controversial issues shall be barred from sponsored programs and shall be discussed, if at all, on sustaining time. It also provides that, in the interest of fairness, any responsible group protesting against the presentation of a controversial issue shall be given an opportunity to state its point of view.

The formula reads well and serves as a complete answer to any charge of prejudice on the part of the networks. However, it offers no guaranty that opposing sides of a controversial issue will be given an equal opportunity to put their case before the listening public. The reason is that since these programs are not on advertising time, and member stations of the networks are not under contract to carry them, the coverage of any specific program depends upon the number of individual station managers who choose to broadcast it. Under such conditions one program may be put on the air by nearly a hundred stations, and the answer to it may be transmitted by less than a dozen stations.

There is at least one case on record in which the President of the United States discussed a controversial issue over the facilities of the three major networks with practically all of their affiliated stations carrying the program. A United States Senator, trying to answer that broadcast on the following evening, was given a single chain and not all of that. There is another case in which certain stations refused to carry a network broadcast by a representative of the Communist Party, but did lend their facilities later to another broadcast designed to be an answer to the Communist speech.

If the present practice could be continued and if public confidence in it could be maintained, it would be possible for an unscrupulous political party in power nationally to bring such concealed pressure on individual stations, subject as they are to Federal license, that it could give itself what might amount to an effective monopoly on the radio discussion of controversial issues. There could be no greater threat to the freedom of the air. So long as conditions within the industry make possible the continuation of such a potential danger self-regulation can never be more than a phrase.

In bringing this statement to a conclusion may I return to the suggestion that the best way to end the charges of unfairness and monopoly in radio and to provide for the future stability of broadcasting is to take steps immediately looking toward the development of standards. Where mathematically possible these standards should be determined by experts. In all other areas the standards should be determined democratically through the participation of responsible and interested citizens' organizations. While such a procedure may involve some difficulties, it has none of the fundamental weaknesses which characterize the proposed alternative procedures. In my humble judgment, it offers the only defensible course for this Commission to pursue.

Accounting System of the Federal Government

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, March 20 (legislative day of Thursday, March 16), 1939

ADDRESS DELIVERED BY E. F. BARTELT, COMMISSIONER OF ACCOUNTS AND DEPOSITS, UNITED STATES TREASURY DEPARTMENT, BEFORE THE NATIONAL ASSOCIATION OF STATE AUDITORS, COMPTROLLERS, AND TREASURERS, AT THE BUENA VISTA HOTEL, BILOXI, MISS., NOVEMBER 16, 1938

Mr. MEAD. Mr. President, our Nation is this year celebrating the one hundred and fiftieth anniversary of its founding. So complex have the services of Government grown during this century and a half that the extent of its operations is almost beyond human comprehension. Particularly is this true of the management of our fiscal affairs.

As a source of authoritative information on a subject vital to all of us, I ask unanimous consent to have printed in the RECORD the address on the accounting system of the Federal Government, in abridged form, delivered by E. F. Bartelt, Commissioner of Accounts and Deposits, United States Treasury Department, before the National Association of State Auditors, Comptrollers, and Treasurers, on November 16, 1938.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman and gentlemen, it is a pleasure to be with you today to discuss, and perhaps to clarify in your minds, the principles upon which the Federal Government's accounting system rests.

It is appropriate that we should exchange information on governmental accounting systems. Both the area and the scope of fiscal relations between the Federal Government and the States have increased markedly in the last two decades; but, aside from such interrelations, your problems are essentially the same as ours.

All of us realize the immense importance of proper accounting in the transaction of the public business. Informative fiscal accounts are a primary essential to an intelligent understanding of government. They are not only important tools of management, but are also the chief conservator of the public funds against waste and graft. In a true sense, the real "watchdogs" of the public funds are those keepers of the public accounts who are on duty day after day and year after year faithfully and currently recording the transactions that go to make up the great cooperative activities which we know as government. * * *

The fundamental principles are common to all public accounting, whether of the Federal Government, of the States, or of subordinate units of government. As to expenditures, we have to proceed on the basis first of clear authorization, properly attested and recorded; second, administrative officers must be held accountable for seeing that all expenditures are made for the purpose of carrying out express authorization; third, there must be a careful record and classification of expenditures; and fourth, there should be thorough audits by an authority independent of the administrative and disbursing authorities. As to receipts, the records must, of course, disclose whether all money due to the Government from various sources is being efficiently collected and faithfully accounted for. * * *

FUNCTIONS OF AN ACCOUNTING SYSTEM

In the administration of an accounting system there are involved four major functions, namely:

(1) The designing of the system;

(2) The maintenance of the system—that is, the keeping of the books;

(3) The interpretation of accounting data for management purposes; and

(4) The auditing of the accounts and records.

We will have time to discuss only the second of these four major functions.

For convenience, I shall divide the system into two broad classifications—

The first may be termed "administrative accounting" in the several departments. It consists principally of scattered sets of books with which approximately 175 operating units exercise control of the respective appropriations made to them by the Congress. This classification also embraces cost accounting, in agencies where it is necessary to maintain cost records. It also includes the maintenance of accounts for money due to or payable by the Government.

The second classification might be termed "fiscal accounting" in the United States Treasury Department, which has to do with the financing of all governmental activities. This involves the collection of the revenue; the safe-keeping and disbursement of the public funds; the maintenance of revenue and appropriation accounts relating to all activities of the Government; the control of appropriations through Treasury warrants; the management of the depositary system; the borrowing of money on credit of the United States, and the production, issue, and redemption of securities, currency, and coin.

GOVERNMENT STRUCTURE

To comprehend the accounting system of the Federal Government it is necessary to consider the principles upon which the Government is organized; the source of its authority; how it functions; and the scope of its operations.

Its general purposes, as stated in the Constitution, are:

"To establish justice, insure domestic tranquility, provide for the national defense, promote the general welfare, and secure the blessing of liberty * * *."

To attain these objectives it is organized under three great branches, namely,

1. The legislative branch, which makes the laws.
2. The executive branch, which executes the laws.
3. The judicial branch, which construes the laws in cases of dispute.

be broadcast (release of January 28, 1938). The applicant, station WTAW, propcses a service primarily devoted to educational

indications seem to be that few Americans would favor any attempt by the Commission itself to set social and economic stand-

LEGISLATIVE BRANCH (CONGRESS)

The Congress occupies a position in the Federal Government similar to that of a board of directors in a large corporation. It determines the policies of the Government through the enactment of laws. It has the sole power to levy taxes. No money may be paid from the Treasury except pursuant to its authorization.

EXECUTIVE BRANCH

The President is the general directing head of the business organization of the Government. Under the Constitution he must see that the laws are faithfully executed. In the executive branch of the Government are 10 major executive departments; about 40 independent boards, commissions, offices, and establishments; and approximately 125 subordinate bureaus and divisions within the executive departments. Each of these 175 administrative agencies maintains its own system of accounts.

JUDICIAL BRANCH

The judicial branch is composed of the Supreme Court of the United States, 10 circuit courts of appeals, the United States Court of Appeals for the District of Columbia, and 85 district courts. There are also several special courts such as the Court of Claims, a Court of Customs and Patent Appeals, a United States Customs Court, and a United States Court for China.

SCOPE OF GOVERNMENT ORGANIZATION

During the 150 years of its existence the scope of the Government's activities has expanded to a point almost beyond human comprehension. The Government is a far-reaching institution. Its operations extend to every part of our own country and into every foreign land. Its operations have become so extensive and its financial transactions so complex that it would be impossible, except through exhaustive study and extensive research, clearly to visualize the accounting problem in its entirety.

NUMBER OF EMPLOYEES

The Government employs about 1,200 000 men and women. In addition there are some three and one-half millions employed on work-relief projects and the Civilian Conservation Corps. Contrary to popular belief, only 10 percent of the Government's employees work at the seat of government in Washington.

VOLUME OF FINANCIAL TRANSACTIONS

In 1792 the total receipts of the Government, including postal revenues and receipts from the sale of public-debt obligations, amounted to less than $9,000,000.

In 1915, just before the World War, the total receipts from all sources was less than a billion dollars.

In 1938, including public debt issues and exchanges, the receipts had jumped to over $18,000,000,000. In addition, there were currency redemptions of $3,351,000,000. Its combined money transactions in all accounts in that single year were in the neighborhood of $45,000,000,000.

The Government's revenue last year (including postal) amounted to over $7,000,000,000. Its budgeted expenditures exceeded eight and one-half billions. Its bonded indebtedness is about thirty-eight billions. It has a cash balance of two and one-half billions, exclusive of the $2,000,000,000 stabilization fund. It has a proprietary interest of about four billions in various governmental corporations whose combined assets are more than $12,000,000,000. It has contingent liabilities of some five billions, secured, of course, by assets.

The Treasury handles investments for approximately 25 different agencies and trust accounts, the holdings for which now amount to about $5,000,000 000. The Treasury holds over sixteen billions of gold and silver against which there is a $13,000,000,000 liability. (Exclusive of $1,800,000,000 liability to stabilization fund.) It also holds about $13,000,000,000 in foreign obligations.

PHYSICAL PROPERTIES

The Government owns about 400,000,000 acres of real estate having an estimated fair market value of approximately $5,000,000,000. The combined area is equal to one-fifth of the whole country. It maintains over 2,900 buildings; 300 foreign embassies, legations, and consulates; 45,000 post offices; about 100 courts; 300 hospitals; 130 parks and cemeteries; 150 national forests; 200 Indian reservations; 350 Indian schools; 225 Army posts; 2,400 vessels; 350 quarantine and immigration stations; 22 prisons; 400 customs houses; 820 internal revenue collection offices (including substations); 29,000 lighthouses and aids to navigation; and many other activities too numerous to designate.

VOLUME OF DISBURSEMENTS AND COLLECTIONS

Over 12,000 administrative officers and employees are authorized to incur obligations on behalf of the United States or to certify pay rolls and vouchers to Government disbursing officers for payment. The Government's check books are in the hands of some 1,500 carefully selected disbursing officers, who are authorized to draw checks on the Treasurer of the United States. It handles over 25,000,000 collection items annually and makes approximately 140,000,000 payments a year. The Treasury has paid as many as 1,790,000 checks in a single day.

DEPOSITARIES

The bulk of the Government's fiscal business is transacted through the Federal Reserve banks and their branches. However, in addition the carrying on of the Government's business requires the Treasury to maintain accounts with commercial banks throughout the country, where the receipts or disbursements of the Government are sufficiently large to justify such action. On June 30, 1938, there were 2,851 authorized depositaries. Of these, 1,544 were special depositaries carrying deposits amounting to six hundred and ten millions, representing the proceeds of sales on credit of Government securities; 1,295 were general and limited member-bank depcsitaries carrying deposits of forty-four millions; and 12 were foreign depositaries with deposits of three millions. Deposits with Federal Reserve banks amounted to about $929,000,000.

NUMBER OF ACCOUNTS

The Treasury maintains over 9,000 revenue and appropriation accounts relating to the activities of all departments and establishments of the Government, approximately 6,700 disbursing accounts, 25,000,000 accounts with taxpayers, 2,000,000 accounts with registered owners of Government bonds, and about 700,000 loan accounts with clients of the Farm Security Administration. The Social Security Board maintains almost 33,000,000 accounts with employees subject to the Social Security Act. The Railroad Retirement Board maintains approximately 116,000 individual accounts with railroad employees. The Home Owners' Loan Corporation has in excess of a million accounts with borrowers. The Veterans' Administration maintains almost one and one-half million accounts with pensioners, beneficiaries, and policyholders. The Farm Credit Administration and affiliated agencies have approximately 4,000,000 accounts with borrowers, and the Reconstruction Finance Corporation has over 26,000 accounts with banks, insurance companies, railroads, credit unions, building and loan associations, mortgage loan companies, etc.

This is only a part of the picture, but it serves to illustrate the immensity of the Government's accounting problem. It may be observed in passing that no mention has been made of the Government's equipment, the value of which would be difficult to estimate.

GENERAL OUTLINE OF ACCOUNTING SYSTEM

In view of what I have said, you will perhaps be surprised to learn that there is not in the Federal Government today a master set of accounts which reflects all financial transactions of the Government. For the most part, the accounts are kept in 175 different administrative agencies and, as I will later point out, on various bases. The accounts in the administrative agencies are not correlated with the central financial accounts of the Treasury, and therefore are not designed for the purpose of controlling the financial affairs of the Government as a whole. They are designed almost exclusively for the needs of the respective operating units.

CENTRAL ACCOUNTS KEPT ONLY ON "WARRANT" BASIS

The central accounts of the Government relating to receipts, appropriations, and expenditures are, by law (U. S. C., title 5, sec. 255), maintained upon the books of the Division of Bookkeeping and Warrants of the Treasury Department, in which were vested the bookkeeping functions originally performed by the Register. These accounts, however, as presently constituted, are based only upon warrants issued by the Secretary of the Treasury and countersigned by the Comptroller General.

These warrants are formal statutory documents issued by the Secretary of the Treasury authorizing (1) the setting up of appropriation accounts; (2) the advance of money to disbursing officers; (3) the payment of claims settled directly by the General Accounting Office; (4) the covering of money into the Treasury; (5) the transfer of funds from one appropriation account to another; and (6) the clearing from the books of unexpended appropriation balances. They constitute the control of Treasury receipts and appropriations. Since the central books of the Government are based only on Treasury warrants, they do not reflect the current financial condition of the Government.

In the accounting for Government revenue there are involved at least four basic transactions:

First, the assessment of taxes or duties;

Second, the collection of such taxes or duties;

Third, the deposit of the collections into a Federal Reserve bank or designated depositary for account of the Treasurer of the United States; and

Finally, the formal acknowledgment of the receipt into the Treasury on a covering warrant.

Of these four transactions only the last is reflected in the central accounts of the Treasury's Division of Bookkeeping and Warrants.

Now, let us look at the expenditure side. The expenditure of money involves eight basic transactions:

First, the setting up of the appropriation account;

Second, the apportionment of the appropriation according to the months in which the funds are to be obligated;

Third, the allotment of money to operating units;

Fourth, the incurring of obligations of various kinds and descriptions;

Fifth, the approval of vouchers for payment;

Sixth, the advance of funds for credit in checking accounts of disbursing officers;

Seventh, the drawing of checks by disbursing officers; and

Finally, the payment of the checks by the Treasurer of the United States.

Of all these transactions only two appear in the central accounts of the Treasury Division of Bookkeeping and Warrants. One of these is the warrant setting up the appropriation account, and the other is the warrant advancing funds to disbursing officers. (Note: Subject to qualification that under Executive Order of July 27, 1933, certain budgetary data is reported to the Treasury by executive departments and establishments.)

TREASURER'S ACCOUNTS

The second and entirely different set of accounts are those maintained in the office of the Treasurer of the United States.

brating the one hundred and fiftieth anniversary of its found-

3. The judicial branch, which construes the laws in cases of dispute.

These accounts are based upon moneys received and disbursed by the Treasurer. They also include the checking accounts of disbursing officers through whom the major part of the Government's expenditures are made.

When funds are advanced by the Secretary of the Treasury to a disbursing officer, the warrant is reflected as a charge against the appropriation account on the books of the Treasury Division of Bookkeeping and Warrants and as a corresponding credit in the checking account of the disbursing officer on the books of the Treasurer of the United States. The Treasurer does not keep a separate account for each appropriation; nor does the Division of Bookkeeping and Warrants keep a separate account for each disbursing officer. (Note: Under section 304 of the Budget and Accounting Act of 1921, the personal accounts of collecting and disbursing officers formerly maintained in this division, were transferred to the General Accounting Office.)

DISBURSING OFFICERS' ACCOUNTS

The third set of accounts are the accounts maintained in the various disbursing offices of the Government. These accounts are on a different basis from either set of accounts previously mentioned. They are based primarily on advances of funds to disbursing officers through warrants of the Secretary of the Treasury and upon checks issued in payment of Government obligations. To some extent disbursing officers also account for collections received from miscellaneous sources through the various operating agencies of the Government.

COLLECTING OFFICERS' ACCOUNTS

The fourth and fifth sets of accounts are the accounts of collectors of customs and collectors of internal revenue. There are 48 collectors of customs and 64 collectors of internal revenue throughout the country. The bulk of the Government's revenue is received through these officers, who make daily deposits in Federal Reserve banks and designated depositaries for account of the Treasurer of the United States. Their accounts are based principally on assessments, collections, and Treasury deposits.

ADMINISTRATIVE APPROPRIATION AND FUND ACCOUNTS

The sixth set of accounts are the administrative appropriation and fund accounts of the several departments and establishments of the Government. Except in the case of the Emergency Relief program, these accounts are scattered throughout the departments, bureaus, offices, and field services of the Government. They are based primarily on congressional appropriations, Budget apportionments, administrative allotments, encumbrances for pay rolls, contractual obligations, purchases, etc., and approved vouchers. In some cases administrative agencies also maintain cost accounts. While such accounts are related to appropriation accounts, they are usually operated as separate systems.

The expenditures identified with a particular appropriation account do not always represent the entire cost of a service, function, or activity to which the appropriation relates, because frequently additional expenditures are properly chargeable to other appropriations. The standardization, development, and correlation of the administrative accounting in the several executive departments and establishments present the most difficult problem in the improvement of the Government's accounting system.

SECURITY AND PROPERTY ACCOUNTS

Finally, there are property accounts, mint accounts, security accounts, and supply accounts, all operated more or less as separate systems.

The correlation of these different systems undoubtedly offers a fertile field for constructive study.

CENTRAL ACCOUNTS OF THE GOVERNMENT

Notwithstanding the limitations which I have mentioned, an understanding of the Government's accounting problem must commence with a study of the Division of Bookkeeping and Warrants of the Treasury Department, since that organization is in a sense the hub of the Government's accounting system. (Note: The term "accounting," as here used is to be distinguished from "auditing.") It is important to know how the accounts relating to the revenues, appropriations, and expenditures of the Government center in this bookkeeping organization.

In its archives are the original manuscript accounts kept by Gen. George Washington, in his own handwriting, covering his financial transactions as commander in chief of the military forces during the Revolutionary War. Of equal interest are the accounts of Robert Morris, first superintendent of finance, during the period 1781 to 1784. The first Treasury circular of instructions in the original handwriting of Alexander Hamilton is another document which fires the patriotism of every real American privileged to see it. The history of the United States as a Nation and the history of the Federal Treasury come down the years together.

The Treasury Division of Bookkeeping and Warrants has three important statutory functions, all of which date back to the very beginning of the Government:

1. To issue the warrants acknowledging the receipt of money into the Public Treasury, or authorizing the withdrawal of money therefrom;

2. To keep the public accounts relating to the revenues, appropriations, and expenditures of all departments and establishments of the Government. (Note: The Treasury's accounts relating to the Post Office Department represent only the postal surplus or postal deficit. The Secretary of the Treasury issues a warrant to the Post Office Department on the General Treasury to cover postal deficits.)

3. To prepare an annual report to the Congress relating to revenues, appropriations, and expenditures of the Government.

It will be recalled that the Treasury's control of receipts and issues is exercised through the medium of documents called "warrants." Section 147 of title 31 of the United States Code reads:

"The Treasurer shall receive and keep the moneys of the United States, and disburse the same upon warrants drawn by the Secretary of the Treasury, countersigned in the General Accounting Office, and not otherwise. He shall take receipts for all moneys paid by him, and shall give receipts for all moneys received by him; and all receipts for moneys received by him shall be endorsed upon warrants signed by the Secretary of the Treasury, without which warrant, so signed, no acknowledgment for money received into the Public Treasury shall be valid."

The legality of all warrants issued by the Treasury is attested by countersignature of the Comptroller General of the United States.

Perhaps I should explain here that the Treasurer of the United States receives certain special deposits which are not covered into the Treasury on a warrant. An example is the unemployment funds belonging to the States. Another example is where the Treasurer acts merely as a banker for or custodian of funds of governmental corporations.

In order to give you a bird's-eye view of the system I have brought with me an accounting flow chart which will now be projected on the screen. (Description of charts omitted.)

We will begin with the receipts. Remittances are sent by collectors of revenue to Federal Reserve banks daily. When the bank receives such remittances it credits the account of the Treasurer of the United States and issues a certificate of deposit. At the close of each day's business the original certificates of deposit (together with paid checks, coupons, etc.) are sent to the Treasurer of the United States at Washington, accompanied by a transcript of the Treasurer's account showing all debits and credits.

After the certificates are examined in the Treasurer's office and checked against the bank's transcript, the Treasurer charges the bank and credits his revenue account. The original certificates are then sent to the Secretary's Division of Bookkeeping and Warrants. Here they go to a control desk where they are checked, classified, and posted to an "Uncovered moneys" controlling account. * * *

From the uncovered moneys control desk the certificates are sent to the deposit covering clerks. At the present time there are about 40 of such clerks, working in 14 groups, to each of which is assigned a certain class of deposits. For example, one group is responsible for internal revenue, another for customs, another for War Department deposits, another for Navy, and so on.

COVERING-IN PROCESS

In the covering of money into the Treasury the Department uses bookkeeping machines. At the time the warrant is written there are posted by carbon process several different records, all ruled exactly alike.

First, a depositor's register, on which are posted all deposits relating to a particular depositor. This register is made in triplicate. At the end of the month two copies are sent to the General Accounting Office for auditing purposes. The other remains in the permanent files of the Treasury.

The next record (prepared by carbon process in the same operation) is a revenue or appropriation register (as the case may be), upon which are posted all deposits relating to a particular revenue or appropriation account. This record is prepared in duplicate. At the end of the month one copy is sent to the General Accounting Office for auditing purposes and the other is retained in the permanent files of the Treasury.

The third record (also prepared in the same operation) is known as a departmental deposit list, which is sent currently to the operating agency concerned in order that it may be immediately informed concerning the deposits covered into the Treasury relating to its activities.

The depositors' register furnished the General Accounting Office is checked against monthly accounts current rendered to that Office by accountable collecting and disbursing officers. The departmental deposit list is checked by the executive department or operating agency against triplicate copies of certificates of deposits. Covering warrants are also checked against collection schedules transmitted to the General Accounting Office by administrative agencies. There is thus provided a double check upon the covering of money into the Treasury. * * *

A copy of the certificate of deposit issued by the collecting officer in the field is sent to his superior officer in Washington, called the administrative officer. The departmental deposit list, issued by the Treasury, is also sent to the same office. This step serves two purposes. First, it informs the administrative department or agency concerned of the formal covering of money into the Treasury, and second, it operates as a check by the administrative office upon both the collecting office and the Treasury. Copies of the depositors' register, the repayments to appropriation register, and the revenue ledger, are sent to the General Accounting Office. Collection schedules are also sent to the General Accounting Office by the collecting officer, thus providing an additional check upon the covering of money into the Treasury.

(Note.—When collections are made by administrative officers and turned over to accountable collecting or disbursing officers for deposit, the collection schedules are transmitted to the General Accounting Office by administrative officers.)

The "repayments to appropriation register" is totaled for each appropriation account and is sent to the appropriation and expenditure section of the Division of Bookkeeping and Warrants,

where the items are posted to the proper appropriation accounts in the appropriation ledgers.

GENERAL, SPECIAL, AND TRUST ACCOUNTS

The accounts in the revenue ledger consist of general accounts, special accounts, and trust accounts.

Although the Federal Government has, in the popular sense, three different funds, namely, general, special, and trust, actually all moneys are deposited in the general fund. Within the general fund, however, are general, special, and trust accounts.

The general accounts represent moneys which are not designated by the Congress for specific uses. They consist principally of income taxes, duties on imports, miscellaneous internal revenue, and collections from miscellaneous sources such as fees, fines, penalties, forfeitures, sales of Government property, and so forth.

Special accounts (commonly referred to as special funds) represent moneys which the Congress appropriates for specified uses in advance of their collection. Strictly speaking, they are permanent appropriations, the amount of the collections being in the nature of a "yardstick" for determining the amount authorized to be expended.

The term "trust accounts," of course, is self-explanatory. These accounts include the Government life-insurance fund, various retirement funds, Indian tribal funds, and many others.

On the basis of the receipts in special accounts and trust accounts there is prepared an appropriation warrant for the purposes of establishing the related appropriation accounts and making the money available for authorized uses. Such warrants, after being countersigned in the General Accounting Office, are posted to the detailed appropriation accounts in the appropriation ledgers as indicated on the chart.

A separate public-debt account is maintained showing with respect to each security the total amount issued, the amount retired, and the amount outstanding. * * *

APPROPRIATIONS AND EXPENDITURES

Under the Constitution no money may be drawn from the Treasury except pursuant to an appropriation made by law. Accordingly, the accounting relating to the expenditure of money begins with the appropriation of money by the Congress.

Appropriations are of four general types: (1) Annual, (2) permanent indefinite, (3) permanent specific, and (4) continuous.

Annual appropriations, provided in the several departmental supply bills, are voted each year by Congress. They are in considerable detail and specific as to amounts. They may be obligated only during the fiscal year for which made, but the unexpended balances remain on the books of the Treasury for 2 additional years to meet outstanding obligations.

Permanent appropriations, on the other hand, are available year after year without annual action of Congress. They may be either definite or indefinite as to amount. An example of the latter is the permanent-indefinite appropriation for payment of interest on the public debt which gives the Secretary of the Treasury continuing authority to pay interest as it falls due.

A permanent specific appropriation is one where the Congress appropriates a specific amount more or less permanently for a number of years. For example, Congress may make a limited appropriation, say, of a million dollars a year for each of 5 years. In such a case the Treasury would set up an appropriation account of a million dollars at the beginning of each fiscal year for the 5 years without annual action by Congress. Or it may appropriate a specific amount permanently without limitation as to time.

Then, again, Congress may make an appropriation in a specific amount to be available until expended. These are called continuout or "no year" appropriations. That is, they do not lapse at the end of the fiscal year.

In a limited number of cases—such as good roads and public buildings—Congress authorizes the entering into of contracts to be paid from future appropriations.

Considering the fact that there are over 7,200 appropriation accounts on the books, and bearing in mind also that Congress frequently enacts legislation affecting accounts already on the books, it will be seen that the Treasury accountants and bookkeepers must not only keep abreast of appropriation legislation but must keep alert to the possible effect of other new legislation on existing appropriation accounts.

After an appropriation act has been approved by the President the original is sent to the State Department for custody and safekeeping. The State Department furnishes the Treasury Department with a certified copy of each appropriation act.

APPROPRIATION WARRANT

On the basis of the act an appropriation warrant is prepared in the Division of Bookkeeping and Warrants, upon which is listed the amount to be credited to each appropriation account. After the warrant is countersigned by the Comptroller General of the United States it is posted to the detailed appropriation accounts in the Treasury Division of Bookkeeping and Warrants.

A certified copy of the appropriation warrant is sent by the Division of Bookkeeping and Warrants to each administrative agency to which the appropriations are made. This is in the nature of an official notice from the Treasury that the funds are available for obligation and requisition and is used as the medium for posting the appropriation accounts in the operating agency.

APPROPRIATION TRANSFER WARRANTS

Frequently the Congress authorizes the transfer of unexpended balances from one appropriation account to another. Such transfers are accomplished by appropriation transfer warrants.

SURPLUS-FUND WARRANTS

We now come to what are known as surplus-fund warrants.

Pursuant to the act of June 20, 1874, the Treasury clears from its books, as of the last day of each fiscal year, the unexpended balances of all annual appropriations that have remained on the books for 2 full fiscal years after the close of the year for which the appropriations were made. This is known as carrying money to the "surplus fund of the Treasury." The term "surplus fund" is somewhat misleading since it does not represent surplus money as the term would ordinarily imply in accounting terminology.

Appropriations when made by Congress and set up on the books of the Treasury Department do not represent income or cash set aside in the Treasury for the purposes specified in the appropriation acts. They are only record accounts and merely represent the limit to which administrative offices may obligate Government funds for specified purposes. They are basely largely on anticipated tax collections and other receipts. It follows, therefore, that when appropriations, or unexpended balances of appropriations, are carried to what in the law is termed the "Surplus-fund of the Treasury" it involves simply a matter of writing such appropriations off the books without increasing the cash in the Treasury or affecting it in any manner. * * *

APPORTIONMENT OF APPROPRIATIONS

Before arrangements are made to obligate the appropriations each administrative agency must submit to the Director of the Budget its financial program showing the amount which it proposes to obligate during each month. This is known as the "apportionment of appropriations."

Budgetary apportionments are made only with respect to the total amount which may be obligated during each month under each appropriation. They are not subdivided either with respect to particular projects, types of work, or objects of expenditure.

ALLOTMENTS

Allotments for specified objects are then made to field and other operating units by the head of the administrative agency in Washington. Since allotments are in the nature of authorizations to obligate and spend money, they must be kept within the apportionments approved by the Bureau of the Budget.

OBLIGATIONS AND ENCUMBRANCES

Within the limitations of such allotments, field agencies and other operating units are authorized to employ personnel, make purchases, enter into contracts, and incur such obligations as may be authorized under the appropriation.

In the Government these transactions are usually called encumbrances. To a large extent they are merely estimates, adjustments later being made to the actual amounts when the vouchers are approved for payment.

Transactions relating to Budget Bureau apportionments, administrative allotments, and obligations incurred are not recorded on the central books of the Treasury, except upon the basis of reports submitted pursuant to an Executive order issued July 27, 1933.

PAYMENT OF GOVERNMENT OBLIGATIONS

The payment of the Government's bills is accomplished in two ways:

First, by bonded disbursing officers who draw checks on the Treasurer of the United States against funds placed to their credit on accountable warrants, and

Second, by the Treasurer of the United States who draws checks in favor of claimants on authority of settlement warrants.

Federal Reserve banks are authorized to pay matured or called bearer obligations and matured interest coupons upon presentation and to charge the Treasurer's account for the amount so paid. The payment of interest on registered bonds is accomplished through checks drawn by the Division of Loans and Currency on the Treasurer of the United States. Registered bonds are redeemed by checks drawn by the Treasurer of the United States. At the end of each month the Treasurer submits to the Secretary of the Treasury a requisition for a warrant to cover the payments. The redemptions of matured or called bearer obligations and matured interest coupons are the only cases wherein payments precede the issuance of an authorizing warrant.

ACCOUNTABLE WARRANTS (ADVANCES OF FUNDS TO DISBURSING OFFICERS)

Virtually all of the current bills of the Government are paid by bonded disbursing officers to whom funds are advanced by the Secretary of the Treasury on accountable warrants. (Note.—Accountable warrants do not draw money from the Treasury but merely represent authorizations for disbursing officers to draw checks on the Treasurer in payment of Government obligations.) Such funds, however, must remain in checking accounts with the Treasurer of the United States until disbursed, unless the Secretary of the Treasury specifically authorizes the disbursing officer to pay bills in cash as a result of local conditions. In such cases the Secretary of the Treasury fixes the amount of cash which the disbursing officer may have on hand at any one time. Such cash, of course, is carried at the disbursing officer's own personal risk.

The procedure relating to the advance of money to disbursing officers begins with the preparation of a requisition for funds by the administrative office to which the appropriation is made. This requisition is drawn in favor of the disbursing officer to whom the advance is to be made, and shows the amount which he may disburse under each separate item of appropriation.

The requisition for disbursing funds is first sent to the General Accounting Office for approval. If the officer is not delinquent in the rendition of his accounts and if they are in satisfactory condi-

tion, the General Accounting Office approves the requisition and sends it to the Treasury Department, Division of Bookkeeping and Warrants.

This warrant, as is true of all other warrants, is sent to the General Accounting Office for countersignature. It is—

1. Charged against the detailed appropriation accounts of the Division of Bookkeeping and Warrants; and

2. Credited to the disbursing officer's checking account on the books of the Treasurer. (Note: The warrant is also charged against the disbursing officer on the records of the General Accounting Office, and so remains until the officer has fully accounted for the money contained therein.)

After it is countersigned it is forwarded to the Treasurer of the United States, who pays the warrant and credits the proceeds in a checking account of the disbursing officer. You will recall that under the law the Treasurer of the United States is authorized to disburse money only on warrants of the Secretary of the Treasury, countersigned by the Comptroller General.

As evidence of such credit, the Treasurer issues a certificate of deposit and sends it to the disbursing officer. Within the amounts advanced by the Secretary of the Treasury, disbursing officers are authorized to make disbursements.

Before a payment may be made the disbursing officer must have two things:

1. An approved voucher, properly certified by an authorized administrative officer, showing the services have been performed or goods received. (Note: Or a certificate of settlement of the Comptroller General.)

2. A sufficient balance to his credit on the Treasurer's books. While the Treasurer does not keep a separate account relating to each appropriation the disbursing officer must see from his own books that he has a sufficient unexpended balance under the particular appropriation involved. If he does not have a sufficient balance under the particular appropriation involved he so advises the administrative agency concerned in order that it may requisition the necessary funds from the Treasury.

DISBURSING OFFICERS' ACCOUNTS CURRENT

Disbursing officers are required to render periodic accounts to the Comptroller General for audit and settlement. (Note: The accounts are given an administrative examination by the agency having jurisdiction over the appropriations before being sent to the General Accounting Office for audit and settlement.) In most cases this is done monthly. In the account currently rendered to the General Accounting Office the disbursing officer charges himself with the amounts of the accountable warrants and takes credit for the disbursements. These disbursements, of course, must be supported by approved vouchers of administrative agencies.

The advances taken up by the disbursing officer are checked by the Comptroller General against the accountable warrants. Against such charges the Comptroller General credits the disbursing officer with the amount of paid vouchers which the Comptroller General determines to be authorized and legal disbursements. The balance is stated as an amount due the United States by the disbursing officer.

Money no longer required for disbursement is returned to the Secretary of the Treasury through the medium of checks drawn by the disbursing officer in favor of the Treasurer of the United States. Such checks are charged by the Treasurer against the disbursing officer's checking account and a certificate of deposit issued therefor in the name of the disbursing officer for credit to app'icable appropriations. The Treasurer sends the certificate of deposit to the Secretary of the Treasury. On the basis of the certificate the Secretary issues a warrant crediting the appropriation account, and sends the warrant to the Comptroller General for countersignature. The Comptroller General credits the officer's account and returns the warrant to the Treasurer.

SETTLEMENT WARRANTS

Settlement warrants are used only for the payment of claims settled by the Comptroller General. On the basis of these settlement warrants the Treasurer issues checks directly to claimants. Under the Budget and Accounting Act the Comptroller General may send his certificates of settlement to disbursing officers for payment. Should the latter practice be followed universally the settlement warrant would entirely disappear. * * *

TRANSFER-COUNTER WARRANTS

Adjustments between appropriation accounts for expenditures previously made are effected through warrants known as transfer and counter warrants. These warrants are in the nature of journal entries debiting one appropriation account and crediting another. These warrants are to be distinguished from appropriation transfer warrants. As stated, transfer-counter warrants cover adjustments of appropriation accounts after expenditures have been made, whereas appropriation-transfer warrants are issued for the purpose of transferring money from one appropriation account to another in advance of expenditure, in cases where the Congress authorizes interappropriation transfers.

Except in the cases of the Army and the Navy, advances to disbursing officers are made under specific appropriations and all expenditures must be accounted for accordingly. The Army and Navy, however, are authorized to requisition their funds under what are known as "general accounts of advances." That is, the requisition and the warrant need not specify the appropriations under which the expenditures are to be made. The warrants are charged on the Treasury's books to the appropriate "general account of advances," and on the basis of expenditures reported in accounts subsequently rendered by Army and Navy disbursing officers, the amounts expended are charged against applicable appropriations and a corresponding credit is entered in the related general account of advances. These adjustments are made through the medium of transfer-counter warrants. * * *

CONCLUSION

Before closing it may be advisable to summarize the purposes which are served by the procedure I have outlined.

First, the requirement that the receipt of money into the Public Treasury shall be acknowledged on warrants issued by the Secretary of the Treasury and countersigned by the Comptroller General provides the legal basis for accounting for the revenue received by public officers.

Second, the requirement that the Treasurer of the United States shall disburse the money only on warrants issued by the Secretary of the Treasury and countersigned by the Comptroller General provides the basis for compliance with the constitutional provision that no money shall be drawn from the Treasury except in consequence of an appropriation made by law and is surely a wise precaution.

Third, there is provided a centralized record of money covered into the Treasury and subsequently withdrawn therefrom.

Fourth, it provides the basis for compliance with section 15 of the act of July 31, 1894, which requires the Secretary of the Treasury annually to lay before Congress a combined statement of the receipts and expenditures of the Government, classifying the receipts, wherever practicable by districts, States, and ports of collection and the expenditures under each separate head of appropriation.

Fifth, it provides information relating to the actual receipts and expenditures of the Government which are included in the President's annual Budget and compared with the estimates for the current fiscal year and also the ensuing year.

Sixth, to some extent it provides the Secretary of the Treasury with information for use in the management of the Nation's finances.

I would not wish to leave the impression that I think the Government's accounting system is perfect. On the contrary, I believe there are many things that could be done to improve it. Nor do I think that all wisdom on the subject of Federal accounting rests with those who are employed in the Federal Government. On the contrary again, I feel that the Government would and should profit by advice and suggestions from others. Among those from whom we should be especially happy to receive advice and suggestions are the members of the professional accounting fraternity and the accounting and financial officers of State and municipal governments. We are anxious at all times not only to receive advice and suggestions, but to exchange information and confer on our mutual problems. It seems to me that cooperation between State and Federal accounting officers would be of great and continuing value to both. I am privileged to invite this cooperation in the name of the Secretary of the Treasury.

I therefore urge you to think carefully over the statements I have made today, and also to think carefully over suggestions which you may receive or which may occur to you from time to time concerning the proper fiscal and accounting administration of the affairs of the United States Government. I urge you to lend your aid whenever you can intelligently and thoughtfully be of assistance to those who, like myself, are endeavoring to administer for the information and protection of the citizens the accounting system of the United States Government.

St. Patrick's Day Dinner

EXTENSION OF REMARKS

OF

HON. FRANCIS T. MALONEY

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Monday, March 20 (legislative day of Thursday, March 16), 1939

ADDRESS BY HON. JAMES M. MEAD, OF NEW YORK, AT THE ONE HUNDRED AND FIFTY-FIFTH ANNIVERSARY DINNER OF THE SOCIETY OF THE FRIENDLY SONS OF ST. PATRICK, IN NEW YORK CITY ON MARCH 17, 1939

Mr. MALONEY. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an address delivered by the junior Senator from New York [Mr. MEAD] at the one hundred and fifty-fifth anniversary dinner of the Society of the Friendly Sons of St. Patrick at the Hotel Astor, in the city of New York, on March 17, 1939, on the subject, "Democracy and the Irish."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The ceaseless strivings of restless humanity for types and formulae of government to afford protection, to expand freedom, to insure liberty, have characterized every age.

Since the beginning of time mankind has banded together in some form or another, for mutual protection and security. Finally organized government was instituted to provide for the social well-being of the people, to establish by man-made law, a code under which all might live in safety and security.

The progress of civilization has been marked by the recurring struggles of mankind to perfect government to suit its current needs. Great civilizations and cultures have thrived at periods through the ages—they developed under conscientious leadership; they deteriorated and vanished under autocracy and violence.

The tragedies of civilization are written in the finished chapters of vast and wealthy empires which decayed under misrule and maladministration.

The Chinese civilization, the oldest known to history, found its glory in the ages of benevolent government. When foreign influences were reflected in the Far East, the brakes were set on Chinese culture.

The civilizations that once were the pride of Athens and Rome met their nemesis in the form of waste, extravagance, and indulgence. The untold splendor and refinements of the ancient Egyptian civilization is said to have fallen through its own weakness and its inability to resist alien invasions.

Through all of the ages man has striven for a system of government which would withstand every test—meet every emergency. Political changes have closely followed economic and social trends. Where democracy has proved itself too slow to cope with rapidly changing conditions, it has been shunted aside for a more direct rule. Monarchs and despots wrought great benefits when concerned with the welfare of their people. But the rule of the Pharaohs, the Caesars, and the Czars too often neglected the people and were crushed under revolution, violence, and bloodshed.

What will be the fate of the dictatorships of this day and age? Will they succeed where democracies apparently have failed? Will they exert a continuing concern over human rights and individual security? Will they decimate representative self-government and institute a new and permanent political philosophy?

The history of man-made governments predestines the failure of totalitarianism. The class rule of the modern dictator cannot succeed, because it is founded upon racial hate, territorial ambition, and vulgar paganism.

The constant yearning, groping strugle of man for equity and stability in government cannot be stopped. By the process of trial and error he has discovered that a democracy most perfectly meets his personal, political, and economic needs. He likes it, because it affords his personal, political, racial, and religious freedom. He likes it, because he is part of it and shares in the responsibility for its success.

Naturally, the representative form of government advocates human justice; pleads the cause of economic opportunity; teaches the futility of warfare and strife; it points the way to happier relations between men and governments.

But as we meet on this 17th of March the outlook for democracy—favored system of the Irish everywhere—is beclouded by the European parade of new and tempestuous dictatorships. Communism, fascism, and nazi-ism are displacing weakened and distorted republics as well as tottering monarchies. Revolt, civil strife, oppression, and the wholesale splintering of representative governments represent the world's pitiful predicament today. In continental Europe practically the last feeble gasp of representative government has been snuffed out.

There are few capitals in the world today where there is a real respite from uneasiness as the rapacious rush of violent political systems sweeps the earth. Dublin and Washington are two of these capitals. Freed from rivalries, the hatreds, and the jealousies that warp the minds of absolute leaders; freed from the dreams of grandeur and world power that grips the autocrat, Ireland and America live in peace but not without apprehension.

The fabric of democracy, so close to the Irish heart, has been woven from countless years of mankind's effort and progress in the development of government. Into its fiber has gone the hopes and fears and sufferings of oppressed and persecuted peoples. Democracy may be destroyed by termites who bore within and undermine its principles, by dry rot and decay that accompany abandonment of its complete use, by the corrosion and rust that goes with inflexibility, by ravishment and devastation at the hands of its enemies.

Meticulous care, powerful safeguards, and heroic defense must be provided by democracy's friends to ward off every malicious attack which threatens its welfare.

In this present day of fallacious doctrines and pagan philosophies of government, the sturdy example of Ireland and of the Irish people may well be heeded. The lust for power and influence, the devotion to national greed and avarice, the will to war for ambitious aggressions—all contribute to the immorality of government, to gross materialism, and to the break-down of religious ideals. Ireland has been unfertile ground for the sowing of the seeds of communism, nazi-ism, or fascism. In a nation which contained much poverty and had its difficult social problems, the democratic way was ever sought as a means to the solution of its problems. Differences in religious worship exist in Ireland, yet all live together in peace, and tolerance, and respect. Catholic, Protestant, and Jew formulate its laws and administer its government. This is Ireland's answer to present-day intolerance. Ireland, like America, wishes only her own freedom and her right to self-government. She violently rejects foreign isms alien to her national autonomy. Time and again she suffered defeat. Frequently her ambition was thwarted. But faith, determination, and courage remained her bulwark through the long, weary years, until, at last, she elects her own legislature, runs her own Government, and kneels again in the open, unmolested before the altar of her patron saint.

Deep in the memory and born into the fiber of every Irishman is his passionate love of liberty. He will fight to the end for human rights and personal liberties, but he is the least gullible of any man when the instruments of propaganda set out to trap him. The ancient Irish have traditionally been peaceful, law-abiding, liberty-loving people. Even before the coming of Patrick, when pagan gods were recognized, the people enjoyed a fraternization which encouraged individual initiative and racial development. Their Government, their music, their art were ancient cultures equal to that of the older and larger nation. Divided into a number of relatively small kingdoms, governed judiciously by rulers who submitted their differences to the great priest-king for conciliation, Ireland advanced progressively in the perfection of her Government. Living, then as now, in isolation, free from continental warfare, this noble people were seldom torn with civil strife. Their internal problems were settled in peace and understanding; their Government became more efficient, their culture more refined, their progress more marked as the years went on. Because this tiny nation lived aloof from the intrigue and wars of Europe, she developed a sturdy, moral, peace-loving race. With the coming of St. Patrick and Christianity, the fullness of the character of her manhood was made complete; she was then made ready for her noble mission of service for mankind. Stanch advocates of self-government everywhere, defenders of religious freedom for all, her children served with marked distinction in nearly every noble cause.

For centuries, Irishmen have honored their religion and their ancestry with inspiring accomplishments in every laudable endeavor. In government, science, theology, art, and in military activities, men of Erin have carved for themselves distinguished places. In a speech delivered before your society a few years ago, mention was made of the names of many great Irish-Americans who are honored in history and others who command contemporary respect and admiration. That list included Robert Fulton and his *Clermont*, Robert Morse and his telegraph, Cyrus McCormick and his reaper, John P. Holland and his submarine, Victor Herbert and his immortal compositions, John McCormack and his magic voice, Augustus St. Gaudens and his sculpturing artistry. We were then reminded of the adventure and exploits of Mad Anthony Wayne, Commander John Barry, General Montgomery at Quebec, Capt. Jerry O'Brien on the sea. It was noted that 11 of Washington's generals were Irish; that Robert Morris financed the Revolution; that 12 signers of the Declaration of Independence were of Irish lineage; that Matthew Lyon, who served with Ethan Allen at Champlain, later represented three different States in the Congress of the United States; that General Shields, hero of the Mexican War and of the Civil War, served as a judge of the Supreme Court of Illinois, as Governor of Oregon, and was the only man in our history who served three different States as a representative in the United States Senate.

We were told of the familiar story of the nine intrepid Irishmen who were banished because of alleged treason to England and that each of them rose to high ranking office in the Governments of Australia, Canada, and the United States. Mention was made of Irish heroes who fought for freedom in many lands—of McKenna and O'Higgins, whose names are sacred in the history of Chile; of O'Connell, the hero of Venezuela; O'Leary, of Colombia; O'Reilly, of Cuba. There is scarcely a single democracy that has not enshrined in its history the deeds and achievements of Irishmen. This small island of democratic, peace-loving people has furnished leaders who have improved the character of many nations.

Ireland, without a far-flung colonial empire, without imperialistic ambition, has progressed through sheer virtue of an innate thirst for freedom, a passion for tolerance and understanding, a rugged courage, and a tireless determination to succeed. Its record at home, in Europe, and in the Americas in the cause of human rights, in every crisis, summons Irishmen everywhere for service, today, in the struggle to preserve religion and to save democracy in a confused world.

We thought democracy's victory in the World War would end forever the misplaced devotion of any people to absolute rule. We now ruefully reflect on the fallacy of that reasoning and upon the futility of that conflict. I, perhaps, misspoke when I mentioned the "devotion" of a people to one-man rule. They succumb to dictatorship rather than subscribe to it.

Human rights and personal liberties are flouted tonight in many nations. If the World War was a triumph of right over might its effectiveness has been dissipated, and we stand again (God forbid) on the threshold of human destruction.

Here are the wretched facts that bespeak contemporary international political immorality: World War treaties, agreements, and pacts have been sabotaged; the League of Nations made a mockery by its so-called friends; collective security given way to intense nationalism; international trade and finance thrown into hopeless chaos; violence, oppression, and persecution made part and parcel of political programs; democracy scorned and derided by the new totalitarian states and sometimes questioned by its friends.

These conditions describe the plight of representative government and religious liberty as well. With the growth, through fear and distrust, of political systems which desecrate the very name of self-government, has come the rush of armaments and the will to kill. Ambition, avarice, and godlessness are once more hav-

ing their hey-day on earth, and the struggle of mankind for tolerance and sanity and peace is yet to be won.

There is nothing new in this usurpation of human liberties. There is nothing new in war, itself. But, by reason of modern inventions, human slaughter is made more horrifying than ever before in history. Just as man has developed new and violent forms of Government, so too, has he created new instruments of murder and torture.

The deadliness of new weapons of warfare; the speed in transportation and communication that has come with our age; these are factors that contribute to swift and merciless death in modern battle.

Will economic bewilderment, and the ruthless lust for power destroy the gains of mankind which have been achieved by centuries of struggle and determination? Will they blot out another civilization?

When tributes are paid to Ireland's patron, in the years to come, let it be said that in this political upheaval we are passing through, men of Irish blood added luster to the race by their stirring defense of religion, democracy, and international good will.

While the map of Europe changes from week to week; now when the cause of democracy looks darkest; we rededicate ourselves to the philosophy of Patrick, who found his strength in reason, his success in tolerance, and his faith in God.

Andrew Jackson Speech

EXTENSION OF REMARKS

OF

HON. JOSEPH W. BYRNS, JR.

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, March 20, 1939

ADDRESS BY HON. JOSEPH W. BYRNS, JR., OF TENNESSEE

Mr. BYRNS of Tennessee. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address delivered by me on March 16, 1939, before Andrew Jackson Lodge, No. 120, A. F. & A. M., Alexandria, Va., in commemoration of the one hundred and seventy-second birthday of Andrew Jackson, March 15, 1939:

In considering such a virile character as Andrew Jackson, it is a waste of time to confine one's self to a mere dry chronological account of the various high points in his interesting and eventful life. A study of Jackson is a study of a man rather than the study of dates—a man who appears just as alive today as he did when his gaunt but striking form trod the trails of wilderness of Tennessee, the battlefield of New Orleans, the Halls of Congress, or the Executive Office in the White House.

Andrew Jackson was born in 1767 in a house near the dividing line between the States of North and South Carolina, thereby causing a rivalry for the honor of his birthplace, which still persists at the present time. At an early age his father and mother, with his older brother Robert and young Andrew, moved from North Carolina to the then Territory of Tennessee. This trip was fraught with many hardships. His father, who was a mild-mannered draper, died, leaving the care of his two sons to his worthy spouse. Andrew Jackson's mother was, indeed, a worthy woman, as was another woman who later came into his life and exerted the foremost influence therein. We know little of his mother, but we can judge the soil from the kind of fruit it produces, and she must have been—and undoubtedly was—an example of the finest type of pioneer womanhood, which made America what it is today. When he was barely 15, Andrew Jackson joined a group of "bushwhackers," or, as they are termed at the present, "guerrillas," whose chief amusement consisted in taking potshots at troops of British cavalry. After one such foray, Andrew Jackson and his brother Robert were taken prisoners and were assigned as menial body servants to a British officer whose name we do not know. On one occasion, soon after their capture, this officer ordered the young Andrew to black his boots. Jackson refused amid a flood of vituperation, whereupon the officer struck the boy across the face with his saber. As a result of this blow two scars were left, one of which—and this was by far the least of the two—Andrew Jackson bore to his tomb, but the other was in the breast of Mother England, for this unfortunate and unwarranted occurrence was one of two instances which had more to do with the formulation of Andrew Jackson's character, and thereby the history of this country and of the world, than anything else which happened in his career. This blow was returned a thousandfold, and we may visualize this fledgling eagle harboring in his high-strung soul this deadly insult and injury. It was a sad day for Mother England when this blow was struck, but an omen as to the future of the glorious independence which this country was to enjoy, partially as a result of his efforts. Jackson and his brother were thrown into a prison camp, both contracted smallpox, and Robert died. About a year after he returned to his mother she, too, sickened and died, and young Andrew was left alone in the world, practically a boy, but never yet was any boy better equipped by nature and ability to be thrown upon his own. Young Jackson was a self-educated man. While studying law he financed himself as a school teacher, and what a school teacher he must have been, for he had barely the fundamentals of spelling, and to the end of his days a few of the commonest words in our language he misspelled, but throughout this period there became ingrained in his soul the steady, sterling qualties of the young oak, which develops from little acorns, and the puny shoot into the stalwart, towering monarch of the forest.

From this point life dashes onward for Jackson, the young lawyer, the prosecuting attorney, and—the duelist. History has too often recorded his duels, and some personal encounters which did not dignify the name of dueling, but without exception and in every one of these instances it will be found that he always had ample provocation, and, in fact, in the case of the duel with Dickinson, he had been pressed beyond the power of endurance of any man in insults directed toward the one person in the world whom he held most dear—his wife. The circumstances, briefly, underlying this unfortunate occurrence were these: Rachel, his beloved wife, had been formerly the wife of a Captain Robards, in whose home Jackson had been a boarder. Robards appears to have been a very jealous man, and on the last two occasions which history records had made statements that his wife and Jackson had been intimate. On one of these occasions Robards barely escaped with his life. From a study of history we cannot develop a great deal of enthusiasm for Captain Robards, for on two occasions he deserted his wife, leaving her to shift for herself. On the latter occasion he left what is now Tennessee and went to Virginia, announcing his intention of securing a divorce. At that time in Virginia, under the existing law, a divorce could be secured only by first securing the permission of the legislature to sue. This permission Robards secured and conveyed information of that fact to his wife, only to find later that, even after securing legislative permission to sue for divorce, he had no grounds and therefore could not secure the decree. This latter fact he did not communicate to his wife. We must admit at this point that Jackson was a bit careless as a lawyer, for he did not institute a search among the court records to determine whether or not a final decree had been issued, but, relying upon the legislative action in Virginia, Jackson and Mrs. Robards were married. Nearly 2 years later information was received that a divorce had not been granted, and immediately Jackson separated from Rachel and remained separate and apart until she secured a divorce on the ground of desertion, and immediately thereafter they were remarried. The charge of carelessness may be rightfully laid at Jackson's door, but never the charge of adultery, for one of the requisites of any crime is a criminal intent, and that neither Jackson nor his wife ever possessed. This woman became, in every sense of the word, the wife of his bosom—a true helpmate, a companion, a confidant, and we may say almost an idol. In this sophisticated day and time, when it is thought smart to speak slightingly of all of the traditions of the past, we read statements that Rachel had a "dumpy figure"; that she was uncouth and illiterate. Be this as it may, Rachel was a true sample of her age and time, when there were no finishing schools for young ladies and when the women as well as the men came into constant and daily contact with the soil and with the forces of nature. Whether she had what we now regard as the social graces or not, the fact remains that this woman inspired in the breast of one of America's greatest men one of the foremost examples of enduring love which has illuminated the pages of our country's history.

In 1796, when he was 29 years old, Andrew Jackson was elected as the first and the only Member in the House of Representatives from the State of Tennessee. Tennessee had been admitted to the Union as a State June 1, 1796, just a few months before his election. On December 5 of the same year he took his seat in Philadelphia, where the Congress then met, and it took over a month for him to make the journey from his home near Nashville. One may imagine the hardships attendant upon such a trip at that time, a trip now covered in comparatively few hours in the comforts of a Pullman coach, almost a moving hotel, or transported almost instantly in a comfortable and commodious air liner. The vast subject of our progress from that time to this is nowhere more clearly demonstrated than in this improvement in our modes of transportation.

During his first few days as a Member of the House, Jackson saw and heard George Washington deliver his last address to the Congress. Jackson was never, as we have seen, an imaginative person, but still the distant strains of his Irish ancestry must certainly have caused thoughts to arise in his mind as he sat there and listened to a man whom his keen knowledge of human nature must have caused him to recognize as one of the great men of all times. Twenty-four days after being sworn in as a Member of the House, Jackson made his first speech. He spoke again on the following day, and never again was his voice lifted in the House of Representatives. In the House of Representatives, during Jackson's service, there were other great men, such as James Madison, Fisher Ames, Albert Gallatin, for whom the town near his tomb is named; while serving in the Senate at this time was a romantic figure who had much effect upon American history and, indeed, upon Jackson's career, the brilliant but erratic Aaron Burr. We may pause to devote a minute's thought to this scene—the young Jackson, untutored and unlettered, sitting in the same body with men of great brilliance, and destined by a presence that overshadows us all, to become the greatest of this assemblage.

On November 22, 1797, Jackson was appointed a United States Senator from Tennessee, but in June 1798 resigned, and in October of that year became a judge of the Superior Court of Tennessee, the then equivalent of our present Supreme Court, in which capacity he served until July 24, 1804. On May 1, 1814, he was appointed a major general in the United States Army. This appointment may cause some of us at the present time who have been accustomed to think of soldiers, and especially generals, in terms of military academies and West Point, that the appointment was ill advised, but here history, with its impartial and dispassionate story, shows the appointment to have been vindicated by the results. Jackson was not schooled in military strategy, yet he was a great general. He was not schooled in law, yet he was a great judge. He was not schooled in political science, yet he was a great statesman. Why was all this? Because of the natural, innate genius of the man. Once in a long time the grim sisters who weave the warp and woof of our complex existence run through an otherwise drab and uniform surface a thread the brilliance of whose color causes it to stand out even though buried among thousands of others. Just such a thread was Andrew Jackson.

On January 1, 1815, Jackson, as a major general of the United States Army, commanded the American forces at the Battle of New Orleans. Many essays have been written, many tears have been shed over the fact that this battle was actually unnecessary, because the treaty of peace between Great Britain and the United States had been signed at the time the battle was fought but, of course, due to the fact that there were then no trans-Atlantic cables or wireless stations, the news was not received in time to prevent a great and useless slaughter. Be that as it may, this battle demonstrated to the world at large and to history for all time the fact that the illiterate hill boy was a natural military genius, for in less than 25 minutes the British troops lost 1,971 men and the Americans lost only 13, many of these being said to have "exposed themselves needlessly." Regarding the Battle of New Orleans, a number of books have been written, and so I cannot here hope to give a comprehensive account of that victory but suffice it to say that the ultimate results showed the capacity for generalship on the part of the American leader, which is best evidenced by the statement of a ranking British officer present at the battle who said, "We were beaten by bullets." Not to the glamorous, romantic figure of Jean Lafitte, as dramatized by the present-day Hollywood movie producers, goes credit for this victory but to a stalwart, sturdy son of the South who has been often termed of late "an illiterate." God give us more of his breed and character!

Of all the phases of Jackson's career, no one man could treat in one address. On March 3, 1821, he was appointed Governor of Florida by President Monroe, which office he resigned in October of the same year.

I feel that we must hasten on to the greatest days of his career. In November 1828 he was elected the seventh President of the United States. Much has been written about the disorderly crowds which attended his first inaugural party at the White House. Historians revel in declarations that the common people swarmed through the White House, overlooking the fact that had there been no common people there would have been no White House and no United States. Jackson never posed as anything but a representative of the common people, and, after all, it is the so-called common people who have made this Nation what it is today.

Much has been said of Jackson's fight on the Bank of the United States. This was the second such bank but for the purpose of brevity reference will be made only to the second bank which existed during part of his administration as President. This bank had $25,000,000 capital, of which the Federal Government had $7,000,000 on deposit, private citizens had $6,000,000 on deposit. There was in circulation $12,000,000, and the discounts were $40,000,000. The profits to the bank amounted to $3,000,000 a year, and it is a significant fact that foreigners owned $80,000,000 of the stock of the bank, and a renewal of the charter would have raised the market value of the stock 20 or 30 percent, which would have meant a present to foreign stockholders of several million dollars. Foreign-owned stock was not taxable, which would have given the stock owned by the foreigners a value of about 15 percent more than that owned by citizens of the United States. The fight was long. The bank spent much in lobbying and in actual retainers to public servants. A letter from Daniel Webster, who was at that time a United States Senator, to Nicholas Biddle, at that time president of the bank, asks that his former retainers, "be refreshed." Henry Clay was also paid retainers by the bank while he was a United States Senator.

Under the law the bank had a right to issue bank notes in an amount equal to its capital. These notes were payable in specie on demand and were accepted for taxes and other public debts as well as private. The bank, under the law, did establish 25 different branches and under its charter, to which Andrew Jackson made objection, all of the funds of the Federal Government were to be deposited in the bank unless the Treasury otherwise directed. In return for these favors the bank paid the Federal Treasury one and a half million dollars. The trouble with this arrangement was that this Bank of the United States could break private banks by accumulating their notes and then demanding payment of them, sometimes presented after almost a bale of them had been accumulated. Upon failure to pay off in cash the note thus presented the local bank was publicly declared a defaulter. Naturally this led to great power and prestige in political circles on the part of the directors of the bank and this is what Andrew Jackson principally objected to. Andrew Jackson opposed this bank and thereby inaugurated a very bitter political fight. Those who study the character of the man and the conduct of this bank realize that he did not seek to plunder the Nation. What he asked for was what he thought America stood for—opportunity, the chance to grow into something bigger and finer—as he, an illiterate, unlettered mountain boy, had grown into the greatest figure of the world at that time. He did not envisage America as standing for wealth alone, nor as a reproduction of European classes and conditions. He saw America as standing for freedom and opportunity for himself, and those like him, to rise to greater levels than that to which they had been born. Jackson is a member of a type which may not have done much for American culture in its narrowest sense but which has held fast to the true American dream and which has made the common man the greatest single force in American history.

In this struggle between the great and powerful bank and the President Jackson won, and to his credit goes a victory not alone for his own sturdy, rock-ribbed opposition, but a victory for the common man and woman.

Heretofore reference has been made to the love which Jackson bore to his beloved wife, Rachel. After his election as President, but prior to his leaving Nashville and his assumption of the office, his beloved wife, Rachel, passed from this vale of tears, where she had suffered so deeply, to another and a better world. She is interred in the garden at the Hermitage near Nashville in my district, and her tomb, which is as he would have wished it, alongside his, over which is placed a marble slab on which is inscribed the following:

"Here lie the remains of Mrs. Rachel Jackson, wife of President Jackson, who died the 22d of December 1828, aged 61 years. Her face was fair, her person pleasing, her temper amiable, her heart kind. She delighted in relieving the wants of her fellow creatures and cultivated that divine pleasure by the most liberal and unpretending methods. To the poor she was a benefactor; to the rich an example; to the wretched a comforter; to the prosperous an ornament. Her piety went hand in hand with her benevolence, and she thanked her Creator for being permitted to do good. A being so gentle and so virtuous, slander might wound but could not dishonor; even death, when he bore her from the arms of her husband, could but transport her to the bosom of her God."

It has been said by later day historians, who are inclined to deal slightingly with the traditions of the past, that this inscription was not written by Jackson but by, as some say, Senator Eaton, and as others say, by Van Buren. This, those of us who from the reading of history, know and love the old statesman, lawyer, and soldier, know to be false for as he fought for his convictions as a lawyer, as he fought for his convictions as a soldier, as he fought for his convictions as a statesman—we find, like him, the fire which illuminated his fights, his love for this woman. Jackson was a sort of man who did not need an Eaton nor a Van Buren to help him pay tribute to the memory of his beloved Rachel. He defended her memory on this earth with his very life and it is not unlikely that this stern old man having offered to pour out his life blood in her defense during her life would pour out his heart in a tribute to her memory. To those today who consider Jackson as a brawling, duel fighting, hillbilly roughneck, we would say that he was the product of an age, an age in which gentleness was not at a premium on the frontier from which he sprung, an age in which American history was formed and it is because of such stalwart characters as his that this country has risen to the heights which it has attained.

Jackson is not the figure alone of one period of our history, he is the symbol of Americanism, a product of the soil striving upward and onward to heights undreamed of by those that preceded him. A simple man, unlettered and untutored in the "finer graces" but a figure of substance, a figure of granite or of steel, if you please, a figure of the real American. There are those who believe that those who have passed on know nothing of that which is happening here today but I like to think that stalwart figures of our country's early history are somewhere, somehow, looking down upon us today and, in some mysterious way which you and I may now not understand, guiding our collective footsteps into the paths which we as true Americans may follow. To think that we today have the guidance of those who have been promoted to a higher life, is a thought which I like to dwell upon and which may give us, one and all, new and inspired hope of the future.

George Washington

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, March 20 (legislative day of Thursday, March 16), 1939

SPEECH OF HON. CLAUDE PEPPER, OF FLORIDA, BEFORE THE WASHINGTON DAY DINNER, AT RICHMOND, VA., FEBRUARY 24, 1939

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able and

eloquent address delivered by the Senator from Florida [Mr. PEPPER] at the Washington Day dinner at Richmond, Va., on February 24, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Commenting upon the character of George Washington, Thomas Jefferson, by way of summary, used these words:

"On the whole, his character was, in its mass, perfect; in nothing bad, in few points indifferent; and it may truly be said that never did nature and fortune combine more perfectly to make a man great and to place him in the same constellation with whatever worthies have merited from man an everlasting remembrance. For his was the singular destiny and merit, of leading the armies of his country successfully through an arduous war, for the establishment of its independence, of conducting its councils through the birth of a government new in its forms and principles, until it had settled down into a quiet and orderly train; and of scrupulously obeying the laws through the whole of his career, civil and military, of which the history of the world furnishes no other example."

Napoleon said: "Washington's measure of fame is full. Posterity will talk of him with reverence as the founder of a great empire, when my name shall be lost in the vortex of revolutions."

Speaking in Springfield, Ill., in 1842, Abraham Lincoln said: "Washington is the mightiest name on earth—long since mightiest in the cause of civil liberty, still mightiest in moral reformation. On that name no eulogy is expected. It cannot be. To add brightness to the sun, or glory to the name of Washington, is alike impossible. Let none attempt it."

Heartily do I congratulate you of Virginia, from the fallow soil of which came this man, George Washington, that have assembled here to honor his name and from the recollection of his noble career to draw inspiration for the future. No more fitting time could be selected in which to revere the memory and to emulate the example of George Washington than now, when the times are troubled. Many men are afraid, others suffer unspeakably; and doubt about the future for that Nation that George Washington's genius created hangs like a pall over many who feel and see.

George Washington throughout his whole life was a pioneer, ever grappling with new problems, following a way blazed by no predecessor, charting a course which had its principal support only from his keen judgment, noble conscience, and irresistible will. He always led other men, and ever his way was forward. It is impossible to conceive of George Washington as a negative quality, satisfied with that which was not right, willing to accept less than what was reasonably attainable. It is not possible to imagine George Washington as a negation, content merely to oppose what others propose without the exertion of his own great purpose.

Born to a frontier in a new country, his earliest efforts were to survey that country, bringing it from uncertainty to man's certain use, marking it out for habitation and cultivation, and domesticating, as it were, the wild acres for man's sustenance and comfort.

At 20 years of age, Washington, like an ancester ahead of him, was a major in the Virginia Militia. Thus, early in his country's service against the Indians, and later the French in the Ohio Valley, began the foundation of his illustrious military fame. Insensible of personal fear, indefatigable in action, cool and in command of himself at all times, at 23 he was the commander of all the Virginia Militia forces. His many-sided life was already unfolding, as he was a member of the Virginia House of Burgesses, of the First and Second Continental Congresses. Finally, at 43, this gallant Virginian, by the unanimous choice of the Continental Congress, came to be Commander of the Continental Army. As he had been a pioneer in frontier warfare, a pioneer in the legislative efforts of his country, so did he become the first to assume the responsibility for the creation and command of an American army. Without a competent Congress, facing, as he said, the most difficult task which any commander of an army since the beginning of time had ever faced, without any precedent to guide him, George Washington made the American Army into an effective and victorious champion of American independence and liberty. No pen will ever aptly describe the herculean effort of those 7 years when George Washington was in the American Revolution.

Though his private inclination and the yearning of his heart drew him from the field of battle to his vine and fig tree at Mount Vernon, he was at once engaged upon another effort no less magnificent than that of American independence by force of arms. That is to say, the task of creating an effective American civil government which would preserve the independence he had wrought upon the field of battle from Lexington and Concord to Yorktown. Here again there was no precedent, no other man to lead that fight, to consolidate the forces who wanted to salvage American military success. No other man whose name, character, and judgment could have been the foundation of the United States of America.

And then, that Government finally established, there must be a first President and a new pioneer. Back from his vine and fig tree at his beloved Mount Vernon came George Washington, again the pioneer, defining the office of President, giving it character, organizing the machinery of government, selecting men through whose actions it would become real. And then the establishment of this new Government in the Federal City, the acquisition of the land, marking it off, the location of the buildings, approval of the architecture of these new edifices. At last the conduct of this Government in the first 8 years of its history, fixing the orbit of this new America in the constellation of nations, the laying down of a new foreign policy of neutrality in the controversies of Europe, avoiding permanent commitments abroad. In his wise and cautious mind had to be marked out the territorial limitations of his country for all time to come; what should be America's boundary to the west, the north, the south; how should the West be tied in with the East, and those two sections bound together by indissoluble ties; how could the commerce of this country be stimulated until there was a happy sufficiency for all arising from a free interchange of goods and services among the people? How could the Government increase trade and serve the public good by internal improvements? What kind of a citizenry were we to have? Comes forward the patron of public education, the enthusiastic sponsor of a national university in the Federal City, in the field of invention; also the patron of the pioneer. What about the agriculture of America? See him in correspondence with the British Commissioner of Agriculture and illustrious men in that field abroad. An enterprising businessman, curious and inquisitive about everything capable of improvement.

Here was a man who was of and was the genius of America bound by no tradition outlasting the cause of its establishment, locked into no narrow sphere by prejudice, ever possessing a mind alert and open, a judgment seeking unerringly the truth, always seeking the practical application of principle, and judging that best which works best.

Today America finds itself with new problems, as novel as those of Washington's day. There is no precedent, there is not even unanimity in the admission that the challenging problems exist. There is division in counsel. There are threats that all that we have yet achieved may be lost, and that those aims and aspirations of the patriots of the War for Independence, of the fathers who founded the Constitution, though almost within our grasp, may never be achieved.

The America of George Washington, Thomas Jefferson, Andrew Jackson, even of Abraham Lincoln and Ulysses S. Grant, was essentially the same America. It was primarily an agricultural economy; the factory system had not risen to chain men to a machine and drive families into dark and unsanitary abodes, to detach men and women, families, from the soil, and interweave their destiny with that of the owner of some aggregation of machines or him who directs the course of capital.

Until 1890 the primary influence upon American life was the American frontier. Ever to the west lay new escape from the congestion of the East, and wave after wave of hearty pioneers ebbed across the American continent until they came sharp against the Pacific Ocean in the last years of the nineteenth century. Individualism, liberty, freedom, individual opportunity, absence of restrictive control upon the citizen's movement, or his conduct, whether in business or otherwise, were but a natural inheritance from the War of Independence. But there was born with the restriction of that frontier in 1890, if a date be fixed, a new America, as new as the America of George Washington's day, even more complex as a problem, challenging a new effectiveness in government, a new organization of government; demanding, paradoxical as it might seem, that license be destroyed, that liberty might be preserved. For man could look no longer to the West; there was no Louisiana Purchase, no more Indians to be displaced, no free country beyond the mountains. Americans had to live with one another where they were. Men had to stay at home with their problems, or fly to others equally as bad.

The modern corporation came into being. A new and intricate fiscal structure grew up. An age of specialists demanded of each a peculiar fitness for a task, and then perhaps when his ability related only to one job, that opportunity was destroyed by technological improvements. Just as men lived in the corridors of great cities, as they were confined in the chasms of narrow streets, so did they fall into restricted crevices of an economic order that was unyielding and inflexible to their puny efforts to escape.

Men began to wonder what really was liberty, and what the forefathers really meant by freedom, and what kind of an independence it was that Americans gained.

Thomas Jefferson, when he said that "that government is best which governs least," had in mind the preservation of the kind of freedom that the citizen enjoyed upon the farm in his day. He feared that if the Government expanded its reach, gave its subsidy to a growing industry, if the maintenance of the fiscal structure and the preservation of the industrial order became its chief concern, the very enterprise that it should create would come to engulf the liberties of the individual citizen.

In an earlier day Jackson protested against the rise of a national bank which, under the guise of aid to industry, should come to be a tyrant over the business of America, and destroy the effective liberties of American citizens.

In a later period Grover Cleveland created the Interstate Commerce Commission to restrain the railroads from avaricious domination of farm and factory and to break the shackles of a monopoly that controlled the destinies of men and their businesses.

Later Woodrow Wilson, with the Federal Trade Commission, imposed upon private business a code of fairness. Through the Federal Reserve System he broke the control of a private banking group over the country's commerce and, with the aid of a crusading Virginian, made the public interest the first concern of a nation's fiscal structure.

In the same spirit has this Government laid its hand upon influences in our national life which were destructive of individual liberty. It has tried to open the way of economic opportunity to the individual.

Faced with millions of unemployed, it has tried to give American citizens an opportunity to enjoy an American's heritage, the

right to work. It has replenished the arid areas of capital and credit with new funds available to the business public. It has encompassed the larger view of the public interest and the general welfare and concerned itself about the health of American men, women, and children; about the security and comfort of America's old men and old women; about the price they get for their labor and the produce of their farms; about the security of their deposits and the honesty of representations made to secure their investments.

This modern world, with its perplexities, with its myriad machines producing goods faster than men can buy them, with its specialization, with its marvelous productivity from the ground, with its delicately balanced and complicated interdependence, challenges big minds, big men like George Washington.

There are three forms government may take. Modern government may be a policeman which shall preserve order, maintain the framework of governmental institutions, carry on the business of preserving orderliness in society, without any concern whatever as to how men, women, and children actually get along. That theory of government never pertained in this country even in George Washington's day. It never for long pertained in any government, because no government can honorably abdicate the duty to govern.

Government may satisfy itself merely by being a policeman of an ordered society plus a compensatory force to preserve the balance of things; that is to say, pitting its energy against a force detrimental to the public interest, restricting currency in circulation when there is a tendency to inflation, buying in certain cases when others are selling, and selling while many buy. If every tendency contrary to the public good could effectually be counteracted by such a government, it would surely be desirable that public action stop there.

But experience indicates to many that the Government restricted to either of such spheres can neither promote nor preserve the general welfare, the common defense and security, nor even, indissoluble, the Union itself. They say that government representing the social will and the social conscience cannot escape responsibility for the direction of things, the trend of courses and events; that government which conscientiously desires to preserve liberty cannot allow monopoly to go unrestrained; that a government that is anxious to stimulate the commerce of its citizens cannot suffer millions to go unemployed and deprived of a purchasing power which alone can assure a nation's prosperity; that a government determined to keep order and make men's lives and property safe cannot adequately perform its duty by merely laying a hand upon crime without destroying the conditions from which crime inevitably rises; that a government which cherishes its security cannot permit that security to be undermined by ignorance, poverty, disease, avariciousness or any sinister forces; that government is the only instrumentality through which public problems may be attacked and any hope of solution entertained.

Here we are in America with our problems. We know that 14 percent of our 29,000,000 American families make annually less than $500 a year; that 42 percent of our families make annually, less than $1,000 a year; that 65 percent of our families make less than $1,500 a year; 87 percent less than $2,500 a year; 97 percent less than $5,000; 99 percent less than $10,000 and 1 percent $10,000 or more.

We know that there are perhaps ten to twenty million of our fellow Americans unemployed. We know that between 1925 and 1930 at least 250,000 were added to the tenant farmers of America. We know that there are a million or more illiterates than college graduates in this country. We know that a million of our fellow citizens probably go annually to an untimely grave from preventable disease and infirmity. We know that America's crime bill is annually $15,000,000,000. We know that our resources are being depleted, our lands denuded of their forests, our soil washed into the sea.

No one, to my knowledge, in the Federal Government is greedy for power. I challenge any man to show that the National Government has assumed and continued jurisdiction over any sphere of our activities which has not been responsive to the clamor of public demand because abuses arose which thwarted every effort save that of the social well through government.

Here, then, is an America, confused, troubled, precariously in the balance, as in George Washington's day. The problems of 1939 cannot be solved by the formula of 1776. They cannot be answered from the experience only of an old world. They call for a peculiar genius, one borne in the fallow character of America illuminated only by American purpose.

If we, therefore, who honor George Washington's name and memory, desire to follow his illustrious example and to emulate his noble qualities, let us first see and want to see the deplorable facts and the troubled state of our country's affairs; second, approach those problems with all the skill and knowledge and learning of the age, bringing to bear upon them the searchlight of honest scrutiny always, with the blindness of prejudice and the shadows of pettiness eliminated; third, a resolute will to succeed, a positive philosophy, sensitive, delicately so, of individual welfare, freedom, liberty, yet as well-determined that, challenging as is the difficulty, it shall be solved; be affirmative, like George Washington—not negative in our approach to the day's tasks.

Here, with all the heritage of the past behind us, with all the glorious opportunity of the present before us, with all the learning of this day, the good will of the many earnest men and women of this generation around and attending us, and the Divine Eye looking from above sympathetically upon us, as ever it has, let us bring to the stately figure of George Washington, as it reposes in the spiritual shades across the river, a satisfaction that can come only from his knowledge that the rich blood of his generation has not run thin; that we are worthy beneficiaries of his heritage.

Parity Payments for Cotton Producers

EXTENSION OF REMARKS

OF

HON. HAROLD D. COOLEY

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 20, 1939

Mr. COOLEY. Mr. Speaker, if, as we are told, the South is the Nation's economic problem No. 1, it is time for the South to demand fair treatment at the hands of the Federal Government. No one seems to question the fact that our cotton problem is the Nation's agricultural problem No. 1. To demand parity is only to demand justice long delayed. Farm leaders, including officials of the Department of Agriculture, seem to be suffering with an inferiority complex.

We seem to be able to raise millions and even billions for various and sundry other purposes; we can operate Works Progress Administration and Public Works Administration and sundry other agencies of the Government; we can build battleships costing millions and erect monuments to dead heroes and statesmen, but when we ask for parity and justice for the farmers of the Nation the question comes from all sides, "Where will you get the money?" The House Committee on Agriculture reported the Agricultural Adjustment Act of 1938 containing section 303 which approved the principle of parity payments and authorized and directed the making of parity payments to the producers of cotton and other major agricultural commodities, and this principle of parity and the authorization contained in section 303 were approved by both Houses of Congress and became the policy of this administration and the law of the land. Yet the money has not been made available. Parity is delayed and denied while agriculture continues to suffer. I am frankly of the opinion that Congress should appropriate the money and raise the necessary revenue to make effective the very vital provisions of the law as contained in section 303 of the Agricultural Adjustment Act of 1938.

If the farmers of America are actually given parity price and receive their fair share of the national income we will be once again on the road to national prosperity. I am not only anxious for the bill I am today introducing to become a law but I shall welcome an opportunity to vote for an appropriation of an amount sufficient to assure parity prices to the producers of other major agricultural commodities, and shall likewise welcome an opportunity to vote for a tax bill which will raise the necessary revenue.

I am advised that parity price for cotton at the present time is 15.6 cents per pound. With a market price of 8.4 cents and 2 cents per pound soil conservation benefit payment from the $500,000,000 soil conservation fund and the 1.6 cents per pound payment from funds made available by title 5 of Public, 122, which became a law at the last session of Congress, both payments being upon the normal production on allotted acres, assuming that cotton of the 1939 crop can be sold for 8.4 cents per pound and that farmers will take advantage of the acreage allotment program, they will receive a total of 12 cents per pound. To bring cotton producers up to parity the difference would be the difference between the selling price and benefit payments, a total of 12 cents per pound, and 15.6 cents per pound, or 3.6 cents per pound.

I am advised that if the $500,000,000 soil conservation fund is made available it will take $216,000,000 in addition to this fund and funds available under the act passed at the last session of the Seventy-fifth Congress to bring the cotton producers up to parity. I am, therefore, today intro-

ducing an appropriation bill for $216,000,000 to enable the Secretary of Agriculture to make parity payments to producers of cotton pursuant to the provisions of section 303 of the Agricultural Adjustment Act of 1938.

If the bill is enacted into law the cotton farmers will, for the first time in many years, receive parity price.

The time has come to stop rendering mere lip service to agriculture and to stop merely talking about parity. After all parity is only justice for the farmers of the Nation and the farmers and our farm leaders, including officials of the Department of Agriculture, should demand parity prices.

Founder's Day Celebration

EXTENSION OF REMARKS

OF

HON. CHARLES W. TOBEY

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Monday, March 20 (legislative day of Thursday, March 16), 1939

RADIO ADDRESS BY HON. H. STYLES BRIDGES AT FOUNDER'S DAY CELEBRATION, LINCOLN, NEBR., MARCH 14, 1939

Mr. TOBEY. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by my colleague the senior Senator from New Hampshire [Mr. BRIDGES] at Lincoln, Nebr., on March 14, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Fellow Republicans, I am happy to be here tonight to contribute my small part in this celebration commemorating the founding of the State of Nebraska. It can truthfully be said that we, tonight, meet in the heart of America. No longer to the west of us stretch vast, uncultivated prairies and badlands inhabited by the Indians. No longer to the east of us lie sparsely settled areas and small towns and villages connected by wagon trails. Instead, we find on this March day, seventy-two years after the admission of this great State to our Union, a highly developed, compact nation of 130,000,000 people, a people who enjoy the most enlightened form of government which man has ever been privileged to experience.

Potentially we are a Nation of untold economic resources, of vast untapped wealth, and of people who are energetic, courageous, and eager for an opportunity to build a future for themselves and for our country. Today we are at a standstill. Something is wrong with our economic machinery. It is time we took stock of ourselves. It is time we got back to earth. We inhabit the same country, the same good earth over which our forbears trekked in their wagon trains. Can it be that we lack their spirit and their will to succeed? Can it be that this last decade has been a delusion and a snare? Can it be that there is no short cut to recovery and prosperity except hard work and deep thinking? Again, I repeat, let us get back to earth.

The people of my own New England are descendants of the Pilgrims who landed on our shores to start a new life, to develop this new country, and to insure free expression of their political ideals. The descendants of those pilgrims plowed the fields and hewed the forests. They marched steadily westward—Ohio, Illinois, Nebraska, Nevada, California. The America of our times was their dream. That dream was realized. But that does not mean an end of opportunity, or an end to the development of minds or political ideals.

Today we are all pilgrims. We are still searching for opportunities. We are still a people of ambition and initiative. The time has come when we, as Americans, and as Republicans, must undertake a great mission. We must undertake to gather into our party the majority of the people of this Nation. We can do this by the use of common sense arguments, by good example, by being honest, by keeping our promises, and by a back-to-earth philosophy. We must convince them that the salvation of our Nation depends upon the return of the Republican Party to power in 1940.

Dangerous things have crept into high places within the last 6 years. Dangers that have resulted from a succession of small changes in integral parts of our Government. It is not the great and striking alterations which are so advertised that must be shunned. In 1933, when the present administration came into power, a large portion of our people adopted a philosophy of "Let Roosevelt do it." The President was more than glad to do it. Humility has never been one of his weaknesses. So much harm has since been done and so much good undone that the very foundation of our Government has been shaken. Change, reform, and control have been New Deal watchwords.

A succession of small changes, a perpetual tampering with the small parts which steal away the breath though they leave the body, is what we must fear. We must call a halt to further encroachments on our liberties. A government may lose all its character, its genius, and its temper without losing its appearance. The ultimate end is a dictatorship under the name of a democracy. Our Government as developed by our forefathers was a good government because it was genuinely free. It was a good government because it was practical. It was the production of men of honor, experience, and wisdom. Its object was to secure and protect the weak against the strong, to unite the forces of the whole community against the violence of oppressors. All people are capable of comprehending its principles and its operations. It is capable of being changed at the will of the majority and to pass from the hands of one political party into those of another. Of the comparative merits of different administrations, of their honesty, their talents, their patriotism we have here nothing to say. That must be decided by posterity. But to protect this Government we must preserve a correct and energetic tone of morals. The truth of the matter is that liberty consists more of the habits of the people than anything else. When the public mind becomes defective and weak every attempt to preserve liberty is in vain. Laws become a nullity and our Constitution a piece of scrap paper. Ambitious men must be restrained by this public morality. We have not lost this morality to date, but, as a people, we have skated mighty close to the thin edge.

In times of great crises a superhuman hand seems to reach out and protect the American people. Sometimes it protects them from their own follies. I am firmly convinced that such a hand put a stop to the New Deal last November. Let us not be deceived—it was not Republicans alone who realized that our very form of government was being threatened. For 6 years the Roosevelt administration has been running this country. Literally and figuratively, it has been running this country into the ground, not as the farmers of this section, for instance, might plant seed from which crops would grow but for the purpose of burying the last vestige of individual initiative and individual opportunity. Last November it was the people, the whole people, who spoke. The election of 1938 was a mandate to preserve those principles of democracy which were being plowed under. November 1938 will long be remembered as a turning point in American political history. The people revolted from the New Deal. It could not stand the shock. Today the Democratic Party is split wide open. It is a mockery, and a just mockery, that in their attempt to plant the seed of class consciousness, in their attempt to separate the people of this Nation into groups the new dealers themselves have divided their party. On the one hand stand the ardent, blind followers of Franklin Roosevelt, men such as Harry Hopkins, Harold Ickes, Alben Barkley, George Norris, Benjamin Cohen, and Tommy Corcoran. On the other hand stand the old-line Democrats, men who could not tolerate the direction in which the New Deal was traveling, men who put the welfare of their country above their party. In this latter group we find such figures as CARTER GLASS, HARRY BYRD, MILLARD TYDINGS, BENNETT CLARK, Vice President GARNER, and your own able Senator ED BURKE.

We would be blind as Republicans if we did not see that the opportunity to take advantage of this disruption in the ranks of our political opponents is at hand. But I wish to utter this warning. The security and the hope of the American people is more important than the return to power, or the removal from power, of any political party. We do not deserve to take over the reins of Government in 1940 if we fail to appreciate the lessons of the past 6 years. I am sure we are all dedicated to the proposition that the Republican Party can return to power only under progressive leadership and only if it submits to the people a progressive, intelligent program. In short, we, as a party, must not be destructionists. We must offer something constructive. That is what the people are looking for. Last, but not least, all the elements of our program must be consistent with each other.

The period of planned economy is at an end. The American people have repudiated it. Planned economy is not wrong of itself, but under the New Deal there have been too many plans and no economy. Here in Nebraska you people know that it is possible to run a State government without going up to your necks in debt. During my 2 years as Governor of New Hampshire, 2 years in which the country as a whole was at the bottom of the depression, we balanced the State budget. We balanced our State budget because we did not spend beyond our income. We did not provide huge outlays for bureaucracies, commissions and committees, and organizations whose administration ate up 50 cents of every dollar. We ran our State on a pay-as-you-go basis. There is no reason that the United States Government cannot be run on a pay-as-you-go basis. To be sure, such a program causes discontent, but the discontent exists only among those who cannot feed from the Public Treasury. The spending program of the Federal Government is completely insane.

What can one hope for when spokesmen of the administration publicly state that we cannot have recovery and economy at the same time. What can we expect when some say the national debt need never be paid. Our national debt is rapidly approaching that figure set as the ultimate danger point. No attempt has been made to curtail expenditures. No attempt has been made to cut down the bureaus or to remove the nonsensical duplications existing among the various Federal agencies. In its spending program, as in all of its other programs, this administration is concerned only with its ability to control, to regulate, and to regiment the business, working hours, and the very lives of the American citizens. Despite 6 years of pump priming which has proved the

fallacy of New Deal economics, the people of this country still have the will to save.

The Republican Party stands ready to put into operation a program of curtailment of Government expenditures. Such a program will not deprive a single American citizen of the necessities of life. The President has been acclaiming the philosophy of sharing the wealth and bettering the lot of the underprivileged third, but you know and I know that a continuation of the administration program will mean nothing else than the sharing of poverty. The entire Nation will be underprivileged. We Republicans stand ready to offer the country both recovery and reform. A Republican recovery will be a real recovery. It will mean the opening of new opportunities. It will mean the curtailment of the terrific tax burden imposed by the present administration. Its reforms will be based upon curing the evils of waste, extravagance, and low morality which exist under the present administration. Republican reforms will not mean State socialism financed by the Federal Government. We in New England, you in the Middle West, and the majority of people throughout the rest of the country must realize that it is no honor to be in debt.

How has the present administration solved the problem of relief? Has there been any real attempt to put the unemployed back in the channels of private industry? The answer is no. Let us not read the words of our present leaders; let us look at their actions. When they came into power in 1933 they undertook positive and needed emergency action. That was called the first New Deal. But as time passed the emergency acts became permanent acts. Various relief administrations were seen to have political possibilities that were too good to relinquish. The relief vote was an important asset in the elections of 1934 and 1936. The relief vote of 1938 was the only thing that prevented a complete Republican landslide. We all know of the "purge" and of the use of relief money in politics in Kentucky, California, Tennessee, and in your neighboring State of Iowa. We all share the open disgust of the country at the political activities of the New Deal henchmen as they rode around the country capitalizing on human misery. In my estimation, the solution of our relief problem is the return of the entire administration of relief to the States and localities. Those agencies should have handled it from the beginning. Such a reform would enable the taxpayer to see how his money is expended and to know that most of every dollar went into the pockets of the needy and not into the pockets of administrators, commissioners, inspectors, and other bureaucrats.

Relief and unemployment are the great issues before the people today. They are the problems that must be solved. For the last decade they have marched hand in hand through our economic life. By returning relief to the States we can help solve the problem by cutting down the costs of administration but that is not the permanent solution. The permanent solution of the relief problem rests with the solution of the problem of unemployment. The problem of unemployment can be solved only by encouraging industry and agriculture to take up the slack. Our Republican program does not believe that business or agriculture can be induced to undertake its share in taking up the slack in unemployment by the imposition of excessive taxes, by regimentation and excessive control. For 5 long years, the President has been harping about business recovery and about making friends with business, and about business and Government sitting down at the table together. Mr. Harry Hopkins expounded the beauties of a Government business friendship in his recent visit to Iowa. Things which have been said cannot be reconciled with what the New Deal has been doing. First it was the N. R. A., then it was the A. A. A., then it was the National Labor Relations Act, then it was the undistributed-profits tax, then it was the capital-gains tax. Throughout this period there has been spying, and investigating, and snooping. There has been reviling of business in every forum in the land. The aggression which the New Deal makes upon business and civil rights is always cloaked with an aspect of humanitarianism. Such tactics, however, certainly lend no encouragement to industrial expansion or agricultural development.

Let it not be said that the Republicans approve of all the activities of big business, for that is not true. We do believe that reforms should be for the purpose of aiding everyone. The National Labor Relations Act, for instance, was a necessary reform. We, as a party, believe in the rights of collective bargaining. We believe in labor unions. But we also believe that the differences between industry and labor, and between the two great labor organizations, can be better solved by using methods of arbitration instead of crack-downs—by using methods which will keep the wheels of industry turning instead of fomenting strikes and shut-downs. All businessmen are not devils, and all labor leaders are not angels, and should not be so classified. The National Labor Relations Act should be kept, but it should be amended along the lines suggested by Senator WALSH, of Massachusetts, and by your own Senator BURKE.

The Roosevelt administration has taken great pride in its leadership in social-security legislation. There is nothing new about social security. It has been practiced for years by leading nations of the world. Many aspects of social security were adopted by some of our States long before the Federal social-security law was enacted. During my administration as Governor of New Hampshire we enacted social-security legislation. In a spirit of New England thrift, however, we paid our bills and kept our State budget in balance at the same time.

Republicans believe in social security. The Republican Party stands foursquare on the subject of social security. We believe the present act should be amended because it is misleading. It has misled the very workers out of whose pay envelopes funds are exacted in the form of taxes. The workers believe their money is being saved. They believe it is being kept in a giant fund which will some day provide for them during their old age. In truth, such a vast fund is but a figment of the imagination. There is no social-security fund, and there never has been, and it was not the intention of this administration that there ever should be. The money paid by the American employers and the American workers as social-security taxes is used to meet the current running expenses of the Federal Government. There is now talk of broadening the base of the social-security law. This will give more American citizens the benefits of social security—which is good. It will also give more American citizens the privilege of helping balance the New Deal Budget—which is an impossibility. When the Republican Party comes into power in 1940, one of our first acts should be to put the social-security law on a pay-as-you-go basis. That is only honest to the people who pay the taxes and to the entire population which must otherwise bear the burden of continuing deficits.

From top to bottom the structure of our Federal Government must be decentralized. The powers which have been usurped from the States must be returned. It is indeed strange for Republicans to get together and talk about States' rights. For generations our party has been one which supported a strong Federal Government. It is not the Republican Party which has changed, however. It is the Democratic Party. Historic supporters of States' rights, the Democratic Party, under the leadership of Franklin D. Roosevelt, dedicated itself to the proposition that 48 sovereign States were no longer elements of American democracy. Slowly but surely, tentacles of the administration have reached into every farm and every village throughout the country and sought to regulate the very lives of our most humble citizens. For 6 long years we Republicans have stubbornly fought every inch of the way in support of what we believe to be right. The Federal Government is as responsible to the Constitution of the United States as are the governments of the 48 States and no less. When the Constitution was a stumbling block in the path of the New Deal, the trigger men in Washington, the brain trusters, and the White House palace guards, tried backstairs methods to frustrate the very purpose of that document. The Supreme Court was one power they could not circumvent so they tried to sabotage it by packing it with yes-men. They tried to rob Congress of its power by a reorganization bill whose basic purpose was nothing more than to give more control to the Chief Executive. Today it is our party, the Republican Party, that champions States' rights. It is the Republican Party that seeks to end the tyranny of Federal domination and one-man rule.

What have the new dealers done in the field of agriculture. Not content with a policy of procrastination and fumbling they have now decided it is best to rob the farmer of his American markets. This they have almost accomplished by their trade agreements with foreign nations. The entire special session of Congress in 1937 was given over to the enactment of farm legislation. It took 62,000 words to tell the story of a program any farmer could have told at a glance was unworkable. The first important step toward the solution of our agricultural problem is to adjust our trade laws so that the American market is reserved to the American farmer. The second step is to encourage the development of new uses for farm products. In this respect I have particular regard for the use of excess farm products as motor fuel. To make real progress toward the solution of the farm problem we should concentrate on scientific ideas instead of political ideas. Our American farmers do not want to be a burden on the rest of the population. They seek only an opportunity to work their farms and receive a fair return for their crops. They would rather have earned wealth than a subsidy, and that is what the Republican Party offers them.

Our Republican program is based on reality. It truly subscribes to the back-to-earth movement. The period of muddling through at home, and meddling in European affairs must come to an end. Consistent home and foreign policies are the crying need of this generation. We want peace and recovery. We have only pricked the surface of the field of opportunity offered us in this country. If we have not the sense to change an administration of our Government when it has proved a failure, we can expect no change in our economic outlook.

That gross blunders have been committed by the present administration is generally admitted. But blunders, however inexcusable, or apparently injurious, must be deemed irretrievable only in the last resort. Heaven forbid any admission that this Nation can be wrecked by any one administration. The truth here, as almost always, lies between extremes, between arch conservatives on the one hand and so-called liberals on the other. One would put back the hands of the clock a hundred years and have us live and act as if the conditions of Washington and Franklin were still about us. The other would have us believe that to act well our part on the world-wide stage which alone limits the activities of modern civilized states, we must imitate all the international follies and vices of our period. Between these extremes lies the path of honor, of morality, of safety, and of patriotism. Notwithstanding the present turmoil, the American people may be absolutely trusted to find the right path and walk in it. This middle path is the path which the Republican Party must adopt. The people of the United States are ready for a progressive form of government. They are ready for an active attack on the problems of our time. We are the most truly progressive of all people.

Our destiny does not lie abroad. The future of our youth does not lie in communism or fascism. It lies here in this country

between the Atlantic and the Pacific. Here is where democracy is casting its light. We are the best examples of our times of an enlightened democracy. We have not reached that state by trickery and by cajolery. We have not reached that state by searching for the easy way out of our difficulties. The American people are basically sound. They are not fools. A few of them are lazy. Some of them feel that it is easier to mortgage the future to pay for the pleasures of the present than to work, but they know it is wrong. It is the duty of the Republican Party to present a progressive candidate and a progressive, workable program which will harness the opportunities of Nature and the initiative of the American people.

I have not attempted to cover more than the highlights in this brief talk. There are a thousand and one things that we must do, but we are on the right track. As a party, we are alive and we are vigorous, and after that display of confidence which the public gave us last November, nothing save our own mistakes can stop us in our march to victory in 1940.

Presentation of Gavel

EXTENSION OF REMARKS

OF

HON. ALVA B. ADAMS

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Monday, March 20 (legislative day of Thursday, March 16), 1939

ADDRESS BY HON. EDWIN C. JOHNSON, OF COLORADO, ON PRESENTATION OF GAVEL TO REPRESENTATIVE TAYLOR OF COLORADO AT A MEETING OF THE COLORADO STATE SOCIETY OF WASHINGTON, D. C., MARCH 17, 1939

Mr. ADAMS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the remarks of my colleague the distinguished Senator from Colorado [Mr. JOHNSON] on the occasion of the presentation of a gavel to the Honorable EDWARD T. TAYLOR, Representative from the Fourth Congressional District of Colorado, at a meeting of the Colorado State Society of Washington, D. C., on March 17, 1939.

There being no objection, the presentation remarks were ordered to be printed in the RECORD, as follows:

I am thrilled that it is my good fortune today to have the very great honor to present to my beloved colleague and warm personal friend the veteran Congressman from the Centennial State, the Honorable EDWARD T. TAYLOR, on behalf of the Consolidated Chamber of Commerce of the North Fork Valley and the Chamber of Commerce of Montrose this unique gavel, symbolic in its composite structure of the scenic attractions of his district and conveying as it does their heartfelt appreciation and high esteem.

During his long, outstanding career of legislative service—12 years in the Colorado Senate and 30 years in the Congress—he has accumulated hundreds of legislative achievements in the form of statutes and constitutional amendments to his credit. Silent monuments of majestic splendor and rugged strength dotting his congressional district—one of the most scenic congressional districts in America—by legislative action have been set apart and preserved for all time for the recreation and pleasure of all the people through his wisdom and foresight.

Among the more spectacular and fascinating of these memorials is the Black Canyon of the Gunnison National Monument, fittingly named the Black Canyon because its sides are of black granite and micaceous schists—rocks of the oldest known or Archean age. The cedars on surrounding mountains are thousands of years old.

Peering down 2,700 feet of precipitous walls to the very bottom of this deep, narrow gorge, enthralled by its compelling beauty of color, depth, and immensity, a strange feeling of insignificance of self and reverence for the Creator comes surging over one. Through his legislative efforts this wonderland belongs to all the people and will remain in their natural state for their perpetual enjoyment and inspiration.

Congressman Taylor, this beautiful composite gavel is significantly constructed of materials gathered from different sections of the monument by loving, devoted, and admiring friends of yours. The head of the gavel is made of red cedar from the north edge of the Black Canyon. The handle is of mountain mahogany from the south edge. The polished stones are from the canyon rims, while the gray and pink unfinished granite is from the canyon walls. The bands are, of course, made from Colorado silver.

A signal honor has come to Colorado. For the first time in the history of the Nation a man from the West has been chosen chairman of the powerful Committee on Appropriations, a position of responsibility second only to that which the Speaker of the House enjoys. Under EDWARD T. TAYLOR, its efficient executive head, the Appropriations Committee performs its great tasks with diligence and dispatch. Long may he rule over this important committee with wisdom and justice, holding in his hand this beautiful gavel, the emblem of his high office.

Congratulations, dear Congressman, upon your mighty works, and double congratulations that so many loyal friends love you.

Protection of American Farmer and American Labor

EXTENSION OF REMARKS

OF

HON. J. HARDIN PETERSON

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 20, 1939

Mr. PETERSON of Florida. Mr. Speaker, I have introduced H. R. 4536, which is designed to protect the American producer, farmer, and vegetable grower against the low-cost production of foreign products as affected in the legislation of the reciprocal-trade agreement.

The standard of living in many foreign countries with whom reciprocal-trade agreements exist is such that our American farmers are at a decided disadvantage in competing with farmers in foreign countries.

As an example, the farm laborer in Cuba is paid a maximum wage of $1 per day, and actually is paid much less than this per day, while the laborer on American farms is paid wages from $2 per day up, and his living costs, taxes, and other expenses are higher.

Under the trade agreement with Cuba promulgated in 1902 Cuba is granted a preference of 20-percent reduction of custom duties during the entire year, and under the reciprocal-trade agreement entered into with Cuba in 1934 that country is granted a further reduction on various farm products of from 20 percent to 50 percent from this reduced figure. For instance, the 1930 tariff rate on tomatoes is 3 cents per pound, and with the general 20 percent reduction makes the duty 2.4 cents per pound. Then, under the agreement of 1934, there is the further reduction during December, January, and February of each year of 50 percent, or a tariff rate during those months of 1.2 cents per pound. As to cucumbers, the rate is 3 cents per pound under the 1930 tariff, and under the general tariff agreement with Cuba this is 2.4 cents per pound during the entire year, with a further reduction under the 1934 reciprocal-trade agreement of 25 percent for January, February, and December, or 1.8 cents per pound.

Cuba has such climatic conditions that cost of living and cost of production expense are much lower than in the United States; and, in fact, the United States Tariff Commission found in 1930 that the difference in cost of production on tomatoes was about 3 cents per pound. I venture to say that it is much more now.

That is, it cost the Cuban vegetable grower, in 1930, 3 cents per pound less to raise tomatoes than it did the vegetable grower in the United States. Yet, during the months when the Florida growers, and the greenhouse growers, raise vegetables for the American winter market, to wit, the months of December, January, and February, Cuba has the advantage of a tariff rate of 1.2 cents per pound when they can raise them at a cost of 3 cents per pound less than the American vegetable growers can. Thus, when Florida vegetable growers and American hothouse vegetable growers are raising and marketing tomatoes, cucumbers, and other vegetables for the winter trade, they must compete with Cuban tomatoes, cucumbers, and other vegetables raised by low-standard, peon labor and placed on the American market in New York by water transportation, which is very cheap, when our own American vegetable growers must use railroad or truck transportation, and pay American-standard living wages to American labor, and compete with them on the same market.

What this does to the American vegetable trade is shown by the head line in a vegetable trade journal, which reads:

CUBA PUTS A GREAT LOAD OF TOMATOES ON MARKET—BANG

The article continues:

Unloads of Cuban tomatoes reached the season's high mark when close to 95,000 lugs arrived and most sold at the two sales on Tuesday and Thursday. These offerings were almost double those of a year ago, when only 57,000 lugs sold at the two corresponding sales. Considering the heavy offering, the cold weather, and low quality of most stock, nothing better could be expected than the drop in prices that resulted.

Monday about 43,000 lugs were offered, with prices at $1.10 to $2.50 per lug, while at the same sale last year 29,000 lugs were sold, ranging from $1.50 to $3.40. Those receivers who had tomatoes that were satisfactory to buyers on Monday realized the better prices, while offgrades were in the dumps. On Wednesday there were about 48,000 lugs sold, with some stock going as low as $1, with tops of $2.40 per lug (lug is 30 pounds).

The further consequences of this low tariff is shown by the statement of Mr. H. D. Brown, secretary of the Vegetable Growers of America, a national organization of American vegetable growers, having membership from all parts of the United States, which statement was made recently.

I quote Mr. Brown:

In 1933 nearly 10,000,000 pounds of tomatoes were shipped from Florida alone during the month of December; 14,592,000 pounds in January 1934; and 25,416,000 pounds in February 1934. Tomatoes and other vegetables imported from Cuba can be raised also in California and Texas during these same months. Due to the trade agreement with Cuba the shipments from Florida had decreased 10 percent from 1933 to 1937, while shipments from Cuba had increased from 2,516,581 pounds in December 1933 to 15,568,000 pounds in 1937.

Tomatoes, cucumbers, and other vegetables are grown in hothouses throughout the United States. This branch of the industry in the United States has a capital investment of $125,000,000 and employs 50,000 people in 2,100 plants. All of these plants face financial ruin if the present low-tariff rates on tomatoes and cucumbers shipped in from Cuba are allowed to stand a year or two longer.

Regarding this hothouse industry, which is so disastrously affected along with my Florida growers, I quote from a statement of Mr. O. Keith Owen, president of the National Association of Hothouse Vegetable Growers, an organization of hothouse growers with plants all throughout the Middle West, as follows:

The hothouse vegetable industry has an investment in greenhouses, land, and equipment of some $125,000,000, and 40,000 to 50,000 Americans gain direct livelihood therefrom. One million five hundred thousand tons of coal are consumed annually, 15,000 cars of fertilizer, and 2,000 cars of shipping containers. Large quantities of insecticides, chemicals, seeds, paint, and miscellaneous items are used in the industry. The employment created in the mining of coal, manufacture of fertilizer and shipping containers and miscellaneous items, and the employment furnished to employees of transportation companies, furnish employment to several thousand additional American citizens.

Under normal greenhouse operation, a crop of tomatoes, or cucumbers, is grown in the fall, immediately followed by another crop, the crops frequently being rotated.

Since the existing trade agreement was effected with Cuba, many greenhouse operators have found it impossible to grow two crops per year, with the result that only one—the long spring crop—which produces from January to July, is grown. This discontinuance has been brought about by an increase in importation of tomatoes from Cuba since the effecting of the Reciprocal Trade Agreement Act in June 1934.

Under the above-mentioned act, Cuba was granted a reduction in duty on tomatoes and cucumbers during the months of December, January, and February, commencing in December 1934. In December 1934 there was an increase in imports of tomatoes from Cuba of 400 percent over December 1933, 450 percent in 1935, 450 percent in 1936, 600 percent in 1937, and it is estimated approximately 600 percent in 1938. December is one of the most important hothouse tomato producing months.

In the case of cucumbers, it is all 3 months—namely, December, January, and February, when the reduction in tariff under the Cuban agreement is in effect, are important producing months.

The first December, January, and February after the reciprocal-trade agreement with Cuba was effected, an increase of over 50 percent in imports of cucumbers took place. The second year, an increase of 100 percent; the third year, approximately 150 percent; and a like level of imports of cucumbers has been going on since.

The discontinuance of the so-called fall crop has thrown out of employment thousands of employees, as well as the shrinkage in employment of coal miners and other American workers.

During the first 4 depression years, namely, 1930, 1931, 1932, and 1933, one of the plants in this group alone paid $43,087.44 in Federal income tax. During the first 3 years of the reciprocal-trade agreement with Cuba, $6,735.51 in Federal income tax was paid by this company. In other words, the company in question paid an average per year of $10,771.86 during the first 4 years of the depression and before the reciprocal-trade agreement with Cuba, and paid an average of $2,243.80 annually in Federal income tax during the first 3 years of the reciprocal-trade agreement with Cuba. This shows how the National Treasury loses by reason of this reciprocal-trade agreement.

The plant in question is the largest plant of its kind in existence and consequently has the lowest possible cost of production. It is one of the finest examples of American industrial and agricultural developments and should not be destroyed.

During the past summer, two of the plants belonging to the above-mentioned group have discontinued growing hothouse vegetables. One of them has been junked at a total loss to the investors and the other one is lying idle.

Since effecting the reciprocal-trade agreement with Cuba, large hothouse producing plants in Kansas and Oklahoma have failed and are rotting to the ground, throwing labor out of employment, as well as almost total financial losses to investors.

Two plants in Iowa are operating with the assistance of Reconstruction Finance Corporation loans, and several other hothouse vegetable producing plants in the country are operating at losses and are operating only on account of getting Government loans.

The census of 1930 shows 386 greenhouses producing vegetables in the State of Massachusetts. The bulk of these greenhouses have either been torn down or are lying idle at the present time due principally to the lack of ability to compete with imported vegetables from Cuba.

The hothouse vegetable industry in the United States, as a matter of fact, originated in or near Boston, Mass.

Thirty-three greenhouses were torn down in Ashtabula, Ohio, this past summer because they could not compete with imported vegetables from Cuba.

To this abundant testimony of the effect of the Cuban reciprocal-trade agreement could be added the disastrous effect of various other trade agreements upon the American farmer and vegetable grower, and the result thus produced is caused by the low cost of production abroad as compared with that in the United States.

American labor cannot compete with cheap foreign labor, and these reciprocal-trade agreements, if we are to have them, should at least protect the American farmer and vegetable grower against the difference in cost of living and production abroad. I hope that this bill will be made a law by this Seventy-sixth Congress as a definite, constructive aid toward overcoming the evil forces of the depression and restore our American workers to their jobs in private industry.

I have set forth today the problems of many sections of the country. You will note particular reference to the West, the Middle West, the Southwest, and the Northeast. I have done this to show you that the problem is not just the problem of the State of Florida. We are suffering acutely because we feel the effects of the competition in Cuba, Mexico, and certain offshore areas, but we are enlisting the aid of those interested in the farmer, labor, and American producers throughout the Nation.

In this connection our former colleague, Hon. Virginia E. Jenckes, a former Member of this House from the State of Indiana, included in the RECORD of January 18, 1938, a warning of the effect upon the hothouse vegetable-growing industry. In Florida nature has provided a hothouse, nature has given us the soil and the climate. We can produce at a time when the Nation needs the early vegetables, but to do this we should be fostered rather than handicapped. We cannot maintain the American standard of living and yet encourage the importation of foodstuffs raised with cheap labor in competition with our own.

I wish to urge the Members of the House to study this particular problem and to assist in the passage of legislation which is fair and just to all sections of the Nation.

Allocation of W. P. A. Funds

EXTENSION OF REMARKS

OF

HON. CARL HINSHAW

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 20, 1939

LETTER AND STATEMENT FROM THE BUILDING TRADES COUNCIL OF LOS ANGELES, CALIF.

Mr. HINSHAW. Mr. Speaker, there has come to my attention a procedure followed by the Administrator of the W. P. A. in allocating funds to the Engineer Department of the War Department, and perhaps other departments, which I believe is detrimental to craftsmen in the building trades and other skilled workers in other trades.

I received today a communication from the secretary of the Los Angeles Building Trades Council which I attach hereto, and also a statement and a resolution of that organization showing the demoralization to the craftsmen of the building trades growing out of this destructive policy of W. P. A.

LOS ANGELES BUILDING TRADES COUNCIL,
Los Angeles, Calif., March 11, 1939.

Hon. CARL HINSHAW,
House of Representatives, Washington, D. C.

DEAR CONGRESSMAN HINSHAW: Enclosed you will find a resolution adopted by the Los Angeles Building and Construction Trades Council which we believe is self-explanatory.

We would appreciate your full cooperation and assistance in this matter, as we feel sure that the construction industry cannot carry on under its present burden and will eventually be torn asunder with wage scales and standards destroyed because of the partially trained men who have been used and given so much protection on W. P. A. being thrown into the labor market.

It appears to the undersigned and the council that instead of curtailing the activities of W. P. A., they are broadening so much that at the present time clauses are being inserted in specifications on governmental contracts which have been won by private contractors, providing that the private contractor must employ all labor from W. P. A. relief rolls which in this particular district has created havoc and left our regularly trained building tradesmen walking the street while private contractors are forced to employ incompetents from W. P. A. relief rolls, thereby placing a premium on relief workers to the exclusion of free, independent building tradesmen who have followed the construction industry for their entire lives and it is the only business they have.

Trusting that you will give your full support in this matter and with best wishes, I am

Yours very truly,

C. J. HAGGERTY,
Secretary, Los Angeles Building and Construction Trades Council.

After receiving a report from its employment and organizing committee, the Los Angeles Building and Construction Trades Council, in its regular meeting held on March 2, 1939, instructed its committee and officials of the council to use every fair and legal means in their power to bring to the attention of proper officials in the State and Nation, the conditions which are now existing and have been existing because of the W. P. A. in this district.

The council is convinced, after a thorough study of the situation, that the W. P. A. is steadily and surely causing great havoc and injustice in the building and construction industry due to its interference in the natural functioning of the industry and instead of relieving unemployment, as it was originally set up to do, it is, by its methods and because it is doing work with relief labor that is normally performed by the industry itself in its usual function, throwing more independent and union building-trades men on relief rolls due to the fact that various governmental subdivisions are quick to take advantage of the low cost to themselves by having their construction projects performed by W. P. A.

It was the unanimous opinion that the W. P. A. was inducting thousands of workmen into the building and construction industry and there training them to become building tradesmen in every craft in the industry and glutting the market which is already oversupplied with building tradesmen. In addition to being supported by W. P. A., these partially trained mechanics are permitted to work on private jobs when their allotted number of hours are completed with W. P. A., and no attempt has been made by this department to prevent its clients from accepting work in private employment while at the same time they are employed on W. P. A. projects, which private employment is taken for a wage scale far less than is paid to union building tradesmen or is recognized as prevailing in a particular district.

In view of these facts and with full recognition of the great injury sustained by the building and construction industry, it was regularly moved and seconded that the following resolution be adopted; that copies be sent to President Green, of the American Federation of Labor; President McInerney, of the building and construction trades department; the officers of all State councils and federations, and to the Senators and Congressmen from California.

"Whereas after a thorough study of the conditions in the methods pursued by W. P. A. in the field of the building and construction industry wherein W. P. A. is setting up construction projects in direct competition to those engaged in the industry and on which projects, due to the regulation provided, it is practically impossible for the regular building-trades mechanics, who have spent their life in the industry, to be certified; and

"Whereas the W. P. A. is, by its methods of operation, training men to become building tradesmen to the great detriment of those already engaged in that industry, which industry is already glutted with a surplus of mechanics due to lack of private construction work and curtailment of P. W. A. activities; and

"Whereas the different political subdivisions of Government, such as the several States, counties, cities, and townships are taking unfair advantage of the W. P. A. grants to do construction projects under W. P. A. conditions when such construction projects would normally be done by the contractor engaged in the industry who would employ regular and properly trained building and construction mechanics; and

"Whereas it is our belief that the P. W. A., through its aforesaid activities, is greatly retarding the recovery of the building-trades industry, and by this said slowing up of the second largest industry in this Nation, is hindering the entire business recovery; and

"Whereas W. P. A. is further encroaching on private initiative and replacing regularly trained building-trades mechanics by recently inserting in War Department contracts a provision that relief labor "must" be employed, thereby placing a premium on men who are on relief and who are not building tradesmen, to the exclusion of regular building-trades mechanics who have spent their life in the industry: Therefore be it

"*Resolved*, That we petition the President of the United States and our Representatives in Congress that when the next appropriation for W. P. A. is made that it specifically specify that no part of the appropriation be used for financing any building or construction projects which are commonly recognized as coming within the construction field; and be it further

"*Resolved*, That all construction work be brought under P. W. A. and a proper appropriation be made to enlarge the activities of P. W. A.; and be it further

"*Resolved*, That copies of this resolution be sent to all officials of the American Federation of Labor, and the building-trades department, as well as the delegation in Congress from this State, urging their cooperation in the above resolution to prevent further destruction and deterioration of the building and construction industry.

Twenty Years

EXTENSION OF REMARKS

OF

HON. JOHN C. SCHAFER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 20, 1939

EDITORIAL FROM THE MILWAUKEE JOURNAL OF FEBRUARY 26, 1939

Mr. SCHAFER of Wisconsin. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Milwaukee Journal of February 26, 1939:

Twenty years ago at this time representatives of our Government were sitting at a peace table in Paris. The World War had ended in the previous autumn. We had gone to the aid of France and Great Britain. We had saved the democracies.

This Nation had gone into that war in good faith. We had stood for more pushing around, more humiliation than ever before in our history. When it was no longer possible to stay out, Congress recognized that war was being made on us. And we went in.

We went in and in good faith. For the "little peoples" of this country, the men and women of our farms and our factories, it was a war to "make the world safe for democracy." It was a war to banish autocracy. It was a "war to end wars." And they gave the full measure of devotion.

Twenty years ago at this time autocracy had capitulated. The figurehead of autocracy, the German Kaiser, had fled ignominiously

into Holland. Democracy was triumphant. And now our representatives sat at the peace table in Paris.

Our representatives asked nothing for this country. They asked only that a just peace be made. They asked that the peace be as just as possible to the defeated peoples as well as to the victorious. And then they learned of the secret treaties our Allies had made among themselves. Then the "little peoples" of this country learned of the agreements and commitments their allies had made to distribute among themselves the lands and goods and possessions of the vanquished.

These agreements, of course, were perfectly legal. They complied with international law. They hadn't been made behind our backs. They had been made before we got into the war. Only we hadn't been told about them. At least, not the "little peoples" of our streets and fields.

No need to go back and recall the details of the bickerings around the peace table. No need to recall how President Wilson, in disgust, sailed for home in the midst of the quarreling among these European victors over what each was to get. Wisdom, it seemed, dictated that we return to the peace table and do the best we could. Wilson went back.

So the spoils were divided, with Italy complaining that it had been cheated in the division. Of course, it wasn't simply a matter of taking a crayon and recoloring the map. Into the bargaining entered the play and interplay of international and national jealousies, the demands of minorities, that new idea called the "self-determination" of peoples, and rewards demanded for services rendered by this and that racial group in the hour when the French and English allies had been hard pressed. In the end, however, it was a division of the spoils of war.

We asked nothing. We refused to be cajoled into taking "mandates" over territory that nobody else at the victors' table wanted. At our insistence, provisions were written into the treaty for revising terms and possibly for returning possessions to the defeated as time should heal the animosities of war. We came home empty-handed, except for the I O U's our allies had given us for the billions we had lent them.

We thought, some of us, that as the hatreds of conflict cooled, the machinery for revising the bitter terms of the treaty would be set in motion. And then America, its people wearied of the whole business, turned its back on Europe. The weight of our influence for revision was lost. The weight of our influence for collective security was lost.

Soon Germany began to wiggle out of its obligations. France and England drew the cords tighter. The defeated were to be kept on the ragged edge of poverty. Did Germany want to form a trade union with Austria, that both might breathe easier? France said "No." Better were it that Austria should be given another loan of British pounds and French francs. Good money sent after bad. And the day was only postponed until Germany grew desperate enough and strong enough to take Austria.

Twenty years have passed since our representatives pulled their chairs up to the peace table to write the treaty which was to "make the world safe for democracy." Just 20 years. And again we hear the talk that America must "save the democracies."

Our old I O U friends, France and England, are in trouble again. They have grimly held to the gains of the peace table. And in the Germany from which was driven autocracy as represented in the person of a Hohenzollern who was called the Kaiser, is a new autocracy represented by the person of a Hitler, who is called the Fuehrer.

We must "lift democracy high above the ugly truculence of autocracy," said President Roosevelt, sailing to review the Navy in its Caribbean maneuvers.

"Lift democracy above autocracy."

"Make the world safe for democracy."

How similar they sound.

We are told that there isn't room enough in the world for both Fascist states and democracies. We are told that there is no escape from the "clash of ideologies." Yet, geographically, it's a wide world. And we lived a good many generations in a world with Russian czars, whose ideology was anything but compatible with democracy.

What is the meaning of these days in which we live? Some who can take the long view believe that the World War was just the first skirmish in a series of upheavals and violent adjustments in the relations of men, adjustments that will stretch over a century. But nowhere do we hear of a people who want war. They all pray for peace. Yet we all seem as helpless to resist the current of events as a cork floating on a stream.

What lies in the future none can foresee. Should the turn of events bring war again to our doors we shall again give a good account of ourselves. We shall again give the full measure of devotion.

But whoever cherishes democracy should realize that no nation will emerge from another world conflict without a dictator at its head. No nation will be able to survive the ruin and decay of another such struggle, with its depressions and unemployment and wreckage of trade, and its destruction of national wealth, except under dictatorship.

In these 20 years we ought to have learned some things. We ought to have learned to be very careful not to be jockeyed into a corner from which there is no escape except through war. We ought not allow ourselves to be talked into a fury over "ideologies" and other people's ways of government.

The World Around Us

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 20, 1939

ARTICLE FROM AN ALEXANDRIA, VA., NEWSPAPER OF SEPTEMBER 24, 1938

Mr. COFFEE of Washington. Mr. Speaker, in connection with a debate on the Interior Department appropriation bill relative to the Grand Coulee Dam in the State of Washington, I believe it would be helpful to place in the RECORD an article by an easterner, in which he ably describes that great project. It appears in the column entitled "The World Around Us," published on September 24, 1938, in an Alexandria, Va., newspaper. The author is Mr. O. J. Schuster, well-known journalist and writer. The article is as follows:

The Grand Coulee in the State of Washington is a stupendous spectacle and attracts many motorists each summer; but few of them get so much as a glimpse of the mystery and wonder that hedge about this dry river bed over which, ages ago, flowed the Columbia River, a river a thousand times greater than the Columbia is today. Few tourists are students of geology, and as yet the Government furnishes no trained guides in Grand Coulee to instruct the visitors and so the mighty chasm in which is written one of the greatest mystery stories of the American continent remains to them a closed book.

The Coulee Dam over the Columbia River is not in the Grand Coulee. The dam is at the upper extremity of the great gorge and a hill more than a thousand feet high separates the present course of the Columbia from the entrance to Coulee. Many thousands of years ago a massive ice sheet covered the whole region, in fact covered not only the northern half of the United States but all of Canada and a vast area around the North Pole and beyond it. More than a mile in thickness in many places, this gigantic glacier plowed its way over the hills and through valleys, moving slowly but irresistibly. The climate gradually grew warmer, the glacier receded, and the melting snow and ice formed rivers of mighty proportions. The most gigantic of all these glacial rivers was the Columbia when it was forced out of its old channel and flowed through the great gorge, now called the Grand Coulee, more than 50 miles long and at some points more than 5 miles wide. When the ice sheet had vanished the Columbia was again diverted in its course and returned to its old bed, leaving Grand Coulee high and dry.

Motoring along the length of Grand Coulee, from the dam southward, the thoughtful student may dimly conceive the vastness and grandeur it must have presented in prehistoric times when it was the bed of the Columbia. Geologists tell us that the "most gigantic waterfall in all geological history" was located in it, the volume of water surging over it being at least 40 times that which now tumbles over Niagara Falls. The traveler sees only the dry falls, located about 30 miles from the upper extremity of the Coulee. Here a volume of water more stupendous than that of any other known river of present or past time dropped over a ledge 5 miles wide, in a mile and a half of its width it tumbled over a sheer cliff 417 feet high.

As a conservation project the Coulee Dam dwarfs all other plants of its kind in the world. Nowhere else in the world can a plant of like proportions ever be built. Its capacity will be 2,700,000 horsepower—more than Boulder Dam and Muscle Shoals and all other Federal plants combined. Although the Columbia River is now only a midget compared to what it was when it flowed through the Grand Coulee it still carries five times as much water at Coulee Dam as the Colorado does at Boulder Dam. The whole project, electric and irrigation, will cost about $400,000,000. It will, however, be a self-liquidating investment, paying for itself from the sale of current and of water rights.

A quarter of a century will pass before the irrigation part of the project will have reached its maximum service. During the next 25 years the Columbia Basin, now a desert, will be one of the most productive agricultural areas of the country. A million and a quarter acres with very fertile soil, adequately irrigated, will support and make prosperous half a million people—five times as many as in the whole State of Nevada. Under the Government's conservation program, the land in this basin will be divided into small tracts and sold to actual farmers. Towns and villages will spring up. Electrification will be universal. It is no more to be expected that visitors to Grand Coulee can envisage what developments it will bring in the next 25 years than the American people could foresee the automobile of today when they beheld Henry Ford's first motor contraption jolt along the road.

Give the District of Columbia Debtor a Chance

EXTENSION OF REMARKS

OF

HON. WILLIAM LEMKE

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 16, 1939

Mr. LEMKE. Mr. Speaker, on January 3, 1939, I introduced H. R. 72, a bill which if passed would give to the judgment debtors, mortgagors, and subsequent lien holders the right of redemption from a sale of real estate in the District of Columbia by a judgment creditor or mortgagee after execution or foreclosure sale. Most of the States in this Union now have some kind of a period of redemption. This period extends all the way from 3 to 6 months up to from 1 to 3 years. That is, after the sale the owner of the property may recover it if he pays the amount of the indebtedness plus interest plus expenses of foreclosure. Yet here in the Nation's Capital, which ought to set an example for the Nation, we find that there is no right of redemption, not even a day. This bill would give a 1-year period of redemption.

I have so far been unable to get a hearing on H. R. 72. In the previous sessions of Congress I repeatedly tried to get hearings on this bill without success. I shall renew my endeavors. The time has come that we ought to at least be patriotic enough and honorable enough to give to the property owners and home owners in this District an opportunity to protect their interest in case of misfortune.

I appeal to all the Members of the House, after they have read these remarks, to read H. R. 72. This bill is patterned after some of the laws that exist in other States. It is reasonable and just.

Let me give you an example of what has been taking place in the city of Washington during the past 10 years in this connection. And this is in no way an unusual example. It is typical of hundreds of similar instances. It concerns a realty-holding company organized in this city in 1927 to purchase local residential and apartment properties. The management of the company was capable, and with an assured income from its real-estate holdings, the stockholders had reason to believe their investment would be safe and profitable. The properties were mortgaged for about one-half of their value.

Then came the depression, with its adverse effect on real estate, and all other unfavorable developments incident to the past 10 years. We all know there were times when it was impossible to refinance any loan on real estate, and unless the mortgagee would renew the existing loan the property would go under the hammer. Remedial legislation was passed in most of the States and moratorium became a household word throughout the Nation, but in the District of Columbia nothing was done to relieve distressed mortgagors.

Powerful organizations saw to that, and the local strong-arm squad stood in the way. Of course, many holders of mortgages acted fairly and honorably throughout this period, but you all know that there were a great many instances of fraud and sharp practice which could and should have been prevented. However, the hue and cry of the distressed mortgagors in Washington, D. C., could not be heard in the halls of Congress.

Foreclosures are seldom a matter of court action in the District of Columbia. They are effected through a sale of the mortgaged property by trustees to whom the property is transferred by the borrower for the protection of the noteholders. The customary period for real-estate loans in the District of Columbia is 3 years, with interest payable semiannually, so that lenders have only a short period to wait before putting thumb screws on the borrower if they so elect. During the past 10 years thousands of deeds have been recorded in Washington, representing properties taken over by mortgagees or their agents at distress prices. Often suits for deficiency judgment are instituted to enforce payment of the balance of the debt.

Among the properties purchased by the real-estate company to which I refer was the Meridian Hill Apartments, situated near Meridian Park in a preferred residential section in Washington. This property cost the company in excess of $100,000 in 1927. It was then assessed at more than $80,000. Now let us trace the history of this property and judge for ourselves whether or not remedial legislation is necessary. The original loan of $60,000 at 6½-percent interest on the Meridian Hill Apartments had been placed on this property by one of the oldest mortgage corporations in Washington. This loan represented from 50 to 60 percent of the value of the premises. The trust or mortgage notes securing the indebtedness were sold by the mortgage company to investors, and in determining all questions affecting the loan the mortgage company acted as their agent.

The Meridian Hill Apartments had few vacancies, and the net income was sufficient to show an annual return on the investment. Every 3 years when the loan became due it was renewed by a written agreement with the mortgage company. When the loan matured in 1931, as a condition to its extension the owner was compelled to appoint the mortgage company exclusive agent to manage the property and impound the rents, for which the mortgage company exacted a fee of 5 percent of the gross income as rental commissions in addition to the renewal fees and charges. This gave the mortgage company complete supervision of the apartments and the determination of the rent schedules, as well as the control of all income, repairs, and improvements to the premises. Their total fees and commissions over the period of the loan and extension date amounted to several thousand dollars.

In 1934 the notes were renewed in a like manner, but when the loan was extended in 1937 the mortgage company insisted upon an annual curtail of at least $2,500 on the principal. At this time the original loan of $60,000 had been reduced to $50,000. Based on previous earnings the Meridian Hill Apartments could readily support this amortization if the mortgage company's management proved to be economical and efficient.

Despite the heavy overhead during the last half of 1937 the net earnings of the apartments were sufficient to pay operating expenses, renewal fees, commissions, taxes, insurance premiums, upkeep, and interest on the mortgage, together with a semiannual reduction of $1,250 paid on the principal in January 1938, but during the next 6 months in some manner which would be difficult to explain, a large number of vacancies occurred and the property failed by $996 to earn the July curtail.

The trustee, who was vice president and director of the mortgage company, proceeded to advertise the property for sale, and notice of an auction was prominently placed on the premises. This action seriously impaired its marketability, and prevented the owner from making a sale then in a process of negotiation. At the public auction there was but one bid and the property was purchased by attorneys for the mortgage company at $49,000, which is $14,250 below the present assessed value.

It is especially interesting to note that the mortgage company has continued to manage the property since the foreclosure, and the large number of vacant apartments existing prior to the sale were promptly rented afterward by the mortgage management.

If the bill introduced by me had been enacted into law the loss of this property could not have occurred and the shareholders of the realty company would not have been deprived of their property by legal legerdemain.

Under the laws of the District of Columbia a foreclosure can be consummated in 2 weeks, and the owner of the property has no equity of redemption. The owner may not even know of the sale, as the only notice required is a series of brief announcements in one of the Washington newspapers. Usually the property is bought in by the holder of the mortgage. The sale extinguishes all right, title, and interest the owner has in the property. It is the most indefensible

system ever devised to protect the lender, and is an invitation to the unscrupulous to take advantage of the borrower under conditions similar to that to which I refer.

In this instance the owner of the property appealed to the court for an injunction to prevent the sale, and alleged that the mortgage company by its mismanagement, excessive fees, and wrongful conduct had brought about the default in the payment of the curtail.

The following allegations are taken from the brief and transcript of record filed in the action against the mortgage company: It is alleged that the mortgage company made arbitrary reductions in the rent schedules, which they refused to change at the request of the owner. That they wrote insurance policies through their own agencies in excessive amounts and forms which were unnecessary for the protection of the loan; they were extravagant, wasteful, and generally mismanaged the property.

The realty company wrote letters of protest, but was powerless to prevent the mortgage company from taking advantage of their position as agent under the contract renewing the loan. Relief was refused by the lower court, and it may be noted here that the judges in the District of Columbia have established a record without parallel in the entire Nation in the matter of failure to grant any relief to distressed mortgagors during the past 10 years. I leave it to you to determine whether this sort of thing shall be permitted to continue. Is it not high time we put a stop to this racket at the National Capital, as well as elsewhere in the United States of America?

The Utility Tax Problem in Tennessee

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 20, 1939

LETTER FROM THE TENNESSEE TAXPAYERS ASSOCIATION

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from the Tennessee Taxpayers Association:

TENNESSEE TAXPAYERS' ASSOCIATION, INC.,
Nashville, Tenn., March 18, 1939.

DEAR MR. DONDERO: Congressional consideration and appropriate action appear to be required if the people of Tennessee are to obtain a scund, equitable solution of one of the serious problems confronting them.

In brief, the problem requiring your aid in its solution is this:

Privately owned electric utilities have been one of the large taxpayers in 93 of Tennessee's 95 counties and in more than 140 of the municipalities. Approximately 90 percent of these properties have been or are being purchased by the Tennessee Valley Authority and the related local electric distributing agencies which are being created.

The purchase of these utility properties by public agencies brings our State and local government in Tennessee face to face with the problem of replacing the $3,500,000 of annual revenues which will be lost through the exemption of these properties from taxation unless remedial legislation is promptly enacted.

The taxes now being paid on properties which have already passed or will pass to the Tennessee Valley Authority (as distinguished from those passing to municipal distributing agencies) will require replacement in 76 of the 95 counties. In a number of counties the revenues lost represent from 15 to 40 percent of the county's entire property tax revenue. And in Tennessee as in most of the States property tax is the principal revenue dependence of local government.

Since Tennessee's constitution makes our counties and municipalities largely and fixedly dependent upon this property tax, the utility tax problem facing the people of our State resolves itself into choosing one of two alternatives. These are:

1. Increasing heavily the taxes levied upon homes, farms, and other taxable property of rural and urban people in order to present consumers of electric current with a second and in this case an artificially created reduction in electric rates; or

2. Securing from the Tennessee Valley Authority and the municipal electric distributing agencies a continuation of the tax payments which have heretofore been made by the privately owned electric utilities. State executives in Tennessee have been told by T. V. A. engineers that the present T. V. A. rate structure probably provides a margin sufficient to cover a continuation or replacement of all State and local taxes now being paid by the privately owned electric utilities.

Under an existing Federal statute the State of Tennessee is now receiving a sum equal to 5 percent of the gross proceeds of the sale of T. V. A. current produced at Norris Dam in Tennessee and 2½ percent of that portion of the sales of current produced at Muscle Shoals Dam in Alabama through certain overseasonal flows due to Norris Dam feedings. These payments now amount to but around $10,000 a year. At most, in 1945, after all Tennessee dams are completed and the product sold, these payments, according to T. V. A. engineers, will amount to only about $625,000 a year. Even at the eventual top level these payments will replace only about 18 percent of the present revenue losses of State, county, and municipal government in Tennessee.

The insertion in Senate bill 1796 and in H. R. 5068 of mandatory provisions for continuing to State, county, and municipal government all the present tax payments on those electric utilities sold to the Tennessee Valley Authority would assure the citizens and taxpayers of Tennessee of an equitable solution of the grave problem now pending.

A copy of the 20-page report prepared by this association to present the significant factors of this problem is being sent to you under separate cover today. It is hoped you will give this report a careful reading upon its receipt.

Your usual thoughtful consideration of this problem—which is not confined to Tennessee—and your cooperation in prescribing and applying a sound and adequate solution will be appreciated by the citizens and taxpayers of Tennessee and we feel sure by those of the other States similarly affected.

Yours truly,

C. W. BAILEY, *President.*
WILLIAM R. POUDER, *Executive Secretary.*

The Bituminous Coal Commission

EXTENSION OF REMARKS

OF

HON. JOE B. BATES

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 16, 1939

Mr. BATES of Kentucky. Mr. Speaker, the Bituminous Coal Commission has come in for its share of censure and criticism during the 2 years of its existence under the Bituminous Coal Act of 1937. In my opinion the greater portion of such criticism is unmerited. I say this because I have gone at some length to check on the progress being made by this Commission.

It is true that minimum prices and marketing rules and regulations provided for under section 4 of the act are not now in effect. However, allegations that this Commission has been unduly tardy in carrying out the declared purposes of the act are unjustified. The trials and tribulations of the Coal Commission are no different from anybody setting forth on an undertaking which has little precedent or experience to follow. This Commission was confronted with an uncharted and unmarked course, and, of necessity, must make its own precedents and gain its own experience.

Congress has laid down in the act standards which the Commission must follow. It has been demonstrated there are no short cuts in the procedure necessary to put into effect the standards Congress has decreed. The Supreme Court, as well as other Federal courts, have insisted on orderly procedure in the administration of acts such as the Coal Act.

The Coal Commission has recognized the worth of the requirement of orderly and legal procedure in the establishment of minimum prices and marketing rules and regulations. It has carefully and methodically for more than a year proceeded on practical lines to put into effect the mandates of Congress and the decrees of the courts. No detail has been disregarded. No step necessary to be taken has been avoided. Time has been precious to a failing industry, but time has been sacrificed only to insure a permanent cure to the most pain-wracked industry in the entire country.

This Commission has not been unmindful of the millions invested in the capital structure of the coal industry. It has not been callous to the hundreds of thousands of men, women, and children dependent upon the industry for the bare necessities of life. It is these very things that inspire the Commission to beware of the many pitfalls; to avoid unstable ground; to so conduct the administration of the act that in the end the industry may be stabilized on a firm basis and enjoy a structure of prices not subject to attack on the grounds that they are unfair to any producer or any consumer, or from that small minority of producers that is intent on the destruction of the act because they feel they can live without it, to the detriment, no doubt, of the great majority of producers who cannot realize cost of production.

The Coal Commission is now on the eve of instituting procedure looking toward the final establishment of coordinated minimum prices in all common consuming markets in the United States. It has long since determined the weighted average of the total costs required by the act, which involved incalculable computations and reconciliations. The district boards have proposed initial prices based on these costs, and the Commission has made findings of facts and conclusions as a basis for the coordination of minimum prices into all common consuming markets.

These steps have required exhaustive hearings in which all interested parties have had an opportunity to be heard. In the hearings previously held on minimum prices and marketing rules and regulations each member of the bituminous-coal code has been given an opportunity to protest, and to be heard on his protest, any action of his district board.

In fact, each party at interest, whether or not a producer of bituminous coal, is given an equitable opportunity by the Commission under the democratic processes of the act to present factual evidence. Rules of practice and procedure have been promulgated by the Commission, which are a constant reminder to all concerned of the impartial character of this body.

A word here regarding the general plan of the act is not amiss. In the first place, no act of Congress could be more democratic in its concept. Every step in the establishment of minimum prices and marketing rules and regulations is participated in by members of the code. Every code member is constantly advised regarding action of the Commission on all matters affecting code members. Every code member is given an opportunity to present his particular problems to the Commission. After minimum prices have been finally established the code member may still come in and present evidence, should he believe the decisions of the Commission in his particular case are unsatisfactory. This privilege is also accorded the district boards, any State or political subdivision of a State, or the Consumers' Counsel, who was provided under the act to represent the consuming public.

The district boards, elected to represent code members in the administration of the act, are chosen in a democratic manner, namely, one-half of the producer members on a tonnage basis and the other half by a majority vote of the code members. Further, one member of each district board is chosen to represent the workers in the industry and is selected by the organization of employees representing the preponderant number of employees in the industry of the district in question. The act specifically provides that members of the district boards chosen by the producers shall be "truly representative of all the mines of the district." The Commission has the power to remove board members—

> Upon its finding, after due notice and hearing, that said member is guilty of inefficiency, willful neglect of duty, or malfeasance in office.

It is clear that the act intends the Coal Commission to act as an impartial tribunal in deciding all of the questions which are presented in the administration of the act. Hence it is necessary, as provided, for the Commission to hold lengthy and thorough hearings. In addition, the Commission must be informed on all matters directly or indirectly concerned with the production, sale, and distribution of coal. For these reasons the Commission has gathered together the most complete file of information concerning the kinds, qualities, and grades of coal, the analytical qualities of coal by size as loaded on transportation facilities for the market at the code member's mine, the methods of mining employed in the various districts, the methods of sale and distribution, the methods of transportation, and much technological data not directly concerned with minimum price provisions of the act. For the first time in the history of the industry the Commission has gathered together complete information regarding the many thousands of mines which distribute coal by means of trucks and wagons.

Since early in December, 22 district boards, representing 23 coal-producing States, have been engaged in the intricate processes of coordination. Coordination, involving as it does the consideration of the kinds, qualities, and sizes of coal from more than 100 producing or mine-origin groups within the 22 districts and more than 13,000 separate and distinct mines, is not a minor task. In addition to these factors is the cost of transportation, involving literally hundreds of thousands of freight rates, consideration of which is necessary in order to carry out the requirement of the act, that the prices of the many kinds, qualities, and sizes of coal for shipment into any common consuming market shall reflect, as nearly as possible, the relative market value at points of delivery. Mandatory also are the requirements that prices proposed shall be just and equitable, and not unduly prejudicial or preferential, between and among districts, and preserve as nearly as may be existing fair competitive opportunities.

Further, such prices must have due regard for the consuming public, and in the aggregate may not exceed the weighted average of the total costs for each minimum-price area. These are several of the many requirements of the act in the work of coordination. There are others and each must be accorded proper consideration and weight by the district boards and later by the Commission.

Subsequent to proposals by the district boards of coordinated minimum prices and marketing rules and regulations, the Commission, before making effective and establishing such prices and rules and regulations, will hold a final and complete hearing to adduce substantive evidence that each and every price and rule or regulation meets each and every requirement of the act.

Immediately upon making prices and rules and regulations effective, the Commission will be face to face with the problem of enforcement. Carefully laid plans have been made to protect the price structure. The time for action in this respect is not far distant. The Commission then will require, in order to properly safeguard its interests, a much larger force than is now employed. Thirteen thousand coal-mining operations will not be easy to attend. The great majority, of course, will endeavor to live up to all requirements. They want the act, and they have realized the need of stabilization. However, it is the insistent, subversive, and thoughtless minority which will make necessary the constant watch of the Commission over the entire industry.

Every person who has lived within a coal-producing field is acutely aware of the fact that the question is not whether business is good or bad but whether it is bad or worse. I believe the Bituminous Coal Act of 1937 will remedy these conditions, and I further believe the Coal Commission should be supported in its manifestly sincere and fruitful efforts, under this act, to bring order out of chaos, peace and security to large populated areas of our country, and finally to bring to a basic industry, the bituminous-coal industry, a measure of stability which it certainly has not enjoyed during my lifetime.

Kentucky and Kentuckians believe in this act. We know it is sound and constructive. We know these things because, if for no other reason, my distinguished predecessor in Congress, Fred M. Vinson, was its sponsor in this House and labored long and unceasingly for its adoption.

Republicans on the March

EXTENSION OF REMARKS
OF

HON. KARL E. MUNDT
OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 20, 1939

RADIO ADDRESS BY GOV. HARLAN J. BUSHFIELD, OF SOUTH DAKOTA, AT WASHINGTON, D. C., MARCH 18, 1939

Mr. MUNDT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by Gov. Harlan J. Bushfield, of South Dakota, over the National Broadcasting Co., in a program originating in Washington, Saturday evening, March 18, 1939:

I speak to you tonight as Governor of my native State of South Dakota conscious of my own limitations in presenting the cause of "Republicans on the march." Yet I speak with a song of gladness in my heart that South Dakota is no longer a lonely isle in that vast Democratic sea of States lying west of the Alleghenies, but now forms a span of that mighty bridge of Republican Commonwealths over which the American people will march to victory and a restoration of their Government in 1940. We, too, were led astray in 1932 by the seductive strains of a pied piper promising a Utopia. But we returned safely in 1936 and we came back all the way in 1938.

The fact, however, that my State of South Dakota was one of the first to regain political consciousness after the deluge of 1932 gives me courage to speak for the great Middle West.

SOUTH DAKOTANS ARE TYPICAL AMERICANS

In South Dakota, where our lives are lived close to Nature, where farming, mining, and politics occupy the major portion of our thoughts, we believe that we are typical Americans and that our collective judgment is representative of the American people.

The other night in New York I made the statement: "With a fervency that will brook no denial our people want peace; we do not want armed conflict forced upon us by those seeking a personal profit, nor by emotionalists whose patriotism is taken from dictionaries, nor by political leaders whose thirst for power, or whose unsensible alliances have placed us in a position from which we cannot retreat.

"Our duty is to defend liberty on this continent. We went to war once to make the world safe for democracy; from the ruins of that war rose the brutal theories of nazi-ism and communism. Another war would be a mortal blow to civilization. Liberty cannot survive another great war, and if liberty dies in America it is gone from the world."

National defense has been much in the public eye of late. Much has been said and written upon that subject, but may I point out that national defense, like religion, covers a multitude of sins, and unless carefully watched by those placed on guard by the people may be used for purposes far removed from that objective.

Those in high places drinking the heady wine of public applause often become so intoxicated by it that they lose contact with the people; few of us are gifted to drink deeply of that draught without losing our sense of proportion and there have been instances in which popular leaders have imbibed that exhilarating liquor so freely that they lost all consciousness of the authority which created them.

OURS IS A PEOPLE'S GOVERNMENT

For 5,000 years humanity has been struggling upward toward freedom for the individual; sometimes they have slipped backward, but each time the ground lost was recovered. Each loss was compensated by a gain until at last we reached a point from which there was no turning back. Our forefathers for the first time in history set up a people's government that was to derive all power from the consent of the governed.

Attilla and Genghis Kahn had swept across Europe burning, devastating, and murdering; the Moslems had been driven back to the wilds of Africa from whence they came to continue their worship of Mohammed. The Crusaders, like the waves of a storm-tossed ocean, had swept across Europe through the snowy Alps, through steaming Asia, fighting for an ideal, a symbol, the alleged tomb of Christ; the Dark Ages, with their futile savagery, their enslaved peasantry, and incessant wars, had given way to organized governments. King John of England had signed the Magna Carta; Charles I had lost his head to the rising tide of democracy; America had been peopled by adventurous souls seeking religious freedom. A wilderness had been conquered. The forests, the mountains, and the prairies had been invaded and made to answer to the will of man.

Out of this background of bloodshed and suffering, of human misery, oppression, cruelty, and hardship came the American idea of a government by the people. There never has been a benevolent despot; there never will be. In some inspired way the founders of the American Government realized that and it was their effort, as it has been that of their descendants, to maintain a people's government.

FREEDOM IS THE HEART OF AMERICANISM

In the 150 years that have followed that momentous achievement of constitutional government, civilization has advanced more than in all previously recorded history. That accomplishment is not an accident. Through the welter of warring tribes, kingdoms, and empires that have flowed across the pages of history since the beginning of time, the individual has always been a negligible quantity. Not until the establishment of the American Government was he given freedom of movement, thought, and achievement. That, my friends, is the answer to the unbelievable strides of the human race in the last 150 years. Freedom. That is why America has been the mecca of all other peoples; that is why the Statue of Liberty in New York Harbor has been a beacon to the oppressed of every land. That is why we have, in that short space of time, been able to conquer a continent by our inventive genius, by our daring to achieve, by our individualism. Our belief in and support of that freedom is the basic tenet of the Republican Party.

And we do not subscribe to the statement made on Tuesday that the present administration is responsible for the "definite policy that needy persons out of work should not be allowed to starve." No one in America has ever starved, and no one ever will, because that policy belongs—not to the President—not to Congress—but to America, and has been our policy since the Revolutionary War.

With matchlock in one hand and the Bible in the other, those incomparable ancestors of ours penetrated the mountains, forded the rivers, marched across the plains, and on to the Pacific coast, fearless, independent, self-reliant. My home in the great Midwest was not settled by a dependent people; the men and women who invaded the then savage prairies threw up sod shanties, dugouts, board cabins, and reared their families by the warmth of cow chips and twisted hay—neither asked nor expected help from any source. They were the pioneers. Through their arteries coursed the red blood of Americanism. It was they and men like them who built the railroads, the telephone and telegraph, the motor car, radio, airplane, and all the thousands of mechanical and electrical appliances that have given America the highest standard of living ever known.

Those men and women were not interested in the racial jealousies that eventually brought on the World War, but we, of today, are interested in what has happened since. When the guns were silenced at last, humanity turned hopefully to rebuilding a shattered civilization. Like an epidemic of measles the people of Europe espoused popular government. The monarchies of Russia, Germany, and Austria disappeared. Republics were established, and we thought popular government was here to stay; that the long struggle for freedom had been won. And yet within a decade we have seen all this changed. From the Russian revolution emerged Stalin—more harsh, more terrible than the Czars. The Republic of Germany fell before the goose-stepping minions of Hitler. Austria is but a memory, and now the wolves are snarling over the carcass of Czechoslovakia.

AMERICA MUST CHOOSE IN 1940

The issue today is broader than party—deeper than politics; it is an issue of life and death for an ideal—the ideal of popular government. Either we will continue upon the broad highway of individual liberty by which we have achieved so much, or we will take the left-hand turn that leads backward to governmental oppression. Republicans are on the march because we believe that in the retention of our freedom, as we have known it, lies our hope for the future. We want our children to have the same opportunity we have enjoyed. We want the American form of government to continue as our monument to liberty.

As our marching host gets under way toward 1940, party labels will be submerged beneath the greater ideal of Americanism. There can be no temporizing. There can be no compromise. There can be no hesitation. Either we go forward to the great destiny that is blazoned across the horizon of our future, or we go backward to what we see depicted in Europe today.

FEDERAL LARGESS DRUGS THE BODY POLITIC

Make no mistake, my friends, about the issue in this conflict. It is no longer possible to say "It can't happen here." Let me tell you that it has happened here. No one not in the Governor's chair realizes how fully it has happened here. Every avenue of State endeavor, every function of State government, every objective plotted by State legislatures is blocked with the words "You must not because it will lose you Federal funds." Highway building, public health, unemployment service, State activities of all kinds end in a blind alley, forbidden of passage by some Federal bureaucrat. From Washington into every State capitol the ribbons of control stretch like guiding reins, each bearing the golden treasure of Federal largess, to drug the will and control the activities of our people.

You ask me what can be done about it. Stop wasteful spending. The people are sickened by it. They are ready for a national leader with intestinal strength enough to make it an issue. In South Dakota last year we made it an issue, and in keeping with our promise, the legislative session just ended made a record in the reduction of the cost of State government.

REPUBLICANS ARE ON THE MARCH

Republicans, yes, Americans, are on the march today. Have we the courage to lead them? Have we the courage to stand up and be counted?

Belshazzar, in his gilded palace, could read the message written on his palace wall no more than our modern Belshazzar can read the warning blazoned upon our national sky today. The rumbling of the approaching storm is audible to those who will listen. Republicans on the march. Yes: A march to save the American form of government. A march to preserve liberty for all future Americans.

We, in South Dakota, pointed the way in 1936. We are still pointing the way in 1939. My message to you tonight is that we of the Middle West have our eyes on 1940 and you will find us marching with the men of the East, as well as the West, toward a victory for constitutional government.

Subsidized German Imports

EXTENSION OF REMARKS

OF

HON. ALLEN T. TREADWAY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 20, 1939

CORRESPONDENCE WITH THE SECRETARY OF THE TREASURY AND A RULING BY THE TREASURY DEPARTMENT

Mr. TREADWAY. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following correspondence which I have had with the Secretary of the Treasury, and also a ruling of the Treasury Department:

MARCH 1, 1939.

Hon. HENRY MORGENTHAU, Jr.,
Secretary of the Treasury, Washington, D. C.

MY DEAR MR. SECRETARY: I desire to call to your attention an article appearing in the Boston Transcript for Tuesday, February 28, in which it is stated that the Treasury has quietly and secretly abrogated the countervailing duties which previously have been assessed under section 303 of the Tariff Act against certain subsidized German exports. The article indicates that such action was taken in December 1936, at the instance of German interests, and that little, if any, publicity was given to the matter. It appears that the first notice many New England industries had of the arrangement was their discovery of German goods on the American market at exceptionally low prices.

According to my understanding of the provisions of section 303 of the Tariff Act, the Treasury has no discretion but to apply the countervailing duties whenever any country, person, partnership, association, cartel, or corporation pays or bestows, directly or indirectly, any bounty or grant upon the manufacture, production, or export of goods, and such goods are imported into the United States. If the allegations contained in the newspaper article are true, it would appear that the Treasury is not carrying out the plain mandate of the law in assessing countervailing duties against certain German exports to this country, and is thereby causing American industry and labor to be subjected to unfair competition in the domestic market.

In a separate article in the Transcript, there appears a dispatch from its Washington correspondent indicating that the Treasury was defending its action on the ground that the private-barter subsidy method involved did not come within the purview of section 303. May I say in this connection that both the articles to which I have referred point out that the German Government is directly involved in the subsidy. The latter of the two contains this statement:

"The German Government has full facilities for giving its exports to the United States a concealed Government subsidy. Several years ago the German Government forced business and industry to raise a billion mark fund for the subsidization of foreign exports. Later the Government itself contributed a part of the subsidy."

The first article above-mentioned quotes Mr. William H. Cliff, of the Home Market Club, as saying:

"An overseas buyer of German goods gets in practice a discount varying from 15 to 40 percent, or even more, from the list price. When this price concession is not sufficient to obtain the business, the German exporter may be directly subsidized by an additional 10 to 15 percent. Moreover, exporters are allowed to reduce prices abroad and remove losses through the repatriation of German bonds which are lower in the foreign market than in Berlin, and thus the German exporters make a profit on bonds which compensates them for the loss on merchandise exported. Furthermore, the German Government frequently pays bounties to exporters so as to enable such exporters to quote lower prices in the American market."

Whether the subsidy is from Government or private sources, or both, and whether it be direct or indirect, it would appear from a reading of section 303 of the Tariff Act that Congress intended that countervailing duties should be imposed. Moreover, inasmuch as such duties have previously been collected, it seems to me that it is up to the Treasury to show cause why such countervailing duties should not be continued.

You are of course familiar with the managed currency system of Germany, under which its so-called inland marks can only be used to buy German goods. It is my understanding from the first newspaper article above-mentioned that an indirect subsidy on German exports is being effected by paying in inland marks prices for American cotton, copper, and oil which are 33 percent above the world market, and requiring American exporters of these products to spend the inland marks for German goods which are subsequently imported into this country and sold for far less than the fair market value, to the detriment of American producers of competitive products. Clearly such an indirect subsidy method is within the purview of the countervailing duty provisions of section 303, and certainly it at least comes within the purview of the Antidumping Act, which as you know imposes a special dumping duty on foreign goods imported into and sold in the United States at less than their fair market value.

I would appreciate it if you would give me, at your earliest convenience, a full explanation of the Treasury's action regarding this matter, and thereby obviate the necessity for my introducing a privileged resolution formally calling upon you for such information.

Very truly yours,

ALLEN T. TREADWAY.

THE SECRETARY OF THE TREASURY,
Washington, March 7, 1939.

DEAR MR. TREADWAY: I have your letter of March 1, 1939, requesting a statement with respect to articles appearing in the Boston Transcript for February 28, 1939, regarding alleged subsidies and dumping practices affecting exports from Germany to the United States.

The Treasury Department agrees with you that it has no discretion but to apply countervailing duties under section 303 of the Tariff Act of 1930 whenever it is satisfied that any bounty or grant is paid or bestowed directly or indirectly upon the manufacture, production, or export of goods imported into the United States which are subject to regular duties under the Tariff Act of 1930.

The articles in the Boston Transcript and your letter suggest that German exports to the United States are being subsidized in three ways:

1. By cash payments to exporters from a fund originally created by forced contributions from German business and industry and later supported by contributions from the German Government.

2. By sales of German merchandise in the United States at reduced prices with permission to offset the price reductions through the purchase of German bonds outside Germany and their sale in Germany at a profit.

3. By so-called "barter" trading in which imports into Germany are sold at prices substantially above the world-market level, and the funds derived from such sales used to purchase German goods which are sold after importation into the United States at far less than their market value.

Numerous investigations conducted in Germany by agents of the Treasury have satisfied this Department that cash subsidies from a fund built up under a German law approved June 28, 1935, were paid in connection with the exportation of German goods to certain countries, but failed to establish that such payments were made on any direct or indirect exports to the United States. Under date of December 6, 1935, the German Government gave formal assurance to the United States that such funds had not, and would not, be used to promote exports to the United States.

Bond procedures such as are described in the articles and your letter were discovered by Treasury investigations, and formed in part the basis for the Treasury's countervailing duty order against German merchandise issued on June 4, 1936 (T. D. 48360). Under date of August 12, 1936, the German Government gave official assurance to the United States that it had "taken measures to the effect that neither the use of the scrip and bond procedure will be permitted, nor will the payment of a public or private premium or subsidy, or the use of other German currency and reichsmarks freely convertible into foreign currency or reichsmarks freely utilizable in Germany, be allowed in connection with the direct or indirect exportation of dutiable goods from Germany to the United States of America, so far as such exportation takes place or may take place on the basis of agreements which were concluded on or after August 3, 1936."

On the basis of this assurance the Treasury Department in Treasury Decision 48479, of August 14, 1936, instructed collectors of customs that estimated countervailing duties need not be collected on merchandise exported from Germany if the collector concerned were satisfied by documentary evidence that the contract of purchase or other agreement pursuant to which the goods were exported from Germany was entered into after August 2, 1936. Under existing instructions, countervailing duties may still be applicable to the classes of German merchandise specified in Treasury Decision 48360 in the absence of satisfactory evidence that their export from Germany was pursuant to an agreement entered into after August 2, 1936.

Continual investigation has failed so far to establish any recent instance in which the Antidumping Act, 1921, should be applied to importations from Germany. Dumping orders are now outstanding against German thumbtacks and wire fencing of certain

descriptions. (Treasury Decision 46615 and Treasury Decision 46826.)

In the fall of 1936 numerous requests were received from American importers and exporters for advice as to the applicability of countervailing duties to merchandise imported from Germany pursuant to various arrangements described in the requests for advice. In view of the volume of these requests, the Treasury Department on December 23, 1936, issued a press release summarizing certain of the previously made rulings holding that certain procedures in connection with imports from Germany would not involve the payment or bestowal of any bounty or grant within the purview of section 303 of the tariff act. This press release was given wide publicity. One of the procedures not involving a bounty or grant was the payment of the purchase price of imports from Germany in whole or in part with the proceeds of the sale in Germany of merchandise exported from the United States, provided the proceeds so used were continually owned by the person for whose actual account the American merchandise was sold in Germany and the German goods were purchased in that country.

The agents of the Treasury Department stationed in Germany, as well as customs officers in this country, have been and are closely scrutinizing procedures in German-American trades to keep the Department supplied with information concerning such procedures in order that it may determine whether they require the application of any special provisions of our customs laws. These, as I think you will realize, are not simple matters to determine. Even with all the facts at hand there are naturally great difficulties in attempting to fit the generalized provisions of our laws to the special circumstances surrounding trade with those countries which have adopted exchange control and other restrictions on commerce. I can only assure you that the Department is continually making earnest efforts to get all the facts and just as earnestly endeavor to apply our laws promptly and fairly to the facts of the situation as they are developed.

Sincerely,

H. MORGENTHAU, Jr., *Secretary.*

Hon. ALLEN T. TREADWAY,
House of Representatives.

TEXT OF ORDER DEFINING CUSTOMS PENALTIES TO BE IMPOSED ON SUBSIDIZED NAZI IMPORTS

Notice of countervailing duties, to be imposed under section 303, Tariff Act of 1930, by reason of the payment or bestowal of a bounty or grant upon the exportation of certain goods from Germany. Collectors of customs instructed to suspend liquidation of entries covering dutiable imports from Germany and to collect estimated additional duties in certain cases.

TREASURY DEPARTMENT,
OFFICE OF THE COMMISSIONER OF CUSTOMS,
Washington, D. C.

To Collectors of Customs and Others Concerned:

The Bureau is in receipt of information concerning the operation of so-called "barter" transactions through which the importation into the United States of merchandise from Germany is financed by means of premium prices for certain products, particularly cotton and copper, which satisfies the Bureau that such transactions involve the payment or bestowal of bounties or grants within the meaning of section 303 of the Tariff Act of 1930 (U. S. C., title 19, sec. 1303).

Accordingly, notice is hereby given that dutiable merchandise imported directly or indirectly from Germany, which has been or shall be acquired by or through the disposal of other goods on a premium basis (regardless of the character of such other goods or of the method or means of such disposal), if entered for consumption or withdrawn from warehouse for consumption after the expiration of 30 days after the publication of this decision in a weekly issue of Treasury Decisions, will be subject to the payment of countervailing duties equal to the net amount of any bounty or grant determined or estimated to have been paid or bestowed upon its exportation from Germany.

Upon entry for consumption or withdrawal from warehouse for consumption, on or after the effective date of this notice, of dutiable merchandise imported directly or indirectly from Germany, there shall be collected in addition to any other duties estimated or determined to be due, estimated countervailing duties at the rate of 25 percent of the invoice value. The liquidation of entries covering such merchandise shall be suspended and the facts concerning the manner of payment for the goods shall be reported promptly and in full to the Bureau.

JAMES H. MOYLE,
Commissioner of Customs.

Approved March 18, 1939.

HENRY MORGENTHAU, Jr.,
Secretary of the Treasury.

Partial text of the Attorney General with respect to the above Treasury decision, explaining how the penalty tariff could be applied in specific cases, follows:

MARCH 18, 1939.

The Honorable SECRETARY OF THE TREASURY.

MY DEAR MR. SECRETARY: Reference is made in your memorandum to the President, dated November 28, 1938, in which you outline practices now prevailing in Germany, and to your recent informal request for my opinion as to whether those practices require the imposition by the Treasury Department of countervailing duties under section 303 of the Tariff Act of 1930. * * *

HOW SYSTEM OPERATES

From a subsequent memorandum, dated January 20, 1939, it appears that the following example will serve to illustrate how the present German practices operate:

An American importer desires to import into the United States from Germany certain cameras. Before this can be done approval of the transaction must be obtained from the German exchange control authorities, without whose approval nothing can be exported from Germany.

This approval is obtained, and under arrangement approved by the German import control authorities, without whose approval nothing can be imported into Germany, a German agent acting for the American importer buys American cotton at the world price for $1,000 and sells it in Germany for 2,500 reichsmarks (the world price at the prevailing rate of exchange of 40 cents), plus a premium of 33⅓ percent, making a total sales price of 3,333 reichsmarks, the equivalent of $1,333.

This sales price has been fixed in advance by the German import control authorities, and the German purchaser of the cotton is required to pay it into a special account in a German bank in free German marks, which immediately become blocked and frozen, and thereafter, for all practical purposes, are usable only by the American importer in the purchase of cameras which the German exchange control authorities have authorized to be exported from Germany.

The American importer thereupon buys cameras for $1,333 (3,333 reichsmarks) and imports them into the United States. Thus, for cameras which cost the American importer $1,000 the German exporter is paid $1,333, with the result that the German exporter is enabled to compete unfairly with, and probably to undersell, American camera manufacturers, while the exportation to Germany of American cotton is correspondingly restricted or curtailed.

IDENTICAL IN EFFECT

Comparison of the present German practices and those considered in the above-mentioned opinion of the Attorney General shows that they are identical in purpose and effect.

Adopting the language of that opinion (pp. 497–498), the present practices, like the former, "are * * * for the benefit of German exporters and enable them to export their goods so as to be in a position to compete with our domestic products * * *"; under them "export transactions are completely controlled by the German Government, which permits only such exports as it deems to be in the German interest, and the devices described are means by which the German Government enables the German exporters to export without incurring loss"; "the German authorities also completely control imports into Germany, permitting only those which are deemed for the benefit of that country"; and, manifestly, "the whole policy indicates a desire to encourage exports from and discourage imports into Germany * * *."

In an opinion dated June 2, 1936 (38 Op. 489), the Attorney General had occasion to consider certain practices then prevailing in Germany, including that of currency manipulations by the German Government through "controlled," "frozen," or "blocked" mark accounts known as "Aski mark accounts" and "Barter mark accounts," and held them to constitute "the payment or bestowal, directly or indirectly, of bounties or grants upon German exports" within the meaning of the above-quoted section of the Tariff Act of 1930, "calling for the imposition by the Treasury Department of countervailing duties" under that statute.

Since the German practices now prevailing are identical in purpose and effect with those discussed in the above-mentioned opinion of the Attorney General, it follows that they likewise call for the imposition by the Treasury Department of countervailing duties.

DECISION REEXAMINED

From other data available it appears that in December 1936 the German Government was advised, with your approval, that certain practices then proposed by the German authorities to govern the exchange of proceeds of American goods sold to Germans for German goods sold to Americans would not call for countervailing duties.

An examination of those practices, however, shows a fundamental difference between them and the practices now under consideration.

The former contemplated that both the sales of the American goods and the purchase of the German goods concerned were to be upon an uncontrolled market "at the current fair German open-market prices for such goods," while the latter involves a controlled market for both American and German goods, and, as to American goods, prices arbitrarily fixed by the German Government.

The practical effect of the present practices is the same as that which would flow from the imposition and collection by the German Government of a special duty or impost upon American goods and the subsequent use of the funds thus derived to subsidize German exports to America in order to enable German exporters successfully to compete in the markets of this country.

Insofar as they involve imports into Germany of American goods, such imports are restricted to essential raw materials which Germany does not produce in quantities sufficient to supply its

needs, and which, therefore, must be imported. Instead of permitting those raw materials to be purchased at world prices and paid for in foreign exchange, as is customary in international trade, the German Government requires them to be purchased and paid for under the practices outlined.

Thus burdensome import restrictions are imposed upon American goods, and at the same time substantial subsidies are bestowed upon German goods exported to this country.

It is my opinion, therefore, that it is the duty of the Secretary of the Treasury to impose countervailing duties under section 303 of the Tariff Act of 1930 upon such goods imported into this country from Germany as are affected by the practices outlined in the above-mentioned memorandum of November 28, 1938, and that the proposed Treasury decision, copy of which accompanied the memorandum, is appropriate in form to carry out that purpose.

Respectfully,

FRANK MURPHY, *Attorney General.*

Governmental Propaganda

EXTENSION OF REMARKS
OF
HON. J. PARNELL THOMAS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Monday, March 20, 1939

CORRESPONDENCE WITH THE ATTORNEY GENERAL OF THE UNITED STATES

Mr. THOMAS of New Jersey. Mr. Speaker, under leave to extend my remarks in the RECORD, I quote the correspondence between the Honorable Frank Murphy, Attorney General of the United States, and myself on the question of a study and investigation by the Attorney General into the dissemination of propaganda by our governmental agencies:

FEBRUARY 27, 1939.

Hon. FRANK MURPHY,
Attorney General of the United States,
Washington, D. C.

MY DEAR MR. MURPHY: On October 22, 1913, the Congress of the United States enacted into law (38 Stat. L., 212) the provision that "no money appropriated * * * shall be used for the compensation of any publicity expert unless specifically appropriated for that purpose." Yet it is definitely apparent from the findings of the Select Committee of the Senate to Investigate Executive Agencies of the Government, appointed pursuant to Senate Resolution 212 (74th Cong.), from my own personal study, and from the investigation of others, that numerous agencies in our Federal Government have not obeyed such mandate of Congress.

And as Government agencies have no more right to disobey Federal statutes than have individuals or private corporations, it would seem to me that a study and investigation of this question by your office is warranted. Will you, therefore, consider such action your immediate responsibility?

I am confident that if your office will make such an investigation it will not only show numerous flagrant violations by existing Government agencies of Statute 38, Law 212, but it will also demonstrate the extent to which Government agencies are annually spending millions of dollars of taxpayers' funds to perpetuate themselves in office on their present enormous scale. It would also show the degree to which certain agencies are resorting to the dissemination of propaganda to sell the public on the theory of [illegible]al bureaucracy and collectivism.

To me the current wave of Government propaganda is an extravagant, unfair, and malicious civil practice. It is a waste of the taxpayers' money, and an impartial portrayal by the Attorney General of its usage should lead to its ultimate curtailment.

Trusting that you will give my suggestion your earnest attention, and assuring you of my hearty cooperation, I remain.

OFFICE OF THE ATTORNEY GENERAL,
Washington, D. C., March 3, 1939.

Hon. J. PARNELL THOMAS,
House of Representatives, Washington, D. C.

MY DEAR MR. CONGRESSMAN: This acknowledges your letter of February 28, in which you call my attention to the provision of the act of October 22, 1913 (U. S. C., title 5, sec. 54), that "no money appropriated by the act shall be used for the compensation of any publicity expert, unless specifically appropriated for that purpose."

I note your request that a study and investigation should be made by my office as to whether any agency of the Federal Government has violated this statute.

In reply, I desire to call your attention to the fact that the enforcement of this act is not vested in the Department of Justice, and that consequently I have no function to perform in the premises.

With kind regards.

Sincerely,

FRANK MURPHY, *Attorney General.*

MARCH 20, 1939.

Hon. FRANK MURPHY,
Attorney General of the United States,
Washington, D. C.

MY DEAR MR. MURPHY: You state in your letter of March 3, which is in answer to mine of February 27, that:

"I note your request that a study and investigation should be made by my office as to whether any agency of the Federal Government has violated this statute (U. S. C., title V, sec. 54, enacted October 22, 1913, relating to compensation of publicity experts). In reply, I desire to call your attention to the fact that the enforcement of this act is not vested in the Department of Justice, and that consequently I have no function to perform in the premises."

It is hard for me to reconcile this answer of yours with the simple request which I made, namely, a request for study and investigation which you apparently construed to mean "enforcement." At no place in my letter did I suggest that you enforce the statute. I merely recommended that you determine through a study and investigation whether or not the Government agencies are living up to the mandate passed by the Congress in 1913 that "No money appropriated by any act should be used for the compensation of any publicity expert unless specifically appropriated for that purpose."

In view of your apparent misunderstanding of my letter, I again wish to recommend that you make such a study and investigation. If, on the other hand, you would not have time or are not equipped to make such a study and investigation, I would appreciate it if you would endorse the enclosed resolution calling for a special committee of seven Members of the House of Representatives to investigate the subject of publicity and propaganda by our Government agencies.

Sincerely.

The resolution referred to in my letter to the Attorney General is as follows:

Whereas an act was passed by Congress on October 22, 1913 (38 Stat. L. 212), which provided among other things, that "No money appropriated * * * shall be used for the compensation of any publicity expert unless specifically appropriated for that purpose", and

Whereas it is apparent from the investigation of executive agencies of the Government by the Select Committee of the Senate to Investigate Executive Agencies of the Government, appointed pursuant to Senate Resolution 212, Seventy-fourth Congress, and from other investigations and studies on the subject of publicity, and the dissemination of propaganda by the executive departments in our Federal Government, that the law of the land has been and is being grossly violated; and

Whereas millions of dollars of the taxpayers' funds are being squandered each year through this pernicious use of propaganda to further the existence of our costly bureaucratic agencies: Therefore be it

Resolved, That the Speaker of the House of Representatives be empowered to appoint a special committee of seven Members of the House of Representatives (1) to determine which and why executive agencies are violating the mandate of Congress as set forth in Thirty-eighth Statutes at Large 212, and (2) to investigate the whole question of publicity and dissemination of propaganda by our executive agencies; and be it further

Resolved, That this special committee submit a written report of its study and findings to the House of Representatives at its earliest possible opportunity.

Social Security Taxes

EXTENSION OF REMARKS
OF
HON. ALBERT G. RUTHERFORD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 20, 1939

EDITORIAL FROM THE PHILADELPHIA INQUIRER

Mr. RUTHERFORD. Mr. Speaker, several times last session I stated that the tax paid by employees under the Social Security Act was simply an income tax. I am glad that my views have been confirmed by a great newspaper

of my State. I insert in the RECORD an editorial on the subject by the Philadelphia Inquirer:

The comparatively small proportion of the population that filed income-tax returns last Wednesday were reminded by one of the printed instructions of an additional income tax from which no deductions are permitted.

It applies to 40,000,000 persons, including a huge number of those earning the smallest wages and salaries, many times more than those who pay the regular Federal income tax.

This is the tax taken from pay envelopes, to which employers add an equal amount, to cover benefits and costs of administering the social-security system. It amounts at present to 1 percent for each and has yielded more than a billion dollars, which the Government has promptly spent for its running expenses.

Washington officialdom has never liked to regard this levy as an income tax. It has preferred to lay stress on the benefits it is expected to provide for the aged and make the contributors look upon the enforced assessment, impossible to escape, as an investment potential of rich returns.

But so much confusion had arisen over attempts by income-tax payers to deduct their social-security contributions that it was found necessary to print this statement: "Tax withheld or paid under section 801 of the Social Security Act for or in behalf of the employee is a Federal income tax and is not deductible by the employee."

It is equally a tax on the income of employers, large and small. In the case of millions of wage earners and salaried folk in the lower brackets, it is the poor man's income tax and, as has been said, without a dollar of deductions for dependents.

An interesting poll was recently taken on the question of levying income tax on those earning $15 to $20 a week. The vote against it was 88 percent. Yet a considerable proportion of the opponents, receiving small wages or salaries, undoubtedly now pay this other income tax which, unless the law is changed, will eventually impose an individual burden three times as heavy as at present.

The movement to lessen this handicap on the buying power of the people and therefore on recovery, or at least to prevent the progressive increase in a tax that bears so heavily on all, is receiving especially strong support from two sources.

Small business has been making its voice heard at the hearings before the House Ways and Means Committee in Washington. The American Federation of Labor has called for reform of the reserve plan which puts unnecessary hardships on the workers.

Witnesses before the committee have asserted that social-security taxes are forcing small business establishments to the wall. Operating on a narrow margin, the levies spell the difference between profit and loss. In addition, it is charged that the small firms pay more for each employee's old-age insurance in proportion to dollar sales than do the large corporations.

Big business, which means large concerns owned by a multitude of persons of moderate means who are more or less dependent on dividends for their support, can cite some instructive figures.

These are the concerns furnishing the bulk of employment in normal times. Three corporations contribute in social security taxes more than $13,000,000 a year, or from 10 to 15 percent of their total taxes. Numerous companies report that these levies are equivalent to a dollar or more per share. If there is that much less for stockholders, there is that much less for the merchants dependent on their trade and for industry languishing for lack of new capital.

Reports from 137 representative businesses show total contributions of nearly $136,000,000, for both old-age and unemployment insurance.

If this money were all needed for the beneficent purpose, and the benefits were commensurate, there would be no ground for criticizing the Social Security Act. But, unfortunately, this is not the case.

What the Treasury Department recently referred to euphemistically as "the old-age retirement tax" is an income tax, bearing most heavily on the little fellows and, as has been pointed out, is being spent as quickly as received. By this time most persons understand that the so-called reserve fund—supposed to be built up to forty-seven billions by 1980—is a sham, composed of paper I O U's put in the social-security cash drawer for the money drawn out.

The only way these promissory notes can be redeemed is by more taxes—that is to say by making the contributors, with the rest of the people, pay all over again.

The House Ways and Means Committee is considering several proposals designed to insure that every dollar taken from employees and employers for old-age security is devoted to that purpose; to provide more substantial and, as Mr. Roosevelt has recommended, earlier benefits, instead of waiting until 1942; and to institute a system of pay-as-you-go that would do away with that mammoth though really mythical reserve fund, which is the excuse for the unreasonably heavy assessments.

President Roosevelt has forwarded to Congress the Social Security Advisory Council's suggestion for stabilizing the combined tax at 3 percent in 1940 instead of stepping it up to 6 percent by 1948, as now provided.

Uncle Sam must not act as an "Indian giver," granting pensions already paid for and then virtually taking them back by requiring the recipients or their relatives to pay a second time. No more important duty confronts this Congress than making social security real, while easing the heavy burden it now imposes on millions of wage earners and employers.

Great Lakes-St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. BERNARD J. GEHRMANN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 20, 1939

JOINT RESOLUTION FROM THE LEGISLATURE OF WISCONSIN

Mr. GEHRMANN. Mr. Speaker, the army of unemployed evidently is not getting smaller, and we all agree that Federal works projects will be necessary for years to come.

All of us are opposed to continue many types of projects that were undertaken, simply because worth-while projects could not be undertaken on short notice, and without sufficient data. There is one international project that can, and should be, undertaken immediately, and that is the Great Lakes-St. Lawrence seaway.

Not only would this be a great aid to commerce in the United States but it would be of still greater value in case we should ever be invaded by a foreign foe. It is hard to estimate the actual value this great international waterway will be to the United States, but the Army engineers have for years advocated its construction. Canada is willing, and I am sure the people of the United States are overwhelmingly for it. A lot of misinformation and unfair propaganda has been spread about this great waterway in the past. But I believe that many of those who opposed it for different reasons have since come to the conclusion that this waterway will be of immense value to every section of the United States. I am therefore very glad to find that the legislature of my State has passed a joint resolution asking the President and the Congress to resume treaty negotiations with Canada immediately, so that we may have the Senate ratify this treaty before Congress adjourns. I include the joint resolution of the Wisconsin Legislature, as follows:

Joint resolution memorializing the President and Congress of the United States to resume negotiations for a Great Lakes-St. Lawrence seaway treaty

Whereas a piecemeal approach to the settlement of the matters and issues involved in the joint use of the Great Lakes-St. Lawrence Waterway would not fulfill the long-time needs of the Midwest or the country at large; and

Whereas a complete cooperation of all States and countries is essential so that specific problems and usages may be determined and consummated by a comprehensive treaty containing adequate and sufficient safeguards and provisions for mutually compensatory objectives of inland waterways and defense bases; and

Whereas the position of all interested parties should be indicated and declared so that our country will not be hampered by any uncertainty as to the future source and availability of supply of cheap and adequate hydroelectric power; and

Whereas the demands of national defense and productive power for our great industrial centers require multiple sources of hydroelectric power, and in an age so dependent upon power and transportation disastrous consequences will follow a failure to anticipate future needs of cheap power sources; and

Whereas such seaway will provide a means of transportation connecting and unifying the agricultural sections of the Midwest with the industrial sections of the East by a reduction of transportation costs that will be productive of expanded markets, added industries, increased purchasing power of the United States at large, improved capital and physical power plants for industry and defense, and stimulated employment; and

Whereas the Canadian and American Governments may extend and continue an inspiring example of cooperation for constructive improvement instead of cooperation only for destructive purposes; and

Whereas negotiations for a treaty should not be permitted to lapse and lull by reason of early failures caused by opposition created by special interests seeking to maintain their abilities to exploit the needs of the people: Now, therefore, be it

Resolved by the senate (the assembly concurring), That the Legislature of Wisconsin memorializes the President and the Congress

of the United States to resume treaty negotiations and to enact necessary legislation for the procurement of a Great Lakes-St. Lawrence seaway; be it further

Resolved, That properly attested copies of this resolution be sent to the President of the United States, to both Houses of Congress, and to each Wisconsin Member thereof.

WALTER S. GOODLAND,
President of the Senate.
LAWRENCE R. LARSEN,
Chief Clerk of the Senate.
VERNON W. THOMSON,
Speaker of the Assembly.
JOHN J. SLOCUM,
Chief Clerk of the Assembly.

Tolerance as Practiced by Those of Irish Extraction

EXTENSION OF REMARKS
OF
HON. JOSEPH J. O'BRIEN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1939

ADDRESS BY HON. JOSEPH J. O'BRIEN, OF NEW YORK, AT THE TOMB OF THE UNKNOWN SOLDIER, MARCH 17, 1939

Mr. O'BRIEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address made by me at the Tomb of the Unknown Soldier, March 17, 1939:

Mr. Commander, members of the clergy, ladies, and gentlemen, the placing of this wreath at the Tomb of the Unknown Soldier on this auspicious occasion proves in a most conclusive manner that we of Irish descent and extraction practice the virtue of tolerance.

Earlier this morning a wreath was placed at the statue of Commodore John Barry, the Irish-American patriot, by this organization, the Irish-American Veterans, and now this same organization is honoring a hero of the World War. We do not know his nationalistic extraction nor his religious denomination, and we care less. We do know that he offered the supreme sacrifice to his God and his country with the principal thought in mind that the ideals and traditions, precepts and policies of a democratic country might live. We of Irish extraction honor him today because his memory is sacred. We accept the responsibility of carrying on the glorious traditions of our patriotic ancestors in exactly and precisely the same manner that they fought and died to perpetuate.

As our Irish ancestors leave to us the rich heritage of historical value, it is up to each and every one of us as true sons of Erin to thank God for the privilege of having been born in this country and to be allowed all those things that are near and dear to the heart of every descendant of St. Patrick, the right to life, liberty, and the pursuit of happiness, and to worship divine Providence as we see fit.

Our Irish ancestors have glorified the pages of history, and we must so conduct ourselves in appreciation of our American birthright to do everything within our power to keep the pages of history unblemished by those who do not appreciate the rare privilege of living in this great and glorious country. Let us of Irish extraction never do one thing to besmirch the pages of history that were so zealously guarded by our ancestors. Let this be our program, let this be our determination, and America the great will be greater because we American veterans of Irish extraction have helped to make it so.

God bless our United States.

Our Foreign Trade and Foreign Affairs

EXTENSION OF REMARKS
OF
HON. JOHN G. ALEXANDER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1939

Mr. ALEXANDER. Mr. Speaker, Members of the House, I hope you will, if you have not already done so, take time to read the following March press dispatches and news releases which have appeared in less than a month after my predictions made in this House on February 22—that Japan would do precisely what has now been disclosed in the course of debate in the Japanese Parliament she is doing.

JAPAN REVEALS PLAN TO PROVIDE OWN MUNITIONS—THREE-YEAR PROGRAM DESIGNED TO MAKE NATION SELF-SUFFICIENT

TOKYO, March 9.—Hitherto secret details of a gigantic industrial expansion program designed to give Japan complete self-sufficiency in war materials within 3 years was disclosed today in Parliament.

The plan embraces Japanese-occupied China and Japanese-protected Manchukuo as well as Japan proper.

PROGRAM ALREADY UNDER WAY

Kazuo Aoki, president of the cabinet planning board, told the lower house budget committee the program already was under way and was scheduled for completion in 1941. Hence, he said, some phases might be disclosed.

Raw materials derived from newly occupied areas of China play a major role in the production scheme. The majority of industries and articles coming under the plan relate directly to war materials.

The plan envisages the following percentage increases over present output: Ordinary steel, 60 percent; special steel, 100; steel ingots, 60; pig iron, 100; iron ore, 150; coal, 30; magnesium, 1,000; copper, 80; lead, 90; zinc, 70; tin, 100; natural gasoline, 30; synthetic gasoline, 2,900.

The gasoline would be ordinary medium test, not airplane fuel.

PROPOSED INCREASES

Still other products and the proposed percentage increases: Natural oil, 40; synthetic oil, 800; dehydrated alcohol, 1,200; soda, 20; caustic soda, 40; industrial salt, 65; ammonium sulphate, 40; paper pulp, 20; gold, 20; machine tools, 100; railway locomotives, 30, passenger cars, 70; freight cars, 50; automobiles, 400; wool, 240.

Aoki told the Diet the actual details of how these increases would be effected could not be disclosed at present.

JAPAN TO BAR UNITED STATES TRADE IN CHINA, CHAMBER HEARS

The Chamber of Commerce of the United States yesterday published advices from China that developments there "indicate the Japanese are determined to eliminate American business from North China."

The chamber of commerce at Tientsin reported the Japanese-sponsored government had adopted export embargoes and restrictions and exchange controls to the disadvantage of American businessmen.

And in an article on Spys at the Panama Canal Zone, by H. R. Knickerbocker, foreign correspondent for the International News Service, we find the following:

German "grand strategy" in respect to the Panama Canal is based on their common interest with Japan in crippling or destroying the United States Fleet in time of war.

Their calculation is that in case Germany were to go to war with England and France they would win if the Americas were kept out. They count upon Japan to nullify the American intervention, and destruction of the Canal is the key.

Now, let us see how they are prepared to do that very thing, and without the loss on their part of a ship, an airplane, or a man. Here is the International News Service copyrighted article, which I have obtained special and personal permission to use, with the hope that I may awaken America to the dangers inherent in the present world situation unless we take stands everywhere to protect our rights and further the preservation of peace:

(By H. R. Knickerbocker)

SAN JOSE, COSTA RICA.—Because the American island of Guam is 1,500 miles "near" Japan, the Japanese declared it would be an unfriendly act if we fortified the island, our own territory. Today the Japanese have established a potential military airfield just 300 miles from the Panama Canal, and provided themselves with a base whence a fleet of fast bombers could reach America's life line in 90 minutes.

I flew over and photographed this field, the first time it has been visited by an American newspaperman.

It is 1 square mile of the flattest, smoothest, best-drained land in Costa Rica, 2 miles from the unguarded shore of the Pacific Ocean, about 15 miles from Puntarenas, on the Gulf of Nicoya.

On it are engaged today 30 Japanese "farmers." They say they are "growing cotton."

Their boss is a reserve officer of the Japanese Navy.

The field could not have been better designed for a base from which to attack the Panama Canal if its present owners had been able to ask for bids on the following specifications:

Wanted, an air base capable of accommodating large fleet of heavy bombers; field must be absolutely level, dry, and near the sea.

Good road to seashore necessary and each must be suitable for landing in small boats. Field must be located in country with no coastal defense, and a minimum army.

Meeting these specifications, the field is, in Costa Rican measurements, 350 "manzanas" in area, or 595 acres, or just under 1 square

mile, and its diagonal provides a runway long enough for the take-off of bombers loaded to capacity.

The field is level as a billiard table.

It is drained by the nearby Barranca River, which leaves it dry even in the rainy season when the surrounding country is swamped.

In 15 minutes a slow truck can haul a heavy load from the beach to the field.

The beach slopes gently at the precise gradient most favorable for landing small boats laden with men or materials.

The position is ideal for landing secretly.

Large bodies of men could come ashore from freighters and considerable supplies could be landed by night without detection.

Airplanes in parts, gasoline, and bombs could be put off ordinary commercial vessels and smuggled into the "cotton plantation" with no one to witness.

Costa Rica has no coast guard, and its army numbers around 400 men. Normally, nearly all of them are in the capital.

None of them are anywhere near "El Chaguite," the Costa Rican name of the Japanese "cotton plantation."

Between the headquarters of the Imperial Japanese Navy in Japan and its farthest outpost here there are in fact only two obstacles; one Costa Rican policemen in Puntarenas and about 8,000 miles of Pacific Ocean.

It is precisely the function of "El Chaguite" to help the Japanese Navy span those 8,000 miles.

At this moment the United States fleet is in the Atlantic. The approach of a Japanese aircraft carrier or any part of the Japanese Navy to a point near enough to the Canal to arouse suspicion would bring the United States Navy posthaste back through the Canal into the Pacific.

But the Japanese fleet, or parts of it, can cruise freely without arousing suspicion at a distance of 2,000 to 3,000 miles away from the Canal.

In order to be able to fly from such a distance, Japanese bombers would need a refueling field. A bombing plane laden with bombs might do 2,000 miles in one hop. Without its bombs it could do 3,000 miles.

Thus, with a field in Costa Rica, Japanese bombers laden with bombs could take off their carriers at 2,000 miles from the Canal, fly over and drop their bombs on the Canal locks, land on their Costa Rican air field, refuel, and fly back to their mother ship.

Or, without bombs, they could take off at 3,000 miles away, land first at El Chaguite, refuel there, take on a load of bombs, fly over and bomb the Canal, then return to their Costa Rican base, refuel again, and return to their carrier.

From the first appearance of the Japanese planes over Panama and Costa Rica to the completion of their enterprise the time elapsed would not be over 3 hours.

Is this vision far-fetched? Is this an alarmist view to take of an innocent cotton plantation? United States Army and Navy authorities do not think it alarmist.

Here are the facts:

Mr. Takahiro Wakabayashi is Japan's No. 1 agent in Latin America. He is a sort of traveling ambassador and superspy extraordinary, with a territory which he once defined as "everything from the Rio Grande to Tierra del Fuego."

He speaks Spanish, English, French, and German as well as his native tongue.

He served as consul general in Panama, Bogota, and Buenos Aires, and after 12 years in the formal Japanese foreign service he resigned and came back as general manager of the important semi-official Federation of Japanese Importers and Exporters.

In this capacity Mr. Wakabayashi took a warm interest in Costa Rica's trade with Japan. He noted with concern that Japan was selling many times more to Costa Rica than she was buying.

In 1936, the year Mr. Wakabayashi began to take an interest in the matter, Japan sold Costa Rica goods to the value of $654,947 and bought only $5,121 worth.

This was only natural, because Japan does not use much of Costa Rica's principal products, coffee, bananas, and cocoa, while the poorer Costa Ricans demand the cheap Japanese goods.

It had always been so, but Mr. Wakabayashi suddenly came forward with an ingenious remedy.

He would teach the Costa Ricans to grow cotton and then Japan would buy the cotton and thereby rectify the trade balance. But first he would have to bring in some Japanese to see if cotton could be grown at all.

The Wakabayashi plan pleased the Costa Ricans. The first batch of 21 Japanese entered the country July 13, 1937. They were stationed on a so-called experimental farm at Alajuela, just outside of San Jose.

Here appears the true delicacy of the Japanese plan which would appear calculated to a degree improbable were it not for the factual evidence that the field is intended for an airfield.

The Alajuela farm was merely a blind. It bore no resemblance to an airfield and could not be used for one. It was intended to camouflage the ultimate purchase of El Chaguite.

Nobody could charge the Japanese at Alajuela with anything worse than planting cotton in a place where it would never grow.

It didn't, so the wily Wakabayashi then set forth to acquire the property he had in mind from the beginning.

Now the price of land in the vicinity of El Chaguite was about $12 an acre, and until the Japanese entered the market this parcel was for sale for 40,000 colones, or $7,200.

But the Costa Rican landowners, having reason to suspect that the Japanese had more than a commercial interest in the land, put up the price until the usually thrifty businessman, Mr Wakabayashi, finally paid $12,727 for a 4-year lease on the 595 acres.

Thus, he pays $21 an acre for 4 years' rent of land which an ordinary purchaser could have bought outright for $12 an acre.

This was the first clue to the character of the Japanese "cotton plantation."

The second was the fact that every expert who has inspected the place has reported it is impossible to grow cotton profitably there and that no serious effort to do so is being made.

This was the opinion of Prof. Loren G. Polhamus, of the United States Department of Agriculture, who visited El Chaguite a few months ago.

It is all very odd and very oriental, but the men concerned with the defense of America's life-line want to take no avoidable chances. They would like some sort of diplomatic action to nullify this, the nearest threat that has appeared in the neighborhood of the canal.

To any mind which is trained to observe the fast-moving chain of events in Europe, it is apparent that the outbreak of war is imminent, and if America can stay out, it will be a miracle of God's goodness. We should be in constant prayerful contemplation, study, and discussion of this most serious problem confronting America today.

Cape Cod

EXTENSION OF REMARKS

OF

HON. CHARLES L. GIFFORD

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 20, 1939

LETTER FROM A CONSTITUENT

Mr. GIFFORD. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following letter from one of my constituents:

To Hon. CHARLES L. GIFFORD,
Washington, D. C.:

The directors of the New York World's Fair have officially recognized Cape Cod as the forty-ninth State of the Union.

To select pictures for the contemporary art section of the fair, they appointed committees for each State, but Cape Cod has a special committee apart from Massachusetts, the only section of the United States to be so segregated.

While we are conscious of a certain honor implied by this recognition of our independence, I maintain that we are more than just another State; in fact we are a separate republic, and Mr. Roosevelt has tacitly, though regretfully, agreed to our secession, and accepted Congressman CHARLES L. GIFFORD as our ambassador to Washington.

"Cape" Cod is really an island, entirely surrounded by salt water, and though we heard there has been a depression in the United States, it didn't affect us much, except to make our imports cheaper. We kept up the old tradition of economy, honesty, and simple living and remained Republican.

When 46 States seceded from the Union in 1936, leaving only Maine, Vermont, and Cape Cod to carry on, I told Mr. Roosevelt that I thought we ought to have our own Cod Island republic, since Massachusetts had gone New Deal and the Democrats had cut a canal and left us out at sea.

Mr. Roosevelt replied that though he hated to think of Cape Cod as a foreign country, because he had so many relatives here, he was glad that Mr. GIFFORD would be sent as ambassador. However, he felt that we should now pay Mr. GIFFORD's salary, and also maintain the expense of the canal, harbor dredging, lighthouses, and buoys.

To this I asserted that we didn't want the lighthouses and buoys, as they tended to ruin the good business in wrecking that we used to have. The dredging, too, is a nuisance, I declared, as it stirs up the quahogs so. But as a gesture of appeasement, I promised that when his Weather Bureau got stuck, any one of our fishermen would call up and tell him what to expect tomorrow or next day.

So while we feel that it is very gracious of Mr. Whalen and Mr. Lehman to treat us as a separate entity, and shall be proud to be represented at your fair; we want you to realize that we have a dignity beyond that, and feel somewhat slighted because you never invited us to have our own building there. We could have sent you a fishhouse that would have stolen the show, since man is still primitive, in spite of your modern magnificence propaganda.

HAROLD DUNBAR.

CHATHAM, CAPE COD, *January 26, 1939.*

Admission of German Refugee Children

EXTENSION OF REMARKS
OF
HON. ROBERT F. WAGNER
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, March 20 (legislative day of Thursday, March 16), 1939

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the RECORD a number of editorials advocating the enactment of legislation admitting German refugee children into the United States notwithstanding the quota. I ask that they be printed in the body of the RECORD.

Mr. CLARK of Missouri. Mr. President, this matter of printing a large number of editorials in the body of the RECORD is strictly contrary to the rule. In a matter of exceptional importance it has been done on a few occasions, but to include a large number of editorials in the body of the RECORD seems to me to be contrary both to the rule and to good practice. Therefore, I feel bound to object.

Mr. WAGNER. Very well. I ask that they be printed in the Appendix of the RECORD.

The PRESIDING OFFICER. Is there objection?

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Bridgeport (Conn.) Post of February 16, 1939]

REFUGEE CHILDREN

Senator WAGNER has introduced a resolution, which has been referred to the Committee on Immigration, which would provide for the admittance into this country of 10,000 German refugee children this year and next year, in addition to the ordinary immigration quotas.

The measure has the endorsement of clergymen of all denominations and of both of the large organized labor groups. The latter fact is significant, as ordinarily organized labor is not keen about increasing immigration quotas and theoretically increasing competition for jobs. In this case it is different.

Of all the things done under Nazi dictatorship, nothing was more distressing to the sensibilities of the rest of the world than the packing of thousands of helpless children into trains, each with a bare 40 cents in his pocket, and sending them away, while their parents were herded into concentration camps. About half of the children thus segregated are Jewish, and the others are Catholic or Protestant children whose parents fell into disfavor with the Nazi Government for some reason or other.

Other nations are opening their doors to quotas of these children. America alone among the great nations has failed to take any save those who might be brought in through the ordinary immigration quotas.

In this case nothing is asked of the Government except an act of generosity which would appeal to the hearts of all. These children would not become public charges as they would be brought into this country only upon the request of those able and willing to look after them. It would be many years before these youngsters became old enough to enter our own labor market and then they would be thoroughly Americanized.

Surely there could be no hesitancy on the part of the United States in making this gesture of friendliness to a group of frightened and bewildered youngsters.

[From the Bridgeport (Conn.) Times-Star of February 18, 1939]

"OF SUCH IS THE KINGDOM OF GOD"

Democratic and Republican leaders of the Nation, churchmen of all faiths and denominations, and both the big labor organizations have joined in a move to open the doors of the United States to admit 20,000 refugee children forced to flee from Nazi persecution in Germany. In Bridgeport, as in other cities, the proposal is winning support, as it should.

The movement began with an appeal from 49 clergy—Catholics and Protestants. It was promptly endorsed by ex-President Hoover and by organized labor. And now Senator WAGNER has given it official form with a resolution introduced into the Senate.

His plan is to admit 10,000 children this year and 10,000 next year, as each child is assured of a home. Thousands of families and charitable organizations, he says, have offered to take in these shelterless children, forced from their own homes in Germany because of their race or because of the faith of their fathers. Catholics as well as Jews are increasingly under the persecution of the Nazis.

Mr. Hoover and Mr. WAGNER and the labor organizations assure us that this influx of children will not add to the distress of our unemployed nor interfere with our labor policies. The topmost limit of age is 14 years. England and Holland, the Senator says, have given sanctuary to these little waifs and now the United States is planning to do so, too.

It is comforting to see the broad-gage Nazi persecutions at last meeting a broad-gage answer in America. It is encouraging to find all religious faiths here, all political parties, united in this humanitarian endeavor. The Nazis are striking blindly at innocent children, and the heart of America gives the Christian answer.

[From the Dayton (Ohio) Daily News of February 20, 1939]

SUFFER LITTLE CHILDREN

"Breathes there the man with soul so dead" that he can oppose Senator WAGNER's bill to raise the immigration quotas for the benefit of 10,000 refugee children this year and the same number next?

Ten thousand German refugee children under 14 years of age would be admitted, regardless of quotas, provided responsible citizens or institutions guaranteed their education and support, once they are here. This is the provision of the New York Senator's joint resolution now before the Immigration Committee of the Senate.

How many child refugees there will be in all from Germany—Catholic, Lutheran, and Jew—in these 2 years, no one can tell. Ten thousand, we may be sure, will be but a small fraction of them all. We shall be admitting 20,000 in all. At the rate of 10,000 a year it would take a century to bring a million here. Twenty-five years ago we were receiving a total of a million aliens a year.

Now we are asked to approve a special dispensation to permit the entrance of an extra 20,000 children, their support assured. There is a rumor that the plan will be opposed. We don't believe it. This is a land which professes admiration and even reverence for the source of the saying: "Suffer the little children to come unto Me, and forbid them not."

If there is a soul in free America so shrunk that he would not suffer these few children to come to us, there's more pre-Christmas Scrooges in the world than we had counted on.

The labor organizations are of all groups most sensitive to immigration acts. Confirming what has been said, the Wagner resolution has the approval of both John Lewis and William Green.

[From the New Orleans Item of February 23, 1939]

REFUGEE CHILDREN

It is fitting that Senator WAGNER, of New York, a man who for years has concerned himself with bettering the lot of others, should be the author of a proposal for salvaging happiness and self-support to a large group of the refugees from Central Europe. He asks that the United States admit 10,000 German-born refugee children, outside the quota limits, within the next 2 years. The New York Times says of his plan:

"It is hard to see how Congress or the American public can refuse the plea. * * * If we had a barbed-wire frontier, as some less fortunate countries have, and could see these children, whose parents are dead or in prisons and concentration camps, we would not hesitate. All we need is imagination. They cry out to us from their darkness."

So far, we believe that ninety-nine out of a hundred Americans will read with sympathy and generous acquiescence. We know that help is needed; we know that help of some kind we can give. But there remains the problem of helping while at the same time we protect ourselves; protect our native labor against heightened competition at a time when competition already is fiercest. The Times says:

"Can the admission of these children do harm? To ask the question is to answer it. All would be under 14 and so would not compete for employment. None would become public charges, for the law would require that their support be guaranteed by responsible individuals or organizations. They would be 'of every race and creed.' If heredity means anything, they would grow up to be good citizens, for in most cases they are alone in the world, because their parents put obedience to conscience above obedience to tyranny. They would love liberty, because they know from bitter experience what the loss of liberty means."

Can any nation that pretends to Christian civilization afford to repudiate the words, "Suffer little children to come unto Me; for of such is the kingdom of heaven."

[From the Asheville (N. C.) Times of February 23, 1939]

ACTION TO SUPPORT EMOTION

Senator WAGNER reports that thousands of families are supporting his bill to authorize admission of German refugee children of every race and creed to the United States this year and in 1940—10,000 each year.

This is as it ought to be. There is involved in the plan no suspension of the quota restrictions for adults. Children 14 years of

age and under would thus be taken into American homes able to take care of them, and there would be no question of these refugees from despotism becoming public charges.

Americans have longed to do something feasible and forthright in giving aid to the victims of Nazi Germany's oppressions and persecutions. As former President Hoover says of the Wagner proposal: "It befits the American wish to aid suffering. It answers the appeal to every American heart for the protection of children."

[From the Idaho Statesman, Boise, Idaho, February 28, 1939]

THE CHILD REFUGEES

Elsewhere on this page is an editorial from the New York Herald Tribune describing a bill introduced by Senator WAGNER, of New York, which would permit 20,000 children under the age of 14 years to be received in the United States outside of quota restrictions within the next 2 years. Purpose is to permit persons in the United States to receive some of the refugee German children, whose parents are in concentration camps or "have been thrown on the mercy of the outer world."

It is noteworthy that Senator WAGNER is one of the stanchest supporters of organized labor in the Senate, that the measure has the endorsement of both the A. F. L. and the C. I. O., and also Catholic and Protestant churchmen.

After reading the Herald Tribune editorial, it is impossible to reach any other conclusion except this—humanity demands the bill's passage.

[From the San Francisco Chronicle of March 2, 1939]

TENDER CHILDREN AT MERCY OF IRON REGIME

When the first consignment of Jewish children went from Germany to England, where homes awaited them with benevolent British families, the final picture as they crossed the German border was that of the Nazi officials taking the poor tots' toys away from them.

This inconceivably petty and senseless piece of tyranny is a touchstone to indicate the fate of the estimated 50,000 young children still in Germany, Jewish and others, whose parents are in concentration camps or who are otherwise thrown on the merciless Nazi world.

The United States cannot be expected to take on itself the whole burden of the refugee problem. It has duties to its own that come first. Yet surely what it can reasonably do it should do. It is hard to be comfortable in an American home with the feeling that it could, without harm to its own, but is failing to, take in one of these tender children tormented by bitter persecution. They are on the conscience of the civilized part of the world. Great Britain and Holland have taken a considerable number of them. Senator WAGNER, of New York, has introduced a resolution in Congress which would, without disturbing the present immigration laws and quotas, give special visas to 10,000 German children under 14 for whom adequate assurance of support and care has been given by responsible American citizens or private organizations.

Senator WAGNER points out that this number is too small to set up any future of disadvantage to American labor, and on this point he asserts that both branches of the labor movement have expressed their sympathy with the objective he seeks.

This seems, as the Senator says, a practical contribution to the cause of human freedom and one that we can and ought to make.

[From the Youngstown (Ohio) Vindicator of March 5, 1939]

ADMIT THE REFUGEE CHILDREN

One of the most pitiful results of Nazi persecution is a great throng of helpless children, deprived of parents or other protectors and thrust upon the mercies of a world which seems to be losing a sense of mercy.

There are about 50,000 children under 14 thus cast adrift in Germany because their parents have been "liquidated" or thrown into concentration camps. Half of them are Jewish, the rest Catholics and Protestants.

Senator WAGNER has introduced a resolution authorizing admission into the United States of 10,000 of these children in each of the years 1939 and 1940. It should be passed in spite of the Nation's proper concern for its own refugees from economic misfortune.

None over 14 is to be admitted, so there will be no competition with wage earners. None is to be admitted unless "satisfactory assurances are given that such children will be supported and properly cared for through the voluntary action of responsible citizens or responsible private organizations and consequently will not become public charges." The number to be brought in will not be noticed in American life, for it represents only 1 refugee child for every 2,000 children under 14 now in the country.

The crowded little nations of England and Holland are taking 7,000 of these hapless waifs. What Senator WAGNER proposes is the least America can do to alleviate the misery resulting from suppression of liberty. As he says, it is "the most immediate and practical contribution by our liberty-loving people to the cause of human freedom, to which we are inseverably bound by our institutions, our history, and our profoundest sentiments."

The American Federation of Labor and the Development of Education

EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 20, 1939

RADIO ADDRESS BY PAUL SCHARRENBERG, LEGISLATIVE REPRESENTATIVE OF THE AMERICAN FEDERATION OF LABOR

Mr. GEYER of California. Mr. Speaker, under leave to extend my remarks, I include a radio address given by Mr. Paul Scharrenberg, legislative representative of the American Federation of Labor, in a Nation-wide broadcast over the N. B. C. network sponsored by the National Educational Association. As will be seen by this address, the American Federation of Labor supports the Harrison-Thomas bill providing aid to local schools.

The subject of Mr. Scharrenberg's address was "The American Federation of Labor and the Development of Education."

The text of the address follows:

A. F. OF L.'S INTEREST IN PUBLIC SCHOOLS STRESSED BY SCHARRENBERG—UNITED SUPPORT OF LABOR MOVEMENT FOR HARRISON-THOMAS BILL PROVIDING FEDERAL AID TO LOCAL SCHOOLS IS PLEDGED BY FEDERATION'S LEGISLATIVE REPRESENTATIVE: "WE BELIEVE THAT THE VERY ESSENCE OF DEMOCRACY LIES IN EQUAL EDUCATIONAL OPPORTUNITIES FOR ALL CITIZENS," HE SAYS

WASHINGTON, D. C.—The important part played by trade unions in the United States in establishing and developing the American public-school system and the urgent necessity of financial aid for local schools by the Federal Government along the lines of the bill introduced in the Senate by Senator ELBERT D. THOMAS, of Utah, and Senator PAT HARRISON, of Mississippi, were emphasized by Paul Scharrenberg, legislative representative of the American Federation of Labor, in a Nation-wide broadcast over the N. B. C. network sponsored by the National Education Association in its program, Our American Schools.

The Harrison-Thomas bill, on which hearings have been held by the Senate Committee on Education and Labor, has the full support of the American Federation of Labor.

The subject of Mr. Scharrenberg's radio address was The American Federation of Labor and the Development of Education. The text of the address follows:

"The American labor unions took a leading part in establishing our public-school system as the cardinal principle in social planning. In the early years of our Republic children of working people could learn to read, write, and figure in free schools, but there was a stigma of poverty attached to attendance in such schools.

"As our population and industries grew, wage earners organized in unions and made known their wants and needs in public affairs. Property and other personal qualifications for suffrage were eliminated and equal voting rights given first to all male citizens and later to all female citizens. In a democratic government equal educational opportunities are a natural sequence of manhood suffrage.

ADEQUATE SCHOOL MAINTENANCE STRESSED

"The American Federation of Labor has, from its organizing convention in 1881, made public schools a matter of its primary concern. After the establishment of the public-school principle, the American Federation of Labor has continued to work for adequate maintenance of these schools so that educational opportunities for all citizens should expand as our wealth increased.

"We have insisted upon enrichment of the curriculum, better prepared and better paid teachers, better buildings and equipment. We have fought for child-labor laws and for compulsory school-attendance laws to give all children opportunity for physical and mental growth before assuming wage-earning responsibilities. We have insisted that boys and girls have such protection until 18 years of age. The purpose of public education is, we maintain, development of each individual for satisfaction in personal living and for effectiveness as a citizen in a democracy. The heart of training for citizenship is understanding of our economic, social, and political institutions—our only guaranty of maintenance of democratic institutions.

LOCAL CONTROL IS ESSENTIAL

"The United States in its development has been a land of opportunity for workers and the A. F. of L. wants to make it a land of equal opportunity for all citizens. We believe that the very essence of democracy lies in equal educational opportunities for all citizens.

"Control over schools and educational policies should be in the hands of those immediately concerned, exercised through the local government. The American Federation of Labor believes that only local control of educational policies will provide equal educational opportunities or the kind of training suited to the life of various communities.

FEDERAL GRANTS ARE NECESSARY

"The American Federation of Labor was among the first to ask for Federal aid to equalize educational opportunities for the citizens of all sections of the country. We well know that incomes in the Southern States averaged about one-half as much as incomes in the United States as a whole.

"Only Federal grants can overcome existing obstacles in those areas where average incomes are lowest. With this fundamental thesis the American Federation of Labor is in full accord. We are equally convinced that Federal grants should in no way interfere with local determination of local educational policies.

"It is our belief that the tests used as a basis for making grants to States should be objective and equitable. With Federal funds granted according to need, with local determination of educational standards, the Federal Office of Education could, through the administrative use of State reporting and accounting, exercise a leadership to raise educational standards generally.

"In any such large program of Federal aid to public education the federation believes there should be a general advisory committee to assist the Commissioner of Education in carrying out the functions vested in him. Such a provision is in conformity with our local public-school practices that school politics should be formulated by citizens.

"Finally, we believe that any Federal-aid program should be reviewed periodically so that policies may be reconsidered in the light of experience and changing circumstances.

PUBLIC FUNDS FOR ADULT EDUCATION

"Expanding our program of public education, the Federation has repeatedly endorsed the use of public funds for adult education. We believe that the very perpetuation of our democracy depends upon the widespread education of youth and adults alike. Education does not end with the classroom or the school teacher but should continue throughout life.

"Last, but not least, the American Federation of Labor believes in academic freedom for teaching and research and holds that freedom must be the final goal of all social policies. Freedom has continued to exist only as it begets responsibility in those who exercise it."

The Interior Appropriation Bill and the Housing Act

EXTENSION OF REMARKS

OF

HON. JAMES A. SHANLEY

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, March 20, 1939

Mr. SHANLEY. Mr. Speaker and my colleagues, I certainly wish to add my emphasis to the Interior Department appropriation bill, and especially to the sections dealing with the Housing Act. In this connection I consider that the White amendment would be a death blow to the real purposes of this legislation, and I shall vote against it. The opponents of housing would seem to put us in the quandary of the man who said that a house ought to be built, but it ought to be built out of the materials of the old house, and until the new house is completed the old one ought to be occupied.

I hardly think that such legislative Houdinis meet with the approval of those who have spent so much time in the study of the English housing efforts and the experience we have had. I believe our housing efforts represent the highest type of intelligence and direction, and though mistakes and errors have been made, they were fewer than expected.

I have a number of telegrams, as have all other Members, but I include the one which came from my chief industrial city as typical, and under permission to include it in my remarks, I here append it:

Earnestly request elimination of rider on Interior appropriation bill limiting cost land and dwelling under United States Housing Act to $3,500. Absolutely impossible construct decent housing in New England city under such provisions. Inclusion of this clause would eliminate Connecticut from Federal housing program and confine its benefit to parts of West and South. Twenty million dollars for Connecticut at stake.

C. E. A. WINSLOW,
Chairman, New Haven Housing Authority.

Will "Government Investment" Promote Business Recovery?

EXTENSION OF REMARKS

OF

HON. LELAND M. FORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 20, 1939

ARTICLE FROM THE GUARANTY SURVEY

Mr. LELAND M. FORD. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following article from the Guaranty Survey, published monthly by the Guaranty Trust Co. of New York:

[From the Guaranty Survey of February 27, 1939]

WILL "GOVERNMENT INVESTMENT" PROMOTE BUSINESS RECOVERY?

(There is no question regarding the possibility of a national income of $80,000,000,000 a year in the United States. But a mere rise in prices would not, in itself, enhance prosperity or increase employment. It would not even materially improve the fiscal position of the Government. To have the desired effects, an advance in national income must be due to an increase in the volume of production.)

The persistent idea that the country can spend its way to prosperity has recently appeared in a new and more extreme form. Under the revised theory, the deficit of the Federal Government is no longer regarded as merely an emergency device to provide employment and promote business recovery at a time of crisis. It is now advocated as a means of raising the national income to a predetermined figure by holding Government relief and recovery expenditures (or, as they are now called, "investments") at the existing level until the resulting business expansion increases the national income to a point where it automatically balances the Budget by yielding the necessary revenue.

The advocates of this policy maintain that their program is capable of raising national income to a point where unemployment will be greatly reduced and the Budget will be brought into balance without any increase in tax rates or any reduction in expenditures. The figure of $80,000,000,000 has been mentioned as representing the level of annual national income that would support the present scale of Government expenditures under the existing tax schedules. This total compares with a 1938 income estimated at $60,000,000,000.

To bring the expenses of the Government into balance with its present revenues, it is contended, would imply acceptance of the 1938 income total as a normal and representative figure to which the people of the country must be prepared to adjust themselves, since it is held unlikely that the higher level of income will be reached in the near future if public expenditures are reduced. In other words, it is believed that business recovery cannot be expected to take place unless the Government continues to spend greatly in excess of its current income.

There is no question regarding the possibility of a national income of $80,000,000,000 a year in the United States. The estimated income in 1929 slightly exceeded that figure, and the income in 1937 was less than 13 percent below it. Moreover, the population of the country has increased about 7 percent since 1929, so that a given total of income at present implies a lower income per capita than it did 10 years ago. And technological improvements have increased potential productivity. To restore the 1929 level of national income, therefore, is not an unreasonable aspiration.

But it is of fundamental importance to recognize that a national income stated in terms of dollars is the product of two factors—a volume of production and a price level. An increase in either factor—the other remaining unchanged—would raise national income. The effects of the two types of increase, however, would be entirely different. A mere rise in prices would not in itself enhance prosperity or increase employment. It would not even materially improve the fiscal position of the Government, since any increase in revenue would be offset by a rise in the cost of almost every branch of governmental activity.

To have the desired effects, an advance in national income must be due to an increase in its other factor—the volume of production. This, obviously, would require greater employment of labor and would increase Treasury receipts without correspondingly raising costs. It must be assumed, therefore, that it is an enlarged output, not a higher price level, that governmental "investment" is primarily designed to bring about.

LESSONS FROM PAST EXPERIENCE

In considering the factors that would be helpful in increasing the national income to $80,000,000,000, it may be pertinent to examine some of the conditions under which that level of income was achieved before. In the fiscal year 1928–29 the expenditures of the Federal Government, exclusive of debt retirements, total $3,299,000,000, as against the estimated total of $9,492,000,000 for the current fiscal year. Receipts of the Treasury exceeded expenditures by $734,000,000, instead of leaving a net deficit

of $3,972,000,000, as is estimated for this year. The national debt has been decreasing continuously for 10 years and showed an aggregate decline of $8,551,000,000 for the period. State and local debt, however, was increasing. Altogether, public indebtedness—Federal, State, and local—increased by an estimated amount of $834,000,000 during the 7 fiscal years from 1922 to 1929.

In the same interval, corporate securities were issued (according to the compilation of the Commercial and Financial Chronicle) in the amount of $39,121,000,000, of which $31,600,000,000 represented new capital, rather than refunding operations. This comparison takes no account of the increase in short-term credit or of the enormous amount of new capital employed through the reinvestment of current earnings by corporations and other business concerns without resort to the capital market. It was private investment, therefore, not governmental "investment," that provided the funds to finance the great industrial expansion which produced a national income in excess of $80,000,000,000.

The same has been true of every period of expansion following a depression in the past. Never before was it assumed, merely because the normal flow of capital into industry had been temporarily interrupted, that it would not be restored and must be replaced through the "investment" of borrowed funds for government. On the contrary, public policy was directed toward balancing the Budget, maintaining confidence in the soundness of the currency, and, in short, creating a favorable environment for private business expansion.

NATURAL VERSUS ARTIFICIAL RECOVERY

To assume that a public policy similar to that followed in the past would, in the present instance, entail an indefinite period of industrial stagnation, rather than a sound business recovery, would be to assume that the system of private enterprise has definitely broken down and can no longer function without governmental support. There is no more warrant for such an assumption than there has been in previous periods of severe depression. It is true that certain far-reaching and probably permanent changes have taken place in the economic and political background. But the same has been true in the past. Such changes are continually taking place; and the system of private enterprise has repeatedly demonstrated its ability to survive these changes, together with the wide business fluctuations that accompany them, and to rise to new levels of prosperity.

It must be emphasized, however, that these past recoveries took place under a set of rules that not only allowed business to expand but gave it an incentive to do so. Investors risked their funds in productive enterprise in the confidence that they would be left free to earn and keep such profits as existing business opportunities permitted, subject only to the ordinary revenue needs of government. They were called upon to face the natural hazards of business, but not the present artificial burdens of regulated costs, excessive and restrictive taxation, and Government competition.

THE EFFECTS OF RECENT POLICIES

By way of contrast, it is appropriate to examine the effects of recent attempts to stimulate recovery by Government borrowing and spending. The low point of the depression, as measured by national income, was reached in 1932 at approximately $40,000,000,000. The policy of governmental borrowing and spending to promote recovery began in the following year and has been followed for nearly 6 years. During that time, the national income has risen about $20,000,000,000; that is, it has regained about one-half of the ground lost between 1929 and 1932.

These comparisons, while providing a rough measurement of the degree of recovery that has taken place, reveal almost nothing concerning the factors that have produced the recovery. To assume that the rise in the national income since 1932 has been due wholly to the borrowing and spending program—or, in other words, that the income would not have risen at all in 7 years without governmental aid—would, of course, be contrary to all reason and experience. But how much recovery would have taken place under other public policies can only be conjectured.

There is some evidence to support the view that recovery would have progressed quite as swiftly, and, in all probability, more so, under the traditional public policy of economy and noninterference with business. It appears that seldom, if ever, in the past has recovery from a major depression proceeded so slowly as in the present instance.

Adequate explanations for the sluggishness of recovery are not far to seek. The borrowing and spending program itself, while it may stimulate business and increase the national income temporarily, provides no effective substitute for private investment, since it is limited for the most part to public works and other nonrevenue-producing projects that make little or no permanent contribution to industrial productivity and earning power. At the same time the policy tends to defeat its own purposes by shaking confidence in the future of currency, credit, prices, and costs, and thus discouraging private investment.

FACTORS PREVENTING INVESTMENT

But the Government's fiscal position, serious as it is, is not the sole obstacle, or perhaps even the most important obstacle, to recovery. The crux of the problem lies in the outlook for profits, which has been impaired in various ways by recent legislative and administrative policies. Close regulation, particularly in the field of labor relations, has raised and frozen some of the principal operating costs of business concerns. Heavy direct taxes on commerce and industry have imposed a further burden on earning power. Tax rates on capital gains and on large incomes in general have reached almost confiscatory levels, threatening actual and potential investors with the loss of a large part of any profits they might make through successful use of their capital. Over a large section of the business field, actual or threatened governmental competition has obscured the prospects of profitable operation to such an extent that expansion has been very sharply curtailed. And in all these directions there hangs over business the ever-present possibility of new and unknown measures of a similar nature.

When difficulties of this kind become too great, the sacrifices, exertions, and risks that businessmen and investors must incur in expanding their operations cease to be worth while. No theory of "equitable" distribution of income or of "social justice" can alter the practical fact that the system of private enterprise rests squarely upon the principles of freedom of contract and security of property, and that such a system cannot expand and prosper under a set of rules that violates these principles.

In the face of these conditions, it seems clear that the practice of incurring huge Treasury deficits in the hope that the excess expenditures will increase the national income to a level where the Budget will balance itself automatically not only has small prospects of success but is a deterrent, not an aid, to recovery.

Cycles of Intolerance, Bigotry, and Persecution

EXTENSION OF REMARKS

OF

HON. WILLIAM I. SIROVICH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 15, 1939

ADDRESS BY HON. WILLIAM I. SIROVICH, OF NEW YORK, IN THE HOUSE OF REPRESENTATIVES, MAY 26, 1936

Mr. SIROVICH. Mr. Speaker, under leave granted me to extend my remarks in the CONGRESSIONAL RECORD, I include the following speech which I delivered in the House of Representatives on May 26, 1936:

The SPEAKER. Under the order of the House, the Chair recognizes the gentleman from New York, Dr. SIROVICH, for 30 minutes.

Mr. SIROVICH. Mr. Speaker, ladies and gentlemen of the House, comets were regarded in ancient times as presagers of evil, forecasting the death of kings and the destruction of nations. Edmund Halley, an English astronomer, the friend of the great Newton, observing the comet of 1682, checked back on previous appearances of comets and decided that this comet had a definite orbit about the sun covering 75 years, and predicted the return of this comet in 1737. His forecast was derided; but when 1737 came in the course of time Halley's comet appeared again, and has since that time made its route according to the schedule of Halley. Its latest appearance was in 1910. Superstition faded before knowledge and understanding.

Depressions and panics seem to have cyclic orbits, and with them also seem to come cycles of intolerance, bigotry, and persecution, as if both were parts of some cosmic disturbance. Like the lag of the tides after the meridian passage of the moon, these cycles of bigotry are not always immediate with the economic cycles, but, nevertheless, they seem concomitant with them. I could cite you many instances which seem to bear out this thought, but will not take the time now to do it, except to call attention to the fact that great wars seem to be followed by deep economic depressions, and during these depressions nationals of one nation try to put the blame for the situation on nationals of another nation, and often on minority groups within their own nation.

This latter case is the situation in Germany between the Austrian Dictator Hitler and native Germans of Jewish religion. Germany had failed in the World War. She had lost her colonies; her navy lay at the bottom of Scapa Flow; her foreign markets had been taken away; a loaf of bread sold for a billion paper marks; and the financial condition of the people in general was appalling, so those who had assumed power looked about for a scapegoat. The Jewish element of the German people provided such a scapegoat by the dictatorship and those behind it. Jews had led in steel making, shipping, foreign trade, and domestic commerce out of all proportion to their numbers compared to other Germans; nor were the Jews behind in music, the arts and sciences, and philosophy. This state of affairs first led to jealousy, then to bigotry, and, finally, to persecution, with all of which the world is familiar.

There could be no escape to asylum elsewhere in the world, though longing eyes were cast on America, since Jewish money and goods had been commandeered by the Nazis, and families once well-to-do or in comfortable circumstances were herded into ghettos and denied expatriation.

In other generations persecution because of political or religious differences has given some of its best immigrant stock to the United States of America. The Pilgrims and Puritans, Huguenots, Lutherans, Irish, German, English Catholics were striking examples. It is also true that love of liberty, freedom of conscience and speech, and a desire to better their economic condition brought many fine men and women to America whose descendants are a credit and an honor to our Nation.

For almost 150 years America has been the haven, the mecca to which the proscribed, the persecuted peoples of occidental civilization have longed to migrate. Every cycle of bigotry, economic depression, and racial intolerance in continental Europe drove millions to our shores. America, the land of liberty and opportunity! America, the land where they cradled religious respect for all faiths! America, the land of freedom and equality! That America was their destination.

From the west coast of Ireland to the eastern shores of the Black Sea these emigrants sought America. From the White Sea in the north to the Straits of Messina in the Mediterranean they set sail for America. In the last 15 decades America was the one word in the mind and on the tongues of millions of all the nationals within these regions. America, the land of hope and faith. The land where a man could be a man, free and independent, no matter what tongue he spoke or what his racial stock might be. A land where wages were high, worktime short; a land open for settlers, jobs for all workmen—the land of promise and plenty.

So the adventuresome took ship in the steerage at as low as $15 a head, providing their own food and bedding. They came in millions and spread all over the land of plenty from Maine to Oregon, and from the Great Lakes to the Gulf of Mexico. They built the railroads. They manned the river steamboats. They built the wharves and docks. They did anything to which they could turn their willing hands. Coal and iron mines, rolling mills, textile mills, blast furnaces, coke ovens, tunnels, subways, bridges, roads, commercial and domestic buildings. All these and much more they dug down, laid down, or built up.

All who came to the land of plenty were not brawn; also came brains—fine brains, the seat of great minds. The list is too long to name them here, but Carl Schurz, Joseph Pulitzer, Jacob Schiff, Prof. Abraham Jacoby, Steinmetz, Einstein are not the lowest on the list. A roster of those whose thought, rather than their hands, helped mold this Nation to one of the greatest in the world would fill multiple pages of the CONGRESSIONAL RECORD. To this roster would be added many names besides those recorded of the Jewish race, as well as names of Irish, Scots, Welsh, English, German, French, Italian, Austrian, Hungarian, Polish, Scandinavian, Russian, and Balkan derivation.

There is much discussion these days of the alien immigrants to the United States of America and their effect on the ethical, political, economic, industrial, and employment present-day status of the Nation. Some of this discussion has been vitriolic in its denunciation of the immigrant. In order to get a true viewpoint it may be well to have a look backward at the situation as it existed in the Original Colonies and in the United States of America in the nineteenth century.

America was not settled by a homogeneous race, Nordic or otherwise. The original settlers came from many lands, nor were the English settlers in the various Colonies all of one blood and religious or political thought. Florida was settled by Spaniards, as was California and other parts of the west coast. Louisiana and the lower tributary valleys of the Mississippi were settled by the French, who also penetrated the Great Lakes region, the upper Mississippi region, and the adjacent territory.

Swedes settled in Delaware and along the Delaware River. German colonists occupied the fertile valleys of eastern Pennsylvania, where later they were joined by Scotch-Irish, Irish, English, and Welsh. Scandinavians, including Swedes, Norwegians, and Danes, took possession of fertile homesteads in Delaware, Wisconsin, Minnesota, and the then Territories west. Poles came to Pennsylvania, as did Letts and Lithuanians. New York, originally called New Amsterdam, was settled by Hollanders, Flemings, and Walloons. Massachusetts Bay and Plymouth Colony were settled by English from the southwest of England.

Maryland was settled by English Catholics, Virginia by English Anglicans. Great rivalry existed between these two Colonies, and Maryland still calls itself the Free State because of its early attitude toward liberty of conscience and thought. Georgia was founded by James Edward Oglethorpe. It became a refuge for persecuted Protestant sects, then opposed to the Anglican Church, and unfortunate debtors, but worthy classes of England. The early Georgian colonists were English, German Lutherans, Piedmontese, Scottish Highlanders, Swiss, Portuguese, and Jews.

Portuguese and Spanish Jews were among the first settlers of the now exclusive Newport, R. I., and one of the oldest cemeteries in the United States of America is the Jewish Touro Cemetery in Newport. In my district in New York is an ancient Jewish cemetery, just off Sixth Avenue, and another near the Bowery and Chatham Square, containing a few graves of early Manhattan Islanders who were Jews and settled in New York City in 1654.

Persecution is not new in what is now the United States. Witch trials were common in Salem. The ostracism of Roger Williams from Massachusetts founded Rhode Island. Virginia cavaliers harassed the Catholics of Maryland. Anglicans scouted Lutherans. Mormons were driven from Palmyra to Fayette, to Kirtland, to Jackson County, Mo., to Nauvoo, and finally established Utah under Brigham Young.

Persecution need not be physical or depend upon personal harm. It may be by ostracism, terrible to sensitive souls. It may be by boycott. It can take many forms, developed over centuries of practice by baiters of a people whose ideals are not understood by their antagonists. Persecution is not always a conflict of races. It may and has existed between elements of homogeneous races, usually due to differences in religion and politics.

History repeats itself by generations, by centuries, and by millennia. Thomas Torquemada, the sadistic inquisitor in the Spain of King Ferdinand and Queen Isabella, having driven out the Moors from Spain, turned his attention to the Jews, and, after royal consent to their expulsion, expatriated 800,000 Jewish families, who fled to Holland, Russia, the Balkans, Italy, the Dutch East Indies, Tunis, Tripoli, Morrocco, and other countries that granted them shelter. These countries of refuge profited greatly by the arrival of the new Jewish immigrants, but Spain lost her commanding position among the nations of that time and has been on the downgrade ever since. The great empire of Spain has disintegrated.

Today in Germany the same conditions obtain that did in Spain under Torquemada. Hitler is the modern Torquemada. Today the same conditions obtaining in Germany under Hitler will produce the same results that occurred in Spain under Torquemada. I repeat this to emphasize it. The next world war will destroy Germany—southern Catholic Germany will secede as a nation from northern Protestant Germany.

Civilization was said to have been thrust into Spain on the point of a Moorish lance. The famous Giralda Tower of Seville was built by the Moors and used by them as an astronomical observatory. When the Spaniards drove the Moors out they did not know what use to put the beautiful tower to, so they let it stand idle. Much of the so-called kultur of Germany is, like the culture of Spain, not indigenous to German soil, but has been borrowed from other sources, with the possible exceptions of Goethe's and Schiller's works.

Prior to 1700 Germany did not figure in the culture of Europe to the extent that she later achieved. The new Europe of the Rennaissance was born in Italy, nurtured in France, developed in England, and thence spread to the rest of Europe, Germany being the last to accept the new culture. Leonardo da Vinci, Michelangelo, Raphael, Titian, Dante, Descartes, Rabelais and Montaigne, Columbus, de Gama, Copernicus, Gallileo, and Magellan were not German. The mothers of Rabelais and Montaigne were Jewesses.

René Descartes preceded Immanuel Kant as a philosopher, and his work was of great aid to Pascal and Newton, and Descartes was not a German. Immanuel Kant was of Scotch descent. Latins, not Germans, led the way in the new civilization. Dante, Cervantes, Rabelais, Shakespeare, and the lesser authors are well known outside of their native lands, but the best of German poets, Goethe, is not read much outside of Germany. Shakespeare competes with Goethe on the German stage, but Goethe does not compete with Shakespeare on the English-speaking stage. Schiller's dramas deal more with non-German subjects than with those concerning his own nationals. Schopenhauer, Kant, and Nietsche drew their inspiration from non-German sources. German culture was influenced by foreign sources more than the culture of any other race in Europe.

Baruch Benedict Spinoza, the distinguished Portuguese-Holland Jew, has been the brilliant, gifted, dominating, intellectual figure of German philosophic culture for the past 200 years. Such talented writers as Goethe, Lessing, Schiller, and Herder were inspired by Spinoza's contributions and their works were profoundly influenced by his conceptions and ideals. Nietzsche was of Polish descent. Whenever and wherever we find Nietzsche dilating upon the superior qualities of his superman we find him always drawing his inspiration from the great foreign, oriental prophet of the Persians, Zoroaster. The great pessimist Arthur Schopenhauer was of Dutch descent and propagandized the Buddhistic-Hinduistic philosophy into Germany. His object was to replace the Biblical influence of the New and Old Testaments. Neander is universally considered the most distinguished and representative German church historian. He, too, was a baptized Jew. Heinrich Heine, the supreme lyric poet of his day, was a Jew. Karl Marx, the avatar of Soviet Russia and the author of the world famous Das Kapital, was of Jewish extraction. Wassermann, the great serologist; Ehrlich, the world's most famous biochemist; Henle, one of the greatest anatomists of his time; Albert Neisser, the greatest bacteriologist of his day, discoverer of the gonococcus and the leprosy bacillus, were all Jews.

In the realm of physics where names are comparable to the four outstanding Jewish-German physicists, such as Hertz, of the Hertzian or X-ray fame, Helmholz, Einstein, and Plank. Max Reinhardt, the greatest theatrical impressario, is a representative German member of the Jewish faith. The most important modern German poets, such as Zweig, Werfel, Hoffmanstahl, and Wassermann, are members of the Semitic race. Emil Ludwig and Leon Feuchtwanger are two of the world's most famous modern German-Jewish novelists. The three greatest German publicists of the last century, Maximilian Harden, Alfred Kear, and Ludwig Boerne, were non-Aryans, disciples of Judaism. The founder of Germany's modern merchant marine and the North German Lloyd Steamship Co. was the Jew, Alfred Ballin. The Junker Party, the great political reactionary party of Germany, was founded by a baptized Jew, Fritz Stahl. Mendelssohn is considered one of the foremost musical composers of the world; he, too, was of Jewish extraction. The greatest tenor that Germany produced in the last 5 decades was Yadlowker, a Russian Jew. One of the most brilliant statesmen

of modern Germany was the distinguished Rothenau, Minister of Foreign Affairs, who was assassinated by the Nazis. His father was the founder of the general electric industry of Germany.

A brief cursory of the facts that I have presented proves conclusively that neither German culture, so-called, nor modern German civilization are of purely German creation. German "kultur" is the cumulative contribution of the creative effort of a conglomeration of different races, religions, and peoples from all over the world, who lived in Germany and were inspired by the creative geniuses of the world to ennoble mankind by the product of their mentality.

A pureblooded German "kultur and civilization" is a myth, an aspersion, and an insult upon the intelligence of any liberal-minded citizen of the world.

The list of great ones in German history, in art, music, science, biology, medicine, and surgery, is saturated with non-German names and with countless Jewish names too numerous to mention. Because of religious bigotry, intolerance, and racial persecution by Germany's modern Torquemada, Hitler, Germany will disintegrate. Its empire will suffer the fate of medieval Spain. The Prussian-German empire will be succeeded by a German confederation based on southern Catholic Germany, as Bavaria, Saxony, and Wutenberg, united with Austria, of which Vienna may yet be the titular capital. Northern Prussian Germany, or Protestant Germany, has always been militaristically inclined. Prussian Germany has given to Germany its great warriors. It has oppressed its neighbors in war and peace. It has given to a unified Germany the autocracy of the Hohenzollern dynasty, against which Woodrow Wilson and Congress declared war. No great names in science, art, and literature have come from its bowels. On the other hand, southern Germany and the Rhineland have contributed to Germany on the altar of its culture and civilization its most eminent scholars, savants, scientists, musicians, painters, and philosophers.

After the next world war a ring of Catholic nations will surround Prussian-Hitler Germany. Catholic nations, such as Belgium, France, Czechoslovakia, southern Catholic Germany, Austria, Hungary, Poland, Rumania, and Yugoslavia, will destroy Prussian junkerism, Hitlerism, and militarism and make the world safe for free men to exist.

Mr. Speaker, ladies and gentlemen of the House of Representatives, on May 17, 1929, a distinguished, gallant, and lovable personage, a Representative of the great Commonwealth of Virginia, the Honorable Henry St. George Tucker, delivered an address in this House on the subject of reapportionment. It was a masterpiece of verbal elegance and forensic legal lore. In his peroration this brilliant scholar stated that "children from the Sons of the Covenant were never intended by our forbears to participate in the Government of the United States."

It was my privilege to respond to that address. When I concluded my remarks that great personality arose and clarified his expressions, so that no one could misconstrue or misinterpret them. It was a sublime effort, worthy of the great statesman that he was. Since that memorable occasion the Honorable Henry St. George Tucker has made his eternal pilgrimage to that "bourne from whence no traveler ever returns." To commemorate that heroic and immortal event in my congressional experience I now desire to call to your attention that address and Mr. Tucker's response thereto. Henry St. George Tucker's answer is a ringing challenge to anti-Semitism, racial bigotry, and religious intolerance wherever it may be found.

The address and response are as follows:

"Mr. Speaker, ladies and gentlemen of the House, the Commonwealth of Virginia has contributed some of the most distinguished names to the history of our Nation. Out of 56 men who signed the Declaration of Independence, 7 of them came from the great Commonwealth of Virginia.

"In the early history of our Government the Old Dominion gave four of its most eminent sons as President of the United States—George Washington, Thomas Jefferson, James Madison, and James Monroe. A quartet of famous names that have never been equaled or been surpassed by any State in the Union. [Applause.]

"Next to the founder of our country, George Washington, stands the name of Thomas Jefferson, the founder of the great Democratic Party of our Nation.

"The life and character of Thomas Jefferson symbolizes, to my mind, all the ideals and virtues that prompted our forefathers to establish this great democratic-republican Government of ours. [Applause.]

"When the Sage of Monticello passed beyond the Great Divide he left a will in which he requested that when a tombstone was erected to commemorate his memory only three sentiments should be expressed thereon: First, that he was the author of the Declaration of Independence; second, that he was the founder of the University of Virginia; and third, that he was the author of religious liberty and freedom of worship in the Commonwealth of Virginia.

"What an extraordinary trinity of ideals to which Thomas Jefferson consecrated his life. First, education; second, the right of worshiping in conformity with a man's own conscience; and third, as author of that imortal document, that great charter of human rights, worthy of God himself, the Declaration of Independence. [Applause.]

"Mr. Speaker, ladies, and gentlemen, picture to yourselves the modesty of that extraordinary intellectual giant, Thomas Jefferson, the greatest man of his day. He never put upon his tombstone that he was twice President of the United States. He never had inscribed upon his eternal shaft that he was Vice President of the United States. Never did he declare to those who might read his epitaph that he was first Secretary of State in the administration of George Washington. Nor did he state that he was ambassador of the United States to France and helped to bring to a successful conclusion the great Revolution which brought liberty and freedom to our forbears through the assistance of France in aiding the American cause in its hour of need. [Applause.]

"Seven famous names are penned to the great Declaration of Independence from the State of Virginia—George Wythe, Richard Lee, Thomas Jefferson, Benjamin Harrison, Thomas Nelson, Jr., Francis Lightfoot Lee, and Carter Braxton. Where is there a schoolboy today throughout the length and breadth of our country who has not heard of the militant Maccabean sentiments of Patrick Henry in his clarion call to the people of our Nation when he said 'Give me liberty or give me death'? Such is the contribution of the Commonwealth of Virginia to the early history of our country. [Applause.]

"A century has passed since the death of Thomas Jefferson. The great Commonwealth of Virginia has 12 distinguished men who represent that great State in the House and Senate. Let me have them pass before you in panoramic fashion as their names come to my mind. Andrew Jackson Montague, former Governor of Virginia, and named after the militant and aggressive leader of democracy, Andrew Jackson; R. Walton Moore, a descendant of Lewis Morris, the New York signer of the Declaration of Independence, and also a descendant of the Walton family, of New York, a family of merchants in the old days, one of whom was mayor of New York, and all of whom are buried in the churchyard at Trinity Church; Schuyler Bland, Patrick Henry Drewry, Clifton Alexander Woodrum, Senators Carter Glass and Claude Swanson, and last but not least Virginia's illustrious son, Henry St. George Tucker. [Applause.]

"Where is there a State in our Union that can match these names for brilliancy in their accomplishments, and for extraordinary manifestations in service to our people? [Applause.]

"For 14 decades the distinguished family of Tucker has been represented in the Congress of the United States. The original Thomas Tudor Tucker served as a Member of Congress during the administration of Gen. George Washington. George Tucker, a kinsman of St. George Tucker, our friend's great-grandfather, was a Member of this historic forum. In 1825 Thomas Jefferson appointed him as professor of moral and intellectual philosophy in the University of Virginia. Henry St. George Tucker served from 1815 to 1819 in the Congress of the United States.

"Thus we behold the picture of great-grandfather, grandfather, father, and son serving the best traditions of our people and our Nation.

"The present Henry St. George Tucker, in my humble opinion, is one of the greatest constitutional lawyers in the Congress of the United States. [Applause.]

"As former acting president of Washington and Lee University, as former president of the American Bar Association, as a Member of this House on and off since 1889, and as professor of law he is one of the outstanding and distinguished representatives of the great Commonwealth of Virginia. [Applause.] He comes from the town of Lexington, Va. Lexington that was the home of Robert E. Lee, the illustrious general and distinguished soldier of the Southern Confederacy; Lexington, Va., where that distinguished soldier, Stonewall Jackson, taught mathematics.

"In the center of that community is the city of Staunton, which is the birthplace that cradled and nurtured the greatest exponent of the philosophy of democracy, one of the greatest Presidents of all times, Woodrow Wilson. [Applause.]

"Since the inception of our Government four successive generations of Tuckers have represented the State of Virginia in the House. Henry St. George Tucker, the present incumbent, carries in his vest pocket a watch, an heirloom from colonial days, whose ticks and beats were heard by John Randolph, of Roanoke, its original owner. Edmund Randolph, of this distinguished family, was the first Attorney General in the administration of George Washington.

"Surely, with all these antecedents that I have enumerated, anything that Mr. Tucker would say on the floor of this House carries great weight. Our distinguished colleague delivered a speech in this historic forum on the 'power of Congress to exclude aliens in the enumeration of the population of the United States for Representatives in Congress.' It was a brilliant effort. A masterpiece of forensic lore. A debatable constitutional question. His main contention being that when the Constitution was adopted in 1787 aliens were not present. Therefore he infers they should not be counted now.

"As a matter of fact, immediately after the Revolution, proportionate to its population, we had as many aliens then as we have now. In our midst were the Tories, hillbillies, the Hessians, English troops, and other soldiers of fortune, who fought against our forbears in their desire to establish a republican form of government. But when the Constitution was adopted, a general amnesty was declared and everybody was permitted to participate as citizens of our Republic. That was why we had so few aliens.

"However, when the fourteenth amendment to the Constitution was passed, after the abolition of slavery in 1868, section 2 declared—

" 'Representatives shall be apportioned among the several States according to their respective numbers, counting the whole number of persons in each State, excluding Indians not taxed.'

"Surely, in 1868 we had millions of aliens then as now, and it was the intention of our forefathers to count all of its people. They left nothing to be inferred and only excluded Indians not taxed. Therefore, it is my contention that an alien is a person under the fourteenth amendment to the Federal Constitution, and should be included upon the basis of fixing representation, excluding only 'Indians not taxed.' As a matter of justice, all the people living in our country are aliens or the descendents of aliens. The only true Americans are the Indians, whom we have deprived of their land and even disfranchised by not permitting them to vote. [Applause.]

"While we are on the subject of the aliens I would like to state that there are 45,000 people in the United States today who are the sons and descendants of former alien immigrants, who, since their entrance into this country, have contributed to our happiness, glory, and prosperity in times of peace and have fought upon every battlefield in defense of our country in times of war. For almost 100 years these aliens, through their sweat and blood, have helped to build our great American railroads, have perfected our great American industries of steel and iron, have worked in the mills, in the looms, and in the factories. They have gone down into the bowels of the earth to bring forth the hidden mineral resources of our Nation, have dug the subways, have built the great skyscrapers and dwellings, which have made our Nation and our people the most wonderful, the most respected, and the richest of all the world. [Applause.]

"Directly in front of the home of the President of the United States there are monuments on each corner erected to perpetuate the name and fame of five aliens who gave up everything they held near and dear to help our colonial forefathers establish this mighty Republic of ours.

"Pulaski, a Polish count, who organized the Foreign Legion, marching these soldiers through Maryland, Virginia, North and South Carolina, fighting all the way for our cause, until he fell wounded in the Battle of Savannah and was buried at sea. Gen. Baron von Steuben, the great German strategist, who trained and disciplined the American soldiers at Valley Forge and made it possible for Washington to win his subsequent victories. Rochambeau, the great French soldier, who, in conjunction with Lafayette and Washington, was responsible in lowering the colors of Cornwallis at Yorktown, that brought victory to the arms of America. Kosciusko, the great Polish engineer, who designed and built West Point and was wounded at the battlefield of Saratoga, that caused to bring about the defeat of Burgoyne. And last, but not least, the distinguished and gifted General Lafayette, who brought the aid of the French people to the cause of the American Revolution, that made success possible. Everywhere, throughout the length and breadth of our land, there are humble shafts that commemorate the lives of these alien immigrants who worked for our happiness in times of peace and were ready to die for our Republic in times of war. [Applause.]

"Mr. Speaker, ladies, and gentlemen, my purpose in addressing the House today is to take exception to the peroration of my distinguished colleague, Mr. Tucker. In his concluding remarks he said "aliens from the commonwealth of Israel and strangers from the covenants of promise were never intended to be given participation in the Government of the United States." If this figure of speech, this Biblical sentiment of Mr. Tucker, were literally interpreted, exclusive of its text, it would cast aspersions upon one of the most patriotic and loyal group of citizens in our country.

"Since no religious test is required by our Constitution to hold public office to serve our people, why pick out one group of people and say 'aliens from the commonwealth of Israel and strangers from the covenants of promise were never intended to be given participation in the Government of the United States'?

"Let me tell my colleague, Mr. Tucker, who these strangers from the covenant of the land of promise are.

"For 25 centuries these covenanted people from the land of promise have been persecuted and been proscribed. They have been pillaged. They have been plundered. They have been burned at the stake. They have been driven from the land that God covenanted as their own. As wanderers in the world, they have gone through pogroms, massacres, and inquisitions; and while all these monarchies, emperors, and others who have persecuted them have been forgotten in the ashes of time, these aliens from the commonwealth of Israel lived on, and will continue to live wherever the influence of civilization and humanity exists, because Judaism stands for three ideals that it has preached from the time of Abraham. First, the belief in one ever-living God. Second, the belief in the inspiration of the Holy Bible containing within it the Ten Commandments given by God to Moses on Mount Sinai. Third, the belief in the immortality of the soul. For these reasons the Jewish race will and must continue to live. [Applause.]

"When the Assyrian king destroyed the commonwealth of Israel, many of these people settled in Phoenicia. Prior to the Christian era the Phoenicians were the Yankees of the East. Living near the forests of Lebanon, they hewed down the trees and converted them into ships. They settled in Greece, the lower part of Italy, and particularly Venice, which is called Venetia, derived from Phoenicia, and Carthage.

"As their ships plowed through the Mediterranean and through the Straits of Gibraltar, they went to England. There they went down into the mines and brought back tin, which they used to alloy copper, and were among the first bronze makers of the world. It was these Phoenicians, the most civilized and cultured people of their day, who called England British. The term 'British' comes from two Hebraic words, 'b'rith,' which means covenant, and 'ish,' which means son. Therefore 'British' means the covenanted son.

"In 1492 two of these sons of the covenant, Spanish Morranos, Louis St. Angel and Gabriel Sanchez, gave 20,000,000 maravedis, which amounts to about $200,000, to Queen Isabella to finance the expedition of Christopher Columbus. On the three ships, the *Pinta*, the *Nina*, and the *Santa Maria*, that set sail with Columbus for a northwest passage to Indian were 108 men; 18 of them were Jews—sons of the covenant. Dr. Maestral and Dr. Marco were physician and surgeon, respectively, on the ships. Rodrigo Sanchez was superintendent of the vessels. The first man to sight land was Rodigro de Triana. The first man to set foot on American soil was Louis de Torres, whom Christopher Columbus took along with him to act as interpreter with the Grand Kahn of India. All these men were of Jewish extraction. Jehuda Cresques, a Jew, was the man who perfected the compass for the first time that made it possible for Columbus to sail away from the harbor and guide his destiny. Abraham Cecuto presented Christopher Columbus with the astronomical charts that made it possible for him to follow the North Star and wend his way westward. So you see, fellow Members of the House, it was aliens from the commonwealth of Israel who not only financed the expedition of Columbus but were present with him in those strenuous and frightful months that he must have gone through ere he discovered this wonderful country or ours that our forefathers and divine Providence decreed should be the haven and home for all the oppressed of the world. [Applause.]

"When Washington was at Valley Forge and the cause of the American colonists looked helpless and hopeless, General Washington sent his emissary to one of the sons of the commonwealth of Israel in the person of Haym Salomon, who was an immigrant from the city of Lodz, Poland. Mr. Salomon was one of the richest men of his time. He took out $675,000, all the money he had in the world, and sent it to General Washington to help our colonial forbears. For this act of generosity a servant betrayed him to the British. He was imprisoned, court-martialed, and sentenced to be hanged. Haym Salomon died in prison, but his money helped to save the cause of the American Revolution. This money was never returned to his wife and children, who were left penniless.

"In the city of Charleston, S. C., in 1777, Col. Emanuel M. Noah gathered together 100 sons of the covenant who fought under the leadership of Captain Lushington, with General Moultrie as their presiding officer, all throughout the American Revolution. Since that time the children of Israel—first, last, and all the time true American citizens and patriots—have contributed to every line of human endeavor to make our Nation the greatest, the most glorious in the world. In science, in art, in literature, in philosophy, in journalism, in medicine, in law, in jurisprudence, in banking, and in statesmanship the Jew has contributed his all upon the altar of our Nation. In every war, from the American Revolution, the War of 1812, the Mexican War, the Civil War, the Spanish-American War, the allied war, Jewish blood has saturated and hallowed the soil of our country and of Cuba, the Philippines, and France that our institutions might be preserved. [Applause.]

"I appeal to you, Mr. Henry St. George Tucker, an illustrious citizen of the State of Virginia, distinguished Member of the greatest representative body in the world, the Congress of the United States, to name any group of citizens within the confines of our country who are more loyal, patriotic, sincere, and devoted to the institutions of our Nation than are the children of the covenant, the Jewish people. [Applause.]

"During the Civil War your sainted father was a soldier of the Confederacy. During the darkest hour of this fratricidal war Judah P. Benjamin, a son of Israel, was attorney general, secretary of state, and secretary of war of the southern Confederacy. He dined in your home and took from his back his own coat to give to your honored father. You have served in the Congress of the United States with many men who were members of the Jewish faith, such as Isidore Strauss, who was your devoted friend and broke bread in your home.

"In view of the respect and regard that everyone has for you, Mr. Tucker, I contend it is your privilege, nay, I should say it is your duty, in justice to your name and fame, to define what you meant when you said that, 'aliens from the commonwealth of Israel and strangers from the covenants of promise were never intended to be given participation in the Government of the United States.'

"[Applause.]

"I yield now, for a reply, to my friend from Virginia [Mr. Tucker]. [Applause.]

"Mr. TUCKER. Mr. Speaker, I have been greatly distressed to learn from my eminent and distinguished friend from New York [Mr. SIROVICH] that the remark made by me in what was a legal argument has been construed by some a reflection on the great Jewish race. It gives me pain. I know that there is no man who knows me who will say that I ever could have been guilty of such a thing.

"Mr. Speaker, I would be false to the tenderest memories of my life, I would be false to some of the most ennobling companionships of my life if I could ever, by word or act, say or do anything to reflect upon the great Hebrew race. [Applause.]

"All through my argument I spoke of aliens as "unnaturalized foreigners"—applying to all races. This was a mere figure of speech and in no sense was it intended to diminish the accomplishments of the Hebrew in the march of human progress in science and law, in philosophy and theology, and in the highest development of family life known in American life.

"I thank my distinguished friend, Dr. WILLIAM IRVING SIROVICH, for giving me this opportunity to explain the expression used by me in the close of my speech referred to by him. I deeply regret that anyone has seen in that phrase any evidence of any intention to disparage or criticize the Jewish race. Nothing could be further from my thought. No act or word of mine would ever be so construed by you who know me. To do so I would have to forget some of the sweetest friendships and most ennobling associations of my life with Hebrews. The words used were from the Apostle Paul—it was his language, not mine.

"Mr. Speaker, I desire to reiterate, in closing, my profound respect for the citizenship of our Nation of every race and creed, and especially for those of the Jewish race. [Applause.]

"Mr. SIROVICH. In behalf of the Jewish race I want to thank you for the manly way in which you have corrected the sentiment that you have expressed and for the great regard and respect that you have for the citizenship of the Jewish race.

"In this country we pledge allegiance to one flag and to one Nation. As an American, I extend to you, Henry St. George Tucker, the hand of brotherly love, and sincerely hope that you will live far beyond the Biblical threescore and ten in happiness and in contentment with your people.

"Within the great Liberty Bell in Philadelphia there is a sentiment taken from the Third Book of the Holy Testament which says: 'Proclaim liberty throughout the world, unto all the inhabitants thereof.' When that bell rang it spread liberty and freedom to all the people of our country. Your manly and courageous sentiments today will bring happiness and contentment to the descendants 'from the commonwealth of Israel and strangers from the covenants of promise.' [Applause.]"

Mr. Speaker, all religions are the result of the accident of birth, place, time, and circumstance, modified by the racial tendencies of the peoples among whom the worship arose. The solitary Jehovah of the Jews, the Trinity of the Christians, the polytheism of the gods of ancient Greece, and of surviving Buddhism and Brahmanism; Mohammed, the prophet of Moslemism; Confucius, the analector and interpreter of ethics; the Code of Hammurabi; the Great Spirit of the North American Indian; the many gods of the Mayans, Toltecs, and Incas; Mithraism, Molochism, idolism, fetishism, totemism, and all the varieties of figure worship had their beginning and continued being in the search of many peoples for knowledge of a Supreme Being, of an All-Powerful One, Omnipotent in all things, as revealed to them by one or more prophets of their own race or adjacent races. That such conditions continue to exist through millennia indicates that the true God cares little about the form of worship, over which mankind has fought so long and bitterly. Bigotry and intolerance are solely human characteristics and have no place in the truly divine scheme of things. The true God is so tolerant that it behooves humanity to imitate this quality of godliness. Let every true American, therefore, be ever ready to offer up everything he holds near and dear in life to bring about racial tolerance to all, through the brotherhood of man and the fatherhood of God.

National-Defense Policy

EXTENSION OF REMARKS

OF

HON. HIRAM W. JOHNSON

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 21 (legislative day of Thursday, March 16), 1939

RADIO ADDRESS BY HON. H. STYLES BRIDGES, MARCH 16, 1939

Mr. JOHNSON of California. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by the Senator from New Hampshire [Mr. BRIDGES] on the radio program of the Town Hall of the Air on March 16, 1939. The subject of the address is What Should Be Our National Defense Policy?

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WHAT SHOULD BE OUR NATIONAL DEFENSE POLICY?

Congress is now considering the largest peacetime defense program ever undertaken by the United States. In the minds of both the House and the Senate, and surely in the minds of the American people, this vast armament outlay is to provide adequate defense for our country. Its basic purpose is to insure peace and, failing in that, to provide a stanch bulwark of self-defense.

I am of the firm opinion that the American people want peace. They will go to great lengths to prevent the sacrifice of American lives on foreign battlefields. They understand fully the lesson of the last war. They have not forgotten that thousands of our young men were killed or wounded. They have not forgotten that billions of dollars were lost in property destroyed and repudiated debts. The last great war resulted in disillusioned lives, broken bodies, and the great depression—a sure price for such a conflict. America cannot afford again to pay such a price. Now, what defense policy and what foreign policy should we adopt? What is the surest means of maintaining peace with the rest of the world?

I realize that we cannot stick our heads in the sand and pretend that occurrences in Europe and Asia are no concern of ours. I am not an isolationist in the sense of one who believes that the Atlantic and Pacific Oceans are sure protection, and therefore we can let the world explode around us. Science has robbed us of the protection of nature. Neither am I an internationalist in the sense that it is the best policy to aline ourselves with foreign nations and be part and party to their plots and plans. Our defense policy should be hemispheric in scope. The democratic ideals of the North and South American Continents should be our charge. But the Western Hemisphere should be our limit. I am unalterably opposed to our country's sticking her nose in the business of Europe and Asia unless the safety of our own democracy is challenged. I am convinced that a safe-sane defense policy should be one that is based on no entangling alliances, no understandings, no commitments, and agreements by which we could be drawn into the controversies of Europe. We are after a defensive defense policy, and as such we must have a defensive foreign policy. We cannot go traveling around the world trying to settle the boundary disputes of Europe, Africa, and Asia, which have been constantly going on for some 25 centuries. If we do, we are going to get our fingers burned.

Great confusion exists in the minds of our people as to the present foreign policy of the United States. I am not trying to inject partisanship into this debate because the issue is too important. We should leave politics at the water's edge. It is evident, however, that the confusion in the minds of many is caused by the President himself. Let me give you a few illustrations of his inconsistency.

In 1936, speaking at Chautauqua, N. Y., he said: "We are not isolationists except insofar as we seek to isolate ourselves completely from war."

In 1937 he said in Chicago: "When an epidemic of physical disease starts to spread the community approves and joins in the quarantine * * *."

In his opening address to Congress last January he said: "There are many methods short of war, but stronger and more effective than mere war, of bringing home to aggressive governments the aggregate sentiments of our people."

Following his congressional address of last January the President indulged in the ill-fated secret airplane deal with France. At a closed meeting with the Senate Military Affairs Committee the President attempted to explain the deal and outlined to the committee his foreign policy. Three days later at a press conference he released a statement which contained the following: "We are against any entangling alliances, obviously." This policy was far different from the policy that he had outlined to the Military Affairs Committee.

The President is the spokesman of the Nation. His word in these vital matters of foreign policy may lead to war or peace. What assurance have we that in another month or so he will not come forth with a new foreign policy? His periodic changes in foreign policy are very dangerous not only to the peace of mind of the American people but to the very safety of the country.

Americans as a whole are opposed to the dictator powers; our sympathies are naturally with England and France. On the other hand, I do not believe it to be the duty of this country to thrust itself into the internal workings of foreign governments and dictate, using methods "short of war," how they should be run. The intrigue of European diplomacy has not changed. Let us not be under any illusions. The "have not" powers are after some of the territory which the "have" powers now hold. England and France and the so-called democracies are in our favor only by comparison.

The American public is being subjected to the greatest campaign of high-pressure propaganda ever to take place in our history. This so-called "method short of war" policy that we are being talked into is dishonest. Unless we are prepared to go the whole distance, which may mean war, such a policy misleads the very nations which we favor in Europe today. Refer to the recent Munich pact, out of which grew the present appeasement doctrine adopted by the democracies of Europe. Does anyone suggest that if the United States gave assurance of military aid to back up England or France last September Germany would not have marched into Czechoslovakia? We know now, or at least we have reasonable assurance, that the German dictator was not bluffing. He had the men and the planes. The French people and the British people did not want war. They were willing that Czechoslovakia should pay the price for their peace. A hundred and fifty years ago Poland was carved up to keep peace. This carving up of minorities and little countries is nothing new.

It is the American form of government which we must protect and which we would not be protecting if we were to inject ourselves, using "methods short of war," to police every European scrap. Our defense policy must be built upon a foundation of self-defense. The Monroe Doctrine is an element of self-defense. The protection of the Panama Canal is an element of self-defense. The maintenance of military and naval stations in the Hawaiian Islands are elements of self-defense. Contrast this with the policy of "collective security." What is collective security? It is a policy by which the United States would practically guarantee the Governments and territories of France and England and others—guarantee them with the lives of American boys. Is that the

policy we want? Let us understand this means war. If we adopt it as the best way to secure peace we merely fool ourselves. The French and British are not following this policy of appeasement because it is the ideal policy. They are following it because it is the best practical policy. The United States should formulate a defense policy based upon the farewell address of our first great President, and abide by it, not because it is the ideal policy but because it is the best practical policy which will insure peace to our people.

I maintain we should not flirt unless we are serious. We should not make even temporary alliances. We should not place the frontier of our country abroad unless we are prepared to go to war. Some condemn me for taking issue with the President's secret airplane deal with the French. The actual sale is not the issue. We will sell planes and we have sold planes to anybody. The secrecy of this deal caused distrust and fright on the part of great numbers of our people. Although the President assured us that our policy was to avoid entangling alliances, we found we were engaged in undercover deals in implements of war and the disclosure of military secrets to a foreign country, this particular deal being discovered only by accident. Make no mistake—foreign governments judge us by our actions as well as by our words.

The whole subject of America's defense policy must be based on reality. Let us be honest with ourselves. Let us look through this propaganda. Our country today is rampant with propagandists. The followers of Hitler hold a meeting in Madison Square Garden to tell us of nazi-ism. Outside crowd thousands of followers of Stalin who would break up the meeting of the Nazis only to impose upon us the ideology of communism. If we spent more time cleaning out the rats within our own house, we would be better able to protect our country when the time came.

We must have an army, a navy, and an air force to protect our Western Hemisphere. The dictators know we may bluff about rushing about giving aid to warring nations abroad. But they know we do not bluff in maintaining a self-defense policy for North and South America. Actual visible instruments of American war power prepared to defend this country will do more to discourage aggression than all the plots and plans of diplomats put together. Let the marching men and the medals and the bugles and the drums and the phony salutes stay abroad. Couple an adequate defense program with a workable neutrality act and pass legislation to take the abnormal profits out of war and we shall have a practical defense policy that will go a long way toward insuring peace for our country.

Americanism

EXTENSION OF REMARKS

OF

HON. EDWARD R. BURKE

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 21 (legislative day of Thursday, March 16), 1939

ADDRESS BY HON. MILLARD E. TYDINGS BEFORE THE ELKS' CLUB OF BALTIMORE, MD.

Mr. BURKE. Mr. President, I ask unanimous consent to have inserted in the RECORD a patriotic and stirring address on "Americanism" delivered by the senior Senator from Maryland [Mr. TYDINGS] before the Elks' Club, in Baltimore, Md., on March 16, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Ladies and gentlemen, we are living in an age of restlessness and change in the field of governments. In many countries old philosophies and methods by which governments are administered are being discarded and strange and out-moded philosophies and methods are being substituted therefor. The trend in many nations is against democratic philosophy. Indeed, the very foundations upon which rest human life are being torn up and reconstructed with breathless rapidity.

In Europe many of the leading nations have had two or three different styles of government since the World War began. Some of these changes of government have been accomplished by armed revolution. Propaganda, economic pressure, and threats and resort to arms are widely employed by nations seeking to improve their own economic well-being at the expense of other nations or to force their own peculiar philosophies and ideologies on weaker nations.

International law, international traditions, and international morality are being abused and assailed on every hand. The people of the world stand stunned before the rapid course of events. In many powerful nations the millions of humans have their lives directed by a single man. What such a man says is law. Attempts at petition or of protest meet with death or imprisonment for those who complain. In many of the countries the masses of the people are unrepresented and inarticulate. There the conception of government is that men exist for the government and not that the government exists for men.

All of these circumstances cannot help but cause us some concern. We are impressed by what is taking place in other countries. We find our citizenry growing more and more alert to the ominous possibilities of the future. We realize, more and more, that our own philosophy of government in the United States, our time-honored institutions and traditions are being challenged from within and without. We must meet this challenge. If reason guides our actions and experience our thoughts, I believe that we shall meet it successfully, and the constitutional democracy of the United States of America will not be overthrown in the years that are ahead.

Because we believe that our system of government is the best in the world; because we believe that it transmits more of economic well-being, more of freedom, more of opportunity, more of humanity to the men, women, and children of our country, by comparison with the government of any other nation on earth, we are anxious to assert the virtues of our national government in order that it may be preserved in this time of international turmoil.

That is why we are assembling here tonight to present the record to show the things which America possesses which the people of other lands, with different philosophies of government, do not possess.

We call our particular form of government, the political institutions of our Nation, and the opportunities, rights, and liberties of our people, Americanism. It is a way of life as well as a system of government. Americanism is antipathetic to dictatorship. Here our people are free. Under dictatorial forms of government people are not free, for there they are denied the rights, opportunities, and liberties which we have.

In dictatorial forms of government men are the servants of their governments. In the United States of America they are the masters of their Government. In dictatorial countries men exist for the state. In the United States government exists for men, so it may promote and safeguard their welfare and freedom.

In dictatorial countries the people live under the government of a single man. In the United States the people live under a government of laws made by their own duly elected representatives. In reasserting the great value of our free institutions which we call Americanism, it is well for us to look back over the pages of history and, to review the long struggle of men to be the masters of their own destiny, to have the God-given blessings of life and of liberty and the pursuit of happiness, the struggle to be free and to live among their fellows in security and without fear, which only came into full flower when our country was born 150 years ago.

Let us go back to the time of Athens, to a period some 500 years before the birth of Christ. Then men were beginning this long struggle which was not crowned with success until it was won and safeguarded in the Declaration of Independence and the Constitution of the United States written some 2,500 years later.

In the day of Athens sincere friends of freedom were rare. Yet even then people with no freedom or history to rely upon were groping for liberty.

In the early days of Athens the cruel domination of class over class, the oppression of the poor by the rich, and of the ignorant by the wise, was the order of the day. From this degradation Athens lit and held on high, the torch which has since guided man on the road to freedom.

In early Athens a wise man name Solon was appointed to revise the laws of the country. To the rich Solon gave a voice in the government commensurate with the burden of public service in taxes and war which this class bore. The poorer classes as before were excluded from holding public office. However, Solon gave them for the first time a voice in electing their magistrates from the classes above them. This novelty introduced the idea that men ought to select those upon whose wisdom they were compelled to rely for the preservation of their property and families and their lives. Thus democracy was born in a small way 25 centuries ago. By making every citizen the guardian of his own interest, the element of democracy was first introduced. Solon stated boldly that no governing authority was to be entirely trusted and he subjected all who exercised the power of government to the vigilant control of the persons they governed. He diffused power by placing some of it in the hands of the people. This was the beginning of our present representative form of government.

When in the Persian war the services of the masses far eclipsed those of the upper classes, particularly upon the sea, new influence and new privileges were given to the masses of the people. The offices of state, which had been a monopoly of the select few, were thrown open to the people as a whole and the people came into a larger measure of representative government, and with it more opportunity, liberty, and security.

Always men felt dimly that they were the creatures of Almighty God and not the creatures of the state.

After democracy was first put on trial its faults became apparent gradually, too. Men found it was bad to be oppressed by a majority as they had found it bad to be oppressed by a minority. But a start was made and men began to think of government as something that belonged to them and not as something to which they belonged.

From the remarkable beginning at Athens the struggle for freedom next had its seat in Rome. The Romans proved to be a practical people. Then, too, they had the history and the precedents of Athens to draw upon. Thus they began to combine the lessons

of experience and history with their desire for changes in government. Their progress was slow, but because progress was slow it was generally sure in the strength of its foundations.

Due to a long period of war the masses of the people were reduced to dependence upon the rich or upon the charity of about 2,000 wealthy families who really owned most of the state. Wise men sought to induce the rich to allot some share of the public lands to the common people, but the rich resisted.

The character of the common people became sterner in this dispute, although the fight was carried on with comparative moderation. At one time there were 320,000 people dependent upon public rations for food.

In this situation Julius Caesar, supported by the army which he had led in a career of successful conquest, and by the impoverished masses, seized power, and he immediately through the medium of the law was wise enough to accomplish the transformation by a series of measures which were moderate and not injurious.

Eventually the right of Roman citizenship was extended to the people of the provinces. A roman civil law system was devised and set up. As Rome progressed religious toleration of a sort came into being and the real beginning of the laws of nations was made.

Curiously enough, the republic which Caesar had overthrown was less democratic and less free than the monarchy which supplanted it, and the Romans, too, learned the lesson that it is more important to regulate the power of government than to regulate liberty, for they found that under a regulated government liberty flourished and grew. Gradually the Romans evolved a mixed constitution as they pioneered for freedom. That constitution is different from our modern conception of a constitution. It sought to give the people, however, a maximum of democracy, but with such restraint that democracy could not injure the minority or destroy itself.

In a way the Romans blended monarchy, aristocracy, and democracy together, and, considering the slender experience of the past, made decisive progress toward the fuller democracy and constitutional government which we enjoy in America today.

Then, too, the Romans distributed much power among the several parts of the state in the form of local self-government. This acted as a restraining influence upon the central or national government. By extending the principle of local self-government, there was a diffusion of political knowledge and a maintenance of healthy and independent opinion.

So from the early beginnings at Athens to the height of Rome's grandeur men were beginning to achieve freedom. The masses were admitted to citizenship. The masses not only had their duties to government but had won their privileges and rights from it. A beginning of religious toleration was made. A beginning of local self-government took place. Government was beginning to exist for the benefit of men and not men for the benefit of government. Men secured more of their rights, had their voice in national policy, and the seeds of democracy planted by Solon and Athens were growing in the fertile soil of democratic Rome.

Following the decline of Rome and the rise of western Europe the struggle for more and more freedom and more and more representative government met many defeats, but the urge that men were the creatures of God and not of the state still throbbed in the hearts of many men.

In the Middle Ages the institution we call parliament or congress got a firmer foothold, although it was composed of people from a selected class for the most part, rather than from and by the whole people.

In the year 1215 the barons at Runnymede induced King John to define the rights and liberties of mankind. These were exhibited and agreed to in the Magna Carta for that country. Freedom was consolidating its gains and men were continuing their struggle to put the rights of men beyond the touch of any constituted government.

Following the Middle Ages, in the seventeenth century, the Habeas Corpus Act became a part of the law of the land. Formerly it had been possible for monarchs to throw men into prison where they might languish, suffer, and die. But after the Habeas Corpus Act was enacted, it was possible for any other citizen to go into court and demand that the body of the imprisoned citizen be produced as well as an airing of the charges upon which he was incarcerated.

Of course, during all these struggles of the Middle Ages, wars between nations went on. Countries vied with each other for the influence and support of the clergy, of the feudal lords, and connived with each other for the acquisition of the territory of other nations.

The impetus given to freedom in Athens and Rome was not wholly arrested, for looking back over the space of 1,000 years, which after Rome we call the Middle Ages, we find the following more firmly embodied in the lives of mankind:

Representative government was almost universal in one form or another; election methods were, of course, still crude, but elections were held nonetheless; the principle that no tax would be lawful that was not consented to by the class that paid it; that the right to tax the people was inseparable from their right to be represented in government; in short, not a penny of tax could be levied without the consent of the people or their representatives. The institution of slavery practiced by the ancients was almost everywhere extinct; and the absolute power of rulers over men was held to be a wrong little less than slavery itself. The right of the people to insurrection against government was both admitted and defined. The rights of mankind had been blazoned forth in Magna Carta. Agitation for the Habeas Corpus Act was already under way. Governments consisted of a system of states in which authority was restricted.

However, it was a period of great religious intolerance, a time when kings offered huge sums of money for the murder of an enemy, when kings declared which religions were legal and which were illegal, usually with the idea of making the dominant religious faith a support to their own continuance in power. By royal command, one nation in a single generation passed four times from one faith to another.

These acts on the part of monarchs were but the result of the restlessness of men desiring a greater voice in their government and greater safeguard for their rights and liberties.

Mainly from the intolerance of one religion toward another, hundreds of people left the countries of Europe during more modern times to come to America in the quest for what they had been denied at home, and because quite frequently the nations of the Old World had abandoned the fate of the people to an authority it could not control.

From the early settlements States grew and Provinces were fashioned, and here in Maryland religious liberty became a part of our early Government. The old idea that taxation and representation were inseparable likewise was carried to these shores, and the conflict between the ideas and oppression of the Old World and the ideas and liberty of the New World found expression in the Declaration of Independence and, after the Revolution, in the Constitution of the United States of America.

Since our country was born 150 years ago we have realized and consummated the struggle that began 2,500 years ago in Athens. Moreover, we have safeguarded what has been won through all these centuries in the Constitution of our beloved country. No President and no Congress may take away from men what thousands of men and women have died to win for you and for me.

Now, let us see what Americanism is, in the light of the struggle which I have briefly outlined and as portrayed in the Constitution of our Nation. These things are Americanism: First, a government of limited powers, of three branches—the Presidency, the Congress, and the courts. Congress has certain limited powers; the President has certain limited powers; and the courts are the umpires which see that neither the Congress nor the President exceed the powers given them by the people.

Ours is a representative Government. No man holds legislative office except by direct election by the people themselves and then only for a limited term. Congress can make no law, under our Constitution, respecting the established religion. By law, man can have any religion he cares to embrace in this country. Congress can pass no law prohibiting the free exercise of religion. It cannot abridge the freedom of speech. It cannot take away the freedom of the press. It cannot deny to the people the right to peaceably assemble and to petition the Government for the redress of grievances.

Our Constitution provides that the people shall be secure in their persons, their houses, their papers, and their effects against unreasonable searches and seizures; that no man can be arrested except upon probable cause, supported by oath or affirmation; that no man can be made to answer for any infamous crime unless he is indicted by the grand jury; that he cannot be tried twice for the same offense; that he cannot be compelled in any criminal case to be a witness against himself, nor be deprived of life, liberty, or property without due process of law; that he shall have the right, when charged with an offense, to a speedy and public trial by an impartial jury from the State in which the crime was allegedly committed; that he must be publicly confronted with the witnesses against him; that he cannot be held in prison awaiting trial without being given the opportunity to put up bail; and that cruel and unusual punishment shall not be inflicted upon a citizen.

These things are the warp and woof of Americanism and set the Government and the life of our people far apart from the governments and lives of people in other countries. Our rights are defined. No one man or group of men can take them from us. Our Constitution defines them and preserves them for you and me and the courts—which are independent of the executive and legislative branches of our Government—are there for us to appeal to if there is need.

We have the right to say who shall make our laws, and the conditions under which these laws shall be made, and the limitations surrounding the making of laws.

We have the right to worship God as we see fit, to speak out, to print what we desire to print, to petition our Government for the redress of grievances, without fear of prison camps or death; to enjoy the security of our homes and our families; indeed, to sum it all up, to be free men.

In the United States we have asserted that we are the creatures of Almighty God, that our Governments, State and National, are set up to protect our liberties, our freedom, our rights, our opportunities, and our privileges, and that governments cannot infringe upon these things.

These things are Americanism. These are the things which have grown from the little seed planted at Athens, which continued its growth through the various governments of Rome, survived the persecution and blighting influences of the Middle Ages, started to bud with Magna Carta and the Habeas Corpus Act, and came into full flower in the definite provisions of the Constitution of the United States.

These things are Americanism, may I repeat; and who is there with soul so dead who does not with these privileges feel a glow of inner satisfaction that he is of and in a country where freedom

does not depend upon the whim of some one man, but rests secure in the Constitution of his country, under a representative form of government of limited powers, with the final power in all things residing in the people themselves.

Shame on those who would retreat from the high state we have won for ourselves in this land. Shame on those who would destroy the religious freedom which Americans enjoy. Shame on those who would supplant a constitutional representative democracy with the rule of a dictator, whose acts we could not foretell or know. Shame on those who, being citizens of the United States, profess a love for foreign lands which seems at times to be greater than their love for America, and double shame on those who, enjoying the fruits of the struggle of martyrs and patriots who have died through all the ages, would set their sufferings and sacrifices at naught, and walk backward to the days of oppression, gloom, and hardship, when men were little more than dumb animals, whose lives, employment, and conduct was subject to the order of cunning rulers, more interested in preserving and extending their own power than in furthering the welfare of the masses of the people.

I have no fear, my friends, that any man on the face of the earth can prove by fact or logic that, taken all in all, there is any government beneath the sun which gives to its people more opportunity, more humanity, and more freedom than our own system of constitutional government gives to them.

Why, then, do we find here and there these groups that advocate change? Why, then, would they take us backward to the slavery of the centuries that are dead? They are too avaricious in seeking by revolution, by blood, the fruits which they are unwilling to win by toil. They embrace a conception that the rights of mankind are not God-given but are to be subjected to the whim of some other man. They would supplant the code of laws with the policeman's club. They would supplant the Ten Commandments with armed force, God's plan with man's plan.

And, finally, remember that America is the oldest continuous Government on the face of the earth today, and, incidentally, the greatest land on the face of the earth today. For, since we came into being as a nation 150 years ago, the governments of all other countries have gone through violent and contradictory changes. We have existed because we have won and safeguarded in the United States the rights of mankind, where we have set up a government of, for, and by the people, under a constitution limiting the powers of our rulers, while preserving to each individual the inalienable and God-given blessings of freedom.

Here we have exalted individual man, diffused the widest measure of local self-government, and in the main realized in its highest perfection the ideal of liberty for which thousands have died in the past that we, their heirs, might enjoy this happy state of being.

That there will always be some imperfections in our Government, it being a human institution, is inevitable. But compare it with any other government and its imperfections are small and of little consequence.

Let us, then, rededicate ourselves to the principles and tenets of our country, its ideals and its blessings, which we call Americanism. Let us be conscious of the fact that here is one of the few remaining spots on the face of the globe where men are the masters of their destiny. Let us reconsecrate ourselves to preserving the free institutions of our land, confident in the belief that by so doing we will make the next 150 years of our history even more remarkable than the 150 years that are behind us.

We make no mistake when we set aside a day from time to time to examine our inheritance, for as we examine into all the long dim past we, like those who have gone before, learn the truth, and the truth has made us free. This truth causes us to pledge our allegiance to our Constitution, our philosophy of government, and to the flag of our country, and to make us proud that we are citizens of the United States of America.

Town Meeting

EXTENSION OF REMARKS

OF

HON. H. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Tuesday, March 21 (legislative day of Thursday, March 16), 1939

EDITORIAL FROM THE HANOVER (N. H.) GAZETTE, MARCH 9, 1939

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Hanover (N. H.) Gazette, of the issue of March 9, 1939, entitled "Town Meeting."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Hanover Gazette, March 9, 1939]

Before another publication of this local newspaper, the electorate will have met under the auspices of a pure democracy, and expressed themselves fully and completely, we hope. They will at least, have had the opportunity. In reality, most of the town's business will have been considered and judged long before the meeting and close observation will reveal directed moves and motions. This is as it should be. Town Government has become too complicated to permit it to spring from the head of "Jove," or Farmer Brown on the day he tunnels his way through the mud into town.

There are other reasons for predigestion of facts and figures. In effect town government is one of the quintuplets puddling around with the county, the State, the National Government, and alphabet soup. One needs to have a bowing acquaintance with the family to become oriented in the scheme of things. Strained expressions will indicate a variety of headaches when explanation is being given of interrelated, participating tax appropriations. It cannot be helped. It is influenza on a national rampage. Some of the doctors will say that it is inevitable and try to make a case. In doing so, they will tell you to build the bridge, since the State or the alphabet is in on the deal, and the town contributes only a "bag-of-shells." This beats the rubbing of Aladdin's lamp, by several nautical miles.

The skeptical gentry, however, are difficult to sell. Some of them keep books. They have an income account, an inheritance account, an interest and dividends account, an incorporate income account, a social-security account, a stock-in-trade account, a gas-tax account, and, on page 1492, the accounts are still indicated. It is volume 1, with others coming up. In fact, every time these voters see a white-collared stranger coming up the street with a brief case, they groan with Washingtonian neuritis and grab another tabular sheet. The pain is accompanied by a high temperature and, historically speaking, is known to be very dangerous.

Translated into terms of "town meeting day," the democratic formula is anemic. In certain communities easy money has already robbed the town of its essential character. The spigot is still open, but the day of reckoning is not far distant. When it comes a good dry cave will be a nice place to live.

The Epidemic of Hatred

EXTENSION OF REMARKS

OF

HON. LYNN J. FRAZIER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 21 (legislative day of Thursday, March 16), 1939

RADIO ADDRESS BY DR. HARRY EMERSON FOSDICK, FEBRUARY 19, 1939

Mr. FRAZIER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address delivered by Dr. Harry Emerson Fosdick on February 19, 1939, on the subject The Christian and the World-Wide Epidemic of Hatred.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE CHRISTIAN AND THE WORLD-WIDE EPIDEMIC OF HATRED

We are living in the midst of a world-wide epidemic of hatred and nothing is more contagious than that. The Japanese ransack the Chinese with unbridled fury; in Palestine the Arab hates the Jew and the Jew the Arab; in Spain apparently everybody hates everybody; the Italians hate the French; the Russians hate the Germans; the Germans hate the Jews. As for the rest of us, more and more we hate the forces that are destroying the religion we believe in and the democracy we desire. Ours is a world afflicted with one of the most virulent epidemics of contagious hatred in all history.

Obviously this presents the Christian with a serious problem. Whatever else Jesus taught and exemplified, He taught and exemplified good will. "Love your enemies; bless them that curse you; do good to them that hate you." We cannot erase that from the Sermon on the Mount. "Father, forgive them, for they know not what they do." We cannot erase that from the memories of the Cross. Nevertheless, today, out of what sometimes seems our best ethical life, moral indignation and righteous anger rise in the face of outrageous wrongs that threaten our freedom, our democracy, our religion, our sense of humane decency. What sensible meaning can we put into the love of enemies in a time like this?

Be sure I am talking to myself as much as to you. I, too, am indignant. What humane heart can avoid indignation? There is

infamy in the air. And so serious is the emotional response in this country, so easily can politicians who need public support, warmongers who profit from munitions, fanatics with bitter prejudices, and good men and women with humane feelings, all together whip up popular indignation, that one of our most competent journalists said it would be easier to carry this country into another war now on a wild and rising tide of anger than it was in 1917.

What, then, is the message of the Christian gospel to us in this situation?

In the first place, it says moral indignation does have a place in life, but do not let it spoil your intelligence. After all, say what we will on behalf of moral indignation, it is one of the cheapest drugs on the market. Anybody can be morally indignant. Walk down the street and throw a stone in any direction and you will probably hit somebody morally indignant about something. One of the most eagerly sought after emotional indulgences in the world is to be righteously angry at someone.

Now, the first effect of intense moral indignation is to muddy the stream of clear thinking. No man, and especially no mob or society of men, can be deeply stirred by anger, however justified, and still keep a fair, objective, clear, impartial mind fitted to diagnose what really is the trouble and prescribe for its correction. The more indignation we indulge in the less clear thinking we do.

Remember those occasions in our personal experience when we were morally indignant! Of how many of them we are now ashamed! What premature explosions of unwarranted feeling they caused! What injustice we afterward discovered we unwittingly had done!

If thus in individual relationships we constantly face the peril of moral indignation to clear thinking, how much more when the turbulent stream of public life is roiled, as it is today? The first result of this situation is that we begin to explain our trouble by devils whom we hate—the Japanese, the Germans, the Russians are devils; if only we could crush them all would be well. But the Japanese are not devils; they are human beings like ourselves. They live in one of the most overcrowded lands in the world. Here in the United States we have 41 people to the square mile. In Japan they have 465 people to the square mile, and their population increase is annually between 800,000 and a million. They face a constantly lowered standard of subsistence and the ultimate peril of starvation. They are afraid. Eighteen years ago in Tokyo I met a group of Japanese leaders. They were liberals, supporters of the League of Nations, looking forward to an increasingly progressive and democratic regime. Even then, however, when they turned their eyes to the continent of Asia one could see they were afraid. They had to have those raw materials or die. Then Russian communism swept down from the north and in from the west on China. France in the south of China had a great empire. Great Britain was carving out a huge sphere of influence in the Yangtze Valley. The Japanese are not devils; they are human beings, afraid, who think they must do what they are doing or die.

That does not mean that I am complacent about what they are doing. I am not. I am indignant. I hope they fail. There is no way through to a decent civilization by the road they are traveling. And as an American I am ashamed and humiliated that for profit's sake we have been supplying them with raw materials and munitions, without which they never could have done to China what they have done. Nevertheless, in this, as in every situation, it still remains true that the more ill will the less clear thinking. Only good will keeps its eyes open and its head level. Only good will puts itself in the other's place and sees the whole situation. Only good will can maintain a physician's attitude and diagnose what really is the trouble behind the things that we hate.

One of the finest things I ever heard in a Christian pulpit was Maude Royden's statement of the case for Germany. Maude Royden is a British woman with all her sympathies naturally British, and she abhors Hitler's policies as we do. "Nevertheless", said she, "let me for a moment state Germany's case." Well, let me for a moment state Germany's case: A defeated and humiliated people forced in the peace treaty to assume the sole guilt for the World War, an assumption which every intelligent historian now knows to be untrue; lured to peace by President Wilson's fourteen points and then let down on all of them; disarmed under promise of general disarmament only to discover that no other great nation in Europe had the slightest intention of disarming; burdened by taxation for war reparations that made helots and slaves not simply of the guilty generation but of their children and then of their children; forming a democratic government only to discover that the democracies had not the slightest interest in making it possible for a representative government to survive in Germany—until at last Hitler arose, promising to redeem them from that hopeless situation, and, what is more, doing it, so that today Germany is the most powerful nation on the continent, and all the world anxiously waits for the nod of the Fuehrer's head. Well, supposing that had been our experience, wouldn't we be giving Hitler all the gangway he might desire?

This does not mean that I am not indignant at the Nazi regime. I am. It is outrageous in its cruelty. Nevertheless, always the devils we thus hate are symptoms, not causes, and no good physician ever centers his attention on symptoms.

This, then, is the first thing the Christian message says: Moral indignation has its place in life, but do not let it spoil your intelligence!

The second thing is this: Moral indignation has its place in life, but do not let it spoil your humility. Always there is a head-on collision between righteous anger and humility. The more one fans the flame of moral indignation against another's sin the less able or inclined is he to see his own. One reason why moral indignation is so satisfying is that in passing condemnatory judgment on another's evil one is happily unconscious of his own.

This is true in the very realm where probably today it is hardest for us to see it—with regard to our feeling concerning the Nazi persecution of the Jews. Such racial prejudice seems to us outrageous, and it is. Nevertheless, for a moment let us think about ourselves. Granted that in this country we have nothing equal to the governmentally directed attack upon the Jews in Germany! Nevertheless, anti-Semitism itself is a rising menace in America, such that no one knows what is going to happen. Every man in public life receives a constant stream of the vilest kind of anti-Semitic propaganda, not simply from obscene and illiterate fanatics, but from organizations, well financed, well manned, able, and clever. We have our racial problem, too.

Not long since, a Nazi journal called for a Jim Crow car for Jews in Germany. Jim Crow cars for Jews—that is an outrage! But Jim Crow cars are not a Nazi invention; they are an American invention. The Nazis, working out their program of racial discrimination, are borrowing some of their techniques from us. We have our problem of racial prejudice too and history is keeping the record of the injustice with which personally and governmentally we have sometimes handled it, North and South alike, so that in that realm humility becomes us well.

Yes; go further! Few things did more to turn Japan away from confidence in the West than the insult she suffered when the United States refused to put the Japanese upon the quota. That seemed to say that all other peoples are good enough to be welcomed here except Asiatics. Putting Japan upon the quota would have meant about 150 Japanese immigrants each year. We would not stand it. They are an inferior people, we said in effect, and we cannot endure 150 of them a year. No one can estimate what that meant to Japan. My friend, Dr. Nitobe, a great Japanese, representing his people at the League of Nations, married to an American wife, a believer in and a lover of this country, wept like a child when he heard it and vowed that never again would he set foot on American soil. That Exclusion Act stands still as one of the most senseless, needless, intolerable pieces of racial prejudice ever perpetrated by a great nation. If we have any moral indignation to spare on racial prejudice, let us spend a little of it on ourselves!

On this point Jesus is terrific. He troubles me here sorely. Remember the scene where the Pharisees brought to him the woman taken in adultery, seeking his backing for the old Mosaic law that would have stoned her to death. How noble such ethical indignation as theirs can be made to appear. But when Jesus turned their attention from her to themselves, saying, "He that is without sin among you, let him first cast a stone at her," they "went out," we read, "one by one, beginning from the eldest, even unto the last." So in these days of angry feeling, one finds oneself gathering rocks to stone others, until one meets the eyes of Christ. "He that is without sin among you, let him first cast a stone." "Why beholdest thou the mote that is in thy brother's eye, but considerest not the beam that is in thine own eye? * * * cast out first the beam out of thine own eye; and then shalt thou see clearly to cast out the mote out of thy brother's eye." How we should like to avoid all that. But how can we? Moral indignation has its place but don't let it spoil our humility.

The third thing is this: Moral indignation has a real place in man's experience, but do not let it spoil your confidence in good will as the only ultimately constructive power we know. Granted that by violence we sometimes can coerce, inhibit, restrain. But never yet has violence built anything. Only intelligent good will builds anything.

Here is the final fault in moral indignation. When it gets control it produces a situation often illustrated in the relationships between a father and his son who has done wrong. The father is indignant. The son is, as it were, in the prisoner's dock, the father is on the judge's bench; and from that aloof and elevated place he issues his condemnatory verdict on the son's misdeeds. So father and son are torn apart by moral indignation, and there is no hope until moral indignation is overpassed. Let the father say "Son, I am trying hard to put myself into your place and understand what the trouble really is; perhaps some of the blame is mine." Let the father say, "Son, when I was your age I did something just as wrong as you have done; I never told you that before, but I did." Let the father say, "Son, you and I are done up into one bundle of life; I love you, and you, I think, love me. If one of us sinks life can never be the same to the other again. We must be saved together." Only when the father thus gets off the judge's bench and gets the son out of the prisoner's dock and puts the whole situation on some other basis than moral indignation can there be any hope. Well, today moral indignation is splitting the world up, each nation climbing into the judge's bench and trying to put all other nations into the prisoner's dock. That does not represent the realistic fact. The realistic fact is we all share guilt together, we are all done up in one bundle of life together, and we all must be saved together.

Where would this country be now if after the Civil War, which, far from saving the Union, left us still a disunited and dissevered people, there had not been enough good will on both sides to say, "We must be saved together." After the evacuation of Richmond, Abraham Lincoln visited the city; and, remembering that General Pickett, who had led the Confederate charge at Gettysburg, lived there, he slipped away by himself and called at Pickett's home. As he rang the bell, Mrs. Pickett, with the baby on her arm, fol-

lowed the servant to the door to see who the visitor might be. "I am Abraham Lincoln," said the caller. Mrs. Pickett gasped with surprise. "The President?" she said. "No," was the answer. "Abraham Lincoln, George's old friend." We say the Civil War saved the Union. That is not even a half truth. The Civil War nearly ruined the Union. It was only enough of Lincoln's spirit on both sides of the line to heal some of the wounds that saved the Union.

That is true of every war. After the Napoleonic Wars, Carlyle is reported to have said, "The clock of the world might have been set forward a thousand years if there had been enough moral and religious force to rebuild our shattered civilization upon a new and Christian foundation." Who would not say that about the Great War too? And if now, following the baying of the dogs of war once more unleashed and in this country too much hallooed on by those who seek popular support for vast expenditures, we go into another war, when that is over the cry will still be, "We are not saved; all the victories that we trusted in have not saved us."

There is no salvation save intelligent, constructive good will—some decent international economic planning, for example, to make raw materials accessible to all—and the road to that goal is not mainly moral indignation but intelligent good will.

I think I never understood so well before what Paul meant when he said, "Be ye angry, and sin not." Of course, we are angry. "Anger," said an old writer, "is one of the sinews of the soul; he who lacks it hath a maimed mind." Read the twenty-third chapter of Matthew's Gospel and see to what heights the Master's moral indignation could rise. But to be angry and sin not—that means not to let it spoil our clear-headed intelligence or our penitent humility or our faith in the ultimate necessity and efficiency of good will. Ah, my soul! In these days be ye angry and sin not.

Prayer: Eternal God, our Father, who hath set us in this troubled time, keep us still among those steady, far-seeing, intelligent men and women of good will, the minority that yet can save the world. So help us, even in this difficult era, to live in the spirit of Christ. Amen.

Freedom of the Press

EXTENSION OF REMARKS

OF

HON. H. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Tuesday, March 21 (legislative day of Thursday, March 16), 1939

ARTICLE FROM THE PITTSBURGH PRESS, FEBRUARY 21, 1939

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Pittsburgh Press of February 21, 1939, having to do with the freedom of the press, and, in addition, offering some good suggestions to Mr. Harold Ickes, Secretary of the Interior, who recently has had something to say on this subject.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Pittsburgh Press of February 21, 1939]

Freedom of the press is as essential to a free nation as is religious freedom or freedom of speech.

Unmistakable signs of an ugly and ominous storm are becoming increasingly evident. A carefully planned campaign of hate against the newspapers of the Nation is now in progress. Its purpose is to mold public opinion in view of future legislation to curb the press.

The self-styled archpriest of this unholy crusade is the all-wise Mr. Harold Ickes, who considers everyone to be out of step and out of date but himself.

Faultfinding is an indication of neither wisdom nor self-righteousness. It would be folly to deny that the newspapers are not perfect. Being human institutions they are heir to human frailties. The publishers and editors are among the first to admit this fact. It is well to bear in mind that to serve and please the public requires the wisdom of a Solomon. Unfortunately, Solomons are an extinct species and Ickes' are most prolific.

It would be the height of folly to destroy or make inoperative and ineffective a thing because of certain defects or abuses, which may be only occasional and less effective than its record of past performances and future possibilities for the public good. This is a self-evident truth even to the average citizens. But Mr. Ickes is above the average.

Being or pretending to be so much concerned about the abuses, evils, crimes * * * ad nauseam, of the daily press, it is only logical that all branches and phases of the press should receive at least equal attention and consideration from Mr. Ickes. Their potentialities for good or evil are equally great, if not greater than that of newspapers. Here I refer specifically to the cheap and indecent literature which appears in the form of magazines and periodicals that swarm the land like a plague of locusts, leaving in its wake warped and broken lives and crimes, destruction, and misery.

According to the latest and most reliable survey, there are at present "421 periodicals (exclusive of books, yellow sheets, and leaflets) published in the United States which are devoted principally to the exploitations of the evil in people's lives, to the publication of fact and fiction which have an appeal to the lowest animal instincts in the human being, to the report of crime in such wise as to glorify both the crime and the criminal. Most of these magazines—to be accurate 366 of them—have come into being since the advent of the industrial depression. The publishers have taken advantage of the leisure time of the unemployed youths to feed them religious and moral poison, and, in some instances, actually to start them on the road of moral ruin."

Little wonder that Canada and even far off Australia have imposed a ban on most of these American magazines that have only a crime and sex appeal to offer. Attention, Mr. Ickes!

It is now a belatedly recognized fact that these periodicals contribute in an appallingly large measure to the general weakening of the social standards upon which our modern civilization rests.

In confirmation thereof witness the repeated warnings of Mr. J. Edgar Hoover against such explosive reading. Witness the call of the Catholic hierarchy to rally in a campaign against indecent literature. Our juvenile court judges are most emphatic in their condemnation of this "literary realism." Witness the unhappy marriages, broken homes, and the cluttered divorce courts. Witness further (horrible even to contemplate) the ever-increasing number of morons and sex criminals at large. God-fearing parents are living in mortal fear lest their boy or girl become a pathetic victim of this erotic literature or a prey of such a victim. Witness also the uncontrolled spread of the social disease, syphilis. Does Mr. Ickes wish to condone all or any of these crimes and criminals against which the newspapers wage a relentless campaign?

Any single one of these crimson blots on society should arouse every God-fearing and law-abiding citizen, including Mr. Ickes, to spare no effort or sacrifice in order to blot out every trace of this blight which is afflicting society so cruelly.

Here, Mr. Ickes, is a most glaring abuse of the freedom of the press which is crying to heaven for vengeance. It merits your respectful attention. These periodicals enjoy all the privileges of the freedom of the press which they put to the most destructive use. Here is a cause worthy of the chivalrous and courageous crusader of old, a cause which is truly patriotic and nonpolitical, unselfish and nonpartisan, noble and American—a cause which is the root of the evil you appear to be so zealous to eradicate. Yet you choose to remain silent about it. Why the apathy or inconsistency?

Mr. Ickes, you are in the right church but in the wrong pew.

REV. A. M. BEDNARCZYK,
Mount Carmel, Pa.

The Proposed John Muir-Kings Canyon National Park

EXTENSION OF REMARKS

OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 20, 1939

ADDRESS BY HON. HAROLD L. ICKES AT SAN FRANCISCO, CALIF., FEBRUARY 15, 1939

Mr. GEARHART. Mr. Speaker, in order that the arguments that he there advanced, the compelling reasons he then pointed out, in support of the pending legislation for the creation in California of a John Muir-Kings Canyon National Park may not be lost upon those who did not have the privilege on February 15, last, of hearing him, either at the luncheon tables of the Commonwealth Club of San Francisco or over the ether waves of the radios, the facilities of which were made available, I am, the entire membership of the House of Representatives approving, their unanimous consent having been given, extending the address of the Secretary of the Interior, the Honorable Harold L. Ickes, in the CONGRESSIONAL RECORD.

It is as follows:

In England, an invitation to visit the King is considered a royal command. In San Francisco, an invitation to speak before the Commonwealth Club is a democratic command. I am nothing if not democratic.

When that invitation is not merely to speak before this audience but to speak upon the subject of the John Muir-Kings Canyon National Park, the duty of complying is transformed into a privilege.

During the few days I have been in California, I have been deeply impressed with two things connected with this proposed national park. First, the very high character of the support given it among the people of California; and second, the way in which this California support, by its influence during the formative period of the park proposal, has diminished the opposition to the establishment of this park by eliminating the basis of opposition.

In elaborating upon that theme, I wish first of all to pay a tribute to the principles and standards of the Sierra Club. I wish to compliment the Sierra Club in this public fashion upon the stand it has taken regarding national parks in general, and the John Muir-Kings Canyon National Park in particular. Its position was that it would not commit itself offhand, to any national-park proposal that might be made, or to any bill that might be offered to carry out a project which it favors. On the contrary, perhaps because of its long record of consistent support of national parks, the Sierra Club has insisted that any project it supports shall be of the highest type, and that the law establishing the park shall be the best law obtainable.

I do not believe a bill has ever been offered in Congress to establish a national park which represented a more thorough threshing out of all points of view than this national-park bill sponsored by Representative GEARHART, of Fresno. His purpose, and the purpose of those collaborating with him, has been at all times to obtain the best possible park, and to protect the rights and interests of all groups of people who have a legitimate interest in the manner of administration of the public lands involved, especially where it touched on irrigation.

Congressman GEARHART, in framing his bill, had the benefit of the studies that have been made by the Bureau of Reclamation and of the many conferences that have been held between the reclamation officials and the representatives of the irrigation interests in the San Joaquin Valley. To show how close the collaboration has been, I think there is no harm in stating that the Bureau of Reclamation and the Kings River Water Association were consulted by Congressman GEARHART on practically every word of the provisions in the park bill relating to reclamation, and agreement was reached on every word. This was essential, because it was necessary to leave the park boundaries indefinite at two points until final studies by reclamation engineers should fix the location of power dams supplemental to an irrigation and flood-control storage dam, all of which had to be outside the park.

At the same time the principles of wilderness conservation had been so thoroughly discussed with the directors of the Sierra Club, both by Congressman GEARHART and the National Park Service, that there was no difficulty in dealing with what would otherwise have been a hard task, indeed—to make the provisions of the bill satisfactory to the irrigation people without making them unsatisfactory to those chiefly interested in preserving the wilderness. I think it is a triumph in conciliation, a triumph in cooperation, to have such understanding and agreement come about in dealing with a subject which might so easily lead to a conflict, and which has been a source of injurious conflict in past years.

In the Gearhart bill protection of the wilderness is written into the law instead of being entrusted to the changing and changeable personnel of any administrative body. The desire of the Sierra Club to have the Kings Canyon wilderness thoroughly protected furnished part, at least, of the inspiration toward this step. The wilderness provisions of the Gearhart bill embody, in general, the principles worked out by the Sierra Club through several years' study with due regard to the interests of the general public.

My own preference, in one respect—and I think it will be a general preference—is to go a little further in the direction of wilderness simplicity than Congressman GEARHART'S bill goes. But of that I shall speak a moment later. First, let me outline the provisions of the Gearhart bill.

As most of you know, the proposed John Muir-Kings Canyon National Park combines the Kings Canyon country, the General Grant National Park, both of which already belong to the Nation, and the great privately owned Redwood Mountain Sequoia grove. The Kings Canyon section of the park is treated as a wilderness. The Gearhart bill excludes all new roads and truck trails from the Kings Canyon area, except in the valley of the South Fork of the Kings River below Copper Creek. That is, automobile roads in the park are limited to the new State highway now under construction, plus a short extension on the floor of the canyon. This will give all visitors, coming in by motor car, a chance to see this magnificent canyon with its walls three to four thousand feet high, threaded by a beautiful river and bordered by cascades coming from the tributary streams.

The rugged wilderness above and beyond the canyon floor is to be without roads, and without buildings except trailside shelters for the use of hikers and horseback riders. This is written into the bill, and when the bill passes, it will be part of Federal law.

In order to exclude the pressure of invested private capital, and other features especially inharmonious with a wilderness park, there is to be no concessionaire system. That is excluded by a requirement that all buildings in the park shall be erected with Government funds, that no exclusive privileges shall be granted on roads or trails, and no concessions of any sort shall be for a longer period than 1 year. On account of existing contracts, this does not apply to General Grant National Park, which, however, is not a part of the wilderness.

The effect of the wilderness provision is to permit only trails and trailside shelters in the Kings Canyon country, except in the valley of the South Fork, where the highway extends, and where housing structures and other conveniences may be erected for the public.

Under the bill as introduced these housing structures may be of any type, from a simple cabin up to the most sumptuous hotel. My personal preference, I started to say, would be to go a little further in the wilderness direction. I do not think that elaborate hotels fit the picture of the Kings Canyon region. No such hotels will be authorized, even though Government money is available for them, while I am Secretary of the Interior. I do not believe the general public wants them, and I should be pleased if Congress decided to exclude them by law, so that there will be no opportunity in the future for grandiose mistakes. I submit this matter to your thought, so that you leaders of conservation here in California may be prepared to express your views on the subject, whatever your views may be, when this national park bill comes up before the Public Lands Committees of the House and Senate for consideration and amendment

It is not for the sake of using complimentary words that I refer to leaders of conservation in California. This State has furnished true leaders and true partners, especially in the development of the national-park system. Everybody knows what we owe to Stephen Mather, of California, the first Director of the National Park Service, who devoted the later years of his life, and so much of his money, in generous constructive work for the development of national parks, and especially for the acquisition of private lands in them.

You in California well know what the country owes to Franklin K. Lane, Secretary of the Interior under President Woodrow Wilson. It was Secretary Lane who gave the second strong push to the movement, now well on toward completion, to change the Department of the Interior from a department of despoliation to a department of conservation. The first push in that direction was to be found in the general policies of President Theodore Roosevelt, and the national park system made notable progress through the helpful influence of both of these men.

Neither the Nation nor California will soon forget the devoted labors of the late Congressman Everett Kent, who gave Muir Woods to the Nation, and who took so great a part in the saving of the big trees of the Sierra Nevada Mountains, as well as the coast redwoods. If or when the John Muir-Kings Canyon National Park is established, it will consummate one of the labors to which Congressman Kent devoted his patriotic energies. The type of devotion he showed is indeed a form of patriotism, for it springs from love of country, love of the people of this country, as truly as any other form of disinterested service to the Nation.

Among the Californians who have helped to create our national-park system, or above them all, shall I not place the beloved name of John Muir? From the time he led the movement, a decade before the end of the nineteenth century, to create the Yosemite National Park, down to his death in 1914, John Muir engaged in a ceaseless campaign, a never-ending struggle, to arouse the American people to the need of preserving the wonder spots of Nature. It was he, more than any other man, who brought to a halt the savage and senseless destruction of the big trees. It was he who built that wall of human feeling about them until today to cut a living sequoia has become the badge of infamy.

It is no empty gesture, no undeserved capitalization of fame, that causes the name of John Muir to be attached to the proposed national park in the country he loved so well. The suggestion for this action did not originate in Washington; it came from California. The John Muir Association, I believe, most actively sponsored the proposal, in connection with the present bill, but the same thought had long been lying dormant. Stephen Mather, of California, more than 10 years ago, proposed that a national park be named for John Muir, but never until the present year has there been a project which so inevitably connected itself with his name.

Forty-eight years ago John Muir first called on the country to make Kings Canyon a national park before the pressures of a heedless society destroyed it as a wilderness. More than 30 years ago he first called on the people of America to save the beautiful sequoia grove on Redwood Mountain, the only sequoia grove in existence which presents a sky line of big trees upon a mountain top.

Today the 7,000 big trees of Redwood Mountain and Redwood Canyon are menaced with saw and axe, or rather, I might say more accurately, menaced with dynamite, for it is only by dynamiting these huge trees that they can be put into condition for commercial use. Commercial use for what purpose? To serve as grape stakes and fence posts.

In Redwood Canyon is a giant sequoia known as the Hart Tree. If you were able to climb that tree to a height of 160 feet and cut it off at that height, you would have a circular floor way up there 20 feet in diameter. If that seems incredible, let me repeat it. The Hart Tree is 20 feet in diameter at a height of 160 feet above the ground. I asked the Otis Elevator Co. how many men could stand on that circular cross section of a tree trunk 160 feet in the air, figured on the same basis as elevator capacity, and they told me—how many do you suppose? One hundred and fifty-seven. I suppose if I had asked a streetcar company, they would have said 300. Anyway, 157 men could stand on the circular top of that tree trunk, if it were sawed off 160 feet above the ground. It contains more wood than any other tree on earth.

Not only this tree but 7,000 others are marked for destruction, not because anybody wants to cut them, but because of the pressure of unpaid taxes, the ruthless compulsion of debts that cannot

be paid except by sacrificing the forest. These big trees can be saved only if the Federal Government steps in to save them, and it must be done this year.

These two magnificent spots on the earth's surface, beloved of John Muir, are both brought within the compass of the John Muir-Kings Canyon National Park. One of them—Kings Canyon—must be guarded against the insidious demands of a civilization which has been remorselessly invading the wilderness; the other—Redwood Mountain—must be saved from immediate and total destruction. I believe that public opinion, in California and throughout the Nation, will rally to this cause, and when the movement is crowned with success, we must give the greater part of the credit to old John of the Mountains. The spirit of John Muir, which broods over the mountains of California, is coming to the aid of Redwood Mountain and of the movement to preserve forever the wilderness of the Kings River.

I can see, in the present attitude of leaders of thought in California and especially in the attitude of the Sierra Club, a rededication of effort in behalf of our national parks, a renewal of the leadership which has meant so much to them in the past. I believe that this has been due in part, I hope it has been due, to a rededication on our part in Washington to the basic principles of a sound national park policy.

The thoughts and purposes of John Muir, his outlook toward Nature, live today in the men who are carrying on his work in California. In such men as William Colby, and Walter Starr, and Francis Farquahar, and Joel Hildebrand—those I have come most intimately in contact with during the past few months—I can see a carrying on of the work of their great predecessors, nor would I confine that statement to the men I have named.

I have been told something of the activities and interests of unnamed thousands of young people in California, who have made the high Sierras part of their lives, in both winter and summer. I have been told how they are learning the art of traveling light in the high mountains, learning to throw a diamond hitch on a burro, and, I suppose, what to do when the burro throws the diamond hitch, so that mountaineering of a kind that was once a sport for millionaires has now become part of the American way of living, or perhaps I should say the California way, of living.

I want national parks for these young people, and I want these young people for our national parks.

In the ideals of those who truly love the mountains I see a goal for those who administer our national park system.

We have learned something, in the last 20 years, about the administration of national parks. We look upon our work, and in its broad and enduring aspects we find that it is good. We look upon our work, and in its transient, temporary aspects we do not find that all of it is good. But we know how to make it better.

In some of our national parks we might apply the opening line of Wordsworth's sonnet, "The world is too much with us." And where that holds true, it is an eternal struggle to avoid the line which follows: "Getting and spending, we lay waste our powers."

It is with this thought in mind that I invite your attention to another bill which has been introduced in the present Congress by Senator ADAMS, of Colorado, and Representative DEROUEN, of Louisiana, the chairman, respectively, of the Senate and House Committees on the Public Lands, a bill representing the views of the Department of the Interior.

This is a measure empowering the President of the United States to set aside by proclamation wilderness areas in national parks and national monuments from which roads, hotels, and permanent camps shall be perpetually barred. It applies both to existing national parks and national monuments and to any which may be established in the future.

If this bill is enacted into law, it will be possible to protect the great wilderness of the newly established Olympic National Park from unwise road construction and from hotels which might better be operated in the nearby local communities.

If this bill for national park wilderness areas becomes a law, the eastern forests of the Great Smoky Mountains National Park, in North Carolina, can be held as a wilderness in contrast with the more highly developed western slope in Tennessee. It will enable us to protect the areas that still remain roadless in Mount Rainier National Park. Under this bill a proclamation by the President will establish a wilderness area, and once it is established only a new act of Congress can take away this wilderness protection.

This plan to safeguard national park wilderness areas by law is a direct outgrowth of the conferences which have been held in the past few months between myself and my Department and various conservation leaders in California. It is an enlargement of the plan to put wilderness safeguards in the law establishing the John Muir-Kings Canyon National Park.

In asking Congress for the passage of this bill on wilderness areas, I am asking that the discretionary power of my own Department be cut down. I suppose that is something new in the annals of government, for the head of a department to ask that part of his own power be taken away. But that is what I desire. I want these wilderness areas so protected that neither I nor any future Secretary of the Interior can diminish their protection merely by signing an administrative order.

The wisdom of such a law has been more and more impressed upon me, as I see how strong and persistent the pressure becomes upon all branches of government, for deviations even from established administrative policy, even when that policy is publicly announced. I suppose that the creation of a national park, under existing laws, removes about 90 percent of the danger that a great scenic asset will be damaged or ruined. What I want to do is get rid of the other 10 percent, which remains after the national park is established. That can be done for wilderness areas in national parks by giving them the same protection by law against overdevelopment and overuse by recreation seekers that the national parks now have against industrial exploitation.

This wilderness policy is consistent with a wide use of the areas affected. In the first place, there will always be portions of the park which are connected with the highway system, and therefore will receive a heavily concentrated quota of visitors. When Congressman GEARHART was drafting his bill for the John Muir-Kings Canyon National Park, he made the comment that he wanted the limit on road building to be so placed that any person, though crippled or handicapped by age, could see the marvelous canyon which begins at Cedar Grove and reaches its greatest magnificence at Zumwalt, 5 miles higher up the river. He has drawn the bill to make that possible, and I approve of it.

In the roadless areas of this park, there will be a different type of visitor. If trails are well maintained and occasional shelters and supply depots are furnished, you will find sturdy young men and women, and older ones, too, going into the mountains on their own two legs, and many of them will go where a horse cannot follow. The wilderness will be opened to use, but it will be opened in a way that will keep it a wilderness.

This distinction between wilderness areas and other portions of national parks, I should observe, is to a large extent blotted out where winter sports are concerned. The concentrations which occur in winter sports cannot harm the wilderness, unless accompanied by unsightly permanent works which are out of place anywhere except in a commercial resort. When the land is buried under 8 feet of snow, no damage can be done to grass or flowers, and the only road that can be seen is the one that ends where the snow begins. In the depth of winter, the wilderness is restored even where it has been destroyed by the thronging crowds of midsummer. The trails and dusty paths are gone, the tired look of the landscape has vanished. And if, before the winter ends, the crowds of skiers have left their own deep mark upon the landscape, that too vanishes with the melting snow. The ski trails disappear, and where the true wilderness exists, it is a wilderness when summer comes.

Let me caution you against a misconception of this wilderness policy. It is not intended that a line shall be drawn between the finest areas, and those not so fine, and to say that one class shall be treated as a wilderness, and the other shall not. There is no intention, nor would it be right, to block off the finest works of Nature for the exclusive use of those with the physical stamina to go on foot or the wealth to go by saddle horse and pack train. Rather, the intention is that the most beautiful areas shall be divided into two classifications, one of them open to the motoring thousands, and protected as well as possible from the deterioration that results from our motor civilization; the other, equal in majesty, left for those who love the grandeur of mountains and forests untouched by the works of men.

In this connection, let me say that it is not necessary to treat each national park as a complete unit, which must be divided in strict geographical ratio between wilderness and nonwilderness areas. We can afford to keep all of the Kings River a wilderness, in the high country above the South Fork Canyon, because the motorist who wants to drive amid the peaks of the high Sierra and the high mountain meadows can do so on the Tioga road in Yosemite. If he wants to reach the forests of lodgepole pine just below timberline, he can do so in Sequoia National Park. The Kings Canyon wilderness area will in truth be the wilderness section of a composite group of national parks whose nonwilderness features are comprehended in Yosemite and Sequoia. These three parks must be seen in relation to each other to appreciate their balance and unity.

The unity of these three parks, I may add, has nothing to do with physical contact or continuity. To make them supplement each other, it is enough that they can all be approached from the same general section of California.

In a slightly different sense the same principle of unity in detached areas holds true of the area proposed for the John Muir-Kings Canyon National Park taken by itself. It is composed of three disconnected units—Kings Canyon, the present General Grant National Park, and Redwood Mountain. These three areas are bound together administratively by the fact that the only highway running into Kings Canyon runs through General Grant Park, while Redwood Mountain borders the highway running from General Grant Park to Sequoia. These areas are linked together in another sense, because Kings Canyon is and will remain a primitive high-mountain area, while Redwood Mountain is and can be kept the most primitive of all the great groves of big trees. There is an advantage in the physical separation between Kings Canyon and the remainder of the park. It will make it easier to maintain Kings Canyon as a wilderness. In 1924, when this park proposal was before Congress, it was planned to include in the park all of the national forests between General Grant Park and Kings Canyon, thus taking in Hume Lake and the territory about it. We do not desire Hume Lake in the John Muir-Kings Canyon National Park, because it has been developed by the Forest Service as a recreation center with summer home sites leased to private individuals. It is much better for everybody concerned that territory devoted to summer home sites shall be left out of national parks.

There will actually be greater unity in the national park with Hume Lake omitted than if it were included. The national park is for all people on equal terms, because the land belongs to the Nation, and if individual rights and privileges are set up the scenic

values are no longer a common heritage. The unity found in the John Muir-Kings Canyon National Park will be in part a spiritual unity growing out of the harmony men find in the mountain area and the forest area of a park dedicated to the memory of John Muir, and administered in accordance with that dedication.

I hope that you in California who have this feeling for the wilderness will put your strength back of the effort we are making to protect it, not merely through the wilderness provisions in the bill for the John Muir-Kings Canyon National Park, but in the more comprehensive movement represented by the Adams-DeRouen bill for wilderness areas in all or any national parks and monuments.

It is a provision in fundamental harmony with the national-park law as it exists today, which protects these chosen areas against commercial and industrial activities. The finest natural features of our country cannot be protected and exploited at the same time. You cannot cut down a scenic forest and still enjoy it. You cannot dam up a high mountain lake and raise and lower its level through the year and still retain its natural beauty.

Neither can you thread a mountain wilderness with roads and deck it with hotels and have it long retain the full charm which forms the basis for its renown.

The United States, rich beyond all other parts of the world in economic resources drawn from the earth and water, can spare from economic use those choice regions where, by a happy union of circumstances, the economic value is low and the scenic value is high.

And again the United States, rich beyond all other countries in the beauty of its mountains and forests, can afford to set aside and protect some of these mountains and forests, not merely from industrial exploitation, but from too intensive use in recreation. In dealing with some spot of supreme beauty, let us not, like a boy holding a butterfly, destroy it by too ardent a laying on of hands.

Nature and the needs of man have combined to make it easy for us to preserve Kings Canyon and Redwood Mountain. The big trees of California, oldest and largest of all living things on earth, are not coveted by the lumbermen. Its wood, though almost indestructible, is too brittle to be used as lumber.

The Kings Canyon highlands, which David Starr Jordan rated as the mightiest, most awe-inspiring mountain panorama on the American continent, furnishes one economic asset, and one only, but that one important beyond all others—the living water which converts the central valley of California from a desert to an ever-blooming garden.

It is a vital and integral part of the plan for the John Muir-Kings Canyon National Park that it shall not interfere with but shall supplement and strengthen the use of the waters of Kings River for the people of the valley below. Water in a high mountain country has one most satisfactory attribute which it shares with water generally—it flows down hill. It is not necessary for the people of the valley to go up into the high mountains to get that water; it will all come out of its own accord. Our problem, the problem of reclamation, is to see that it comes out the way we want it to, and does what we want it to do when it comes out.

That has been looked after in the bills Congressman GEARHART has introduced in Congress. It has been looked after in Mr. GEARHART'S Pine Flat reclamation bill, for irrigation, power, and flood control. It has been looked after in the John Muir-Kings Canyon National Park bill, drawn in partnership, not in conflict, with the economic interests of the San Joaquin Valley.

It is because of this common interest, because of this determined effort to make sure a common interest was served, that we have succeeded so well in winning to the support of this national park those who once were apprehensive regarding it.

Let me at this point express my appreciation of the attitude that has been taken by the United States Department of Agriculture and the Washington office of the Forest Service, regarding the inclusion of Kings Canyon in the national-park system. I find, in speaking to the people of California, that it is necessary to make a distinction between the Washington office of the Forest Service, and some of the regional employees in California, and thus clear up a misconception.

For 19 years, without a single break in the record, the Department of Agriculture and the policy-making officials of the Forest Service have supported the proposal to make Kings Canyon a national park. The first declaration to that effect was made by Secretary of Agriculture Meredith in 1920. The last declaration supporting the park was made by Secretary of Agriculture Wallace on February 8, 1939. The letter from Secretary Wallace to me, which I made public in San Francisco 2 days ago, did not represent a change of policy on the part of the Department of Agriculture. On the contrary, Secretary Wallace adhered to a long-established and consistent policy. This national-park project has been supported by the Secretary of Agriculture and by the Chief of the Forest Service on every occasion when their opinion has been sought by committees of Congress, beginning in 1920. If, out here in California, some of the regional employees of the Forest Service have engaged in a campaign which conflicted with that record of the Government department to which they belong, we may, perhaps, describe it as an example of what one of the framers of the Constitution called "an excess of democracy."

Secretary Wallace, in pledging the continued support of his Department for the national-park measure, has reaffirmed the policy of his own father, who was Secretary of Agriculture under Presidents Harding and Coolidge.

I wish also to express my appreciation of the attitude of Chief Silcox, of the Forest Service. In the discussions that have taken place among departmental officials in Washington, Chief Forester Silcox took a position comparable to that of the Sierra Club. At the very outset he indicated that he would support a national park provided the boundaries were adequate to make it a real park, and provided assurance were offered that the park would protect the Kings Canyon wilderness as it ought to be protected against all forms of commercialism.

In other words, while some of the minor employees of the Forest Service were so busy in California, getting articles in newspapers opposing a national park, because it would lock up economic resources in a mountain country whose chief value was for recreation, their superiors in Washington were taking the precisely opposite position, and the statesmanlike position, that they would support a national park in a country which they believed to be primarily of national-park usefulness, provided the park as established would measure up to what it ought to be. When they found that it would measure up, the Department of Agriculture announced itself once more, as it had done repeatedly in the past, in favor of the park.

I ask you to take special notice that in this decision of the Department of Agriculture and the Forest Service to support the transfer of Kings Canyon from national-forest to national-park status the determining factor was the approval, by Secretary Wallace and Chief Silcox, of full protection of the wilderness. It is quite plain, therefore, that when some of the boys in the regional office of the Forest Service here in California got that bright idea, to drop the principle of wilderness protection and talk about the great danger of bottling up economic resources, they cooked their goose with their own superiors. In other words, the newspaper articles and speeches by Forest Service employees in California against this national park were a powerful influence in causing the Department of Agriculture to declare its renewed support of the national-park project.

I must say that the local Forest Service boys did a good job of it. For concentrated publicity, blowing up a bubble which Secretary Wallace has pricked, I don't know when I've seen anything better. One feature of it is so incredible that I can hardly believe it is true. A few days ago I received a copy of a remarkable letter, written by a man in Dunsmuir, Calif., to the editor of one of the metropolitan California newspapers. I won't identify the newspaper further, except to say that it is published considerably less than 10,000 miles from the city of San Francisco. The Dunsmuir man told the editor that, being a former employee of the Forest Service, he had a personal slant which made him inclined to oppose the creation of this national park. But, he said, he had been told that this newspaper refused to publish letters and articles favorable to the park, and even though he was in the opposition, he protested against this policy because he wanted to read and study the other side. He also said—and I suppose that is why he sent me a copy of the letter—that it verified the charges I had made against newspapers in the Town Hall of the Air debate with Publisher Gannett of the denial of freedom of the press by newspaper publishers themselves. I greatly admire the spirit of that man at Dunsmuir, Calif. I can think of few things more admirable than for the opponent of any proposal to desire for himself and insist upon the right of others to read the arguments of the other side. It would be interesting indeed to know whether the report he had heard was true.

I cannot agree, however, that this incident is an indictment of the California press, because it contrasts so strikingly with the fair treatment given the national-park proposal by most of the newspapers of this State. I believe that in general the columns of California newspapers have been hospitable toward all arguments, both pro and con, on the subject of the John Muir-Kings Canyon National Park.

I also think that in an atmosphere where so much smoke has been engendered the air will be much clearer now that it is known that the Forest Service and the National Park Service are in agreement, and they will unite in recommending to Congress that it pass Congressman GEARHART'S bill establishing the John Muir-Kings Canyon National Park.

Freedom Is As Freedom Does

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 21, 1939

ADDRESS BY HON. HAROLD L. ICKES, SECRETARY OF THE INTERIOR, FEBRUARY 10, 1939

Mr. PATMAN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I insert herewith an address entitled "Freedom Is As Freedom Does" by Secretary of the Interior Harold L. Ickes, delivered before the third annual

conference of the National Lawyers Guild at the La Salle Hotel, Chicago, February 10, 1939.

Some of you may remember that a month ago I had occasion to plead at the New York Town Hall of the Air for a press freed from the shackles put upon it by its own publishers and editors. My opponent in the discussion was Mr. Frank Gannett, proprietor of a chain of 19 newspapers.

I had hoped, being a passionate believer in democracy and in a genuinely free press, that this prominent publisher would present a convincing case. But as he spoke I was disturbed by an impression of inadequacy. Judging from the letters that I have received since, many people all over the country seem to have had the same feeling.

I want to sketch for you my experience in connection with that town meeting of the air debate.

I made three charges: That a section of the press has financial affiliations which limit its freedom; that it is influenced by advertisers; that it is unfair to certain groups of citizens, especially workingmen. I illustrated each one of these charges with specific facts and examples. I concluded then, and I repeat now: "While as to Government regulation and control the press of America is free, it is not, because of its own financial and economic tie-ups, what it should be—a free servant of a free democracy."

As lawyers you will agree with me that these specific charges should have been met, if possible, with specific refutations.

But how did the press react to my criticism, which was made with a feeling of genuine concern for the public interest? To begin with, without even attempting to meet my points, except in one instance, my opponent immediately began to shout "Unfair!" and a good portion of the press followed his lead. To prove how "fair" they are the newspapers proceeded to throw dust in their readers' eyes. I was "unfair" because, instead of dealing in dazzling generalities, I raised embarrassing, specific questions. I was "unfair" because I was unable to agree that all of the publishers, the columnists, and the editors of America are a galaxy of Galahads.

From the manner in which some of our great publishers reacted to my observations on the freedom of the press, I am led to believe that they are a thin-skinned lot. As Heywood Broun said 2 weeks ago in the New Republic, "The modern newspaper publisher and his representatives can dish it out, but cannot take it."

Editors would be surer of themselves and the people would be surer of their newspapers if more editors and publishers were willing to defend newspaper integrity in the give and take of public debate. It isn't healthy for any man to come to feel that he can attack with impunity from a protected position. Nor would a good sportsman want to do it. With the great power of the press ought to go an equal responsibility for fair play. To quote Heywood Broun again: "American publishers need a shot in the arm * * *. A rubber-stamp Congress may be an evil thing, but a rubber-stamp press is still more dangerous to democracy."

To the best of my knowledge, in commenting upon my charges, only a very few papers in their editorials tried to hold the scales evenly balanced. This was notably true of the Philadelphia Record which was frank enough to express its regret in an editorial pointedly entitled "Spare the Rod and Spoil the Press," that the press had been bludgeoned by advertising interests into fighting the Pure Food and Drugs Act in 1935. It thought that to criticize the press was a good thing for the press.

I may say that practically every other paper ignored this principal issue of the Pure Food and Drugs Act of 1935.

The New York Times and Herald Tribune were among the papers that gave a fair rendering of the speech. The Associated Press declined to send me an authentic copy of its release. The International News Service report, as printed in the Washington Herald, might be characterized as a successful attempt to prove that the press can be unfair and biased and willing to color the news. The United Press gave a fair report.

As for the Gannett papers, they reacted characteristically. The following tabulation was made by the Guild Reporter:

One of the Gannett chain, the Massena (N. Y.) Observer, gave 26 inches of space to Mr. Gannett and no space to Mr. Ickes. Another, the Malone (N. Y.) Telegram, gave 24 inches to Mr. Gannett and not an inch to Mr. Ickes. In fact, the Telegram contained no reference that its publisher had debated with a man named Ickes. Three other Gannett papers, the Plainfield (N. J.) Courier-News, the Utica Press, and the Observer-Dispatch, gave the merest summary of my words. But they printed the text of their owner in full. A check-up of the stories that appeared in 16 Gannett papers on the first day shows that, altogether, 487 inches of space were given to Gannett and 158 to Ickes. "There has been no suppression of Mr. Ickes," Mr. Gannett had proudly exclaimed during the debate.

The Denver Post, further to prove how fair the press can be, printed Mr. Gannett's speech in full with never a separate reference to the views of Mr. Gannett's opponent. The Scripps-Howard chain indulged in an editorial outburst full of such barnyard humor that many of its readers were moved to protest.

In short, a general can-can was danced around the real issues in order to detract attention from them. There are editors who, when they cannot meet an issue, make a face at it.

I did not need this demonstration to prove how exocannibalistic an editor can be if one has the audacity to suggest that all of his qualities are somewhat less than godlike. A cynical associate of 20 years' metropolitan newspaper experience insists that nobody is ever going to win an argument with editors in their own columns. Our editors are graciously proving this to be a true aphorism.

The newspapers zestfully played up two overstatements that I made in my New York debate in order to discredit an entire position. It happened that, in reply to a question from the floor, I stated that, so far as I knew, no newspaper had carried the story of the findings of a scientist to the effect that tobacco was a short cut to Heaven. Since I am trying to build a truthful record, it is my duty to admit that this was an exaggeration. I should have said that the majority of the newspapers had suppressed this story which, according to the magazine Time (March 7, 1938), was sensational enough "to scare the life out of tobacco manufacturers and make tobacco users' flesh creep."

In New York City, for example, it was suppressed by 72 percent of the daily papers. Throughout the Nation the percentage of suppression was probably much higher. The scientist in question, according to the New Republic, admitted that he had received 250 clippings, which may seem like a "pailful" if one overlooks the fact that there are in the United States more than 2,000 daily newspapers and over 10,000 weekly publications.

My second overstatement was in connection with a certain accident that occurred in Boston. This also was in answer to a question from the floor. I said that the sensational story of the killing of two men by the chaffeur of a department store did not appear in any Boston newspaper, except one. Frankly, I should have phrased my statement in different terms so as to make the point I wanted to bring out—namely, that department stores, being heavy advertisers, are "sacred cows" to newspapers.

In this instance it happened that certain newspapers that carried the story did not mention that the owner of the car was a department store. In two or three newspaper accounts the name of the owner of the car did not appear at all. In another, buried about two-thirds of the way down the column, the name was printed, but there was no reference to the fact that he was the proprietor of the department store, the display "ad" of which was carried in a contiguous column. The name was given, followed by a residence instead of a business address.

With these qualifications, I admit my mistakes. And in admitting them I do it on as prominent an occasion as that on which the errors were uttered. I admit my overstatements over a Nation-wide hookup of the same National Broadcasting Co. that carried my original words. I do not publish my retraction in an inconspicuous paragraph buried back of the want "ads," as newspapers sometimes do on those rare occasions when they admit one of their errors.

I will be interested to see whether the newspapers will be as candid in admitting their errors of overstatement with reference to my slip on these two items as I have been. My guess is that they will prefer to continue the flank attack that has been inaugurated by such knights of the quill as Westbrook Pegler and Hugh S. Johnson—two gentlemen who in the past have submitted to a censorship of their writings on the part of their employers.

Inviting resentful editors to brew up another mess of editorials to fling at me, I will repeat what I said in New York last month—that owing to economic tie-ups our press is not as free as it should be in a democracy. I am not alone in this opinion. Let me put on the stand a few distinguished witnesses.

A few weeks ago, William Allen White, perhaps the outstanding editor in America today, said: "We have ceased to be a profession and are now an industry."

Paul Bellamy, of the Cleveland Plain Dealer, in 1928, told the American Society of Newspaper Editors some blunt truths:

"Better be frank and admit that we have one rule for the strong and another for the weak. * * * Who of us will deny that the paper he serves has published scores, if not hundreds of * * * misadventures * * * when the actors were humble persons? Why, such stories are the warp and woof of the newspaper. * * * But here, forsooth, stands the great John Goodman, pillar of society and advertiser to boot. At once the kind of editorial sixth sense, the trouble detector, flashes red, and we hesitate. * * *"

Finally I want to quote the pungent line of J. David Stern, publisher of the Philadelphia Record and the New York Post: "If publishers would listen more to reporters than to bankers they would publish better newspapers."

There is no doubt that publishers enjoy complete freedom to print or suppress, to omit, to distort, or invent. There is no doubt that they are responsible to nobody save their consciences and their affiliations. Consider the case of Dr. Rexford G. Tugwell, an honest, able, and disinterested public servant. Because he had the temerity to support a bill that would protect the people from deleterious and poisonous drugs and cosmetics, he was lampooned, ridiculed, and lied about by a press subservient to the advertising interests, until he quit the Government service.

In the Philadelphia Record editorial to which I have referred, occurs this frank and significant admission:

"Much of what Secretary Ickes had to say is true. We are ready to confess that along with the rest of the newspapers we deserve criticism for the shameful part the press played under pressure from patent-medicine advertisers in fighting the pure food and drug bill, the so-called Tugwell bill, in 1933."

In this same connection I call to your attention an article by Chester H. Rowell, former editor and present columnist of the conservative San Francisco Chronicle. In May 1936 he wrote:

"When the Tugwell Food and Drugs Act was first before Congress, the newspaper opposition to it was directly and openly organized by

advertising agencies acting through the advertising departments of newspapers. * * * The vagaries and excesses of Tugwell should have been combated by some more legitimate method than this form of advertising blackmail."

From the very nature of their enterprise, publishers are, perforce, motivated by a profit psychology. Since even a small newspaper represents an investment of thousands of dollars, publishers are inevitably men of property. Their property sense in many instances gives them a bias. They think of their newspapers as business enterprises to be devoted, only if and when it is pleasing to them, to the public interest. The Wall Street Journal (January 20, 1925) admitted as much with startling candor:

"A newspaper is a private enterprise, owing nothing to the public, which grants it no franchise. It is, therefore, 'affected' with no public interest. It is emphatically the property of its owner who is selling a manufactured product at his own risk."

(May I say, parenthetically, that, instead of a franchise, a generous Government grants a subsidy that, last year, amounted to some $90,000,000.)

William Allen White wrote me a letter the other day in which he puts it this way:

"The tremendous capital investment now needed to buy the machinery and establish a circulation gives the owners of American newspapers an abiding sense of property. That property sense biases editors and owners—mostly unconsciously—and incidentally employees, so heavily that almost instinctively and automatically newspapers take the property side of every controversy. * * * The direct influence of advertising on an American newspaper is negligible. Most publishers have enough moral and business sense to fight direct advertising influence. But association with the plutocracy of every community, association in the country club, in the university club, in the chamber of commerce, in the interlocking directorates in every town, sooner or later, will degrade a publisher, however nobly he may aspire, and give him a sense of the eternal rightness of the established order."

Anyone who has the money can buy or start a newspaper. Nor does it matter how a publisher made his money, who he is, or what standing he may have as a citizen. Sometimes the mere accident of birth makes a publisher. Reputable doctors, through their associations, try to weed out quacks, and the lawyers of the country make at least a feeble effort toward purging the bar of shysters and crooks. But newspaper publishers, even those of fine standing and of high personal integrity, seldom seem to have scruples about some of their associates. You members of the Lawyers' Guild, who are yourselves liberal dissidents from the hide-bound—or shall I say precedent-bound?—groups within your own profession will understand why J. David Stern resigned in protest from the American Newpaper Publishers Association.

Many papers show their cynical contempt either for the memory or the intellectual integrity of the American people. The Hearst output may be cited as an example. During the 1936 campaign Hearst used every contemptible weapon to discredit President Roosevelt. The "Lord of San Simeon" even referred to the President as "you and your fellow Communists." Yet on the day after the election Hearst had the effrontery to write:

"If Mr. Roosevelt is a good President, if he is a democratic President, if he is an American President, the Hearst newspapers will support him again * * *."

To which the New Republic made the appropriate answer: "In view of the fact that the Hearst papers, after hitting below the belt every day for many months, have just been repudiated in the most overwhelming landslide in political history, the impudence of such an attempted bargain with the President leaves one breathless."

And while we are on this subject, Chicagoans will recall the tactics employed by the Tribune during the 1936 campaign. You remember the fake photographs that appeared in the Tribune showing a worker wearing a social-security "dog tag" and another depicting a street cleaner sweeping away Roosevelt buttons. These were pure fabrications. Those who posed for these pictures did it for a price.

Let me tell you another typical Tribune story. Last fall the "Mourning Kernel" employed one Clifford Blackburn, who had been suspended by W. P. A. for drunkenness and later discharged for letting a tree fall on a city truck, to write a series of articles smearing W. P. A. Mr. Hunter produced facts and affidavits to disprove case after case. As part of its attack the Tribune printed another fake picture, a disreputable practice to which it has apparently become an addict. Need I say that the Tribune characteristically did not see fit to print Mr. Hunter's refutation?

We know what happened in 1936, despite the Hearsts, the McCormicks, and the whole chorus of newspapers that assaulted the President day after day with "news" and cartoons that ranged all the way from coloration to flagrant fake. This 1936 anti-Roosevelt press campaign was so notorious, in fact, that Mark Ethridge, general manager of the Louisville Courier Journal, declared: "Newspapers never so badly failed to give guidance and leadership to social and economic changes and were never so unfaithful to their trust to present unbiased news, with editorials free from selfish interests * * *."

I believe that such a situation is not healthy for the newspapers. The press exists by public favor, and not vice versa. There is at least one publisher who recognizes this. Capt. Joseph Medill Patterson, of the New York Daily News, has suggested that it would be well for Congress to investigate the press. He offers his own paper as the first to be scrutinized, and he is willing that the Chicago Tribune, in which he also has a very large interest, should follow in its order. It is understood that Dean Ackerman, of the School of Journalism of Columbia University, has conceived the idea of a Nation-wide scientific study of the press.

These two gentlemen have raised an interesting question. It seems to me that an investigation would undoubtedly bring to light important information and relevant facts about the press. And because newspapers play the tremendous role that they do in our political and economic life, the Nation has a right to know more about them. I hold that we must do everything to defend the freedom of the press for the sake of our general liberties and our democratic institutions—that is why I am speaking tonight on this subject. And without waiting for an investigation, I suggest that it would be a wise idea for the publishers themselves voluntarily to print at appropriate intervals a frank and detailed statement of their financial relationships.

Although I am a severe critic of the shortcomings of the press, I am also a defender of its freedom. I want it to free itself from its own voluntary servitude. I am of the opinion that governmental control of the press would be a calamity, and the very idea is abhorrent to me. Despite self-serving insinuations on the part of some publishers, I am happy to say that no one in this administration has ever proposed or contemplated any censorship or coercion. I quote from a letter of President Roosevelt written to the St. Louis Post-Dispatch November 2, 1938:

"I do not think that anyone would seriously argue that the freedom of the press to criticize the administration in office has in any manner been curtailed since the spring of 1933. A casual reading of a representative digest would reveal the fallacy of allegations to the contrary. Praise be! And may that freedom ever prevail—throughout this administration and throughout every administration in all the years to come."

I should also like to quote these forthright words from a recent editorial in the Charleston (W. Va.) Gazette:

"The truth of the matter is that there has been no instance when any publisher in this country has been threatened with the loss of his freedom of the press by the present administration.

"There has been a lot of moaning and weeping, but there has never been a bill of particulars.

"There has not been even one substantiated instance. * * *

"There has been plenty of freedom of the press as this newspaper can attest and as can any other honest newspaper.

"But that, in general, in this country there has been a fair press cannot be maintained. It exists only in rare instances."

Despite abuses that are inexcusable from the point of view of the press itself, no fair-minded person would deny that American newspapers are still the best, as they are the freest, in the world. Generally speaking, they print much misleading propaganda, they color the news to suit themselves, they distort the news, they suppress the news, they even invent "news," but they also carry much news that is vital to the public weal.

Although they are swimming against the current, there are, in this country, a number of excellent and honest newspapers, which serve the public welfare sincerely and effectively. Instantly, there springs to mind William Allen White's Emporia (Kans.) Gazette. Many of you will think of others where the editors and publishers have had the courage and character not to succumb to the insidious property sense and are, therefore, free to serve their fellow citizens. Even some of our big metropolitan newspapers like the New York Times, the New York Daily News, the Washington Star, the Christian Science Monitor, the St. Louis Post-Dispatch, the Philadelphia Record, and others, come well within the limits of what a fair and objective newspaper ought to be. There are still others which, while more partisan and therefore more disposed to color the news and to editorialize in the news columns, are nevertheless capable of behaving in an honorable and sportsmanlike manner. You Chicagoans will recall that during the 1936 campaign the Daily News, whose publisher, Col. Frank Knox, was the Republican Vice-Presidential candidate, carried on its front page a dispatch in which it was indicated that Howard Vincent O'Brien, the News' own columnist, had said that the colonel did not have "a Chinaman's chance" of being elected.

I would also like to pay my particular respects to the New York Daily News, a supporter of the New Deal, which during the 1936 campaign scrupulously opened its columns to both major parties, an example that was later followed by the Chicago Times. However, we Chicagoans must admit that it takes more than the Daily News and the Times to make a sensitive native feel that this city is respectable journalistically. We recall that Leo C. Rosten in his book, Washington Correspondents, wrote that, according to the opinion of this informed body of high-class newspaper writers, the Chicago Tribune, next to the Hearst press, is the least credible of all the newspapers in the country.

An instance of fairness similar to that of the Chicago Daily News comes to me from the other edge of the continent, and the mentioning of it also gives me pleasure. In the course of a warehousemen's strike in San Francisco the union made an attack on Paul C. Smith, editor and general manager of the San Francisco Chronicle. Mr. Smith featured both the attack and his reply. One marvels how Mr. Smith ever got a job on the San Francisco Chronicle, or, having gotten it, was able to hold onto it.

However, notwithstanding the bouquets that can be handed to particular newspapers in particular instances, the fact is, as Grover C. Hill, editor of the Montgomery Advertiser, wrote in the Bulletin of the American Society of Newspaper Editors: "Our newspapers are better today than ever before, but they are not yet half good enough."

It seems to me that the newspapers need not necessarily be the tools and servants of their economic interests. They seem not to

know that business houses are as dependent upon newspapers as newspapers are upon them. Advertisers cannot live without newspapers, and it is a pity that newspapers have become so servile to advertising. It is even more a pity that so many of them persist in representing a class interest, a money interest, instead of the public interest; that the Bill of Rights, excepting only the right of a press free from Government interference or control, means little to them; that they oppose and misrepresent the workingman; that they ignore the rights of the underprivileged to justice and equality of opportunity; that they color news, distort news, suppress news, and invent news in favor of those with whom they are allied financially and socially and with whose objectives they are in sympathy.

I should like to conclude with the wise words which William Allen White spoke to his fellow editors a few days ago in Fresno, Calif.:

"The people will turn to us if we just keep the Government a democracy; if we will just listen to the voice * * * of the American people and see that that voice is free. * * * The freedom of the press will take care of itself, if we ourselves are free of those things that make for the restriction of the press. * * * If we, as editors, will only keep the faith, the democratic faith, there need be no fear of change; there need be no fear of tyranny."

I join my friend, William Allen White, in urging the newspapers of the country "to keep the faith."

Hawaii Has No Race Problem

EXTENSION OF REMARKS

OF

HON. SAMUEL W. KING

DELEGATE FROM HAWAII

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 21, 1939

ARTICLE BY HON. SAMUEL W. KING, DELEGATE FROM HAWAII

Mr. KING. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include, with the permission of the publishers, an article written by me and published in the March issue of the monthly magazine Asia, as follows:

Since the time, more than a century and a half ago, when the people of the Hawaiian Islands were first brought into contact with the outside world, the door of opportunity in Hawaii has been open to all, regardless of racial origin. Our public schools and the paths leading to economic advancement and political office have offered no barriers based on race. Hawaii's greatest athlete, for example, a full-blooded Hawaiian, is held in universal esteem and affection; the city and county attorney of Honolulu, a man of Japanese ancestry, has the respect of the entire community, as have also a former chief justice of the Hawaiian Supreme Court who is of Portuguese ancestry, and a young man of Chinese extraction sent to the Territorial senate by an electorate that numbers but few voters of his racial group—to mention only a few shining examples. In other words, from the beginning Hawaii has solved her racial problem by refusing to consider racial differences as constituting a problem.

Our racial relations today are merely the natural evolution of the Hawaiian spirit, supplemented by the Christian teachings of the American missionaries. This pattern of life was stated by King Kamehameha III, whose rule covered most of the missionary period. In promulgating the first constitution in 1840, he said, "God has made of one blood all the nations of men, that they might alike dwell upon the earth in peace and prosperity."

The rapid decrease of the native population and the rapid development of Hawaii's agricultural resources brought into Hawaii, over a period of about 50 years, people of many racial strains. The United States offered a refuge and a land of opportunity to the oppressed millions of Europe and absorbed them and their children into the economic and political life of the Nation. Too remote and small for this great migration, Hawaii offered economic advancement to its thousands of immigrants, mostly but not entirely from the Orient, as the nearest source from which she could attract the manpower she needed.

Today the races of Hawaii live together as one people, owing one common allegiance to their American nationality. Racial origin means nothing to the individual in his status as an American. Among the racial groups there is mutual understanding and friendly sympathy. The spirit of old Hawaii governs, and "race prejudice" as such is not countenanced. Her people are building out of the varied constituents that make up Hawaii a new Hawaiian, proud of his Hawaiian nativity, of his ancestry, and, above all, of his citizenship in the great American democracy.

President Roosevelt, in his farewell message to the people of Hawaii at the end of his visit in 1934, said in recognition of this spirit: "In a fine old prayer for our country I find these words: 'Fashion into one happy people those brought hither out of many countries and tongues.' That prayer is being answered in the Territory of Hawaii. You have a fine tradition in the ancient beliefs of the islands, and I am glad that this tradition is so well maintained. You have built on it, built on it wisely, and today men and women and children from many lands are united in loyalty and understanding of the high purposes of America."

Occasionally the question of racial origin is raised by recent comers, expressing prejudices that prevail in their former homes and are foreign to Hawaii. To those of us who belong to Hawaii through birth or long residence the community of spirit among the different races that make up Hawaii's people warrants no special mention. In the business and professional life of Hawaii, in governmental employ and in politics, in the schools and sports of the island life, the citizens of Hawaii participate as individuals, fellow members of the Hawaiian community, with no concern as to one another's racial ancestry.

Such an attitude has made Hawaii a happy country, where people dwell together in peace and amity, where the spirit of the Hawaiian greeting, "Aloha", governs the relations between the races. As the youth of Hawaii progress through the public schools, imbibe the principles of American democracy and absorb the spirit of Hawaii, they carry on the pattern of life established 160 years ago; and they go out into the world free of the hates and prejudices, the animosities, and jealousies that make racial barriers. Knowing one another as individuals, they like and respect one another as individuals. Knowing representatives of all the several races in Hawaii, they find the same human traits common to all. As Chester E. Rowell said in the Honolulu Star-Bulletin: "For over a hundred years the descendants of traders and missionaries and the descendants of the original inhabitants of the island have lived there together, singularly free from that institution of racial caste which has cursed the American mainland. * * * Whether in crime or aristocracy, Hawaii has considered the individual, not the race. It will be a sorry service if we, who have failed in our race problem, impose our standards on Hawaii, which has succeeded."

That Hawaii should ever lose its happy freedom from intolerance because of a new philosophy brought into the islands from elsewhere would be indeed a tragedy.

Foundation Stones of the United States

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 21, 1939

PORTIONS OF GREAT DOCUMENTS OF AMERICAN HISTORY

Mr. VOORHIS of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including portions of the great documents of American history.

FOUNDATION STONES OF THE UNITED STATES

In these times of trial it is good for every American to go back from time to time and read with care the great passages from our public documents and the great utterances of our great men. It is in the hope that the reading of them will help to steady us all and help us to face the future with resolute determination to solve our problems for the sake of continuing greatness and increasing justice in our country that the following collection of foundation stones of the United States has been brought together.

I. FROM THE DECLARATION OF INDEPENDENCE

We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain inalienable rights, that among these are life, liberty, and the pursuit of happiness—That to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed, * * * (from a declaration by the Representatives of the United States of America in General Congress assembled, July 4, 1776).

II. THE PREAMBLE TO THE CONSTITUTION

We, the people of the United States, in order to form a more perfect Union, establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity, do ordain and establish this Constitution for the United States of America.

III. THE BILL OF RIGHTS OF THE CONSTITUTION

The first 10 amendments, commonly known as the Bill of Rights, were adopted in order to quiet the apprehension that, without some such declaration, the Government would assume, and might be held to possess, the power to trespass upon those rights

of persons and property, which by the Declaration of Independence were affirmed to be inalienable rights. They "were not intended to lay down any novel principles of government, but simply to embody certain guaranties and immunities which we had inherited from our English ancestors * * *." (Constitution of the United States of America, annotated. Compiled under authority of S. Con. Res. 35, 75th Cong.)

AMENDMENT I

Congress shall make no law respecting an establishment of religion or prohibiting the free exercise thereof; or abridging the freedom of speech or of the press; or the right of the people peaceably to assemble and to petition the Government for a redress of grievances.

AMENDMENT II

A well-regulated militia being necessary to the security of a free state, the right of the people to keep and bear arms shall not be infringed.

AMENDMENT III

No soldier shall in time of peace be quartered in any house without the consent of the owner, nor in time of war but in a manner to be prescribed by law.

AMENDMENT IV

The right of the people to be secure in their persons, houses, papers, and effects against unreasonable searches and seizures shall not be violated, and no warrants shall issue but upon probable cause, supported by oath or affirmation, and particularly describing the place to be searched and the persons or things to be seized.

AMENDMENT V

No person shall be held to answer for a capital or otherwise infamous crime unless on a presentment or indictment of a grand jury, except in cases arising in the land or naval forces, or in the militia, when in actual service in time of war or public danger; nor shall any person be subject for the same offense to be twice put in jeopardy of life or limb; nor shall be compelled in any criminal case to be a witness against himself; nor be deprived of life, liberty, or property without due process of law; nor shall private property be taken for public use without just compensation.

AMENDMENT VI

In all criminal prosecutions the accused shall enjoy the right to a speedy and public trial by an impartial jury of the State and district wherein the crime shall have been committed, which district shall have been previously ascertained by law, and to be informed of the nature and cause of the accusation; to be confronted with the witnesses against him; to have compulsory process for obtaining witnesses in his favor; and to have the assistance of counsel for his defense.

AMENDMENT VII

In suits at common law, where the value in controversy shall exceed $20, the right of trial by jury shall be preserved, and no fact tried by jury shall be otherwise reexamined in any court of the United States than according to the rules of the common law.

AMENDMENT VIII

Excessive bail shall not be required, nor excessive fines imposed, nor cruel and unusual punishments inflicted.

AMENDMENT IX

The enumeration in the Constitution of certain rights shall not be construed to deny or disparage others retained by the people.

AMENDMENT X

The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States, respectively, or to the people. (Constitution of the United States.)

IV. A PORTION OF GEORGE WASHINGTON'S FAREWELL ADDRESS

The great rule of conduct for us, in regard to foreign nations, is, in extending our commercial relations, to have with them as little political connection as possible. So far as we have already formed engagements, let them be fulfilled with perfect good faith. Here let us stop.

Europe has a set of primary interests which have to us none or a very remote relation. Hence she must be engaged in frequent controversies, the causes of which are essentially foreign to our concerns. Hence, therefore, it must be unwise in us to implicate ourselves by artificial ties in the ordinary vicissitudes of her politics or the ordinary combinations and collisions of her friendships or enmities.

Our detached and distant situation invites and enables us to pursue a different course. If we remain one people, under an efficient government, the period is not far off when we may defy material injury from external annoyance; when we may take such an attitude as will cause the neutrality we may at any time resolve upon to be scrupulously respected; when belligerent nations, under the impossibility of making acquisitions upon us, will not lightly hazard the giving us provocation; when we may choose peace or war as our interest, guided by our justice, shall counsel. * * *

'Tis our true policy to steer clear of permanent alliances with any portion of the foreign world. (George Washington in his Farewell Address, September 19, 1796.)

V. THOMAS JEFFERSON'S STATUTE OF RELIGIOUS LIBERTY FOR THE STATE OF VIRGINIA

Be it enacted by the general assembly, That no man shall be compelled to frequent or support any religious worship, place, or ministry whatsoever, nor shall be enforced, restrained, molested, or burthened in his body or goods, nor shall otherwise suffer on account of his religious opinions or belief; but that all men shall be free to profess, and by argument to maintain, their opinion in matters of religion, and that the same shall in no wise diminish, enlarge, or affect their civil capacities.

And though we well know that this assembly elected by the people for the ordinary purposes of legislation only, have no power to restrain the acts of succeeding assemblies, constituted with powers equal to our own, and that therefore to declare this act to be irrevocable would be of no effect in law; yet we are free to declare, and do declare, that the rights hereby asserted are of the natural rights of mankind, and that if any act shall be hereafter passed to repeal the present, or to narrow its operation, such act will be an infringement of natural right. (Extract from statute of religious liberty, proposed by Mr. Thomas Jefferson, to the General Assembly of Virginia, and passed by that body in October 1785. 12 Hennings (Va.) 84.)

VI. JOHN MARSHALL ON THE CONSTITUTION

It must have been the intention of those who gave these powers (to the Federal Government), to insure, as far as human prudence could insure, their beneficial execution. This could not be done by confiding the choice of means to such narrow limits as not to leave it in the power of Congress to adopt any which might be appropriate, and which were conducive to the end. This provision is made in a Constitution intended to endure for ages to come, and consequently, to be adopted to the various crises of human affairs. (John Marshall in *McCulloch* v. *State of Maryland*.)

VII. THE MONROE DOCTRINE

We owe it, therefore, to candor and to the amicable relations existing between the United States and those powers (European) to declare that we should consider any attempt on their part to extend their system to any portion of this hemisphere as dangerous to our peace and safety.

Our policy in regard to Europe, which was adopted at an early stage of the wars which have so long agitated that quarter of the globe, nevertheless remains the same, which is not to interfere in the internal concerns of any of its powers; to consider the government de facto as the legitimate government for us; to cultivate friendly relations with it; and to preserve those relations by frank, firm, and manly policy, meeting in all instances the just claims of every power, submitting to injuries from none. (From President Monroe's message to Congress on December 2, 1823.)

VIII. FROM DEMOCRACY IN AMERICA, BY ALEXIS DE TOCQUEVILLE (1835)

"As soon as land began to be held on any other than a feudal tenure, every discovery in the arts created so many new elements of equality among men.

"Men are not corrupted by the exercise of power or debased by the habit of obedience, but by the exercise of a power which they believe to be illegitimate and by obedience to a rule which they consider to be usurped and oppressive."

IX. A PORTION OF ANDREW JACKSON'S FAREWELL ADDRESS

"The immense capital and peculiar advantages bestowed upon it (the Second Bank of the United States) enabled it to exercise despotic sway over the other banks in every part of the country. From its superior strength it could seriously injure, if not destroy, the business of any of them which might incur its resentment; and it openly claimed for itself the power of regulating the currency throughout the United States. In other words, it asserted (and undoubtedly possessed) the power to make money plenty or scarce at its pleasure, at any time, and in any quarter of the Union by controlling the issues of other banks and permitting an expansion or compelling a general contraction of the circulating medium according to its own will. The other banking institutions were sensible of its strength, and they soon generally became its obedient instruments, ready at all times to execute its mandates.

In the hands of this formidable power, thus organized, was also placed unlimited dominion over the amount of the circulating medium, giving it the power to regulate the value of property and the fruits of labor in every quarter of the Union, and to bestow prosperity or bring ruin upon any city or section of the country as might best comport with its own interest or policy. * * *

Yet, if you had not conquered, the Government would have passed from the hands of the many to the hands of the few, and this organized money power from its secret conclave would have dictated the choice of your highest officers and compelled you to make peace or war, as best suited their own wishes. The forms of your Government might for a time have remained, but its living spirit would have departed from it. * * * Let us abide by the Constitution as it is written, or amend it in the constitutional mode if it is found to be defective. (From President Jackson's farewell address, March 4, 1837.)

X. LINCOLN'S GETTYSBURG ADDRESS

Fourscore and seven years ago our fathers brought forth on this continent a new nation, conceived in liberty, and dedicated to the proposition that all men are created equal. Now we are engaged in a great civil war, testing whether that Nation, or any nation so conceived and so dedicated, can long endure. We are met on a great battlefield of that war. We have come to dedicate a portion of that field as a final resting place for those who here gave their lives that that Nation might live. It is altogether fitting and proper that we should do this.

But, in a larger sense, we cannot dedicate—we cannot consecrate—we cannot hallow—this ground. The brave men, living and dead, who struggled here, have consecrated it far above our poor

power to add or detract. The world will little note nor long remember what we say here, but it can never forget what they did here. It is for us, the living, rather, to be dedicated here to the unfinished work which they who fought here has thus far so nobly advanced. It is rather for us to be here dedicated to the great task remaining before us—that from these honored dead we take increased devotion to that cause for which they gave the last full measure of devotion; that we here highly resolve that these dead shall not have died in vain; that this Nation, under God, shall have a new birth of freedom; and that government of the people, by the people, for the people, shall not perish from the earth. (An address by Abraham Lincoln at Gettysburg, November 19, 1863.)

XI. ABRAHAM LINCOLN ON LABOR

In the early days of our race the Almighty said to the first of our race, "In the sweat of thy face shalt thou eat bread"; and since then, if we except the light and the air of heaven, no good thing has been or can be enjoyed by us without having first cost labor. And inasmuch as most good things are produced by labor, it follows that all such things of right belong to those whose labor has produced them. But it has so happened, in all ages of the world, that some have labored, and others have without labor enjoyed a large proportion of the fruits. This is wrong and should not continue. To secure to each laborer the whole product of his labor, or as nearly as possible, is a worthy object of any good government. (From Abraham Lincoln, edited by John G. Nicolay and John Hay, vol. I, p. 92.)

XII. GIFFORD PINCHOT ON CONSERVATION

* * * Conservation stands for the same kind of practical common-sense management of this country by the people that every businessman stands for in the handling of his own business. It believes in prudence and foresight instead of reckless blindness; it holds that resources now public property should not become the basis for oppressive private monopoly; and it demands the complete and orderly development of all our resources for the benefit of all the people, instead of the partial exploitation of them for the benefit of a few. It recognizes fully the right of the present generation to use what it needs and all it needs of the natural resources now available, but it recognizes equally our obligation so to use what we need that our descendants shall not be deprived of what they need. (From the Fight for Conservation, by Gifford Pinchot.)

XIII. CHARLES E. HUGHES ON LEGISLATION AND THE COURTS

* * * I like to think of the courts as in the truest sense the expert agents of democracy—expressing deliberate judgment under conditions essential to stability, and therefore in their proper action the necessary instrumentalities of progress. We are constantly reminded of the fact that legislation, even when making important changes, is new only in part. It cannot escape its roots. In providing what is new it also brings forward what is old. Concepts long familiar in the law are introduced into new statutes; language can hardly be used otherwise, despite crudities in drafting, and in nearly every line is a connection with the past which demands the expert judicial interpreter. And, further, what may seem at the time to be an abrupt or catastrophic change takes ultimately its place in legal history, when causes and effects are better understood, as a natural evolution. It is undoubtedly the duty of the courts to construe legislation according to the intent of the legislature. (From an address before the New York Bar Association on January 14, 1916.)

XIV. A PORTION OF THE MESSAGE TO CONGRESS OF PRESIDENT FRANKLIN D. ROOSEVELT, JANUARY 4, 1939

Storms from abroad directly challenge three institutions indispensable to Americans, now as always. The first is religion. It is the source of the other two—democracy and international good faith.

Religion, by teaching man his relationship to God, gives the individual a sense of his own dignity and teaches him to respect himself by respecting his neighbors.

Democracy, the practice of self-government, is a covenant among free men to respect the rights and liberties of their fellows.

International good faith, a sister of democracy, springs from the will of civilized nations of men to respect the rights and liberties of other nations of men.

In a modern civilization all three—religion, democracy, and international good faith—complement each other.

Where freedom of religion has been attacked, the attack has come from sources opposed to democracy. Where democracy has been overthrown, the spirit of free worship has disappeared. And where religion and democracy have vanished, good faith and reason in international affairs have given way to strident ambition and brute force.

An ordering of society which relegates religion, democracy, and good faith among nations to the background can find no place within for the ideals of the Prince of Peace. The United States rejects such an ordering and retains its ancient faith.

There comes a time in the affairs of men when they must prepare to defend, not their homes alone but the tenets of faith and humanity on which their churches, their governments, and their very civilization are founded. The defense of religion, of democracy, and of good faith among nations is all the same fight. To save one we must now make up our minds to save all. (From Franklin D. Roosevelt's Annual Message to Congress, January 4, 1939.)

Trade Agreements Disastrous to Agriculture

EXTENSION OF REMARKS

OF

HON. FRANCIS D. CULKIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 20, 1939

RADIO ADDRESS OF HON. FRANCIS D. CULKIN, SCHENECTADY, N. Y., MARCH 17, 1939

Mr. CULKIN. Mr. Speaker, under leave to extend my remarks, I insert the following radio address made over station WGY, Schenectady, N. Y., March 17, 1939, on The Effect of Trade Agreements on Agriculture.

Good evening friends, I will prove to you tonight that trade agreements do not benefit agriculture but, on the contrary, have well-nigh destroyed the American farmer.

There were three vehicles of recovery adopted by the present administration for the purpose of bringing agriculture and business back to normal condition. First came the N. R. A., then the A. A. A., and, finally, the trade-agreement program. The first two of these measures were torpedoed and sunk by the Supreme Court.

Under the last of the "recovery" measures, the trade-agreement law, the President was authorized to enter into trade agreements with foreign nations and to reduce the existing tariff 50 percent without the concurrence of the Senate and House. This power was delegated by the President to the present Secretary of State, the Honorable Cordell Hull. Mr. Hull is, in point of character and ability, the outstanding member of the present administration, but he hails from the deep South, and for years has been an ardent free trader. He believes, with all the fervor of his strong nature, that a tariff is unjustifiable from any angle and is, in fact, a sin against the Holy Ghost.

In carrying out this program of trade agreements, Mr. Hull named as his chief of staff Prof. Francis B. Sayre, who, while an able and persuasive gentleman, is an internationalist pure and simple. Professor Sayre is one of the few men who believe the League of Nations is still alive, and has the fixed belief that this trade-agreement program will insure peace and good will among the nations of the world. Placing the trade-agreement program in charge of these two eminent gentlemen was like putting a Quaker in command of the Army and a pacifist in charge of the Navy. With their starry-eyed idealism, they were no match for the virile Canadian, the shrewd Dutchman, and the realistic Englishman.

CAVIAR AND COCKTAILS

In the background, with a passion for anonymity, making out the schedules, was a group of young men mostly fresh out of college who have had no experience with business or actual contact with the sordid affairs of life. Mr. Smith, of General Motors, in his radio talk last week, complained of the backscratching and logrolling that occurred when the Congress had power to make these tariffs. We in Washington know that under the present scheme tons of caviar and oceans of cocktails have been consumed in the subterraneous process of making these trade treaties. I wish I had time to go into that. It is stated that when the schedule for Holland was up for consideration one of the American technicians was playing golf daily with the bright young men of the Dutch Legation. That may have been innocent, but it suggests possibilities. So much for the men who have written these trade agreements.

TRADE AGREEMENTS A FAILURE

Now, let me tell you what the law proposed to do. The Trade Agreement Act of 1934 proposed to restore the American standard of living, overcome domestic unemployment, and increase the purchasing power of the American public. The law has been in operation since 1934, and 20 treaties have been written. In these treaties the United States has made concessions totaling 1,056 reduced rates, 96 bound rates, and 142 items bound free. Of the 1,056 rates which have been reduced, 928 can be directly compared with the rates of the act of 1922. Over 80 percent of these comparable rates have been reduced below the rates provided in the act of 1922 as passed, or, in other words, 776 rates were reduced below the 1922 rates.

Obviously the trade-agreement law has not helped the American standard of living. Today domestic unemployment presents a more serious problem than in 1934. The purchasing power of the American public is lower than it was in 1934, this despite the fact that the Federal Government in the last 6 years has expended for relief over $21,000,000,000.

The added plea for the trade-agreement program has been based on the claim that these treaties will make for world peace. Everybody subscribes to the desirability of world peace, but the trade-agreement program has, in fact, endangered world peace. In the attainment of this objective, the trade-agreement program is another complete flop. In addition, handing out the American

home market of 130,000,000 people, the greatest market in the world even in these unhappy times, has disrupted American economy, retarded and palsied industrial recovery, and well-nigh destroyed American agriculture in its various branches.

If my hearers will recall the provocative and inflammatory notes which Secretary Hull has been writing Japan and Germany, they will know how completely this highly fantastic peace theory has failed. Despite the surrender of our American markets to the foreign farmer, the world spent 18 billions last year for munitions of war. We, ourselves, are developing a great armament program, and last week Secretary Hull made a strong speech in behalf of vastly greater disbursements for armament. The meshing of America's economy with that of the rest of the world is one of the sure pathways to war.

HOW ABOUT FOREIGN TRADE

Just a word about foreign trade. In the days when we were living under a protective tariff, we had a $90,000,000,000 income. During that period our foreign trade amounted to about 6 percent of that figure. It is authoritatively stated that if we eliminate the intercompany relations, that is where an American company has a subsidiary abroad, and over 1,600 of them have, the true volume of our foreign trade in normal times is not more than 3 percent. In other words, the buying power of our 130,000,000 normally takes care of 97 percent of our production.

FOREIGN PLANTS

I mention with some regret that General Motors has 20 auto and truck plants in America and 23 in foreign countries. Mr. Smith's company manufactures for the American market largely in America, and for the foreign market abroad where a substandard of living and wages exists. General Motors is now manufacturing Opel cars in Germany. It is shipping these cars in increasing numbers to the Argentine, Brazil, and other South American states. I think this is a disservice to America where General Motors was built up under a protective tariff and with the dollars of the American people. Of course, I give due credit to the genius and skill which has made the General Motors product what it is, but suggest that if Mr. Smith is sincere in his protestations of devotion to American agriculture and labor, that he use his high influence to stop this rather extraordinary practice.

The fact is, we have never been an exporting nation like Great Britain, Germany, Belgium, and France. Their export of national production will average at least 25 percent.

In express violation of the letter of the statute, the President and Secretary of State have made these trade agreements multilateral. In other words, if they give a concession to Canada on dairy products, 72 other nations participate, and only Germany is excluded. I wish I had time to discuss this disastrous practice. May I add that the Congress intended these treaties should be reciprocal or bilateral, and the debates in both the Senate and House demonstrate that beyond question.

FOREIGN FARMERS IN OUR MARKETS

Now, as to agriculture. The effect of these treaties has been to take the American farmer out of the foreign market and put the foreign farmer in the American market. In the twenties, in the days of the protective tariff, we sold the produce of 80,000,000 acres for export. Under the gentle auspices of the trade agreements, this amount has been reduced to an average of less than 30,000,000 acres. Let me explain that in 1937 foreign agricultural imports actually displaced an American acreage of 87,234,280. The opposition will say that in 1932, under the protective tariff, our exports were the lowest in history. They should remember that in 1932 we had a world-wide depression. They should also remember that in this year of our Lord all nations, we only excepted, have forged ahead to almost complete recovery.

In 1938 our domestic exports of agriculture were $827,000,000. The yearly average of our agricultural exports during the years 1926 to 1930 amounted to $1,692,000,000, or about twice what our agricultural exports were in 1938. Our imports of agricultural products for 1938 amounted to $955,000,000. This was about $125,000,000 more than our agricultural exports. These figures are a complete condemnation of the workings of the trade-agreement policy and establish the fact that American agriculture has been laid on the altar of foreign trade.

AGRICULTURAL DUTIES LOWERED

Agricultural duties in these various treaties have invariably been lowered, and where concessions have been obtained they are, in fact, more seeming than real. For instance, a concession granted by the United Kingdom includes the binding of duty on canned pigs' tongues and animal sausage casings We are also allowed to ship into Great Britain free of duty pigs' heads, pigs' feet, and edible pigs' offal in unlimited quantities. These were typical of the concessions our anonymous representatives obtained, and in return we reduced the duty on nearly every variety of dairy products, including cheddar cheese. These were reduced below the level of the 1922 tariff, which, experience had shown, was not sufficient to protect our dairymen.

THE DAIRYMAN DESTROYED

The fact is that these trade agreements have all but destroyed the 3,000,000 dairymen and their 12,000,000 dependents. For the first time in history butter and cheese are selling at about the same figure in London and the United States. The fact is that the dairy monopolists—the Bordens, National Dairies, and the "packer kings," Armour and Swift—have used Canadian cheese as a battering ram to hammer down the price of the American product. The prices of dairy products are interdependent, and if you destroy the one you destroy all. The dairyman's grievous condition has been greatly depressed by the fact that John Bull and Canada in combination have outtraded Uncle Sam.

THE PEEK PLAN

Take a look at cotton. During the so-called pernicious days of the protective tariff, we sold approximately some 8,000,000 bales of cotton in the world market. In 1938, we sold about 4,000,000 bales of cotton. Today the Government has 11,000,000 bales of cotton on its hands, with the 1939 crop to be heard from. This debacle is due to the fact that these treaties have been multilateral, and no attempt was made by the United States representatives in this program to follow the Peek plan of using the Export-Import Bank for reciprocal trade. The same is true of wheat, corn, and meat products. We gave all the nations of the world except Germany the advantages of all these treaties. The result was we had nothing to trade on, and they went elsewhere. The whole program has been characterized by a star-eyed idealism that has been fatal to the American farmer.

THE BALANCE OF TRADE

Let us look at the balance of trade as it appears from a complete record of 1938. Our exports of merchandise amounted to $3,094,000,000. Our imports were $1,960,000,000, leaving an apparent balance of $1,134,000,000. However, we had $1,974,000,000 in net gold imports and net silver imports of $223,000,000. Gold and silver is a commodity and we are paying a fancy price for it. It is properly chargeable as an import, and putting this metal in the scale we find that our imports over our exports amounted to $1,063,000,000. We are in fact a debtor nation, and if the President and Secretary Hull had used the trading powers given them by the Congress through the medium of the Export-Import Bank, we could have marketed each year an additional billion dollars worth of agriculture products abroad.

FARM INCOME

Now a word about farm income. Farm income in 1938, including benefit payments, was approximately $7,625,000,000. This is a billion dollars less than the average for the 5-year period of 1925–29 when the protective tariff was functioning. Our farmers are not prosperous, as Mr. Smith would seem to imply. They have had their buying power cut down two and one-half billion dollars a year. This, of course, reacts tremendously to the disadvantage of both the farmer and the worker in industry.

WHO IS FOR TRADE AGREEMENTS?

Let me call the roll of who is for these treaties: First, the internationalists of the State Department; second, the importers; third, the international bankers who have financed the vast propaganda that has been thrown about these treaties; fourth, the foreign producer of agricultural or industrial products.

WHO IS AGAINST TRADE AGREEMENTS?

Now let me call the roll of those who are against trade agreements: First, the National Grange; second, the American Federation of Labor, the most numerous body of organized workers and consumers in America; third, the Farmers' Union; fourth, the National Manufacturers Association of the United States, representing American industry that does not manufacture abroad; fifth, the national dairymen's organizations.

Consider the opponents and proponents of this program. That tells the story. A man usually knows when his ox is gored, and the informed farmer of the United States is today in complete opposition to this trade-agreement program that is destroying him. The fact is that this fatal program has fallen of its own weight and has already reduced the standard of living of every citizen of America, whether he is on a farm or in a shop.

This trade-agreement program is, in my judgment, one of the principal reasons why American agriculture and industry has not kept pace with world recovery. Its repeal will save the American farmer and factory worker from destruction. God speed that day!

Good night.

St. Patrick's Day Address

EXTENSION OF REMARKS

OF

HON. CHARLES KRAMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 21, 1939

RADIO ADDRESS OF HON. JAMES A. FARLEY, MARCH 17, 1939

Mr. KRAMER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of the Honorable James A. Farley, Postmaster General of the United States, delivered before the Friendly Sons of St.

Patrick, of Providence, R. I., at 8:30 p. m. Friday, March 17, 1939, and broadcast over a Nation-wide hook-up:

You have all heard, I dare say, of that distinguished gentleman who was one day walking quietly down the street when he received a resounding thump on the back from one who had mistaken him for an old friend. The gentleman straightened up and wheeled sharply around, only to find himself looking into the face of a total stranger. "Well," he managed to say when he had regained his composure, "I do not know your name but your manners are certainly familiar."

In coming here this evening to join you in the celebration of the feast of the great apostle of Ireland, I feel that although I do not know the names of all of you, I am nevertheless among fast friends; for there is something about the Friendly Sons of St. Patrick, wherever you find them, that reminds one of those who have grown up in the same neighborhood, who have imbibed the same lessons of loyalty, and who have followed the same hallowed traditions and not only are their manners altogether familiar, but there is a quickness of mutual understanding that is very reassuring to one who has the privilege to speak before them.

I need not tell you, I trust, that I deem it a distinct honor to address this society which George Washington joined in Philadelphia in 1781; and which had on its roll of membership during the Revolution such noted generals as Wayne, Butler, Hand, Irvine, and Moylan. Since that time it has numbered among its sons, in almost every State of the Union men who have made a secure place for themselves in the history of the United States not only as statesmen, poets, historians, and philosophers but also as leaders in business and in the professions.

I do not believe I shall be accused of exaggeration when I say there is no other race on the face of this earth that has had the difficulties and hardships to contend with that the Irish have experienced, and that has still survived and flourished in spite of all the cruelties the mind of man could invent to ruin it. Other races, for the most part, have been protected and guarded by the power called government; they have gone along the even tenor of their way peacefully and quietly; their history is the record of their lives. Erin, however, has had to fight the very power that should have protected her; she has had to flee from the very arms that should have been raised in her defense; her history is the record of her martyred dead. And the only reason she has any history at all to record today is because of the living faith and sterling character of her sons, who have always loved justice and hated oppression wherever these qualities were to be found.

I am not going back over those years of famine and persecution which you know only too well. In those times everything possible was done to destroy or discourage the Irish people. Their lands were taken away and given to usurpers in the hope that the tyranny of the new landowners would wipe the race out of existence. But those who waged this campaign overlooked one fact. They had not reckoned on the Irish girl. No matter how furious the invaders were when they landed on Irish soil, no matter what means they employed for the annihilation of the Irish, sooner or later they were destined to meet the Irish colleen. And when they did, all their plans were shattered. The English settler married the Irish girl, and from those marriages came the most patriotic Irishmen the world has ever known. They have rightly been called "more Irish than the Irish themselves."

In the time of Queen Elizabeth the inhabitants of Ireland were put to the sword, their dwellings burned, their cattle and crops destroyed. The country was left in such a pitiable condition that a bird could scarcely find subsistence there. Yet Elizabeth had scarcely gone to her judgment when the exiles came back from the mountains, the woods, and the caverns, where they had been in hiding, and in a remarkably short time the land began to blossom again like a flower.

During the reign of Charles II practically every ship that traded with the colonies in America was an Irish ship, built by Irish hands and manned by Irish seamen. Irish woolen manufacturers were the most prosperous in the world, and Irish cattle and horses filled every English market. I mention these things simply to remind you that the Irish were always prosperous if given half a chance. They wanted no concessions and no privileges from any government. All they ever asked for was simple justice, and whenever they got justice they made their own prosperity.

When I hear men speak of the history of Ireland I am reminded of that big Irishman who came home one night with two of the blackest eyes that were ever seen in the face of a white man. One of his companions, meeting him at the door, said to him in a rather plaintive voice: "For God's sake, man, who gave you the two black eyes?" The big fellow became indignant, and shaking his fist in the face of his companion he said to him: "Who gave me the two black eyes? No one gave them to me! I had to fight like a demon to get them." And so it has been with the Irish. They have had to fight to the last ditch to have any history at all to record. But through persecution and starvation they have walked manfully, with their face to the stars, and today they look back on those times of oppression and slaughter, not in a spirit of anger and reprisal, not with a feeling of hatred and revenge, but with the spirit of forgiveness that has always burned like a light in the heart of the Irish. When they were no longer able to tolerate or avoid the tyranny of their oppressors, and they came to America, the land of freedom and opportunity where every man is on an equal footing with his neighbor, where every man is given an opportunity to use his talents and his labor for his own betterment, we still find the Irish among the champions of justice and liberty, and ever grateful for the privileges they have received in the United States. And to prove their gratitude they are and always have been ready to shed their blood and to lay down their lives for the country that has befriended them. Major General Robertson testified before a committee of the House of Commons that one-half of Washington's army was composed of Irishmen. And while that statement may seem an exaggeration, it was nevertheless repeated by Joseph Gallaway on the witness stand before an English tribunal and by General Lee. Both of these men were competent judges, and were certainly in a position to know the facts.

It will be held by some, of course, that it was not American patriotism that caused Irishmen to join an army that was fighting England. Many will believe that they looked upon such a venture as an outdoor sport. One reputable historian tells of a company of Irish who were defending a hill in the Revolution. After the battle it was discovered that all the gunlocks were either bent or twisted, and an investigation proved that when the Irish ran out of ammunition, instead of climbing the hill for more, they used their guns on the heads of their enemies. It is true, of course, that there was little love lost between Ireland and England, but uppermost in the minds of these Irishmen who fought in the Revolution was the safeguarding of that liberty and freedom which they had been deprived of in their own land. And they have amply proved the fact by the number of enlistments in every war in which this country has ever engaged.

When the passion of the hour brought the great Civil War and other wars to this land, we find the sons of the Gael fighting just as courageously in support of their cause as they did in the Revolution; and in all generations they have written their names, not on gold or silver, not on marble or bronze, but on the hearts and minds of a grateful American people.

I trust that this country will never be called upon to enter another war, especially a foreign one. I hope that our time may be given in future days to the straightening out of our own problems and to the making of our land a better and more contented place in which to live. I pray that the Irish, who so well appreciated the opportunities that America gave them in their days of oppression and who were so ready to lay down their lives that those opportunities might continue, will bend all their efforts today in an endeavor to drive from our shores those internal enemies who do not appreciate the liberty that is theirs, and who are trying to undermine and destroy the very foundations on which our Government is built.

In recent years, as you are aware, there have come to our shores from the Old World men and women who could no longer tolerate the tyranny of their mother country. These people have been given the same protection, the same liberty, and the same opportunities for which the sons of Erin are so grateful. But, instead of showing gratitude for these blessings which were denied them in their own country, instead of being ready to shed their blood that such freedom might continue, they are using their liberty to instill into the hearts and minds of their fellow men a distrust for American institutions, to arouse religious intolerance, race hatred, class conflict, and even a denial of the God who created them. Some of these have proclaimed openly that they would not engage in even a defensive war to save this Nation. What, we sometimes wonder, do these people want? Is it communism? They can have it at its source for the small price of a trip across the water, without the necessity of tearing down the existing Government to build upon its ruins. Is it fascism? The ideal Fascist state has been set up in the Old World and welcomes all those who believe in its principles and are ready to work for its success. The fact is that you could not drag any of these agitators with a team of horses to a boat embarking for any of these countries. They know they can have no such freedom there as they have in the United States. And yet they are perverted enough to spend their time and their energies in an endeavor to destroy what is today the best country on earth in spite of the evils that exist here.

What is there across either ocean that can compare to advantage with American democracy? There are abuses here, of course; and there will be, here and everywhere, so long as humanity is what it is. But can we find a more genuine spirit of devotion to the common good in those countries where the rulers dictate what you shall eat, what you shall drink, what you shall wear, where and at what age and at what kind of labor you shall work, what you may read, what you may listen to, what you may speak? The American citizen has still the final word in government in this country. In spite of politics and propaganda, it is he who will ultimately determine who shall be the President of the United States, who shall sit in our legislative halls, and who shall judge our people. He may be indifferent at times, he may be unwatchful, but when he is aroused, when he is indignant with Government policy, he knows that he and his neighbor from coast to coast can put a stop to any kind of arbitrary abuse or injustice.

This country still recognizes that every individual has certain rights which do not come from society, but are the essential claims of those who go to make up society. These rights do not come from the state, because they existed before the state. But it is the duty of the state to protect its citizens in the enjoyment of these rights. Every man not only has the right to live, but also he has the right to the enjoyment of liberty, the right to an education, the right to labor, and the right of worshipping God, and of practicing his religion according to the dictates of his conscience. And where, I repeat, are these rights better safeguarded than in our own country?

No one contends, I dare say, that our democracy is perfect. We have unemployment, we have a serious farm problem, we have trouble between labor and capital. But these things can be ironed out, if we have patience and good will, in the American way. When people tell you that foreign countries have no unemployment, that statement should be taken with a grain of salt. For when you come to examine the wages these countries pay their laborers and the purchasing power of their money, you will usually find that a great many of their people are working for what would be starvation wages in the United States. In fact, many of our people on the relief rolls are getting more than some of those who are working 10 and 12 hours a day in other countries.

This, then, is the problem of America at the present time, as I see it. Lord Macaulay said some 80 years ago, when writing to a friend in America: "Your Republic will be laid waste in the twentieth century as the Roman Empire was in the fifth; with this difference: The Huns and the Vandals who ravished the Roman Empire came from without, but your Huns and Vandals will have been engendered within your own country, by your own institutions." Macaulay must have foreseen a condition in our country when numbers of our citizens were swinging to a dangerous left, away from all the traditions and the philosophy of the men who established the foundations of our democracy. These enemies are not so firmly entrenched yet that they cannot be circumvented. And it is to patriotic Americans like the Friendly Sons of St. Patrick to whom we must look if we would keep our country the land of opportunity, the home of civil and religious liberty that our fathers loved and fought for. And there is every reason to believe that you will not be found wanting in your duty any more than were your fathers before you.

Bryan's Contribution to Religion

EXTENSION OF REMARKS

OF

HON. J. BUELL SNYDER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 21, 1939

ADDRESS OF HARRY B. FLEHARTY, OF OMAHA, NEBR.

Mr. SNYDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by Harry B. Fleharty, of Omaha, Nebr., at an observance of Bryan's birthday, in response to the toast "Bryan's Contribution to Religion":

Mr. Toastmaster, distinguished guests, ladies, and gentlemen, it was my privilege when I began the practice of law in Nebraska some 40 years ago to come in contact in a rather intimate way with William Jennings Bryan.

That contact, while it resulted in the practice of law becoming secondary to interest in public affairs, served to broaden my conception of life's realities and enrich it with visions that otherwise probably would never have been within the scope of my experience.

In most things I have been his disciple and while not always agreeing, I found in him one who could disagree without being disagreeable. His personality and philosophy have been and always must be vital factors in my life.

In considering the phase of Mr. Bryan's activities assigned me, his "contribution to religion," I felt it necessary to first attempt to obtain a definite conception of religion. Langdon Smith in his great poem Evolution says:

> There came a time in the law of life
> When over the nursing sod
> The shadows broke and the soul awoke
> In a strange, dim dream of God.

This awareness of God, the mythical dawning of which the poet pictured, would, I think, describe Mr. Bryan's conception of religion. It provided the foundation for every structure he sought to establish. Bryan's ability to form firm, clearly defined opinions concerning any important problem confronting him undoubtedly had its root in his firmly established religious convictions.

He realized that before one can form a definite opinion concerning anything he must have a definite faith concerning everything; that it is not possible to properly place a part of anything without some conception of the whole.

Bryan confronted a generation demanding knowledge; a generation that, admitting the importance of doing right, failed to recognize the impossibility of even a standard of right without basing it on some faith concerning life's realities.

He witnessed the tragedy of great minds and great hearts becoming helplessly confused as they sought to measure the unknown by the known, as they attempted to retain in the mind of man consciousness of a moral imperative requiring the use of such words as "ought" and "should," while denying the necessity for and the power of any kind of faith.

Mr. Bryan met both thoughtlessness and confusion with a simple positive declaration of faith in God, in Jesus Christ, and in the Bible.

An appeal in the name of science has tremendous force to the enthroned intellect of today; and when in the name of science the declaration was made, "We have now no need of the hypothesis of God," William Jennings Bryan caught the menace of that statement and challenged the materialistic conception of the universe with emphatic reiteration of his faith, the Bible faith, that, "In the beginning God created the heaven and the earth."

The dominant thought and purpose of Mr. Bryan in his last years was to make sure that in interpreting God's revelation in nature his revelation in the Bible was not blotted out. He knew the Christian religion rested for its authority upon the Bible; that to discredit the Bible in the minds of men would discredit the Christian faith in the life of the race.

Materialism was not slow to seize upon the conclusions of science and carry them to unwarranted extremes. Minds that rejected the conception of an omnipotent God were perfectly willing to bow before an all-powerful protoplasm. Intellects that refused to see in Jesus the Son of God were eager to see in man the product of self-created mechanical laws. Brains that scoffed at the conception of divinity in humanity readily imagined a Lincoln, a Shakespeare, a Michelangelo, a Jesus of Nazareth in a drop of protoplasmic matter.

To this materialistic philosophy destroying all awareness of God, uprooting all religion, William Jennings Bryan flung the gantlet and, mastered by his faith, entered the arena bringing into dramatic conflict with these arrogant assumptions of science the force of his personality, the richness of his experience, the power of his intellect, the magnetism of his oratory, and the simplicity of his religious faith.

Materialistic philosophy followed the theory of science to life's first manifestation in protoplasmic matter and then leaping over the chasm which separates organic and inorganic matter held up this microscopic atom and cried out "Before God was, I am."

William Jennings Bryan walked with science as it claimed to trace life to that atom and then bridged the gulf between the organic and inorganic with the first four words of the Book he loved, "In the beginning, God."

Mr. Bryan sought no conflict between religion and science. He believed there must be absolute harmony between the word of God and the works of God. He was not concerned with those conclusions of science which accepted evolution as a progressive development. Whether or not it was scientifically sound did not engage his serious attention so long as it did not strike at the source of creation and attempt to substitute a molecule for a Maker.

Mr. Bryan thought of the universe as you and I think of the construction of a great skyscraper. We note the hundreds of men who work in different ways at different times with materials from different lands and with various tools and we watch the great edifice assume form and perfection under the contributions of all those hundreds of laborers each of whom we willingly give his mead of praise and gladly acclaim their united achievement but at no time does the accumulated services of the army of toilers or the distinctive contribution of an individual toiler dispense with the necessity for or detract from the glory of the architect.

Mr. Bryan found in the theory of a progressive development of life no denial of the divine source of life. In whatever degree the theory of evolution may ultimately be found true, he found in it but a method, not a cause. A process, not a producer. A design which presupposed a designer, and to the confusion of the atheistic science which rejected the hypothesis of God, Bryan went back of its carefully elaborated theory of design and laid the finger of faith on the great Designer, "In the Beginning, God."

The divergent expressions of individual lives, the sometimes apparently malignant manifestations of animate and inanimate matter, neither misled nor confused him. He felt that the blending of apparently discordant notes from individual instruments of an orchestra into a volume of sound that, swelling and sobbing from a hundred instruments, burst into the triumphant melody of a great oratorio, negatived the theory of accidental harmony and conclusively demonstrated the existence of a great composer.

He felt that if it be true that man is but the finished product of a process, he is by that very fact cut off from the process and launched into the realm to which as a finished product he is adapted, just as a great vessel builded in the wharves when it is the finished product of the process that built it is not permitted to rot upon the beach but is cut off from the process and launched into that new realm for which it was prepared by the process.

It is impossible to estimate the value of Mr. Bryan's defense of fundamentalism as it is sometimes termed. The fruit of the seed of his sowing has hardly begun to mature. It is not too early, however, to note the fact that he solidified the religious world, those who are devout and those who are indifferent, into a unit of opposition to arrogant atheism. He demonstrated that, while religion was not menaced, the authority of science was endangered. It became clear through his contribution that if science should willingly permit its conclusions to be made a vehicle for atheistic propaganda, the religious men and women of this and other Christian nations would regretfully but unhesitatingly abandon Ephraim to his idols. There will be no releasing of Barrabas, no crucifixion of Jesus this time.

Bryan forced into the consciousness of the scholarship of America the fact that to humanity with its heartaches, its sins, and its longings, Jehovah is more gratifying than geology, Christ is more comforting than chemistry, and the Bible more beneficent than biology.

"Cribbed, cabined, and confined" by the limitations of our knowledge, standing where knowledge ends, where faith begins, we sometimes seem to sense the proximity of souls set free from those limitations. For those of us who loved him, the passing of William Jennings Bryan will make significant the words:

"It seemeth such a little way to me
Across to that strange country, the beyond.
And yet not strange for it has come to be
The home of those of whom I am most fond.
They make it seem familiar and most dear,
As journeying friends bring distant countries near."

Time Clauses in Government Contracts

EXTENSION OF REMARKS
OF
HON. LELAND M. FORD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 21, 1939

LETTER AND RESOLUTION FROM THE LOS ANGELES BUILDING TRADES COUNCIL

Mr. LELAND M. FORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and resolution from the Los Angeles Building Trades Council:

LOS ANGELES BUILDING TRADES COUNCIL,
Los Angeles, Calif., March 11, 1939.

Hon. LELAND M. FORD,
House of Representatives, Washington, D. C.

DEAR CONGRESSMAN FORD: Enclosed you will find a resolution adopted by the Los Angeles Building and Construction Trades Council which we believe is self-explanatory.

We would appreciate your full cooperation and assistance in this matter as we feel sure that the construction industry cannot carry on under its present burden and will eventually be torn asunder with wage scales and standards destroyed because of the partially trained men who have been used and given so much protection on W. P. A. being thrown into the labor market.

It appears to the undersigned and the council that instead of curtailing the activities of W. P. A., they are broadening so much that at the present time clauses are being inserted in specifications on governmental contracts which have been won by private contractors, providing that the private contractor must employ all labor from W. P. A. relief rolls which in this particular district has created havoc and left our regularly trained building tradesmen walking the street while private contractors are forced to employ incompetents from W. P. A. relief rolls, thereby placing a premium on relief workers to the exclusion of free, independent building tradesmen who have followed the construction industry for their entire life and it is the only business they have.

Trusting that you will give us your full support in this matter and with best wishes, I am

Yours very truly,

C. J. HAGGERTY, *Secretary.*

After receiving a report from its employment and organizing committee, the Los Angeles Building and Construction Trades Council, in its regular meeting held on March 2, 1939, instructed its committee and officials of the council to use every fair and legal means in their power to bring to the attention of proper officials in the State and Nation the conditions which are now existing and have been existing because of the W. P. A. in this district.

The council is convinced, after a thorough study of the situation, that the W. P. A. is steadily and surely causing great havoc and injustice in the building and construction industry due to its interference in the natural functioning of the industry and instead of relieving unemployment as it was originally set up to do it is, by its methods and because it is doing work with relief labor that is normally performed by the industry itself in its usual function, throwing more independent and union building tradesmen on relief rolls due to the fact that various governmental subdivisions are quick to take advantage of the low cost to themselves by having their construction projects performed by W. P. A.

It was the unanimous opinion that the W. P. A. was inducting thousands of workmen into the building and construction industry and there training them to become building tradesmen in every craft in the industry and glutting the market which is already oversupplied with building tradesmen. In addition to being supported by W. P. A., these partially trained mechanics are permitted to work on private jobs when their allotted number of hours are completed with W. P. A. and no attempt has been made by this department to prevent its clients from accepting work in private employment while at the same time they are employed on W. P. A. projects, which private employment is taken for a wage scale far less than is paid to union building tradesmen or is recognized as prevailing in a particular district.

In view of these facts and with full recognition of the great injury sustained by the building and construction industry, it was regularly moved and seconded that the following resolution be adopted; that copies be sent to President Green, of the American Federation of Labor; President McInerney, of the Building and Construction Trades Department; the officers of all State councils and federations; and to the Senators and Congressmen from California.

"Whereas after a thorough study of the conditions in the methods pursued by W. P. A. in the field of the building and construction industry wherein W. P. A. is setting up construction projects in direct competition to those engaged in the industry and on which projects, due to the regulation provided, it is practically impossible for the regular building trades mechanics, who have spent their life in the industry, to be certified; and

"Whereas the W. P. A. is, by its methods of operation, training men to become building tradesmen to the great detriment of those already engaged in that industry, which industry is already glutted with a surplus of mechanics due to lack of private construction work and curtailment of P. W. A. activities; and

"Whereas the different political subdivisions of Government such as the several States, counties, cities, and townships are taking unfair advantage of the W. P. A. grants to do construction projects under W. P. A. conditions when such construction projects would normally be done by the contractor engaged in the industry who would employ regular and properly trained building and construction mechanics; and

"Whereas it is our belief that the W. P. A., through its aforesaid activities, is greatly retarding the recovery of the building trades industry and by this said slowing up of the second largest industry in this Nation, is hindering the entire business recovery; and

"Whereas W. P. A. is further encroaching on private initiative and replacing regularly trained building trades mechanics by recently inserting in War Department contracts a provision that relief labor must be employed, thereby placing a premium on men who are on relief and who are not building tradesmen to the exclusion of regular building trades mechanics who have spent their life in the industry: Therefore be it

"*Resolved*, That we petition the President of the United States and our Representatives in Congress that when the next appropriation for W. P. A. is made, that it specifically specify that no part of the appropriation be used for financing any building or construction projects which are commonly recognized as coming within the construction field; and be it further

"*Resolved*, That all construction work be brought under P. W. A. and a proper appropriation be made to enlarge the activities of P. W. A.; and be it further

"*Resolved*, That copies of this resolution be sent to all officials of the American Federation of Labor and the building trades department as well as the delegation in Congress from this State, urging their cooperation in the above resolution to prevent further destruction and deterioration of the building and construction industry.

"Unanimously adopted March 2, 1939.

"C. J. HAGGERTY, *Secretary.*"

Exclusion of Aliens From W. P. A. Rolls

EXTENSION OF REMARKS
OF
HON. RUDOLPH G. TENEROWICZ
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 21, 1939

Mr. TENEROWICZ. Mr. Speaker, it would seem to me that it is appropriate at this time to clarify in the minds of the people the term "alien" as applied to those persons recently dropped from our W. P. A. rolls. I think we should analyze just what type of persons they really are and then determine just what our responsibility is toward them.

If by the term "alien" we are to mean the man or woman who attempts to incite hatred for our American form of government or who seeks by means of subversive propaganda or other means to undermine our institutions, or to be antisocial in any manner whatsoever, I say this type of person or persons should be deported, after charges have been proven against them.

But, it is not for this type of alien that I wish to intercede today. I should like to speak on behalf of the men and

women who came to America from Europe to find the same degree of freedom and economic security that our fathers and forefathers came here to find. You know all of us are only one or two generations removed from the classification of foreigner, as only the Indians are the true American stock. These men and women have come to us from England, Ireland, Scotland and Wales, Germany, Italy, France, Poland, and Austria; from Norway, Sweden, Denmark, Switzerland, and all of the other countries of the globe. When we needed strong men to build our industrial life 20 years and more ago, we invited and welcomed these people here. They managed to secure the money to pay their way here to help us build our Nation into the greatest industrial country on earth. Their contribution to our industries, to our mining, and to our farming interests is boundless. They went into our blast furnaces, into our production lines, down into our mines, and in many instances became some of our finest and most productive farmers, mechanics, and miners.

In some instances, it may have been true that these people sent some money back to their respective countries. However, this was not the general rule. Their children were reared and educated here, and are citizens today. These people obtained property, they paid city, county, State, and Federal taxes the same as everyone else, and they too were victims of the depression in which thousands of persons lost their life savings and their homes. With their life savings gone, and having reached an age where it is difficult to obtain employment in industry, and their children unable to secure employment sufficient to sustain them, they now ask us for the privilege of digging sewers, repairing roads, building bridges, and other forms of public improvements, in order that they may earn a subsistence wage of $15 a week with which to maintain their families.

Some say the solution to the problem is deportation. Some say "away with them, we do not need these foreigners any longer. Deport them. We will permit their American-born children to remain, but the 'old folks' must return to the country from which they came." A country, by the way, that they have not seen in 20 years or more, and to which they have no desire to return.

My colleagues, these people do not want charity. They want work and security, as do native-born Americans. They have earned their right to this consideration from us. Their only sin is that they failed to become American citizens. Many of them tried to become citizens, and failed in the examinations because the questions asked were too difficult to answer. Anyone who has witnessed the fear that takes possession of some of these people when they are becoming naturalized can understand what has hindered many of them from becoming citizens. The questions asked could not be answered by some of our finest citizens. A person's ability to answer difficult or catch questions should not be a criterion or yardstick of good citizenship. These people have shown their good faith and eagerness, in most instances, to become citizens by going to night schools where they are prepared for citizenship. They are constantly seeking pamphlets and literature on citizenship, and thousands have already secured their first papers, but have been unable to secure their final papers.

I sincerely hope, my colleagues, you will appreciate what I am attempting to portray to you. The man I am fighting for is the one who has made his healthy contribution to the industrial life of America, who has mined our minerals from the bowels of our earth, and who has worked the land on our farms. It is always labor that creates wealth, and for this contribution on their part, these men have become a part of us. We fed them to our industrial machines, we drafted them during the World War—without citizenship papers in many cases—and our casualty lists show thousands of them who fell at the front fighting for these United States. Some of them came back maimed. To those who returned we granted citizenship in reward for their services.

It is to be hoped this condition is only a temporary emergency, and, to my way of thinking, cutting these people off W. P. A. is not economy nor is deportation a sane and humane solution. There must be another way to economize other than by adding to the sum of human misery. Our aim is to alleviate and relieve want and suffering. Therefore, let us admit our obligation to the men and women of these various nationalities who have given all they had to help us build this country into the greatest industrial nation on earth.

Our individual States, we realize, are not capable at this time of coping with the present emergency, so I pray, let us be fair and reopen the W. P. A. rolls in order to assist these people.

[Western Union]

DETROIT, MICH., *March 13, 1939.*

Hon. RUDOLPH G. TENEROWICZ,
House of Representatives, Washington, D. C.:

Due to our critical financial situation brought about by the depression and recession and additionally due to recent removal of aliens from W. P. A. projects, thereby throwing this burden on our welfare rolls, I place myself, city officials, and the community on record as approving the President's request for a second W. P. A. deficiency appropriation. We strongly urge you and your colleagues to do all in helping the President in this humanitarian task, as otherwise undue hardships and misery will result in this community.

WALTER KANAR,
Mayor of the City of Hamtramck, Mich.

[Western Union]

DETROIT, MICH., *March 15, 1939.*

RUDOLPH G. TENEROWICZ,
House Office Bulding:

W. P. A. today discontinued taking employables from welfare rolls, due to lack of funds. Curtailment of W. P. A. activity will bring disaster to the financial situation in Detroit. City of Detroit financially unable to care for these people on relief. Detroit Common Council urges one hundred fifty million appropriation now under consideration for continuance of W. P. A. activity and requests your active support.

FRED D. CASTATOR, *City Clerk.*

Philosophy of the New Deal, or Yesterday, Today, and Tomorrow

---

EXTENSION OF REMARKS

OF

HON. WILLIAM I. SIROVICH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 20, 1939

ADDRESS BY HON. WILLIAM I. SIROVICH, OF NEW YORK, IN THE HOUSE OF REPRESENTATIVES, APRIL 24, 1934

Mr. SIROVICH. Mr. Speaker, under leave granted me to extend my remarks in the CONGRESSIONAL RECORD, I include the following speech which I delivered in the House of Representatives on April 24, 1934:

The SPEAKER. At this time under the special order of the House the gentleman from New York [Mr. SIROVICH] is recognized for 1 hour.

Mr. SIROVICH. Mr. Speaker, I most respectfully request that in order that I may present my thoughts in orderly sequence I be not interrupted until I shall have finished my discussion. I shall then be glad to yield for questions from any Member of the House.

Mr. Speaker, ladies and gentlemen of the House of Representatives, the day is March 4, 1933. The hour is noon. The place is a pavilion erected over the east steps of the Capitol. The eyes of a crowd of 50,000 persons are fixed intently on 2 men standing in the forefront of a large group of distinguished men and women.

The elder man, wearing his robes of office, is the Chief Justice of the Supreme Court, Charles Evans Hughes. The younger man, about to be inaugurated into the highest office in the gift and disposal of the American people, the Presidency, is Franklin Delano Roosevelt, of New York.

The vast crowd is silent as the Chief Justice holds out an open Bible on which the incoming President lays his hand. The Chief Justice recites the momentous oath of office which the incoming President repeats after him in a clear and cultured voice.

As the last words are said the great crowd, almost as one person, broke into loud cheers and applause. President Roosevelt began to read his inaugural address and this event, long awaited as the keynote of the policy of the new administration, was given earnest attention by all. The President's historic words on that occasion

were his desire to "do first things first" and that "the only thing the American people need fear is fear."

The immediate result over the Nation might be summed up by the statement so often made in the next few days:

Now we have a President who will do something.

Optimistic hope succeeded pessimistic depression in the public mind.

For 4 years the American people had manfully stood up under a condition in economics, finance, industry, agriculture, and commerce in all its branches that was astounding. There was no planning ahead in economics. In finance there had been an orgy of flotation and speculation in bonds and stocks. In industry there were 18,000,000 men idle, willing and anxious to work, who were drifting about the country unemployed, helpless, and hopeless.

Agriculture had become overproductive, with the result that wheat was a glut on the market, while men, women, and children in cities were without bread. Commerce was in confusion. The railroads found their mainstay—the hauling of freight—decreasing and passenger transit dropping steadily. Banks were closing by the thousands, tying up and freezing the deposits and savings of the people.

Farms and homes were being foreclosed all over the Nation. Federal expenditures were excessive and often for futilities. Prohibition absorbed countless millions of appropriations in order that a fanatical theory might be enforced on our people.

Capitalism had gone mad with a lust for power. Eighty-five percent of the money and resources of the entire Nation was held by 15 percent of the people. Many highly placed executives were being paid fabulous salaries and commissions running individually into millions annually, while workmen who had jobs were being grudgingly paid a bare subsistence or starving wage.

Political leaders were "taking hopeful views" but were not doing anything to produce definite results in recovery. Without a charted course, no reliable compass, and no captain, the ship of state was drifting like a derelict on the ocean of events.

The vicious practices of frenzied capitalism in the issuance and manipulation of alleged "securities," as exposed by Pecora during the investigation of stock exchanges and banking methods, astounded the average citizen beyond all measure. It was "rule-or-ruin" policy, designed for the greedy benefit of a favored few at the expense of the plundered many.

Gold was hoarded in sums from a few hundred dollars to millions and great amounts of gold were sent out of the United States to foreign countries for "safety's" sake, as if American gold would be any safer in the vaults of Europe, in the event of a catastrophe, than it would be in the United States Treasury or in the Federal Reserve banks.

To the south, from the Rio Grande to the Straits of Magellan, our American neighbor nations were suspicious of the policies of the United States. We may be assured that these suspicions were carefully fostered by European nations which were and are jealous of our great country.

American marines in Nicaragua and in Haiti were a source of objection to the larger South American nations as well as to the nations on which they were billeted. This objection took the form of continuous and emphatic protest from our Latin neighbors. The free United States was commonly referred to among them as "the Colossus of the North."

Continued depression in agriculture heavily reduced the purchasing power of farmers. Since the 40,000,000 farmers could not buy the products of industry the purchasing powers of industrial workers fell off and for 4 years these two conditions continued to act and react on each other in a lamentable and tragic reciprocation.

The people of our country lost faith in the administration at Washington and its reactionary standstill policy, if what was not done can be called a "policy." Our people became distrustful of all financing and financiers. When billions were lent to banks, railroads, life-insurance companies, and other financial institutions with the foolish claim that prosperity would percolate and filter down to the great mass of people from the top, the great common sense of the people showed them that such an economic policy was not and could not be for the benefit of the many, but was deliberately designed as a dole for the advantage of the privileged few.

Small groups of men in allied and interlocked banks and industries were rapidly absorbing the resources of the Nation. Light, heat, and power companies, public utilities, public service of transport were owned or controlled by a few, and the utmost was extorted from the people in the way of charges to pile up profits. Alleged securities, sold to the public at high expansion prices, were bought back at low depression prices. They were salted away for the so-called long-haul pending the time when another boom market could be worked up and these same securities resold at new expansion prices. It was an old game. This plan had been worked before. It had always been effective. Even if the quotations of these securities dropped to bottom prices on the stock exchange, they represented ownership and control.

All that these groups wanted was to be left alone, and so the infamous laissez faire policy of other days became supreme. All any racketeer, gunman, burglar, or easy-money man wants is to be let alone. But as it is the business of the police not to let the criminal alone, so it is the business of the Government not to let alone this unscrupulous laissez faire outfit.

The old dealers have had their day, and the way they dealt with the American public is shameful in its exhibition of avarice and greed. No application of social justice to the people ever was discussed at secret board meetings. The American consuming public was a huge cow, they thought, to turn the grass of agriculture, industry, and commerce into rich, thick cream of profits for those who controlled the pastures. [Applause.]

All these conditions that I have enumerated occurred prior to March 4, 1933. That was yesterday that I have outlined to you, but today there is an actual New Deal abroad in the land. Living human beings and human rights were placed above nonliving property, and alleged property rights take second place to human rights. [Applause.]

It has been the great good fortune of the United States of America that, at every crisis in its history, Providence has raised up a man to lead the way out of depression and tribulation. Today the United States of America has such a man in Franklin Delano Roosevelt, who combines high idealism with splendid practicality. [Applause.] President Roosevelt by most of his acts, as well as his words, during his first year of office has done more than restore hope for the present and future in the American people. He has given them confidence in themselves and their country and has instilled again the national courage that had almost disappeared between November 1929 and March 1933. [Applause.]

President Roosevelt acted as promptly as the contingencies of the moment demanded and as he had told the American people he would act. Within a short time he issued a proclamation prohibiting the hoarding or exporting of gold coin, currency, or bullion, and forbidding all banks to reopen except under such conditions and restrictions as might be set by the Secretary of the Treasury. Congress was summoned on the same day to meet in special session by President Roosevelt.

There was need for this prompt action. Public distrust of banks spread to the dollar. Within a short time the growing confidence of the American people toward President Roosevelt manifested itself by their return of hoarded money to banks. Gold came out of hiding, and the panic of the public, so far as preferring gold in hand to a bank account, was over.

A short time later President Roosevelt placed 250,000 of the unemployed youth in our Republic in the Civilian Conservation Corps, the so-called C. C. C.

Soon after this the President, through congressional enactment, created the Tennessee Valley Authority, through which the Muscle Shoals project is to be finished.

This tremendous undertaking provided more work for the unemployed and gave cheap power for the development of that great region in the Middle South.

At the urgent solicitation of the President of the United States legislation was immediately enacted providing for relief of mortgage distress among the farmers and the home owners of the Nation. This was accomplished through the agencies of the Farm Credit Administration and the Home Owners' Loan Corporation. President Roosevelt was leading the forces of unemployed toward the road of recovery.

There were two halves to the sphere of action. One was reform. The other was recovery of prosperity. But recovery of prosperity without reform of methods that had led to the debacle of 1929, after 2 years of boom, would only again lead to the morass through which the people of the United States had floundered for 4 years—4 years of terrible depression to balance 2 years of whoopee and hoop-la speculation.

The sore spot in the body politic was finance and financial means and methods. The farmers had overproduced; so had industrialists. But the land was still fertile and could produce crops; skilled workingmen could still produce machine and hand products. Finance had gone wild. It had to be put in a strait jacket and controlled. The only institution capable of controlling finance is the National Government.

So a series of legislative acts and Executive orders were put through. The Banking Act and the Securities Act were passed by Congress. The first required commercial banks to separate themselves from the security affiliates which banks had established in the boom days for the purpose of selling stocks and bonds, a method of doing business never countenanced by good banking ethics.

The functions of investment selling and those of deposit banking were dissociated and a guaranty of deposits up to $2,500 for each deposit account in National and State banks under the Federal Reserve System, was established.

The Securities Act was modeled on the British Companies Act of Parliament, but went further in controlling and in penalizing than the English act.

Federal supervision was established over the sale of investment securities, and purchasers of such securities were protected by giving them the right of legal action in case of omission or of misrepresentation of material facts by the issuers and sellers of securities. The Securities Act was passed without a dissenting vote in either the House or the Senate of the United States. [Applause.]

Abandonment of the gold standard, fixing the price of gold from $20.67 an ounce to $36 an ounce, followed. Thus the dollar was devaluated, with a view that such depreciation would be followed by higher commodity prices for goods that the dollar buys.

The chief difficulty in escaping from the depression was the tragedy of unemployment because of the maladjustment prevailing between the prices of products and produce and the load of private and public debt.

In a few quick legislative recommendations the Congress of the United States and the President immediately enacted several legislative enactments, such as the Agricultural Act, the Reconstruction Finance Corporation Act, the National Recovery Act, the

Banking Act, Emergency Railroad Transportation Act, and the Farm Credit Act.

No previous Congress in the history of our Republic has ever passed such a series of legislative acts affecting the welfare of the Nation in such a short period of time. [Applause]

That this legislation has operated for the welfare, happiness, and prosperity of the people of our Nation is attested by the present improved condition of agriculture, industry, commerce, transportation, and the wholesale and retail trades.

Under the National Recovery Act, the so-called N. R. A., the major industries of the United States to the extent of 90 percent, affecting 20,000,000 employees, have been brought under codification. The first code covering the cotton-textile industry was approved by President Roosevelt on July 9, 1933. Between this first code and the end of March 1934, 975 national codes have been prepared, of which 362 national codes have been passed to approval by the President.

Codes of industry to the number of 478 have been prepared and are in various stages of development leading toward Presidential approval, leaving 135 industrial codes "in works" and under initial consideration. All of these codes are subject to revision, under the procedure that has been followed, if they are found to work hardship on either the employers or employees whom they affect, and many have been so amended.

The ideas on which these industrial codes are based are three in number. First, minimum wages for employees to increase the amount of wages paid and thereby increase the purchasing and consuming power of industrial employees; second, maximum hours that employees may work to increase the number of employed and spread employment; and, third, collective bargaining by employees through their own organizations to thus prevent the exploitation of labor by capital. This legislation is the magna carta of labor. It is their emancipation proclamation. [Applause.]

Because of my belief in the principles of the N. R. A., as outlined, I voted against the economy bill which took 15 percent of their wages, amounting to almost $190,000,000, from over 1,000,000 Government employees. I felt that the Government, in fairness, should not reduce the wages and the consuming power of its own employees and ask industry in general to increase wages of its employees. I objected to taking away and reducing the pensions and compensation of service-connected and disabled American soldiers who fought for the United States in Europe during American participation in the World War or who were under military command ready to go overseas when called to the colors. My vote in this case has since been approved and sustained by Members of Congress who have come to realize that I was right in my negative vote on the economy bill, and have by congressional act and vote restored their former pensions.

Congress voted an appropriation of $3,500,000,000 for the Federal public works bill, commonly known as the P. W. A., for the purpose of providing labor with employment in the building of bridges, tunnels, viaducts, roads, in the language of the National Recovery Act. As experience proved and forethought should have shown, a long course of preparation of plans, examination of proposed projects, and other essential technical work was necessary before men could be put to actual work, outside of drafting, surveying, and specification writing. So the Federal Civil Works Administration was set up for the proclaimed purpose of providing work to C. W. A., as it became known, financing came through a series of transfers from other emergency administrations.

It is my point of view that while the spending of this money for emergency relief did furnish emergency work to the unemployed, in the last analysis it is a dole; it is charity covered with the cloak of emergency employment.

Doles or charity are not what the American workman wants. He wants work, real work, because work means self-supporting labor, and self-supporting labor means self-respecting labor. [Applause.]

Self-supporting and self-respecting labor of any sort means good American citizens. [Applause.] Charity in any form means a treatment of the symptoms and not of the disease. It does not go to the cause. The present situation and the situation of the past 4 years was considered by many Americans as evidence of the impending collapse of the capitalistic system. If the capitalistic system cannot cure its own ills and bring back a decent prosperity for all, the Government of the United States will have to bring back decent, self-respecting, permanent prosperity by means that will have to be devised, that will go to the root of affairs, and not merely trim the leaves and twigs of one season. [Applause.]

Is the capitalistic system following lines of the decline and fall of Rome? You remember that in the late days of the Roman Empire the plebeian populace were fed and entertained by panem et circensis—bread and the circuses. This marked the ending of the great Roman Empire. Many Americans contend that C. W. A. marks the beginning of the end of the American Republic.

Let us pause, ponder, and deliberate over this contention.

A few months ago I stood in the crypt of the cathedral in Warsaw before the tomb of Henrik Sienkiewicz, the brilliant and distinguished novelist of Poland, the author of the great novel Quo Vadis, which means "Whither goest thou?" To paraphrase it to my present purpose, I translate Quo Vadis into Which Road?

Which road are Americans traveling?

Dr. William A. Wirt, of Gary, Ind., says it is by a secret bypath to communism.

I say, "No."

Several Members of Congress have characterized it as the road to socialism.

Again I say, "No."

Our distinguished colleague the Honorable James M. Beck contends that Congress has abdicated its constitutional powers and has made our Government one of dictatorship. Is it the type of dictator symbolized by the despotic ethnocrat, Adolf Hitler, of Germany?

No.

Is it the autocratic dictatorship of the theocrat, Adelbert Dolfuss, of Austria?

No.

Is it the absolute dictatorship of proletariocrat Stalin, of Soviet Russia?

No.

Is it the road trod by the British Empire to the British Commonwealth of Nations, with its peculiar organization of autonomous nations, created from former dominions which, while establishing practical independence, yield only voluntary allegiance to the British Crown?

Again I say, "No."

Is it the old, smooth, well-oiled, exclusive road dedicated to big business and the policy of laissez faire, or let us alone?

No.

Is it the road of democracy as built by Jefferson, Jackson, and Wilson?

Some say "yes" and some say "no."

Then what is the road we are taking to reach the ideal temple of democracy as conceived and designed by the founders of our Republic? Our Commander in Chief, Franklin Delano Roosevelt, says it is the road of the New Deal that will lead us to a remodeled republic that will bring economic security, equal opportunity, happiness, prosperity, and justice to the people of the United States. [Applause.]

That there may be no misunderstanding, let me state to the membership of this House that I am not a disciple of reactionaryism; I am not a follower of ultraconservatism; but that in all my deliberations and actions I have uniformly fought for stability and order in government, coupled with progress and reform. I am therefore a liberal and progressive in my political faith and ideals. [Applause.]

Let me briefly analyze the social, economic, and political philosophies and practices of the various forms of government I have enumerated.

Mr. Speaker, what is communism? Communism pleads for an economic administration where all land and material capital shall be public instead of private property; where the state and not the individual capitalists shall be the employers of labor; where production and distribution shall be left not as they are today, subject to speculation and competition, but through a planned economy they shall be regulated in conformity with the laws of supply and demand, so that no one need be left idle, uncared for, ignorant, illiterate, or poor. Furthermore, through world revolution communistic concentration would come from the proposed organization of nations of the world into one gigantic confederation of mankind. Concentration of all private wealth into communistic control and its subsequent dispersion to labor would then be in order. Persuasion, propaganda, and in the end violence and revolution by force are the means proposed to attain these ends. This is communism in the abstract. In the concrete, it is actually an attempted return to the methods of patriarchial days, a breaking up into original units of nations and a vague plan of bringing all mankind to a common level based on manual labor. In modern times communism is the exploitation of capital by labor. Communism is an extreme form of collectivism.

There is nothing in this formula of communism that I have just presented wherein can be found one iota with which the President of the United States is in sympathy. It is a shame to pillory and excoriate the ideals and principles of our liberal and progressive democratic President as being in accord with the program of the Communistic Party of the world. [Applause.]

In socialism the state would retain its national existence as a political entity and own, control, and manage all means of production and distribution. The Socialists claim that it was the purpose of the proposed Socialist Party in each country where it was established to educate the masses politically. Revolution by force and great general strikes were originally opposed. Labor, manual labor, was to be made class conscious and to be organized into militant trade-unions as well as into political parties. The strongest weapon was not, in the ideal socialistic program, the general strike or the bullet and bayonet of revolution, but the ballot. By political means the Socialists proposed to wrest control of production and distribution from the present-day ruling classes for the present-day ruled classes; to shift ownership and control from exploiting classes to the exploited classes. The Socialists originally were known as "Communists," but after suppression of the Commune of Paris in 1871, and adoption by the anarchists of that time of the name of communism, their party name was changed to that of Social Democrats.

The great past prophets of social democracy were Karl Marx, Frederick Engels, Ferdinand La Salle, William Liebknecht, August Bebel, Jean Jaures, and Karl Kautsky.

No fair-minded man in this House of Representatives or elsewhere could accuse the President of the United States of being a devotee of socialism as I have just outlined it to you. [Applause.]

Mr. Speaker, I now come to the subject of dictatorship. When the executive, legislative, and judicial powers of government are ruthlessly seized through stratagem, force, or revolution by an arrogant individual and fused into a one-man power this form of government is called "dictatorship." In Germany Adolf Hitler is

a despotic ethnocrat—a racial autocrat—where only the pure Aryan or Teuton can be the beneficiary of the munificence of the state.

Nazi-ism is Hitlerism. Originally it started as a revolt against the rigorous terms of the Versailles Treaty and the economic tragedy that the German people had to contend against. Nazi-ism has become a farce, a one-man farce, that came into being with Hitler and will pass out of being with his passing. It is a temporary fever of sadistic emotionalism besetting the German people, a transitory stage in the renationalism of Germany, which the good sense of the great mass of the great German people eventually will discard into the sewer of time. Soiled brown shirts can never be satisfactory substitutes for Goethe, Wagner, Kant, and Schiller. [Applause.] It is too bad that the swastika was adopted to the debased use it has been put as the emblem of Hitlerism. The swastika is a geometrical design which is the symbol of a great natural truth known to some deep students, but it can never mean Hitlerism, for its inference and scope is cosmic, not national.

State capitalism instead of private corporate capitalism finds its greatest expression and operation today in Germany, where it is in full control of the lives and liberties of the German people. The state and not mankind is the doctrine—man is made for the state, and not the state for man. This doctrine is not new. In one form or another it has always been the doctrine of tyrants, exemplified by the statement attributed to Louis XIV, "L'Etat c'est moi!": "I am the state!" Tyrants were the state of their time and place. Hitler symbolizes the state of Germany. Hitlerism and the German state typify the combined racial tyranny of the person and the state. State capitalism is the exploitation of labor by capital.

Mr. Speaker, I shall not insult the intelligence of the membership of this House by considering a comparison between despotic Hitlerism government with that of the human program of our President of the United States. [Applause.]

Democracy is dead in Austria. The autocratic dictatorship of Dolfuss has succeeded it. State capitalism reigns supreme. The claim of the Hapsburg dynasty to rule by the divine right of kings has been transferred to the new Austrian State. There again the state is supreme. Freedom of the press, freedom of speech have been denied to the individual. The bullet has supplanted the ballot. Liberty and freedom are a myth in that former socialistic stronghold. Instead of the first article of the former constitution; which declared that Austria is a democratic republic and that its laws emanate from the people, the first article of the new constitution is that Austria is a federal state and its laws emanate from God, the Almighty.

Mr. Speaker, I challenge the assertion that there is the remotest similarity between the archonocrat of Austria, Dolfuss, and the Democratic President of our Republic. [Applause.]

It is 17 years since, in the midst of the World War, social revolution burst out in Russia. I shall not review the first days of this gigantic turn-over, nor the conflicts between the Bolsheviki, the majority party, and the Mensheviki, the minority of the Socialist Party, but come directly to Nicholas Lenin and Leon Trotsky, Russian disciples of Karl Marx. Until that momentous day both had entertained the belief of the other social democrats the world over that social revolution would have to be contemporary and world-wide to be successful. Lenin and Trotsky seized their historic hour to expropriate the lands owned by the crown and the nobles and to allot sections of this seized land to the peasants of Russia, title, however, to remain with the social democratic government. Out of this action grew the present Union of Soviet Socialist Republics, composed of seven constituent republics, or the "Soviet," as it is now called. Mines, railways, mills, factories, and workshops were seized for the benefit of the workers and the people as a whole.

A planned economy was thought out and worked out and a 5-year plan was put into operation. This later was extended to an additional 5 years. Planned economy was the base of the Soviet system. Under this system crops were controlled on distributed lands, industrial development and operation on a gigantic scale was begun; discovery and export of materials of which the Russian and Siberian lands had a natural monopoly, and development of water power, rail, and road communication were encouraged; rationing of the Russian people was inaugurated; huge initial purchases of American and other machinery were made; Lenin was practically deified after death; all resources were conscripted to the state; abandonment of the old religion was decreed; the academic, manual, and technical teaching of the young of both sexes and the primary and common education of illiterate adults was started. The erection of huge housing systems for the masses; the formation and spread of close Soviet groups, called cells, into all parts of the Union of Soviet Socialistic Republics to act as bonds with Moscow; the organization, training, and equipment of a huge army; the spread toward the Pacific Ocean in Siberia are some of the things which Stalin, the successor of Lenin, has put into operation since his accession to the absolute dictatorship of Russia and Siberia—a dictatorship such as Peter the Great or any of the subsequent Romanoffs never conceived possible. The latest development of sovietism is the recognition of the Soviet Government by the United States of America, modified by insistence that no American credits be granted the Soviet until the old Russian Kerensky debts are paid. This is the sovietism of today. That is social democracy as it has been developed in Russia and Siberia.

What characteristic of political sovietism can be found in the program of the President of the United States? None! [Applause.]

Those developments and utilizations of the resources of the vast Russian country which have proven successful have really been adopted from the business methods of other countries. The Government of the United States is not indebted to Russia, but the Soviet Government is indebted to the United States for many innovations that they have adopted in developing their country.

Syndicalism was the base of Mussolini's Black Shirts, but since the day in 1922 that Il Duce marched at their head into Rome and took possession of the Italian Government that form of government by syndicates of workers' unions has been expanded to the present fascism and has been so modified that Mussolini has become the Italian Government. One after another he has assumed the titles of the departmental chiefs and absorbed their duties in addition to those of the commander in chief of the Army and Navy of Italy. Mussolini transformed Italy into a closely united nation, rescued her people from poverty, restored all her production of materials and farming—nay, raised them to a higher plane than they had ever occupied. Today Il Duce is Italy more than Augustus ever was the Roman Empire or Napoleon the French Empire. Napoleon won great battles of war; Il Duce has won great battles of peace. He, too, has a "long haul" plan—a 60-year plan for Italy—at the end of which time he asserts that Italy will be even greater than his present dream. Italy is looking to the sea again. She is looking toward northern Africa. She is looking toward the Danube and the western shores of the Adriatic. Sixty years hence—what?

We are familiar with Mussolini the man, but fascism, the system, is not so well known.

In fascism the state is absolute, superior to individuals or groups. It is claimed to be a guiding spirit with a will and personality and represents the spirit of the Italian nation. In fascism the individual is deprived of individual liberty and freedom, save that which the state wishes to give him. In fascism the rulers have no responsibility or obligation to those whom they rule. They make the law and are superior to the law. Hence dictatorship follows. In fascism the law is an agent of power, but dictatorship—authority—is above the law. In Italy the dictator, Il Duce Mussolini, is the state.

Where is there any comparison between the situation in the Government in Italy and that of the Government of the United States? Again I say none. [Applause.]

Let us behold the great British Government. It is no longer the British Empire. That great political institution has ceased to be. It has been succeeded by the British Commonwealth of Nations. There we find a union of free and independent nations only vowing allegiance to the British Crown. The people of these nations control their own domestic and extraterritorial affairs, which are beyond the pale and scope of the King and the British Parliament.

The new union of English-speaking people has given to the dominions of Great Britain a great freedom that is almost equal to complete independence. Commonwealth means common weal. It was the common welfare of the people in the various sections of the British Empire that has been the stronghold of the establishment of the British Commonwealth of Nations. Please observe the word is "nations," not dominions.

The only visible economic condition that we find present in the Roosevelt administration which is comparable to the social, economic, and political set-up of the British is the Civil Works Administration, which is equivalent to the British dole system in camouflage.

Kemal Pasha, the dictator of Turkey! What a name to conjure with! Its former Sultans would not recognize Turkey under the present regime. The removal of the capital from its historic site on the Bosphorus—which as Byzantium and Constantinople had been the capital city since 657 B. C.—to Angora, in Anatolia, shows the far-reaching peaceful revolution to which the Turks have been subjected. The liberation of women from Moslem restrictions; the expansion of commerce; the education of the young; the liberalism introduced by Kemal Pasha under the strict reign of a dictator, as well as many other changes, have created and brought forth a new nation with new ideals, dedicated to the principles of liberalism and progressiveism.

That is why Turkey is growing and developing under the benign influence of occidental civilization. Surely there is nothing in the program of Kemal Pasha to which the President of the United States, Franklin Delano Roosevelt, is indebted!

Let us look over the great Republic of France. The French tricolor still reigns supreme as the symbol of united people that are ready to live for their country in time of peace and to die for it, if necessary, in time of war. France is still a republic, despite outbreaks in Paris and elsewhere, which cumulatively became so serious as to incite riots and other disturbances that resulted in a call to Gaston Doumergue to come from retirement to assume the presidency of the council of France.

His recent patriotic appeal to the French saved the day. Rioting ceased. Peace has been restored and the risk of foreign invasion has been dissipated. Surely this is an indication of the wonderful stability and order that French valor and courage always offer on the altar of their Republic.

What is there in the program of modern France to which this great Republic under Franklin Delano Roosevelt must pay tribute? None. [Applause.]

The situation in the rest of Europe, of Hungary, Poland, Czechoslovakia and Yugoslavia, Rumania, and the Balkan States shows the same general unrest. Revolution is in the air. Discord, dissension, strife, and dissatisfaction with our modern economic condition seem to be prevalent everywhere. Many plans have been tried, yet no permanent solution seems to be visible upon the horizon.

This is not unusual in politics, but is unusual in economic, industrial, and agricultural affairs in Europe. A world-wide social, economic, financial, commercial, capitalistic, labor war is on. Great

battles are being fought between new theories and established practices. The Soviet outlaws the accepted idea of God. Its followers seem to be atheistically inclined. The Fascisti restore God to honor and reverence. Hitler and Dolfuss substitute the state for God. Kemal Pasha knocks the shackles of Moslemism from the arms of the Turks and forbids the use of the fez for prayers. The Oxford movement spreads in England. Agnosticism seems to be growing in America. Expediency has supplanted sincerity. Opportunism discards rational development. Class is not only against class, but subclasses are opposed to each other. The world is at peace officially, but there is no prospect for peace in the world. Warfare, not yet of bullets and bayonets, or, rather, of airplanes and poison gas, but of economics, commerce, political strategems, and the subtleties of diplomacy is as vigorous and as vicious as it had ever been in the history of the world.

Laissez faire is the wisdom of all the conservatives. The adherents of this principle believe that the state should not interfere in business, nor have anything to do in the quarrel between labor and capital, unless property rights are threatened and impaired. Its sole duty is to protect property and life. It is not concerned with human but with property rights and is deeply anchored in economic individualism. Its slogan is, "Get it and keep it." But this principle is antiquated and can no longer regulate economic forces, because it endangers the existence of orderly government. [Applause.] Even the Iron Chancelor, Bismarck, the embodiment of ultraconservatism, recognized the danger in the laissez faire principle and embarked upon a policy of economic and social reform to secure the good will of the masses for the authorities of the state. He introduced old-age pensions, social insurance, and all forms of social reforms, and made the state supreme, not only in matters military and political but also in matters economical and social. Within one generation after Bismarck's death all the western countries began to emulate this example. In England it was Lloyd George who, by his income-tax and social-reform legislation, dealt a death blow to the laissez faire principle. In France it was Waldeck-Rousseau and the Socialists Briand and Clemenceau who first followed in Bismarck's path.

Today only China, India, and the United States are still addicted to the laissez faire principle. The world historic enterprise of President Roosevelt consists of giving up this antiquated principle of laissez faire in favor of a more modern, more advanced, and more humane social reformation theory of state, society, and government. [Applause.] This theory reduced to its shortest formula is: The state has not only the right but also the duty to interfere with economic forces and determine their course, because the state is not only the watchman but also the dispenser of justice. It is the duty of the state not only to protect life and property but also to come to the aid of the weak and downtrodden. In short, the state is not only a source of power but must also be a source of economic justice to its people. [Applause.]

In abandoning the antiquated principle of laissez faire President Roosevelt has not abandoned the principles of Jefferson, Jackson, and Wilson. Democracy itself is an abstract principle and unless intelligently applied to the emergencies of experience and pragmatic life remains only a theory. President Roosevelt, in planning and executing his New Deal, is revitalizing democracy by applying it to the new economic realities. Like all great historical enterprises of this sort, it requires initiative and courage. This philosophy has nothing in common with dictatorship. [Applause.] That the New Deal has nothing in common with either communism, socialism, and fascism can clearly be seen from the following facts:

Communism appeals squarely to reason and to intellect. Communism is purely rationalistic in origin and motive and is unemotional, or free from all tinges of emotionalism. Hence the cold-blooded brutality communism displays in the execution of its plans, because emotions do not influence reason. Communism is born of logic to the exclusion of love. Hence its affirmation of equality and denial of freedom. Emotionalism originates in love and comes from the heart just as rationalism, reason, and intellect originate in hunger. There is nothing lovable and charming about communism. Behold the multiplicity of its purges and the merciless destruction of human life that disagrees with its tenets. It is the very incarnation of severity and rigorism. Communism, both of the mind and of nature, is something artificial. It requires a dictatorship to translate it into reality. There is freedom in nature, but there is no equality in nature. Real statesmanship consists of fusion and a synthesis between freedom found in nature and equality, the product of the civilized mind.

Communism is not a fusion of these two great outstanding features of life—equality and freedom—but an over emphasis of the first, equality, at the expense of the second, freedom. Since communism denies all and every freedom it denies an important factor in the life of man and hence has a perverse element in its make-up.

But, to say that the New Deal denies freedom is either a misinterpretation or a falsehood. What the New Deal attempts to do is to harmonize and to bring into cooperation the freedom of nature, with equality, which is the product of the civilized mind to fit into the present day political and economic realities. That is the principle of true democracy. [Applause.]

While the principle of democracy is permanent and eternal, its forms change with the passing of time. Democracy in ancient times was different from democracy in modern times. Nineteenth-century democracy is vastly different from twentieth-century democracy because economic and political conditions have changed. To harmonize democracy with the new exigence of life is the motive power of the New Deal, and only gross mental aberration can misinterpret it as an attempt to plant communism in America. [Applause.]

Fascism, whether brown, black, green, or blue, is a revolt against reason in politics and statesmanship, and is wholly emotional in character. Its display of color, its appeal to the senses or to the blood, its bellicosity, its whipping the masses with slogans, and its opposition to all rationalistic methods of government—like parliamentism, the ballot, free press, and so forth—testify best to the emotional primacy of fascism.

In fascism the leader is the state and the source of law. He creates the law. He is therefore superior to the law. To himself he takes all the freedom; to his subjects he grants a crumb of liberty. He claims to be the fountain of truth. To uphold the freedom of the leader the equality of man must be destroyed, for no equality originates in reason. The contempt of the Fascists for men of intellect by burning books, testifies best to their rebellion against reason. Just as the Communists rule with an iron hand because of the exclusive use of reason, so do the Fascists rule with despotic power, because of the exclusive use of emotions. It is the emotional basis of fascism which explains best the sadistic brutalities perpetrated in the concentration camps in Germany. This denial of all reason on the part of fascism and its exhibited contempt for the intellect makes it the perfect antithesis to communism. The paradox of communism and fascism consists in this: The philosophy of communism is reason; the philosophy of fascism is emotion. Both, in practice, lead to despotism and dictatorship in government. The philosophy of true democracy, on the other hand, being more realistic than either communism or fascism, is a balanced fusion of reason and emotion in government. [Applause.]

Democracy recognizes man as both a rational and an emotional being who must be treated accordingly. Communistic or Fascist rule is simple. All it requires is an iron hand. But democracy is constantly engaged with difficulties, because it is always striving to adjust and harmonize two opposing forces—reason and emotion. It requires true statesmanship to bring about this adjustment and deep knowledge of human nature to be a successful ruler of a democratic country.

Such a ruler is our President, Franklin Delano Roosevelt. [Applause.]

The topography of a country is conducive to either communism or individualism. European Russia is a great prairie. At one time it must have been the bed of a great ocean. Upon its steppes everywhere the poor moujik, or peasant, cultivates the soil. The Russian agricultural plain cries aloud for equality. It reflects itself in the communistic philosophy that is found today in the Union of Soviet Socialist Republics. Therefore, the flat plain is conducive to a level common thought, which is equality. Wherever a country has great mountain ranges that tower in their magnificent beauty, and to human eyes seem to defy the very heavens, that ruggedness of peak after peak reflects itself in the rugged individualism of the person who lives in those mountains. In such countries as Switzerland and other countries that have these mountain ranges communism could never exist. Rugged individualism always manifests itself in either monarchial or democratic forms of government.

In countries where they have great forests nature reflects itself on individuals. In nature freedom exists. Man and animal can rove from place to place. No equality exists. The strong eat or destroy the weak. Therefore a great deal of cruelty manifests itself. This cruelty reflects itself in the long wars that such nations usually go into. They never know when they are beaten. That is why Germany, the land of great forests, has had the 40-year war, the 100-year war, and the recent war with the Allies. They never know when they are licked. That may explain the cruelty of present-day rulers of Germany against racial minorities.

Whenever a country has jungles, the tooth and talon law prevails. India being the land of jungles, reflects the laws of nature upon the people who live there. Class hatred, the caste system, bigotry, and intolerance are found everywhere. The untouchables are manifestations of the contempt in which one group of human beings holds another.

Those who live in the foothills and in the Himalayas reflect the rugged individualism which conquers those who are the victims of jungle life.

Afghanistan, being a great mountain region, has held its own against Great Britain, India, and Russia, and against the ancient Manchus and Mongols.

In the United States we have great mountain ranges, great valleys, and great plains. In the mountain sections of our Republic communism can never exist because of the influence of the character of the country. Rugged individualism will and must prevail. The hill people of the great States of Kentucky and Tennessee have remained independent and Elizabethan despite the development of the country all around them. During the American Revolution the mountain citizenry from the White, Green, and Allegheny Mountain Ranges were the most obdurate fighters for our colonial forebears and fought a most valiant and courageous battle.

In later days many radical, liberal, and progressive movements of our Republic have usually sprung from the Middle West, the great Central Plain of our Republic. Greenbackism, the Populist movement, silver movement, and abolition were either started or developed in that section. Only a year ago in one of our western prairie States a judge and sheriff were intimidated by a group of citizens to prevent the execution of the law. Law and order finally prevailed.

Let me call the attention of the Members of the House to the fact that these were group movements animated by community of thought and action. Therefore communism is more likely to pre-

vail in flat lands. The mountain regions of our country, whether north, south, east, or west, will always battle for democracy and the individualism that it represents.

The abuse of economic freedom by certain individuals is past history. It is the record of yesterday which, in terms of time, is the immediate past. It symbolized the freedom of unrestricted individualistic materialism, which was known as rugged individualism or capitalism.

Another school of economic thinkers believe that today, which is the immediate present, sees the beginning of the disintegration of unrestricted individualistic materialism. It is the road which has led from rugged individualism to ragged individualism. This school believes that any leader, whether he be Roosevelt, Mussolini, Hitler, Dolfuss, or Stalin, who mostly disintegrates unrestricted individualistic materialism will be chiefly exalted. To many observers it seems that it is not the destiny of these five men to play other than necessary transitory roles toward a future ultimate system, which they believe is neither fascism or communism, but which some day will be known as "universalism." By universalism this school of economic thinkers mean the true fulfillment of Jefferson's illumined declaration that all men are created free and equal, just as they are in the universe. In universal law and principle this school of philosophic thinkers believe men are not equal physically, not equal emotionally, not equal mentally, but equal spiritually. They believe in spiritual leaders, and a spiritual government, with the material values subservient to them. This to their mind is but the recovery of the past, when ancient Judea, Egypt, India, and Greece had the same form of universal government. Therefore they contend true Americanism or real democracy is simply the fulfillment of the great universal motto, "E pluribus unum," which means one from many, one government from all governments, one corporation from all corporations, one religion from all religions, one race from all other races. That is what they interpret as the democracy of Jefferson, Franklin, and Lincoln. They are opposed to the plutocracy of Alexander Hamilton and the materialistic American leaders who inverted the spiritual destiny of this great universal country. The disciples of universalism see tomorrow's future as the end of material competition in our country and the beginning of material cooperation. This is the only way they claim they can destroy unrestricted individualistic materialism which is capitalism. They see the displacement of material competition with material cooperation and the establishment of economic security for everyone that is desirous of working with body or mind, and the great competition for the things that come from the mind and the spirit which is the only true individualism because in life the mind is the only individualist. Tomorrow or the near or distant future they contend, will bring the establishment of this material security, by material cooperation. Then mankind can compete, to become greater individualists, in the things of the mind and spirit, in the realm of science, art, and philosophy.

Vox populi, vox del. The voice of the people is the voice of God. This they believe is true democracy—and true democracy is theocracy. In such a spiritual theocracy the spiritual leaders will be the mouthpieces of the people through whom the voice of God makes itself heard.

Ancient Greece, Egypt, India, and Judea when they reached their power and glory were theocratic—that is, democratic—for their rulers were spiritual rulers, referred to as priests and prophets, representative of the universal mind. Universalists point to the fact that they have had in this great universal country men and women who had carried on and are carrying on their universal work. One State alone, Massachusetts, the cradle of the new age, gave us great universalists, such as Ralph Waldo Emerson, Harriet Beecher Stowe, William Lloyd Garrison, Henry Thoreau, Julia Ward Howe, Margaret Fuller, Wendell Phillips, and Oliver Wendell Holmes, the father of the former Supreme Court Justice Holmes. This distinguished author and writer once said: "Build thee more stately mansions, oh, my soul." The stately mansion that they would erect in this country today is universal in its dimensions and fulfilling the dream of the American universalists. Thus their economic philosophy is called "universalism."

These people stand neither with the nationalists or the internationalists, but with the universalists of history who, through their present leader, David Sturgis, believed that the universe is the model for all governments and the guide for all people everywhere.

The rise of individualism in Europe coincides with the rediscovery of atomism in the sixteenth century. The atomistic world picture assumes freely moving atoms in infinite space. The scientists of the sixteenth century concluded that, as the macrocosmos consists of freely moving atoms, of free units, so must the microcosmos, or social cosmos, consist of freely moving social atoms, and that the social atom, the individual, must be as free in his movements as is the physical atom.

This is the philosophical background of liberalism and individualism. Its contrast, or opposite, is universalism, the philosophical background of which consists in the denial of atomism of every other individualistic force in the universe. The starting point of universalism is the oneness of God, the universe, nature, man, and humanity.

As a great liberal and progressive, President Roosevelt would like to give economic security to every man, woman, and child in our Republic. [Applause.] The curtailment of economic and financial individualism is not a violation of the principles of American democracy, but is an assurance of its continuation in the future. Without this curtailing of unbridled financial and economic individualism the future of American democracy would have become problematic within a very short time.

In conformity with the traditional ideal of democracy, President Roosevelt is now engaged in restatement of American democracy in terms of present-day political and economic realities. Thus does President Roosevelt emerge as the savior and redeemer of the heritage created by Jefferson, Jackson, and Wilson. [Applause.]

Just as the modern conception of government is different from the paternalistic order of things, so is modern democracy somewhat different from the democracy of yesterday. Since it is no longer the function of the state to exercise the duties of a watchman, so it is not the task of democracy to be limited to the ballot. Political democracy can survive only when it is economically orientated. Economic orientation of democracy is claimed by some for socialism, but socialism is still abhorent to the people of our Republic. It should be pointed out that socialism, as the symbol for Marxism, according to its disciples, stands for collectivism as opposed to free individualism and is exemplified by proposed national ownership of all industry, utilities, and all economic and material resources.

Many Americans are not afraid of national ownership and operation of industry, utilities, and natural resources. What are Muscle Shoals, Boulder Dam, the national forests, and other reservations but actualities of socialism? What are the water, light, heat, and power utilities operated by the cities but other examples of socialism?

American people are putting into practice many of the principles advocated by Socialists. Why be afraid of the name when they stand in no fear of the thing itself? There is certainly no cause for worry for our Republic so long as the city, State, and National Governments strive to bring about good will between labor and capital, prevent the employment of children in mines and factories, provide constant employment for able-bodied men at saving wages, and take care of their citizens in their old age. [Applause.]

"Equal and exact justice for all; special privileges to none." This motto has been adopted by the Democratic Party, and under this motto America demands the abolition of special privileges to favored classes and equal justice to all who labor for their livelihood, whether by mind or hand, or both. [Applause.]

Men, fearful of the future, cling to the living order of things, and are afraid of innovation. It is for this reason that many people consider the changes wrought by our President as something revolutionary in character. His words and deeds are supposed to be in violation of the two great documents of our entire political fabric, the Declaration of Independence and the Constitution.

In my study of the President's program I can find nothing that is contrary to the principles of human rights. I can find nothing that sets the State above the citizen. I can find nothing that provides establishment of a dictatorship. I can find nothing that provides for great armies, in times of peace, of brown, black, blue, or any color shirts. I can find nothing that provides for any symbol of hammer and sickle, of battle-ax bound with rods, of the swastika, nor of any symbol except that of the free American eagle and the stars of heaven, set in a blue vault, one for each State of the Union, the white of peace and the red of courageous hearts that had bled to preserve our Republic. [Applause.] Even the Blue Eagle is intended to represent an eagle, heraldic rather than actual, but still an eagle.

The edifice erected on the specifications of the Declaration of Independence and the Constitution is still the temple of democracy. It is still the temple of the people. It is still the temple of "government of the people, for the people, and by the people", and I pray God that it may ever remain thus. [Applause.]

The additions made in the past by those who misread the specifications must be removed, and like Independence Hall in Philadelphia, the edifice restored to its original simplicity and beauty.

New architects have been called to the work. Some people call them the "brain trust." New workmen must build what they plan, and the edifice must be restored to its original lines. It must not have Russian iron, German paint, Italian marble, British oak, French decoration, or anything but American material. [Applause.]

The original temple of democracy was built in a hand age; the restoration will be completed in a machine age, but the object of the restoration is to bring about the greatest welfare to the greatest number of people and to reopen the temple doors to those who seek the "pursuit of life, liberty, and happiness", guaranteed to them by the immortal Declaration of Independence. [Applause.]

"Quo vadis"?

Whither the road to the future?

I propose that we take the path of planned economy along the course of which there are 10 guideposts.

First. To freeze minimum wages below which no human being should be permitted to be exploited. To have maximum hours so that work could be divided between those that are unemployed. And to abolish child labor wherever it may be found, in mills, mines, looms, and factories, so that children can be in the temples of schoolhouses and not be exploited on the altar of mammon.

Second. To continue and make a permanent part of our institution the Reconstruction Finance Corporation. To enlarge its functions so that loans may be made to small as well as to the large corporations and business people, to employ the army of unemployed to make them self-supporting and self-respecting.

Third. To place agriculture on a parity with industry by extending loans and credit to independent farmers and especially to the present transient tenant and crop farmers to give them permanent

tenure of the land they cultivate and also protect them in the foreign markets of the world by giving them an equalization fee or debenture to put them on a parity with industry and protect agriculture against international price cutting. [Applause.]

Fourth. Planned, systematized, and correlated development on a national scale of all means of transportation and communication. There is to be no building of railroads, airways, highways, or development of water courses, or means of communication such as telephone, telegraph, radio, without approval of this planning board.

Fifth. The encouragement of foreign trade by the establishment of reciprocal-trade agreements with other nations of the world, and the encouragement of the American merchant marine by favoring American ocean freighters through subsidies and other similar means.

Sixth. The strengthening and enlarging of the power of the Federal Trade Commission with a view of eliminating unfair trade and business prices, unfair competition, and purchase of goods dumped on the market through fraudulent bankruptcies.

Seventh. The guaranty of bank deposits and enactment of a uniform banking law through Government control. The encouragement of savings accounts with the Government, either in postal savings or with the Treasury, at a nominal rate of interest, with the entire resources of the United States as security. [Applause.]

Eighth. The national ownership and operation of natural resources, such as public utilities, which are essential to the life of every human being in every home of our country, and means of transportation and communication, which represent the arteries and nerves of our great Republic.

Ninth. National and international bimetalism, and the use of both metals, in adjusted proportions, as a basis for currency. [Applause.]

Tenth. The national ownership of all munitions of war and armor-producing plants, with the trade in munitions and firearms, explosives, and war gases, and other munitions of war, limited to the Federal Government, States, and municipalities. [Applause.]

We in the United States are molding the civilization of the future. In the short period of a century and a half the pioneers of our country, animated by courage, by fortitude and bravery, and inspired by ideals, have converted a wilderness into a great nation. Associated with them in this gigantic achievement have been other liberty-loving men and women who have given up their old heritage, forsook what they held near and dear, and have come to this new land seeking liberty and justice and bringing with them the will and capacity to work. In the great crucible of American principles and traditions these two elements are fusing into a new national alloy, which, like the alloys of modern metallurgy, will possess qualities beyond the capacities of any of the original elements. [Applause.]

I have briefly outlined before, some of the characteristics of today's governments in Europe. Each form of government has originated either through the collective will of the people or has been forced upon the people by organized force, substituting might for right.

In our own country we have achieved a political union that has withstood the test of armed invasion, civil war, foreign wars, the World War, and attacks of undermining forces alien to American spirit. Ours is still—and pray God it may ever be—a great democracy in which vox populi; vox Dei—the voice of the people is the voice of God. [Applause.]

The Old Testament speaks of the Jews as the "chosen people." The rulers of Europe today have appropriated and altered this phrase. Thus we find that Italy is the "chosen state;" Russia, the "chosen class;" and Germany, the "chosen race." But superior to all these is our United States, for ours is the "chosen nation," chosen by people from all over the world who came to our shores, where rule is not by race, nor class, nor creed, nor color, but in which human beings can realize for themselves the highest aspirations that can be found in life. [Applause.]

Under the liberty and freedom which our Republic grants to body, soul, mind, and spirit, from all these diversified national elements among us, will ultimately be developed one group superior to all—the E pluribus unum of America, symbolic of one for all and all for one. [Applause.]

This great American group will carry on its constant faith in their Nation, founded in the struggles and the traditions of the past; glory in its peaceful triumphs and conquests of the present, and shine resplendent in the hope and confidence of its tremendous future. [Applause.]

Imbedded in the heart and soul of our people will be the two great mottoes—"E pluribus unum" and "In God We Trust"—the glorious symbols of America of yesterday, of America of today, and of America of tomorrow. [Applause.]

Mr. Speaker, I shall be pleased at this time to answer any questions that any Member is desirous of propounding to me.

Mr. KELLER. Mr. Speaker, will the gentleman yield?

Mr. SIROVICH. I yield.

Mr. KELLER. I observed that in referring to the accomplishments under Bismarck in Germany the gentleman left out old-age pensions. Was not that enacted under his regime?

Mr. SIROVICH. I included that. I am very glad the distinguished gentleman from Illinois has brought that up, because every bit of social legislation that we find in our own country was first enacted by the archreactionary, the ultraconservative, Iron Chancelor Bismarck, in 1881. And I was very much surprised to see my good friend Tom Blanton as a liberal Democrat stand in opposition this morning to the subject of old-age pensions.

Mr. BOYLAN. Mr. Speaker, will the gentleman yield?

Mr. SIROVICH. I yield.

Mr. BOYLAN. I congratulate the gentleman upon his very able speech. I am sure it proved very informative to the House. The gentleman believes, does he not, that the policies he has enunciated as the policies of today are the policies we are now pursuing? These principles and policies are based upon justice and equality and are in accordance with the tenets proposed by the gentleman?

Mr. SIROVICH. I am very glad that my distinguished colleague from New York, Mr. Boylan, asked that question. What I wanted to bring out is that the philosophy of the principles of Franklin D. Roosevelt are symbolic of the old principles of democracy. They are the same as those enunciated by Thomas Jefferson, Benjamin Franklin, and Thomas Payne. The only difference is the form, because democracy is eternal in its principle, and its form changes as the years come and go, just the same as clothing. The shape and design of clothing of 1934 is different than the shape and design of clothing that was worn in the days of our mothers and fathers. Still the cloth is the same. President Roosevelt is trying to orientate the democracy of today to fit the social, economic, and political conditions that confront us in order to give to every man and woman of our Republic economic security and enable them to compete for the mental and spiritual opportunities in life that will ennoble mankind. This is the philosophy that underlies the New Deal of Franklin D. Roosevelt.

Mr. DUNN. Will the gentleman yield?

Mr. SIROVICH. I yield to the gentleman from Pennsylvania.

Mr. DUNN. Will the gentleman please explain how we are going to get out of a depression when practically every factory in the United States has what they call an age limit? In other words, I am a member of the Labor Committee. When we were discussing the 5-day 6-hour bill, which I hope will be passed at this session, practically every man that appeared before us, who was the head of an industry, maintained that they had an age limit. I asked every one of them, What is your age limit? I do not hesitate to say that practically every one of them stated between 40 and 45 years of age. If the United States Government is not going to provide old-age pensions and unemployment insurance and all of our industries have an age limit, preventing men and women from getting a job when they attain the age of 40 or 45 years, how are we going to get out of the depression?

Mr. SIROVICH. In answer to my distinguished colleague from Pennsylvania [Mr. DUNN], who has loyally and consistently supported labor legislation in this House, permit me to advise him that at the present time in this mechanistic age the slogan or shibboleth of modern industry seems to be, "Equal opportunities for all with the exception of those past the age of 40."

It is a tragic indictment of the civilization of our machine age that men past the age of 40 are being relegated to the scrap heap. However, the 5-day week and the 6-hour day, with which I am in thorough sympathy and accord, would be instrumental in dividing the work so that all of our citizens who are willing to work could be employed.

The profit motive which is being utilized for the benefit of the few in industry should be distributed for the benefit of the great mass of our unemployed. Competition for individual materialism should be supplanted with cooperation, making it possible to have economic security for every man and woman who is willing to work to earn his daily sustenance. Since labor is the producer of capital and wealth it should be entitled to a fairer share in the distribution of the wealth it creates. When men and women arrive at the age of 50 or 60 and are no longer able to work in the quarries of industry, commerce, and agriculture the Government of the United States, in cooperation with the States of the Union, should have old-age pension laws which would pension every worker, every father and mother who have contributed their all upon the altar of industry, to be provided for in their old age. If it is patriotic to pension every soldier who is ready to make the supreme sacrifice upon the altar of war that his country might endure, it is just as noble, just as humane, just as patriotic to pension through old-age pensions the worker, the toiler and laborer, including helpless fathers and mothers, who are dependent upon charity for having given of their lives, health, and strength to make our country great, glorious, and prosperous. [Applause.]

In 1927 I spoke for 1 hour upon the subject of old-age pensions. That bill has become the model for all other bills that have since been introduced upon the subject. The speech that I then made made a most profound impression upon Franklin D. Roosevelt. When he became Governor of the great State of New York he wrote me a letter that it inspired him to appoint a commission to investigate the subject of old-age pensions, and through his cooperation and magnificent effort an old-age pension law was written upon the statute books of the State of New York. Old-age pension is now operating in almost 14 States of the Union. Old-age pensions are found in every civilized country of the world with the exception of China, India, and the United States. I am appealing to the membership of this House to help us secure an old-age pension act before China and India leave this, the greatest civilized Nation of the world, still in the background for having failed to do justice to those who have appealed for aid in their declining age.

Mr. Speaker, in 28 nations of the world we have the compulsory contributory form of old-age pensions, in which the state, the em-

ployer, and the employee contribute an equal percentage for an old-age pension fund. This usually amounts to about 3 percent of the salary of the employee, a like sum being contributed by the nation and by the employer. Second, the voluntary contributory form of old-age pension, which is found in 10 different countries of Europe, in which the state just grants old-age pensions to men and women who have grown old and feeble in the service of agriculture and industry. The workingmen do not have to contribute to any old-age pension fund. The state provides for it alone. Third, there is the old-age savings fund, as found in Japan, in which the nation matches the savings of the workingman and provides for him when he is no longer able to work in the quarries of industry.

Mr. MEAD. Will the gentleman yield?

Mr. SIROVICH. I yield to the gentleman from New York.

Mr. MEAD. I am very much interested in the splendid statement the gentleman is making, and I agree with his statement that President Roosevelt is carrying forward the principles of true democracy. I would like to have my distinguished colleague explain to the House, as I know he can, the fact that President Roosevelt is meeting with the same opposition that the reforms advocated by Jefferson and Jackson met with in their day; that he is meeting with the same opposition that the square-deal program advocated by Theodore Roosevelt met; that the new-freedom movement advocated by Woodrow Wilson met; and that that opposition, Torylike, as it was called in the reactionary days of early history, is ready and willing to step in in strong opposition. We see their opposition to the stock-market control, and yet they forget the Insulls and the Kruegers. We find their opposition to the Securities Act, to the Wagner Dispute Act, and we find partisan debate even in the matter of the air-mail cancelations. Much of this, in my judgment, is an organized effort to defeat the progressive reform advocated by the New Deal and sponsored by Franklin D. Roosevelt.

Mr. SIROVICH. My distinguished friend has asked a very pointed question, but the question is age old in its conflict.

If the gentleman is conversant with the Bible, he will note the same battle being waged between the Sadducees and the Pharisees in Biblical times. You will find the same controversy between the hoi-aristoi and the hoi-polloi in Greece. You will observe the same discord, dissension, and disagreement between the Roman patricians and plebeians. In medieval times the same conflict was waged between the barons, lords, and dukes, and the serfs. In those days the serfs had economic security, but they had no liberty or freedom. Today the modern workingmen have liberty and freedom, but have no economic security. To digress further, please observe that in the parliamentary constitutional form of Great Britain's Government the struggle between the Whigs and Tories and between the Conservatives and Liberals has always persisted. In this the Seventy-third Congress of the United States you can see the same line of demarcation between the reactionary element which is found on both sides of the aisle amongst Republicans and Democrats and the liberals and progressives found in both the Republican and Democratic ranks.

I am a great admirer of the President of the United States and was one of his early and first supporters as a Presidential possibility, yet I have never voted for a gag rule and I have never voted for a measure because the President wanted it. I voted for every measure of Franklin D. Roosevelt when I believed it was a liberal and a progressive measure designed to bring about the reforms that we have been speaking about. [Applause.]

Mr. KENNEY. Mr. Speaker, will the gentleman yield?

Mr. SIROVICH. I yield to the gentleman from New Jersey.

Mr. KENNEY. Will the gentleman explain why there should be any opposition to a great American institution and the first means of raising revenue that this country knew before a system of taxation was put into vogue? Will the gentleman explain to us why this body that objects to so many things should really object to a national lottery conducted by the Government for public benefit, such a lottery as is conducted by more than 30 countries of the world?

Mr. SIROVICH. For the benefit of my distinguished friend from New Jersey, I desire to say that we have to observe a moral code in this Republic. Every honorable man and woman in this country is against gambling. It is unmoral and unethical. However, we have legitimized gambling on Wall Street. We have gambling on race tracks in various States of the Union. We gamble in the future of wheat, cotton, and other commodities necessary for life. We should have a uniform law that is equitable and just to every American citizen. If we allow one form of gambling, we should allow another, and lotteries belong to this category. My theory therefore is, let us eliminate all forms of gambling and let men and women earn their living in conformity with the dictates of humanity, in which social and economic justice reign supreme.

Mr. DOUGLASS. Does the gentleman think a lottery improves the moral code?

Mr. SIROVICH. Does the gentleman think gambling in Wall Street improves the moral code?

Mr. DOUGLASS. No; but does lottery improve the moral code?

Mr. SIROVICH. Not at all; but, as I said, if you allow one form of gambling, you should allow all others. There should be no privileges for one that are denied for others.

Mr. DOUGLASS. Two wrongs do not make a right.

Mr. SIROVICH. I agree with the gentleman that two wrongs never made a right, so we are battling in this House to bring about a fundamental doctrine of democracy which is the greatest good for the greatest number. [Applause.]

Present Issues Before Congress

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Wednesday, March 22 (legislative day of Thursday, March 16), 1939

ADDRESS BY HON. HARRY S. TRUMAN, OF MISSOURI, BEFORE JOINT SESSION OF MISSOURI LEGISLATURE

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the RECORD a very able address delivered by the junior Senator from Missouri [Mr. TRUMAN] on the 21st of March 1939 before a joint session of the Missouri Legislature.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The honorable Senate and House of Representatives of the State of Missouri, you can hardly estimate my feelings when I received a copy of your resolution asking me to address a joint session of the legislature of this great State. I consider it a very high honor and I haven't the words to adequately express my appreciation. You, of course, are interested in the Congress of the United States, just as I am interested in this honorable body, and I am sure you have asked me here to discuss some of the things that are of national interest. I shall endeavor to give you my views on some of the issues now pending in the Congress.

Missouri honored me in 1934 by electing me as one of its two United States Senators. I consider that honor a great responsibility, and I have to the very best of my ability worked exceedingly hard to meet that responsibility.

I had had no legislative experience and only about 2½ years of law school when I went to Washington. My whole experience in public service had been executive and administrative. When confronted with a highly responsible and technical command in the World War I tried my best to learn all about it. I have done the same thing with my duties in the Senate. The fact that I have been a lifelong student of world and United States history has been a very great help.

I was assigned to two of the Senate's busiest and most powerful committees—Appropriations and Interstate Commerce. One controls the Budget of the greatest government in the world and the other has enormous influence on its transportation and communications.

I found out very soon after I had settled down to a study of my duties that the business of a good legislator is not to get things done quickly and efficiently, as a good administrator has to do, but to prevent, if possible, the enactment into the law of the land many crazy and crackpot measures. I have found that much deliberation and study on all proposed legislation is a great deal better for the public welfare than too much hurry and immediate action. I have also found that the man whose interests are of most importance to the country is not usually represented in the lobbies of Congress and that the bill on which the lobbyist and propagandist expend the greatest efforts is the one that needs the most deliberate consideration and, perhaps, obstruction.

It has been my privilege to serve through what I believe is one of the greatest periods in the long and honorable history of the Senate of the United States. I have rubbed elbows with and heard words of wisdom (and some not so wise) from men who will be historical figures in the next generation—John Garner, Joseph T. Robinson, Huey Long, Carter Glass, our own Bennett Champ Clark, Charles McNary, Robert La Follette, Jr., Hugo Black, and many other able and distinguished men.

I arrived in Washington in the midst of the great depression and became a member of the committee that recommended for passage the largest single peacetime appropriation ever made in the history of the country—the $4,800,000,000 relief bill of 1935. I was a member of the committee that investigated the utility scandal and recommended the holding company death sentence. It was my duty to sit day after day and listen to railroad woes and to learn how so-called great bankers, financiers, and rail management had ruined great transportation systems. I was the chairman of the Subcommittee on Interstate Commerce that helped to set up the regulation of air commerce. I had to make a special study of the organization of the National Government in order to vote intelligently on appropriations. Because of my military experience I have had to study the national defense set-up, and having been a farmer until the World War, I have been vitally interested in farm legislation, although I'm not on the Committee on Agriculture.

Now, while trying with all the brain power I have at my command to master great national issues and problems pending in the

Congress, I've had to answer personally thousands and thousands of letters, see hundreds of people, and act as a sort of national employment agency for all the thousands of Missourians who feel that it is their patriotic duty to become attached to the pay roll of the Federal Government. It has been necessary for me to get up early in the morning and burn considerable electric energy at night, both at the Government's and my own expense; but it has been a grand experience, and no one can say that I haven't honestly tried to make you a proper representative in the Senate.

I am very much interested in transportation. I have a feeling that if the agricultural producer and the manufacturer of the necessities and luxuries that our standard of living requires could economically and efficiently place their products in the hands of the users without undue assessments for handling and transportation, many of our woes would be settled.

The railroads were constructed in the boom days of expansion after the Civil War. Until 1920 they had practically a monopoly in the movement of goods and passengers, and they cultivated the attitude of every monopoly—a smug, public-be-damned attitude that is now sending them into bankruptcy. They sat idly by and saw us build thousands of miles of concrete highways for the use of 30,000,000 of automobiles and trucks, and their managements, with 1893 ideas, still believed they had a monopoly in transportation. Airplanes are carrying millions of passengers and thousands of pounds of mail and express. The small manufacturers, who have been discriminated against, have bought their own trucks and haul their products themselves. Livestock is moving by truck, and a man with a "flivver" isn't going to wait for a train.

Railroads are asking for legislation and the committees of Congress are studying the situation. I hope something can be done to help them. But when a patient asks for a doctor he must take the medicine prescribed and have a will to get well if the doctor is to do him any good. The railroads and railroad labor, in self-defense, maintain one of the most powerful lobbies in Washington, and they are vociferous about the legislation that they need to cure their ills.

I think that the rails are still our most useful and our most necessary means of transportation, but railroads need to "live" today and to meet today's conditions. They need men with young ideas, and I hope that they'll realize that.

Automobile and truck manufacturers are making use of every new idea. The airplane manufacturer and the air transportation companies are using every possible means at their command to improve service and to convince the people that air travel is to their advantage.

When railroads were the only means of transportation, excepting the horse and wagon, the simplest way to increase profits was, of course, to increase the price of transportation—charge "all the traffic would bear," or, as they said, charge for "the value of the service." It made no difference what the cost of the handling of traffic was in the calculation of freight charges, and as far as that is concerned it apparently makes no difference to them now. Rail freight charges have no rhyme or reason in their set-up. There is a fairly reasonable rate structure in the northeast section of the country, a rather patchwork crazy quilt in the southeastern section, and one that will really make you dizzy to contemplate in the West and Southwest. Try to cross from one of these so-called freight-rate territories into another with a car of freight, and you get socked with all the traffic will bear plus a real jolt for having the temerity to want to ship from one zone to another.

Competitive marketing is something the railroads seem to know nothing about. There are two basic fundamentals for increasing profits under competition, which are the opposite of monopoly marketing practices. They are, first, reduced operating costs or prices or both, and, second, increased sales through increased sales effort.

The railroads aren't altogether to blame for their present condition, however. They have been bled white by their bankers and financial advisers and have been the object and butt of every tax racket in existence the country over. I believe that they are entitled to the same fair and honest treatment, from every standpoint, that every other means of transportation receives. I believe that the problem before the country is a transportation problem and not a railroad problem. I think that air, auto, water, and railroad transportation must be considered in the light entirely of the public interest. I am sure that every method by which we travel from place to place and move our goods and merchandise is absolutely essential to the welfare of the country, and as long as I am a public servant that will be the policy I shall support.

I believe that the man who does the work and makes our machines of travel perform is entitled to every consideration, and that any legislation affecting any method of transportation must take him into consideration and see that his interests are fully protected. I have spent much time and effort on transportation problems and legislation, and in my opinion we are still far from a proper solution.

While I am very much interested in transportation, I am also interested in the farmer, because, as I have said, I have been a farmer.

The farmer is an individualist, and the hardest thing on earth is to get him to organize even when his best interests require it. The Roosevelt administration has made an honest effort to help the farmer, but I am not convinced that the present A. A. A is working in the interest of the man for whom it was created. There have been too much red tape and paper work and too much recognition of the men who farm the farmer. I am convinced that if world trade can be revived—and I think Cordell Hull has made an honest and practical approach toward its revival—some of the farmers' troubles will cease to exist. Cotton, wheat, and meat are world products and require a world market for their distribution, and if the world markets cannot be restored these crops are going to have to be handled on a domestic-allotment or cost-of-production basis. Our ideas of land uses must be revamped also. Marginal and submarginal land now cultivated must be put to other uses—reforestation, wildlife preserves, and, in some instances, just plain abandonment, and let Nature take her course. Soil conservation is one of the greatest of undertakings and ought to be continually carried forward. All the money spent on the whole farm program isn't a drop in the bucket when compared to the soil depletion of the last 50 years. There isn't a reason in the world why soil conservation and the domestic-allotment, or some other practical plan, would not work together.

National defense, in my mind, means just that. I am for an adequate navy, a well-trained and sufficient air force, and enough men of other arms for training purposes only. Battleships and airplanes cannot be built overnight. Neither can antiaircraft guns and artillery weapons. A policy that would insure safety without aggression on our part is what we need. In my opinion, the program presented to Congress by the President is reasonable and necessary. With world affairs in their present chaotic condition, common sense would indicate that the richest nation on earth should be ready to defend itself against the wild men who are running the dictator states.

This country has finally awakened to the fact that foreign policy and national defense go hand in hand. World disturbances have their effect on us no matter how much isolation we may try to maintain. With transportation and communication what it is today there is no such thing as isolation, and if we don't want to take our proper place in world affairs we must be ready to defend our own policies at home and in the Western Hemisphere.

The whole country should be agreed on a foreign policy, and we should face the world as a unit, no matter what our internal differences may be. I think the recent statements of Mr. Landon and Mr. Stimson are patriotic documents, and I am sure that the votes in the House and Senate on the National Defense Act show that the country is united.

The world is no longer a very large place. We can go around it now in 3 or 4 days, and the time is fast approaching when we'll have airplane passenger service between all the continents at four or five hundred miles an hour. If we are to have world peace we must have world understanding.

If this great Nation of ours were divided into 48 independent governments with 40 different languages and dialects, we'd be having the same trouble that Europe is having. Suspicion of neighbors and neighbor States comes about through ignorance and lack of understanding. I am one who hopes eventually for world peace, but until that time comes I am also one who wants the Nation to "keep its powder dry."

I also believe that if there are any inhabitants here who believe that certain forms of government in Europe are better than ours, they should be sent to those countries they admire and not be given any opportunity to overturn or destroy our Republic. No one on earth thinks more of the Republic of the United States than I. I have sworn to uphold and defend the Constitution of the United States 17 separate and distinct times, and have even gone to the extent of offering my life for it, and I was never more thoroughly impressed with the greatness of the country than at the one hundred and fiftieth anniversary of the meeting of the first Congress, March 4. Every man and woman in this hall should read those three speeches, one by William B. Bankhead, Speaker of the House; one by Charles Evans Hughes, Chief Justice of the Supreme Court; and one by our great President, Franklin D. Roosevelt. You'll be a better and more patriotic citizen for having read them and you'll also be convinced that you have the best government in the world.

We have our troubles and plenty of them, but there is not one of them that we can't solve by honest effort. We are living in an age of transition. We've come from oxcarts to airplanes in less than a generation. We are going through a complete readjustment and it is a painful operation. More progressive legislation has been passed in the 6 years of the Roosevelt administration than in any other half dozen administrations, and we must adjust ourselves to an entirely new theory of existence. Our social-security legislation may not be perfect, but it is a step in the right direction. No one wants to repeal it. It is an effort to give the everyday citizen, who works for a living, some hope and security that he won't be a burden in his declining years. If you'll read history, you'll find that concentration of wealth and power in the hands of a few was the fundamental cause of the downfall of the greatest nations of the past. We are trying to profit by those examples. Monopoly cannot exist in a republic, and a republic cannot exist when its resources are in the hands of a few. I am not an admirer of bigness. I have said on the floor of the Senate that a thousand insurance companies, with $4,000,000 each in assets, are better for the country than one company with four billions. I think that is true of steel factories, packing plants, and grocery stores. I want to do whatever I can to help the small-business man—the big one will take care of himself.

I think the tax burden has to be adjusted in such a way as to give the businessman, particularly the little-business man, a chance to operate and to take up the slack in employment. Tax systems are and always have been cumbersome, patchwork affairs. The Federal system has grown up around income and excise taxes

and import duties. States are adopting income and sales taxes as a means of raising revenue. Then there are counties, schools, and municipalities to be supported. In times gone by, land has always been the basis of most tax systems. As government grows and continues to add service after service to the tremendous number already in existence, means must be found to support them. For every government service rendered the bill must be met by taxation. Most people want all the benefits and service, but want them for nothing. I've heard that Senator Sorghum, that famous old cartoon statesman, stays always in office by voting for every appropriation and against every tax bill. That is an unbeatable system, but, practically, some members of the legislative bodies must vote for taxes.

If we could get an equitable, honest system whereby the people who benefit most from government could be made to pay for it, and have our dual State and Federal system of government so arranged that there would be no duplication of methods of raising revenue, the tax millennium would be here. Since that seems to be an ideal condition, it may never come. We have to do the best we can under conditions as we find them.

When I was a part of the administrative government of Jackson County it occurred to me that it would be a great thing for the taxpayer if the Federal Government had certain taxes that only it could levy, the State certain other things to tax, and leave land and property taxes exclusively to counties and municipalities. Then some of the taxpayers' woes would be over. Nowadays, by the time a man has made out all the forms and returns that he has to make, particularly if he is in business, he is ready to do without any government whatever. I am hoping that an honest effort will be made in Washington to ease and simplify the tax system. But in the meantime, we cannot let people go hungry in a land of plenty. You see how this whole question dovetails into one great problem. Some of us are honestly trying to find the answer to it.

We are approaching another Presidential campaign, and you will hear all sorts of wild and demagogic remedies for all the ills we are heir to, but the American people are hard to fool. They know whom to trust. They know that the Democrats under the leadership of that great President, Franklin D. Roosevelt, have given the common man a chance. They know that selfishness and greed under a Republican regime brought us almost to ruin, and I am perfectly willing to trust the people when 1940 rolls around. Again I want to thank you for this very great courtesy.

Which Way Recovery?

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 22 (legislative day of Thursday, March 16), 1939

RADIO ADDRESS BY HON. JOSEPH C. O'MAHONEY, OF WYOMING, MARCH 12, 1939

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the RECORD a very able address delivered by the senior Senator from Wyoming [Mr. O'MAHONEY] over the radio during the American Forum of the Air on Sunday, March 12, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Let me begin by pointing out at least two roads which do not lead to recovery. Whatever we may believe to be the right answer to the question proposed for tonight's discussion, of one thing I am certain, namely, that the American people are not willing to surrender their economic freedom to either private monopoly upon the one hand or to government on the other. Regimentation of the individual by either private or public power is not a solution of our economic ailments. Indeed, it is regimentation by one or the other that has been the primary cause of most of the ills from which the world suffers.

Any effort to find the antidote for modern chaos must start with recognition of the principle that the rights of the individual are supreme and that both governments and business organizations are maintained only for the purpose of serving the people. When government becomes so all-powerful that the individual cannot act without its permission, then the political system can no longer be said to be free. Likewise, when business is so organized that the individual cannot freely engage in it, the economic system can no longer be said to be free. Before we shall even begin to lay the basis for a sound recovery program we must realize that men were never made for any system but that all systems were made for men.

THE CRISIS IS WORLD-WIDE

This modern crisis which engulfs the whole world arises from the fact that for some reason our economic system no longer provides security for men. Almost every element of the population is clamoring for Government action to correct the results of this failure. Farmers, though they produce an abundance, are unable to secure even the cost of production. The industrial worker is without certain employment and in great numbers is dependent upon the Government for his daily bread. Businessmen, manufacturers, traders, particularly those whom we generally classify as belonging to "little business," and even great transportation agencies like the railroads, turn to Government for credit with which to maintain themselves, and the Government in turn is able to provide this credit only by piling deficit upon deficit.

In the abstract everybody agrees that man can support himself only by work. The trouble is, however, that he has lost the opportunity to work. In the search for the answer to our question, therefore, we must first determine, if we can, what the reasons are why men cannot today freely work, freely produce, and freely exchange the products of their labor.

The explanation of the modern anomaly of want in the midst of plenty seems to me to be a perfectly simple one, arising from the fact that the modern world has become so highly complex in the field of industry, trade, and commerce that man is no longer protected by the simple rules which were sufficient to maintain economic freedom before modern invention changed the face of the earth. The task is to find the rule that is suitable to our times and one that is in harmony with our fundamental ideals. No merely negative remedy would be adequate. It must be constructive, but it must also be democratic.

ECONOMIC FREEDOM ESSENTIAL

No one who has had the opportunity to feel the pulse of the people of America can doubt for 1 minute that they are still devoted to our traditional principles. They believe in freedom. Every person who had the opportunity to witness or to hear over the radio the proceedings which took place in the Chamber of the House of Representatives on March 4 last in commemoration of the one hundred and fiftieth anniversary of the commencement of the First Congress of the United States could not fail to have been thrilled by what took place. It was a rededication, as it were, of the Government and the people of America to the tolerant, patient, and courageous principles of democracy.

My answer, therefore, to the question which has been propounded to us tonight is another question. Do we have the courage to be democratic? If we believe in that personal liberty which guarantees to every man the right to think, worship, speak, and vote as he pleases, then we cannot avoid the next necessary conclusion, that we must guarantee him economic freedom also. Just as man through all past centuries has struggled painfully to achieve the liberties of which we boast when we gather in patriotic assembly to vindicate our system, so he is today struggling to achieve industrial democracy.

That is why I say tonight that there can be no permanent recovery unless, first of all, we securely establish economic freedom. Commerce and industry must be free from arbitrary restraints, whatever their source. The door of opportunity must be kept open for each rising generation, for otherwise all talk of liberty is a delusion.

This is the heart of the so-called monopoly problem—the abolition of those restraints which have closed the door of equal opportunity. And yet, it is no simple thing to discuss monopoly understandingly, for many monopolies are altogether justifiable and beneficial. Monopoly must not be confused with mere size nor with efficiency. The monopoly which is to be condemned is only that which by artificial means, by fraud or force or chicanery, gains undue advantage and fastens a mortgage on the future.

All competition tends to monopoly, for the natural objective of competition is supremacy. Just as the runner seeks to demonstrate his superiority over those against whom he runs, so the worker or the businessman seeks to demonstrate his superiority over those with whom he competes and thereby to build up an ever-expanding trade.

There can be no quarrel, therefore, with that type of monopoly which results from geographical or strategic advantage, from the nature of the business, or from the superior qualifications of the persons or corporations which carry it on. The evil arises when exclusive opportunity to engage in business is secured by methods which do not rest upon merit alone.

BUSINESS NOW NATIONAL IN SCOPE

Fifty years ago the individual who resorted to indefensible practices could be more or less readily controlled by public opinion, because his customers could ordinarily, without great difficulty, take their trade elsewhere. They could exhibit their disapproval in such a way that public opinion itself would tend to be a corrective. But when business ceased to be carried on primarily by men in their natural capacities and when the corporation came to be the effective agency of commerce, public opinion ceased to be a speedy and effective corrective. Men no longer deal with their neighbors, because business is no longer local. It is national in its scope. And so we are necessarily in search of a national remedy.

For half a century our people have been struggling to find the rule that would be applicable to the complex society in which we live. We have vacillated backward and forward between theories of strict enforcement of the so-called antitrust laws, on the one hand, and complete exemption from their prohibitions, upon the other.

The lawbooks are full of cases which condemn as both unethical and illegal combinations by which prices are fixed, trade territory divided, earnings pooled, competitors excluded, rebates granted, and business restricted, and yet as long ago as 1916 Congress passed a shipping act, the purpose and effect of which was to license such activities so far as certain shipping corporations were concerned. In 1918 Congress passed another statute repealing the Sherman antitrust law for associations formed to engage in export trade.

PRIVATE MONOPOLIES INTOLERABLE

And while this was going on both political parties, in words of varying formula, have repeatedly declared that private monopolies are intolerable. But all the time forces were at work which were utterly destroying the local character of business and herding the people into great cities, where they could no longer support themselves by their own labor upon the land, where they could no longer maintain themselves by commerce and trade with their neighbors, but were made dependent for their very existence upon the activities of the giant instrumentality of modern commerce, the corporation.

While this was going on, particularly since the end of the World War, the share of agriculture in the national income was constantly declining and the numbers of unemployed were constantly increasing. Finally, in 1929 the whole system collapsed. The same effects were manifest in other countries. The natural person everywhere was finding himself utterly unable to resist restraints of trade, the geographic radius and effect of which became greater as the means of transportation and communication improved.

Everywhere men have turned to government for relief. In Europe they have allowed government to become absolute, with the result that both personal liberty and business liberty have been suppressed.

In the United States we have been trying to restimulate private industry by Government spending, but, though billions have been borrowed and spent, the problem has not been solved. One great difference we see, however, between what has transpired abroad and what is transpiring here. We have maintained the democratic system. Religious and political freedom here remain unimpaired. It is only economic freedom that has been threatened, and the undermining of that freedom began at least a quarter of a century ago.

Indeed, one of the first efforts of the present administration to achieve recovery was said to be an effort to allow business to govern itself. The N. R. A. was established. Like the shipping act and the foreign-trade act it repealed the antitrust laws for business associations. But the result was not the abolition of restraints of trade nor the reopening of the door of opportunity to free private enterprise.

Thus we are driven to the conclusion that the road to recovery is to be discovered by identifying and effectively prohibiting the practices which close the door of opportunity in national commerce. The duty of Government always is to establish the rule of society which will best preserve order and, as our Declaration of Independence puts it, preserve the "unalienable rights of man to life, liberty, and the pursuit of happiness."

There is no power but the government of all the people which has the authority in a democracy to make and enforce the rule by which all must live. And so I say that Government and business must unite in a common, tolerant, and patient effort to develop the rule which in our complex civilization will preserve economic freedom. Let it be emphatically stated, however, that such a rule must not clothe government with power to direct business. It must make business free, just as it must make the individual free.

SOME SIGNPOSTS TO RECOVERY

It must be a rule that will counteract the depressing effect on small business of the concentration of economic power. It must provide for a decentralization of income—not by breaking big business down but by building small business up and by stabilizing employment, so that worker and farmer shall have a larger and a more certain share of the national income.

Here, then, are some signposts to mark the road to recovery:

(1) The establishment and maintenance of economic freedom.

(2) The decentralization of income by encouragement to small business and the stabilization of employment.

(3) A recognition of the fact that corporations are not persons but artificial agencies created by law for the better utilization of the collective assets of the people for the public good.

(4) A recognition of the fact that the rule of national commerce can only be laid down by the National Government but that it should be laid down upon the abiding foundations of democratic faith.

Democracies are said to be endangered by the development of foreign dictatorships. Let no one imagine, however, that democracy is to be maintained by military operations abroad. It must save itself by doing here at home what no dictator has yet done—namely, to establish a free economic system to raise and maintain such a standard of living for all as will justify the faith of the generations which founded and have thus far maintained America as the home of the free.

Our Present Prosperity

EXTENSION OF REMARKS

OF

HON. ARTHUR H. VANDENBERG

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Wednesday, March 22 (legislative day of Thursday, March 16), 1939

RADIO ADDRESS BY HON. CHAN GURNEY, OF SOUTH DAKOTA, MARCH 21, 1939

Mr. VANDENBERG. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very interesting address on the subject of Our Present Prosperity delivered by the Senator from South Dakota [Mr. GURNEY] over the Columbia Broadcasting System on March 21, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

OUR PRESENT PROSPERITY—WHAT IS IT, HOW PERMANENT, AND WHAT CREDIT SHALL WE GIVE TO THE ADMINISTRATION AT WASHINGTON?

Hello everybody, some of our people have compared this year of 1939 with that year of 1916, just a year before we took an active part in the last great World War. I personally have not gone that far, thinking more about keeping our own house in order, trying to emulate the efficient housewife, whose home is always in apple-pie order—always ready for company, the pantry well filled—so today I am concerned about our present prosperity. What is it, how permanent, and what credit shall we give to the administration at Washington?

I want to put this question up to you today, to give it a few minutes consideration. I wish I might have more time to speak and you to listen. The subject is worthy of our deepest thought.

We are all interested in prosperity—deeply so. It is essential to our enjoyment of life, to our contentment; and if it be true that any administration of Government affairs at Washington brings about prosperity, then I would not be so unfair as to deny it credit for such accomplishment. As a matter of fact, it would do me no good to take such stand, for you would look the situation in the face and you would overrule me if I were not fair and reasonable.

So I think we ought to ask ourselves these questions:

Are times better? Are they permanently, soundly better, or have we merely been taking a "shot in the arm"?

I take up the first question: Are times better? My first short answer is, Yes, times are better, but not good enough to brag about. Or, if I may amplify the answer just given, I would say that times are better than they were in the fall of 1932 or in 1933 or 1934. They are not better than they were in any one year of the 30-year period from 1900 to 1930—and that is taking in lots of territory. In all those years, a young man out of school, or any young man just entering manhood, could reasonably expect to find a job. In all those years, any man having a piece of property—a farm for instance, or a home—could reasonably expect to find a sale for it, if he might wish to sell, at a reasonable price. In all those years, a man might go in debt for his requirements, and within reason, hope to pay those debts. In all those years, a man with a family could reasonably hope to support that family. Today, what is his chance to find a job, his chance to sell any property, his chance to pay any debts, his chance, if a laboring man, to support a family? You listeners, answer these questions, please, and you will look the facts in the face, I am sure.

Let me repeat the questions, for you to answer: Has the young man a chance for a job? Can you sell property? Can you pay debts? Can you support a family in comfort, now?

And when you have made answer to conditions as to these very essential requirements, you will understand the answer I gave a few moments ago: "Yes, times are better, but not good enough to brag about."

It is true that our farm products bring a better price than in the fall of 1932, or in 1933, or 1934. It is true that retail trade is better; true that banks have ceased to fail; true that more people ride in new cars than in the bitter days of depression; but I ask you to take a comprehensive view of the entire field, and then we will have a more clear grasp of the case.

In the late fall of 1929, the world, financially speaking, went topsy-turvy. It would take long hours to discuss all the phases of that monetary landslide. I content myself with the statements that values fell, markets went flat, debts became a burden, and led to bankruptcy, consumption of goods in all homes went to the minimum, employment largely ceased, and distress stalked everywhere—not merely in America, but all over the civilized world. Then, as to our country, the situation was aggravated by the election year of 1932, and by impending changes in the administration at Washington. It should be remembered, too, that in the 2 years prior to 1932, we had a Republican President, heckled by a Democratic Congress.

Our Democratic friends now love to make comparison of conditions today with those of 1932 and 1933. I submit the unfairness of this comparison and insist that the very uncertainty of that time, and the ensuing distress, were at least half chargeable to themselves. In fairness, if they talk farm prices of today, they should compare with the range of many Republican years of the 30 years prior to 1930, during which the general range of prices was better than it is today.

Yes, times, that is, prices of things we sell, are better today than in 1932, but prices of things we have to buy are much higher too. If you have bought anything lately, whether a wagon or plow, a cotton or wool dress or a hair cut, you have found this out. Taxes are very much higher, and with certainty of becoming burdensome. Our unemployment problem is still with us, some 12,000,000 adults are still out of work. And all the new cars are still largely bought on the installment plan.

So I give again my answer of before, "Yes, times are better, but not good enough to brag about." And this, after 8 years of Democratic Congress and 6 years of a Democratic President!

My second question is: "Are times permanently, soundly better, or have we merely been taking a 'shot in the arm'?"

This question should be answered carefully and correctly, not with any political bias, for a correct understanding and solution are vital to the welfare of all America. The thinking, sensible, and patriotic citizen must study and honestly answer this question. I have little patience with the mentality of a man who will be swayed in his judgment, merely because he has received from the public treasury, as in the case of a farmer, a check of a few hundred dollars for planting a lesser number of acres. In point of fact, I do not believe many farmers are so swayed. They cannot be bought for a hundred dollars or so.

Every intelligent man knows we have been "taking a shot in the arm." The President calls it "priming the pump." Critics call it "boondoggling." In old time idiom, it is the "pork barrel"—but the pork barrel multiplied 1,000 times.

I would like to present an imaginative situation, but one which is illustrative and applicable. Here it is: There is a certain fair-sized city—its name is Anymanstown. We have there an uncle—call him Uncle Bim, if you wish. He is immensely wealthy; his credit is unquestioned, though in truth he owes considerable. Uncle Bim was elected mayor on a platform condemning his predecessor. Uncle Bim got the notion he would make Anymanstown prosperous, the city having been in the dumps for some years before.

The first thing Uncle Bim did was to guarantee all the deposits of the three banks in town. This was a fine thing for the depositors and for the community, but pretty rough on Uncle Bim. If any of the banks might fail, the money to pay the depositors would have to be realized from the notes in the bank. Thus Uncle Bim has in effect signed the notes of every borrower in town. Maybe some of you who hear me have signed other people's notes. I leave judgment to you. But in all events, you made some prosperity for a little time in the home of the fellow for whom you signed the note. Mind you, I am not discussing the wisdom or the unwisdom of guaranteeing bank deposits. What I am trying to get across is the idea that signing every borrower's note would surely bring a flush of prosperity—temporarily, at least. Then Uncle Bim put out a manifesto in Anymanstown saying, in effect, "I will organize an office known as Home Owners' Loan Corporation, and another known as Federal Housing Authority. If your debts trouble you I will help you with 40-year loans, which I will guarantee. If you need an ell built onto the house, or you wish to paint the house, or put in a new bathtub at high costs, or if you have a shop and need new machinery on the installment plan, even at high costs, my Federal Housing Authority will see you through. We will sign your notes for all these things." Here again is a good thing (maybe) for the borrower, but rough on Uncle Bim; some of these chickens will and have come home to roost; Uncle Bim will foot the bill. I am not discussing the wisdom or the unwisdom of Home Owners' Loan Corporation or Federal Housing Authority. The thought I have is that these measures must produce, temporarily at least, a certain prosperity, but not the solid, enduring prosperity that always did before come to people through thrift and economy.

When Uncle Bim decided to produce prosperity in Anymanstown he said, "I was elected mayor on my promise to make prosperity all about, so hire every idle man through our P. W. A. office, build necessary bridges, match dollars with residents to grade or pave or build or improve." Then he organized W. P. A. to take the place of P. W. A.; told them to spend money regardless, but get men on pay rolls—cut down hills and wheelbarrow the dirt around. Don't bother about need of the work, just spread out the cash. This, after three full years of H. O. L. C. and F. E. R. A. and P. W. A. and F. H. A. and what not—now, dish out the money regardless. We have billions of dollars—all borrowed—to spend in this way.

Again, the wisdom or the unwisdom of these measures is no part of my discussion today. I am trying to tell you that these things should produce a flush of ease, but I ask you, Are they permanent cures? Are we on the right road?

All this time Uncle Bim has been borrowing money—borrowing in billions. Mark well, there will be groanings in plenty when his children, in future years, dig and delve to pay back Uncle Bim's notes, which plentifully stuff every bank vault in Anymanstown.

So much for Uncle Bim.

In a way, I have been trying to answer the question, "Have we been taking a shot in the arm?"

We have!

Every Democrat admits it.

He tells you the patient was awful sick. Maybe so, but all the time I am trying to ask him and you, Is our little prosperity of today permanent?

Or, to put it bluntly, has Dr. Franklin D. Democracy been giving us food, or just medicine?

Remember, please, that the human body can't go along indefinitely on dope. To be healthy, it requires food.

We of the United States are all the same kind of folks, having firm belief in maintaining our principles of freedom. Therefore, with chaotic conditions prevalent in the major portion of the so-called civilized world, let us take immediate action to make secure the benefits which have accrued to our people under our free Government. Let us immediately give more than lip-service promises to tax-harassed business, big and little; then will honest jobs in private industry take the place of relief which requires further taxation. Let's give back to the farmer of the United States, the food market of his own country, so recently taken from him with reciprocal-trade treaties and their most-favored-nation clauses. All new wealth comes from the soil. Farm prosperity means good customers for a healthy industry that is supplying honest jobs.

The President of the United States

EXTENSION OF REMARKS

OF

HON. SHERMAN MINTON

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 22 (legislative day of Thursday, March 16), 1939

RADIO ADDRESS BY HON. FRANK MURPHY, ATTORNEY GENERAL OF THE UNITED STATES, MARCH 17, 1939

Mr. MINTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address delivered before the Hibernian Society of Baltimore on March 17, 1939, by Hon. Frank Murphy, Attorney General of the United States.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

There have been times in our history when a toast to the President could be approached with a large degree of unconcern—times of uneventfulness when no controversy or dispute as to the Executive's place in the American scheme of things troubled the thoughts of the people. Such a time was the famous "Era of Good Feeling", presided over by James Monroe.

We are not now so blessed with peace and harmony. For a decade we have wrestled with the problem of an elaborate economic mechanism possessed of vast potentialities for productive usefulness, yet so disorganized that at one time we have seen 15,000,000 of our people without opportunity for gainful employment and self-support. Indeed, we have seen the entire system on the border of paralysis.

It has been a period seldom equaled for the number and the gravity of issues pressing for solution. And it was natural that this should come to be, for as the evidence mounted that the economic machine would not adjust itself, sheer human distress compelled government to take a hand as it had never done before.

Inevitably, the expansion of governmental activity has raised doubts in the minds of many as to the value of old concepts and traditions. At times, suspicions—both warranted and unwarranted—have seemed to run riot. And of all the new questions that have been born of the depression, certainly one of the foremost is that of the Presidency and its place in the America of 1939.

On rare occasions, however, situations arise which place upon the President a responsibility of the gravest import—situations in which the fate of the Nation and the security of its institutions are at stake. The events of this week illustrate how quickly conditions can be materially altered in the world about us. They give us serious warning that we should be prepared to act promptly and intelligently as becomes a great and powerful nation for the protection of our interests in any emergency that may arise at home or abroad. It is at these rare and emergent occasions that we are made conscious of the magnitude of the office and the measure of our collective dependence on the individual who at the moment is charged with the exercise of its vast prerogatives and duties. It is not then merely a question of legal powers and constitutional arrangements. At such a time human elements may play a decisive role.

One of these rare occasions is still fresh in the memory of all of us. I refer to that fateful day on March 4, 1933, when the present Chief Executive assumed the duties of the office in circumstances more difficult perhaps, more delicate and baffling, more fraught with danger to that political and economic freedom which is basic in our system of government and enterprise, than any that ever confronted our people.

In that awful crisis, when a whole nation was in the grip of a deadly paralysis of fear and temporary collapse, our anguished hopes and anxious prayers centered not on the Congress, not on the Supreme Court, not on those great industrial leaders and their skilled aides who manage and direct our vast business enterprises and financial institutions, but on the President of the United States surrounded by a small inner circle of men and women chosen to assist him in the execution of the powers vested in him by the Constitution and the laws of Congress. In that hour he became the hope of America.

In the hands of a weak or selfishly ambitious man, animated by a lust for power, or one inexperienced in statecraft and without profound loyalty to the democratic ideal, our liberties might have perished. With magic words of reassurance he comforted a stricken and bewildered nation; with bold, swift, and wise use of the powers provided by his great office he brought about a quick revival of that confidence and the vital processes of trade and exchange that are essential to our economic life and well-being. Here was an outstanding instance in which the office of President, administered by a man of great qualities of mind and heart and enormous talent for executive action, became the means of saving our country from disaster.

Looking backward, it seems unlikely that so much significance would have been attached to this question if it had not been for a curious combination of historical events. One event was the great depression itself; the other was the emergence in full flower of the totalitarian philosophy of government represented by the Fascist and Nazi states. At almost precisely the same moment, historically speaking, the American Nation was confronted on one side by an economic calamity that demanded vigorous leadership and swift corrective action; and on the other by the threat of an absolutist theroy utterly repugnant to our democratic ideals and thoroughly disliked by the American people.

For a time, at the height of the crisis, the Government acted with all the vigor that the emergency demanded. With the President leading the way, the people's representatives in Congress launched a powerful counterattack against the spreading epidemic of business bankruptcy and human insecurity. It is doubtful if ever before, except in time of war, the American people had presented a front so thoroughly united against a common danger.

Since that time, and particularly during the past 2 or 3 years, the Nation's attack on basic problems has unquestionably slowed down. It was natural, of course, that after the first flush of emergency there should be a slackening of the pace. In a democracy where public policy is determined through legislative deliberation, this was not only natural but desirable.

But the change of pace in our search for security has not been due entirely to this natural process. Other factors have entered the picture, and I am referring now particularly to the fear that too much power has been concentrated in the hands of the President.

This issue, of course, is not new to American politics. The charge of ambition has been leveled at various executives almost since the birth of the Republic. It would probably have been directed at anyone elected President in 1932 who was determined to act vigorously to prevent a complete economic collapse. But fate, in its mysterious way, intervened to give an emotional content to the issue far beyond its intrinsic merits. For across the Atlantic Ocean, at this same moment, flesh-and-blood autocrats were actively practicing the despot's creed of coercion, suppression, and aggression as they are today.

There is no doubt that with these living examples providing an atmosphere of realism the question of dictatorship has continued to play a significant part in the public deliberations. Certainly it has influenced and even frightened many well-meaning citizens. And there is good reason to believe that it has helped to reduce the cooperation between the executive and legislative branches which was so strikingly effective in the early days of the present administration.

In a sense we are caught between two conflicting needs—first, the necessity for keeping a strong, united front against dictatorship, and second, the equal necessity for courageous leadership in the fight against mass unemployment and insecurity.

It is true the great emergency is behind us, but we are far from being out of danger. The great problems of providing steady work at a living wage for every employable, of bringing security to the aged, and health to the ailing, and of doing away with strife between capital and labor, are calling insistently for careful, permanent solution. There is the sturdy protection of our democratic ideals and traditions and all the interests of our people.

These are not partisan objectives; these are our common objectives. These are the objectives which should unite us without regard to wealth or race or creed. They are the aims of every American of good will and generous heart. They far eclipse in importance any issue that may now or in the future divide our ranks. It is inconceivable that we can permit disunity to keep us from their achievement. It is inconceivable that democracy should drift into the very thing we fear because of irresolution and division.

Yet contemporary history indicates that this is very much a possibility. In one great nation, where basic economic problems were neglected or ignored, a bloody revolution ushered in a dictatorship of the proletariat. In others where similar conditions prevailed, the "man on the horse" won his way to power with promises of a better life and swiftly proceeded to strip the people of the liberties without which life is poor and cheap, indeed.

However remote these things may seem, they will remain very definitely in the category of possibilities as long as our need for action to preserve democracy is obscured by fear and our capacity for action limited by disunion. Democratic impotence is much more to be feared than democratic leadership.

Remember that the founding fathers were men who led a revolution against despotism. They needed no schooling in the nature of autocratic rule. The memory of its evils was fresh in their minds. Yet they recognized that even in a republic there is need for vigorous leadership, for some central figure to take the initiative in searching out the Nation's problems and devising effective methods for their solution. To phrase it in the language of today, they sought to create a spearhead for the struggle to make democracy work. But wisely they left to the people's representatives the vital lawmaking power and the control of the public purse.

It seems reasonable to believe, also, that the authors of the Constitution contemplated such an exercise of the powers with which they endowed government as would be commensurate with the needs of the Nation—as would permit the activities of government to be expanded in times of stress and strain and to be contracted in periods of quiet and calm. Such, apparently, has been the belief of many occupants of the Presidential chair, many whom we revere for their patriotism and devotion to the democratic way of life.

Andrew Jackson, for example, in his fight against the powerful Bank of the United States, used the Executive powers so boldly that his noted contemporary, Henry Clay, gloomily predicted the speedy transformation of the Government into an "elective monarchy." Yet the people continued to choose not only the Executive but their Representatives in Congress, and that body continued to wield the lawmaking power, and the Bill of Rights survived unscathed.

Of all our Presidents, I venture to say there is none less thought of as autocratic than Abraham Lincoln. Yet, confronted by the emergency of the Civil War, Lincoln took steps which led him to write these significant words of justification:

"No organic law can ever be framed with a provision specifically applicable to every question which may arise in a practical administration. The whole of the laws are being resisted, and all will be destroyed if not protected. * * * The Constitution is silent on the emergency."

Here again, in an emergency, the Executive acted promptly and vigorously to protect the people from dangers which threatened the orderly administration not of any one law but of all law. Yet when the crisis was past America still stood as the world's foremost haven of liberty and of popular rule under a written constitution.

And so it has remained until this day, despite war and panic and, in our own time, an economic catastrophe as serious as war itself.

In the desperate days of 1933 the President was invested by the Congress with powers never before held by the Chief Executive of the United States. Since that time the Presidency has dominated American politics to a degree seldom equaled in time of peace.

What does it all mean? Does it signify that America is gradually abandoning representative government? Are we to believe that democracy has been tried and found wanting?

I am convinced the contrary is true. I am convinced that each expansion of Executive activity, from Jackson's fight against financial monopoly to the recovery fight made since 1933 by President Roosevelt, has been merely another evidence of the capacity of our political system to adjust itself to the condition and the needs of the people. It is democracy's answer to those who sneeringly contend that popular government is doomed to failure because it lacks the capacity for swift action in a crisis. It is unshakeable proof that democracy can meet its problems, can still be responsive to the popular will, and can still retain the Bill of Rights which has kept us a free Nation.

This does not mean that we need to relent in our opposition to dictatorship. We must not relent. We must be as irreconcilable to dictatorship, whether of the right or the left, as we are determined to safeguard our heritage of democratic liberties. But it is equally imperative that we do not lose perspective. We must not confuse the leadership that democracy needs in a crisis with dictatorial ambition, and in this confusion render our leadership powerless to lead.

Plainly the need for leadership is not past. The task of effecting permanent recovery is still largely before us. It is a long-range proposition that cannot be disposed of hastily or easily. It is an undertaking that will require a generous measure of the spirit of give and take. It can only be completed at the willing hands of a united people. It will not be done by a people disorganized by unfounded suspicion and crippled by partisan strife. Above all, it is a job that must be done if the political and economic systems under which this Nation has grown are to endure.

Recent events abroad give warning that democracy must be able to act as well as to talk to protect its people from unsolved social problems at home and from wanton foreign aggression. Action in a democracy requires moral as well as material preparedness, self-discipline, and responsible leadership. Modern democracy must demonstrate its ability to act in accordance with reason as well as to debate the reasonableness of action. In these critical times democracy must be militant enough to defend itself. Democracy needs, as never before, effective moral leadership.

It has been my privilege during recent months to work near the man whom the American people have twice chosen as their Presi-

dent during one of the most difficult periods in our history; and I have been moved, as I believe any man would be, by his unwavering determination to do what he believes is right, what he believes is just for all the people—not for this faction or that group but for the Nation as a whole.

Two weeks ago I was privileged to be present at the church services which he attended, as he does every year on March 4, in commemoration of the day when he first took office. For 6 years he has borne a burden such as few men have ever known. Grave problems were still resting upon his shoulders. Yet he wanted spiritual sustenance, and as he humbly bowed his head to the Divine Power that has never forsaken us there was evident an indescribable yearning to better the lot of his fellow men, to lead them wisely, and to serve them well.

To the President of the United States I propose this toast—may he continue to serve democracy, and by his interpretation of our precious American tradition and ideals continue to give hope and comfort to all who cherish liberty and love justice.

Vice President Garner

EXTENSION OF REMARKS

OF

HON. H. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Wednesday, March 22 (legislative day of Thursday, March 16), 1939

EDITORIALS FROM WASHINGTON TIMES-HERALD AND PHILADELPHIA INQUIRER

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the RECORD two editorials relative to the Vice President of the United States, one published in the Washington Times-Herald of March 22, and the other published in the Philadelphia Inquirer of the same date.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Washington Times-Herald of March 22, 1939]

ELLIOTT SAYS GARNER LEADS

Elliott Roosevelt, son of the President, surprised the customers in his Texas broadcast night before last by delivering a resounding pat to the back of Vice President JOHN NANCE GARNER. The meat of Elliott's speech was contained in this paragraph:

"This much, however, is certain: JOHN GARNER is in the driver's seat right now, well in the lead as a likely Democratic candidate for the Presidency in the 1940 elections."

The logical inference is that that came from the feedbox; but whether the White House or the Garner feedbox, we don't know.

Anway, there seems to be a good deal in it. Mr. GARNER, a conservative old devil at heart, is nevertheless popular with persons of all shades of political opinion in Washington. The Vice President usually retires into obscurity like a cuttlefish hiding behind its own ink.

Mr. GARNER has done anything but that. Such a wisecracking, good-natured, magnetic old boy is he that practically all the men enjoy his company, and most of the ladies consider him a card.

His chances for the 1940 Democratic nomination, as Elliott Roosevelt says, look good. Garner would probably have the southern delegations pretty solidly behind him if he should go after the nomination in earnest. He's the kind of man the South generally likes. And the growing conservatism in various other parts of the country would find at least one rallying point in GARNER.

At this time, 16 months before the conventions, the 1940 line-up looks as if it might be Garner against Dewey.

If that proves to be the 1940 line-up, we think Dewey will outlast the old man in a tough campaign.

[From the Philadelphia Inquirer of March 22, 1939]

WHAT IS SON ELLIOTT UP TO, ANYHOW?

Speaking of rugged individualists, has anybody mentioned young Elliott Roosevelt, radio commentator extraordinary? For several months this son of the President, in his semiweekly broadcasts from Fort Worth, has been promoting another renowned Texan, Vice President GARNER, for the Democratic Presidential nomination in 1940.

Son Elliott makes bold to hail Mr. GARNER as "well in the lead" for the nomination. Since there is reason to believe that young Mr. Roosevelt's enthusiasm for the Vice President is not fully shared by the gentleman in the White House, there may be some wonder as to what it all means.

Elliott has from time to time taken it upon himself to criticize the Government's policies toward oil operators, small-business men, private electric companies, pump priming, and wage-hour legislation. His support for the Presidency of a man who represents, in his words, "the conservative element as opposed to the New Deal," necessarily causes a bit of eyebrow raising.

It is hardly thinkable that Elliott is riding off the family political reservation just for the fun of it or to act smart. On the other hand, if he has political aspirations for himself in his new home on the range, it may be that, the sturdy Texans being what they are, he has adopted a clever strategy.

Flood Control Program for the Mississippi Valley

EXTENSION OF REMARKS

OF

HON. JOHN H. OVERTON

OF LOUISIANA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 22 (legislative day of Thursday, March 16), 1939

ADDRESS OF MAJ. GEN. JULIAN L. SCHLEY BEFORE THE MISSISSIPPI VALLEY FLOOD CONTROL ASSOCIATION AT ITS ANNUAL MEETING IN WASHINGTON, D. C., MARCH 22, 1939

Mr. OVERTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able address, delivered by Maj. Gen. Julian L. Schley, before the Mississippi Valley Flood Control Association, at its annual meeting in Washington, D. C., on March 22, 1939, on the subject The Flood Control Program for the Mississippi Valley.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. President, members of the Mississippi Valley Flood Control Association, ladies and gentlemen, it is a privilege and pleasure to address you again on the vast program of comprehensive flood-control work that the Congress of the United States has authorized for the great valley of the Mississippi River. To the members of this association who are so thoroughly familiar with the results of disastrous floods on that great river system, who have so carefully studied the vital problem of controlling those floods, I wish to express the appreciation of the Engineer Department for your cooperation in the formulation of the program to accomplish that control. This year I shall endeavor to describe to you what has been accomplished to date by the Corps of Engineers in carrying out the mandates of Congress for flood control in the Mississippi Valley, and to outline what the Department expects to undertake in the near future to carry the authorized program toward completion.

For simplicity I shall first deal with the work that has been undertaken and that we expect to undertake in the near future in the main tributaries of the Mississippi River and in the upper part of the basin outside of the limits of the alluvial valley. I shall then describe the Department's work in the alluvial valley itself.

As you know, the first general authorization for flood control outside of the alluvial valley of the Mississippi River was contained in the Flood Control Act approved June 22, 1936. In that act, Congress declared that flood control on the navigable waters of the United States or their tributaries is a proper activity of the Federal Government in cooperation with the States, their political subdivisions and localities thereof, placed Federal investigations and improvements of rivers and other waterways for flood control and other allied purposes under the direction of the Secretary of War and the supervision of the Chief of Engineers, and authorized the amount of $320,000,000 for the prosecution of a Nation-wide flood-control plan. This act contained further provisions requiring States, political subdivisions thereof, or other responsible local agencies to provide without cost to the United States the lands, easements and rights-of-way required for flood-control projects, hold and save the United States free from damages due to the construction works, and maintain and operate the works after completion in accordance with regulations prescribed by the Secretary of War.

On April 6, 1937, shortly after the great flood of January and February of that year, the Chief of Engineers reported to Congress his recommendations on a comprehensive flood-control plan for the Ohio and lower Mississippi Rivers. This report is printed in Committee Document No. 1, Committee on Flood Control, House of Representatives, Seventy-fifth Congress, first session. In this report the Chief of Engineers recommended the construction of 45 reservoirs on tributaries of the Ohio River and 24 reservoirs on other tributaries of the Mississippi River, the construction of levees and flood walls at some 155 cities and towns in the Ohio River Valley and the modification of the project for flood control on the lower Mississippi River. This modification consists of the purchase in fee simple of all lands in the Morganza, West Atchafalaya, and Eudora floodways (including its extension) and the construction of each of these floodways as soon as the lands therefor have been acquired, the protection of lands in the vicinity of Cairo, and

the appropriation of $52,000,000 in addition to sums previously authorized, to be applied to the strengthening of levees, to the extension of the levee road system, to the prosecution of the program for increasing the discharge capacity of the main stem of the Mississippi River, and to the protection of the Cache Creek area.

In the Flood Control Act of August 28, 1937, Congress took the first step toward the adoption of the comprehensive plan just described when it authorized $24,877,000 for the construction of local protection works for cities and towns in the Ohio Basin, these projects to be selected by the Chief of Engineers with the approval of the Secretary of War. Since your last annual meeting, Congress approved this comprehensive plan as it applies to the Mississippi Valley by the Flood Control Act of June 28, 1938, and authorized the amount of $243,600,000 for the initiation and partial accomplishment of that plan as it pertains to the basin outside of the limits of the alluvial valley. Provision is made in this act for such modifications of the plan as may be deemed advisable in the discretion of the Secretary of War and the Chief of Engineers. The act also contains one major change in policy whereby local cooperation is no longer required for flood-control reservoir-channel improvement and channel-rectification projects.

I am sure that all of you are, as I am, interested in knowing what will comprise the program of construction in the next fiscal year, and it would give me very great pleasure to discuss these proposed activities with you in detail. I regret to state, however, that such information is not yet available as the Department has not yet appeared before the House Appropriations Committee to present data pertaining to the proposed program for the fiscal year 1940. Consequently I cannot state definitely what projects will be undertaken in the immediate future, but I can, by using the information contained in my annual report for the fiscal year 1938, indicate to you in a general way the tentative program for the coming fiscal year.

In those parts of the annual report which concern the several districts of the Department, there are inserted statements of the amount which can be profitably expended on each authorized project during the second fiscal year following the year of the report—thus the 1938 report contains such figures for the fiscal year 1940. The sum of these itemized amounts is reported to the Bureau of the Budget as the total amount that can be profitably expended during the forthcoming fiscal year. That Bureau then adjusts the reported amount to fit the requirements of the Budget, and the Department at the proper time submits suitable data on the adjusted amount to the Appropriations Committee for its consideration.

The Bureau of the Budget has set up the sum of $110,000,000 for authorized general flood-control projects and investigations for the fiscal year 1940, outside the alluvial valley. Of this amount, $3,000,000 was set up for flood-control investigations by the War Department and $3,000,000 for watershed investigations by the Department of Agriculture. Thus, under Budget limitations, approximately $104,000,000 would be available for flood-control projects throughout the entire country outside the alluvial valley of the Mississippi River.

The details of the individual authorized projects are shown in my annual report for 1938. Many of you, no doubt, have studied the data in that report concerning the projects of particular interest to you. At the risk of repeating part of that information, I should like to discuss the outlines of the program for the entire Mississippi River Basin. My statements will be premised largely on the data in the annual report and the total budget figure of $110,000,000.

In the Ohio River Basin three of the flood-control reservoirs authorized in the 1936 act, namely, Tionesta Creek, Crooked Creek, and Mahoning Creek, are now under construction. I anticipate that work on these reservoirs will be continued at a rapid rate during the coming fiscal year. Allotments have also been made to enable the district engineers to obtain the basic engineering information on 16 other reservoirs in the Ohio River Basin which might be initiated pursuant to the authorizations in the 1936 and 1938 Flood Control Acts. I expect that the construction of about 12 of these will be undertaken before the end of the fiscal year 1940. These projects will provide reservoirs on the principal tributaries of the Ohio, such as the basins of the Allegheny, Monongahela, Muskingum, Kanawha, Big Sandy, Scioto, Licking, Kentucky, and Wabash Rivers.

Also, in the Ohio River Basin 19 local protection projects are actively under way, or will be under way this spring, in accordance with the acts of 1936 and 1937. Among some of the most important of these are works now under construction at Johnstown, Huntington, Ironton, Tell City, Middlesboro, and Paducah, and the Brevoort Levee in the Wabash Basin. The 1938 act authorized an additional $50,300,000 expenditure for local protection in the Ohio River Basin. It is probable that during the fiscal year 1940 about 17 of the previously authorized projects can be completed, that the others can be advanced well on toward completion, and that it will be possible to initiate some 12 new projects which will be constructed under the additional authorization of the 1938 act.

The Dry Run Reservoir near Decorah, Iowa, was authorized in the upper Mississippi River Basin by the 1936 act. The act of June 1938 contained an additional authorization of $6,600,000 for reservoirs in that basin. It should be possible to initiate the construction of this system of reservoirs early in the fiscal year 1940.

A great many levee projects along the upper Mississippi, Illinois, Sangamon, Rock, and Kankakee Rivers are included in the 1936 authorization. Already 31 of these projects are under way. The 1938 act authorized an additional $2,700,000 for local protection in the upper Mississippi and Illinois River Basins. I expect that about four more projects under the 1936 and 1938 authorizations can be placed under construction in this area during the fiscal year 1940.

The act of June 1936 authorized projects for the protection of the Kansas Citys and Council Bluffs on the Missouri River itself and for seven communities on the tributaries of that river. At Glasgow, Mont., the levees and appurtenant structures on the Milk River have been completed. The levees and flood walls at Topeka, Kans., are under construction at the present time and will be completed with present allotments. Authorization for the expenditure of $9,000,000 for reservoirs in the Missouri River Basin is included in the act of June 28, 1938. I expect that allotments can be made from forthcoming appropriations for initiating the other local protection projects and reservoir construction in this basin.

Five reservoirs, Conchas, Caddoa, Fort Supply, Great Salt Plains, and Wallace Lake, are now under way in the great southwestern area drained by the Arkansas and Red Rivers and their tributaries. Conchas Reservoir will be completed before the end of the fiscal year 1940, and the construction of the others will be expedited as rapidly as funds will permit. In addition to these reservoirs three others were authorized in the 1936 act for the basins of the Red, Ouachita, Arkansas, and White Rivers, and the 1938 act added authorizations totaling $100,000,000 for reservoir construction in the White, Arkansas, and Red River Basins. Studies and investigations are well under way to develop the detailed plans for the great Denison Reservoir on the Red River, and it is expected that the construction of this project may be commenced in the coming fiscal year if sufficient funds are made available.

Funds may also be allotted for starting the construction of some five or six of the reservoirs in the Arkansas and White River Basins under the 1938 authorizations.

While perhaps less in the public eye than the reservoir programs for the southwestern rivers and their tributaries, the local protection projects authorized on the tributaries entering the alluvial valley from both the east and west are also of great importance. Practically all of these projects, 18 in number, for which the required local cooperation has been furnished, have been started and are being pushed to completion. Doubtless part of the appropriation expected to be provided by the War Department Civil Appropriation Act can be made available for continuing this important part of the flood-control program.

I have devoted much of my comments up to this point to an outline of general flood-control projects scattered throughout the vast Mississippi watershed outside of the alluvial valley of the lower river in order that you might gain a broad view of the operations of the Department. Let us now turn to consideration of the status of flood-control work in the alluvial valley and its prospects for 1940.

As you know, flood-control work in the alluvial valley is being prosecuted under authorities contained in the Flood Control Acts of May 15, 1928, June 15, 1936, and June 28, 1938, which authorize the appropriation of $637,000,000 for this purpose. With the $351,000,000 that has been appropriated to date, highly satisfactory progress has been made. The valley has enjoyed 12 long years without accidents and overflows, despite the fact that several high waters have occurred with crests that exceeded those of former floods which caused great damage. Although the comprehensive project has operated true to its design, let us not be lulled into a false sense of security, for construction has not yet reached the point that would enable this project to protect the valley lands against the maximum predicted flood. Such a flood may or may not occur, but it is prudent to prepare for such an eventuality as rapidly as practicable. The Department is therefore vigorously prosecuting those works to which local interests have agreed and is also strengthening the existing works wherever the need has been indicated.

In the St. Francis Basin, excellent progress has been made on both the Wappapello Reservoir and the levees along Little River. Some delay was experienced in getting this work started, but favorable weather and working conditions in the late summer and fall of last year pemitted rapid progress to be made. The construction of the White River backwater levee was prosecuted strenuously after being repeatedly delayed by high water, and earth has been placed in these levees at a rate exceeding the most optimistic hopes. Across the river in the Yazoo Basin, excellent progress has been maintained in the construction of Sardis Dam and final preparations are being made for starting construction of the Arkabutla Dam when funds become available.

In the past year the operations in the Atchafalaya Basin have resembled a beehive in activity. The 1938 act, providing for the immediate construction of the Morganza floodway, was not approved until after the 1939 appropriation which did not contemplate large expenditures in the Morganza area. However, by careful planning and the judicious distribution of available funds, work was started promptly on the guide levees of this floodway. The earthwork on these levees is now well advanced. Dredging in both the Wax Lake outlet and the Charenton Drainage Canal has been advanced to the railroad and highways, where plugs will be left until elevated crossings have been constructed. Agreements having been consummated with the railroad company and now being consummated with the highway commission will probably permit actual initiation of work on these crossings in the near future. With the single exception of the Eudora floodway, noteworthy progress has been made on all important features of the comprehensive plan for the lower Mississippi River, including items added or affected by the 1936 and 1938 acts, and main river work has been performed where needed most.

Sufficient funds have been requested for the fiscal year 1940 to maintain present rates of work and, perhaps, to step them up some-

what. It is expected that construction of crossings over the Wax Lake outlet and the Charenton Canal will be placed under way to open the way for additional levee and dredging work in the Atchafalaya Basin. Foundation tests and investigations are now being made for the elevated railroad crossings over the Morganza floodway and before the end of fiscal year 1940 plans will probably be ready to begin construction on one or more of these crossings. Concurrently with the starting of this new work in the Atchafalaya Basin it is contemplated that levee work in the St. Francis Basin and on the White River backwater levee will be extended; construction of the Wappapello, Sardis, and Arkabutla Dams will be pushed vigorously, and work on main Mississippi River levees, revetments, and dredging will be accomplished to the greatest extent possible with available funds.

The alluvial valley of the Mississippi River may justly be called the cradle of national flood control. Long before floods on smaller rivers were of more than local significance, the frequent and devastating overflows of the Mississippi itself were attracting national attention which early expressed itself in the form of financial help. As early as 1824, Federal funds were allotted toward the control of floods on that river and, after 1881, these amounts were increased steadily until in 1928 Congress adopted a comprehensive plan to be constructed at Government expense. At this time, some opponents of this plan suggested the abandonment of the valley to save money, but the Nation realized that the inhabitants of the Delta should not give up the fertile lands that have become the agricultural backbone of the Nation. It has been stated that the losses from the flood of 1927 touched the whole Nation and subtracted something from the wage or income of every worker, whether he lived in a mill town in New England or tilled the soil in Kansas. The project authorized by Congress in 1928, with subsequent modifications, is now known as the Army engineer plan. Thus, under the jurisdiction of the War Department, the comprehensive development of flood control at Federal expense was started and, in accordance with the will of Congress and the approval of the President, this activity has become Nation-wide under the same governmental agency that began such work. It is fitting in Government organization, as in private enterprise, that the maximum use be made of the knowledge created by the experiences of the established agencies that possess the voluminous records and trained personnel essential to the design of practicable and economical projects.

In addition to new flood-control projects being authorized for construction under the War Department, when economically justified, improvements and extensions to existing projects have been made as the need thereof has been indicated by increased records and hydrological data and as warranted by the increased wealth and population of the areas to be protected. This growth and development has been rational. It was logical to undertake flood-control projects elsewhere in the country after the development of policy and the experience gained in the alluvial valley of the Mississippi River. Similarly it is logical to improve existing projects when such improvement becomes justified. The $325,000,000 project that was adopted for the Mississippi River in 1928 would have been outside all reason in 1880, when such a sum of money exceeded by millions the total annual expenditure of the United States for all purposes. Also, in 1928 it would have been unreasonable to attempt to authorize the supplemental works approved by the acts of 1936, 1937, and 1938 which have augmented the authorization for Mississippi River flood control to $637,000,000 for the alluvial valley and $415,000,000 for the tributaries and upper basin.

At a time when the world password seems to be "change," when worthy procedures of the past are attacked without reason, when unsuspecting persons are urged to abandon tried and true principles, when peace-loving people are forced to prepare for armed conflict, when international boundaries are changed overnight, it is reassuring and comforting to observe the orderly development of flood control under an experienced agency, sworn to serve and protect the welfare of the people of this great democracy.

I am grateful of this opportunity to appear before you and to discuss a subject in which you are so vitally interested, and to which you have contributed so much in the past. May I express to your great association on behalf of the Corps of Engineers our sincerest wishes for a happy and successful meeting and for continued success in years to come?

Look at the Future Through the Past

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 22 (legislative day of Thursday, March 16), 1939

ARTICLE BY DR. JOHN J. WICKER, PUBLISHED JANUARY 15, 1939

Mr. BYRD. Mr. President, I ask unanimous consent to insert in the Appendix of the CONGRESSIONAL RECORD an able and most interesting article written by a prominent Virginian, Dr. J. J. Wicker, president of the Fork Union Military Academy, Fork Union, Va., which appeared in This Week magazine of January 15, 1939.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From This Week Magazine, January 15, 1939]

I have been mixed up with the affairs of this world in a rather active way for nearly half a century. I was born in the lap of a great depression following the War between the States.

I know what it is to work for 15 cents a day from daylight until dark the longest days in the year under the hot Virginia sun, and this when I was only 14 years old—and I cried when the job ended.

Some people think we have a depression now, but some of the older people who can remember the days of the 70's know we are in the midst of a real boom compared with those times.

When we compare 50 years ago with today it is the difference between wading through mud on foot, frequently barefoot, and riding on smooth-paved roads in an automobile! It is the difference between an oxcart, at best, and the airplane. It is the difference between a log or board cabin with pine knots in the fireplace for light or, at best, an old smoky kerosene lamp, and today's steam-heated (often air-conditioned) houses with electric lights, baths, and every modern convenience.

It is the difference between a straw or shuck mattress on the floor and an inner-spring mattress resting on mahogany.

It is the difference between wool and cotton carded by hand, made into thread by the old spinning wheel, and woven by hand on a loom and the finest machine-produced, tailored clothing.

In those days of 60 years ago you might have had a wood stove for heat if you were rich, and your baths were confined to the summertime in some brook, creek, or millpond.

I have known people who walked a mile at daybreak (when the fire had gone out overnight) to a neighbor's house just to "borrow" a chunk of fire because the family could not afford matches (and matches cost 5 cents a box).

I have seen the day when persimmon seeds were converted into buttons for one's coat, and if there were no persimmons, thorns were used instead; when cornoobs were burned to make soda; when wheat was parched to make coffee; and the only sweetening in the so-called coffee was sorghum molasses, stirred with a stick for the lack of a spoon. Those were days when the old smokehouse floor, where the salty drippings from the slaughtered hogs of better days had fallen, was taken up and sawed into bits, soaked in water, and the water evaporated to get the salt for seasoning.

Able-bodied men were glad to work from daylight until dark 6 days a week, 52 weeks in the year, in all sorts of weather—and do the chores on Sunday besides—and receive, for the entire year's work, $100 and board. And out of that salary they had to buy all their clothes and every other thing that they needed.

Many great men were born out of such "great tribulation" because, perhaps, they had "the driving power of poverty."

There were no "free schools" then. My father had to pay tuition for me and for my sister, and we walked 3 miles through the mud to a log cabin where one lady taught everything from A B C's to Latin. I never knew what an overcoat or umbrella was.

Compare this with all the modern comforts and conveniences in our magnificent public-school buildings today, with free textbooks and an automobile bus calling at the door at public expense to take children to and from the school!

But why keep on? The differences went all through the social and economic strata; in those days there was a real depression.

Now we are all "going to the poorhouse in automobiles." The more we have the more we complain. It takes prosperity to make Communists.

When I was in my teens I did the hardest year's work that any man could ever do, seeking to get money to go to college; and at the end of the year when I had paid all my bills I had exactly $1.46 left for my 12 months of labor.

Hard years? Yes. But those were the most valuable years of my life. Those early days gave me a physical constitution that makes me young in my sixties. Life is strangely compensative. My struggles made me love work, and I made up my mind to become independent in my old age.

I asked a 13-year-old boy the other day, "How much is a man's salary?" and he promptly answered, "What he saves." There is hope for this generation when a 13-year-old boy can give an answer like that.

But what is the matter with America? Is it lack of money or manhood? Do we need less load or more horse? Is our trouble within or without? Look without—and what do we see? Better homes, better streets, better roads, bigger and better libraries, more schools and better advantages in all grades of education, more and better-equipped hospitals, an increased number of charitable institutions and organizations, more educated people, more amusements and sports, more luxury, and, in short, more of everything than ever before in the history of our country. So the trouble must be within. If we could only get ourselves in hand, and not act like a lot of spoiled, pampered children, we should soon put this country where it ought to be.

We need self-imposed discipline and regard for the rights of every man. We are trying to build men through their bellies rather than through their brains. What a man is, is far more important than what he has, and we need to work on ourselves.

If we want to build structures that will stand the storms of life, we must put our sweat into the mortar.

We cannot buy our way out of this depression, we have got to work it out.

You know the old story of the woman who thought money was everything: When she was advised to take her daughter out of college because the girl "lacked capacity," the mother retorted, "Give it to her—I will pay for it."

It may be a good thing to have what money can buy, but it is a tragedy beyond expression to fail to have what money cannot buy.

After all, character makes coin; coin doesn't make character. You will never fill the pantry by cultivating a vicious appetite; and you can never destroy a person who learns self-control.

The Silver Program

EXTENSION OF REMARKS

OF

HON. JOHN G. TOWNSEND, JR.

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Wednesday, March 22 (legislative day of Thursday, March 16), 1939

ARTICLE BY HERBERT M. BRATTER IN THE NEW YORK HERALD TRIBUNE, MARCH 19, 1939

Mr. TOWNSEND. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "Silver Leaders' Reserve Note Stand Assailed," by Herbert M. Bratter, and published in the New York Herald Tribune of Sunday, March 19, 1939.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Herald Tribune of March 19, 1939]

SILVER LEADERS' RESERVE NOTE STAND ASSAILED—BLOC'S OBJECTION TO FEDERAL BANK ISSUES IS DESCRIBED AS UNSOUND POSITION

The silver bloc has discovered a new excuse for the silver program: "It relieves the people who use silver certificates of an interest burden." When all our currency is silver and there are no more Federal Reserve notes, the bankers presumably will shut up shop and go home.

According to Representative C. I. WHITE, of Idaho, through the silver-purchase program, "all the American people are relieved of the interest charge as the cost for the issuance and circulation of this money." The motive behind the opposition to the Government's silver policy, the Representative states, "is the simple matter of collecting interest by the banks of this country on the money in circulation." We have some $1,600,000,000 of "interest free" silver certificates "which displace an equal amount of Federal Reserve notes, the kind of currency which * * * must be supported as long as it is in circulation by * * * interest-bearing obligations * * *."

To retire the silver certificates, according to Representative WHITE, would cause the public to pay the banks $96,000,000 in interest every year. This figure he reaches by assuming that the people would have to borrow $1,600,000,000 from the banks at 6-percent interest.

But Chairman M. S. Eccles, of the Federal Reserve System, denies that the issuance of silver currency has the advantages claimed for it by Representative WHITE. In a letter to Senator JOHN G. TOWNSEND, JR., of Delaware, published in the CONGRESSIONAL RECORD of March 13, Mr. Eccles wrote:

"The issuance of Federal Reserve notes as such does not involve interest payment any more than the issuance of any other kind of currency. A person who has a bank deposit can withdraw it in currency and does not have to pay interest; a person who has no deposit and has to borrow must pay interest on his loan, regardless of the kind of currency in which he withdraws the proceeds, or whether he leaves them on deposit and checks against them.

"The issuance of silver certificates in payment for silver purchases by the Treasury in no way diminishes the interest burden on the general public. It is true that if the Treasury paid for silver purchased otherwise than by issuing silver certificates it would have to increase the public debt by the amount of these payments, but that is not, I believe, what is meant by the question. There has never been a proposal that the Treasury pay for silver out of general revenues or out of borrowed funds. Aside from this, the issuance of silver certificates has no bearing whatsoever on the interest burden. * * *

"The issuance of silver certificates adds to excess reserves, and this in turn would tend to reduce interest rates were it not for the fact that they are already at the lowest level on record, and for short-term paper are at the vanishing point * * *."

There's not much comfort for the silver bloc in Mr. Eccles' letter.

So long as the banking system possesses its present large excess reserves, depositors with idle funds on hand may draw against their checking deposits and demand United States currency without borrowing from the banks or incurring any obligation to pay interest. That the banks currently pay out silver certificates rather than more Federal Reserve notes is merely a matter of convenience with them. The Government-issued silver certificates are deposited with the banks, and the banks pay them out. The silver certificates are nonretirable by the Government and must be reissued, whereas Federal Reserve notes turned back to the banks need not be reissued.

Since bank accounts are kept in terms of dollars the man in the street is accustomed to thinking of a bank deposit as a device for storing currency. Actually, Federal Reserve notes are merely the tokens of bank deposits. Every possessor of a checking account has the option either of spending checks drawn against his account or demanding cash—paper currency to pay his expenses. In other words, "currency" merely represents a fraction of a bank account.

DEPOSIT PROPER COLLATERAL

It is like a check in its use, but differs in that it requires no depositor's signature and no payee's endorsement. The employment of currency in place of bank checks, or the alternative of checks in place of currency, in no way alters the "interest burden" which the public pays to the banks for funds borrowed.

The banks today may obtain all the Federal Reserve notes they require without incurring any interest burden. When member banks demand Federal Reserve notes at a Federal Reserve bank, the latter obtains them from the Federal Reserve agent by depositing the proper collateral.

At present this presents no problem at all to the Federal Reserve banks, since the latter have plenty of eligible collateral. The amount of Federal Reserve notes now outstanding might be increased by $3,000,000,000 overnight without in any way adding to the interest burden of the public or to the banking system's income from interest.

MONETIZATION OF SILVER

The member banks would simply be using their present excess reserves as collateral for the notes, and no one would pay a cent's interest. In fact, to meet public demand for Federal Reserve notes the member banks could draw not only $3,000,000,000 more of Federal Reserve notes but even larger sums by pledging other assets now in their possession. In doing so, they themselves would have to pay interest, but that would not represent a burden on the public.

The member banks currently are borrowing almost nothing from the Federal Reserve banks, and therefore there is at present practically no connection between the amount of Federal Reserve notes in circulation and the interest burden on the banks' clients.

The fact is that, potentially, the monetization of silver under the Government's silver program results in the issuance of currency which expands the reserves of the banks. This expands the banks' power to make loans and hence expands their interest-earning capacity. Therefore, potentially, the silver program may increase the public's total interest payments to the banking system.

Consider the following hypothetical case applying to Salt Lake City, where member-bank reserve requirements against deposits are 17¾ percent. Assume that the banks have no excess reserves. The following events occur:

(1) A miner who has sold silver to the Government receives from the latter $1,000 and deposits it in his bank.

PLAN SEEN INFLATIONARY

(2) The bank adds $1,000 to its reserves. In view of the reserve requirements in that particular city (17¾ percent), the bank may lend against the $1,000 reserve almost $5,000. If we assume Representative WHITE's interest rate of 6 percent on the bank's loan to its clients, the bank may earn approximately $300 a year more than before the Government bought the miner's silver.

The silver program is inflationary because it gives to silver sellers "dollars" they did not previously have, which new dollars compete with the dollars of the rest of us. It is further inflationary because it expands member-bank reserves. Such expansion at a time when the banks hold $3,200,000,000 of excess reserves is entirely unnecessary. Since the Federal Reserve System has ways of expanding credit through adjustment of reserve requirements and open-market operations, inflation through silver is completely superfluous. The substitution of a rigid, uncontractable element for a flexible element in the monetary system is not only of no advantage to the country—it is disadvantageous.

In short, silver dollars and certificates have no advantage over Federal Reserve notes to anyone except silver producers and other sellers of the metal.

Too Much Public Debt

EXTENSION OF REMARKS

OF

HON. H. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Wednesday, March 22 (legislative day of Thursday, March 16), 1939

EDITORIAL FROM NEW YORK SUN, MARCH 21, 1939

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial from the New York

Sun of Tuesday, March 21, 1939, entitled "Too Much Public Debt."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

President Roosevelt may be backing away, as has been reported, from the advanced position on business "appeasement" which his subordinate generals, Secretary Hopkins and Secretary Morgenthau, have occupied for him. On the other hand, he seems to have backed down himself on the subject of public alarm over the mounting public debt. Feelers from the administration to Congress to obtain an amendment to the second Liberty Bond Act which would permit a public debt, as evidenced by bonds, notes, bills, and other obligations of the Treasury, in excess of the $45,000,000,000 limit imposed by that act have been withdrawn. Instead, the President has transmitted with his endorsement to Congress a letter from Secretary Morgenthau declaring that there is no need, during the remainder of this year, at least, to increase the debt limit, as it will permit an additional $5,000,000,000 of borrowing within the present limitations.

So far as it goes, that is all to the good. It may also be assumed that the Treasury is well informed on the money market in asking for an increase in the limit of $30,000,000,000 upon borrowing on long-term bonds. Good monetary policy requires that the short-term debt be made, if it can be without undue increase in interest charges, small enough to avoid any maturity difficulty in case of conditions involving sharp advances in interest rates. Moreover, it does not seem possible that interest rates can be lowered much if any, or indeed kept at the present extremely low levels indefinitely. This means that the advantage of postponing refunding of short-term debt into long-term obligations is doubtful.

Now that the question of debt limits has been presented to it by the President, the Congress has a splendid opportunity to clear up much of the monetary mess into which New Deal financing has plunged the country. To begin with, the time is overripe for repeal of the authority now held by the President to devalue the dollar further to half its former gold value. Along with that, repeal of the legislation giving permission to issue $3,000,000,000 in greenbacks and repeal of the Silver Purchase Act would go a great distance toward restoring confidence, and thus right the unbalanced Budget of Government expenditures and revenues by stimulating business activity and lifting the national income.

Nobody need be deceived into thinking that the administration has decided to be content with a $45,000,000,000 debt limit. The debt, direct and indirect, already is well above that figure. It is evident the strategy that has been decided on is to seek at this time more pressing legislation and wait until the direct debt already has come to the borders of the legal limit before asking for an extension as a matter of imperative necessity to carry on the ordinary affairs of government. Meanwhile, through the device of guaranteed debt, the Treasury can borrow large amounts under the name of the Reconstruction Finance Corporation, the United States Housing Authority, and other agencies. The President is in no danger of feeling cramped in the $5,000,000,000 spending room still open for his use.

What Shall We Do About W. P. A.?

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 22, 1939

Mr. BENDER. Mr. Speaker, there is far too much confusion of thought on the problem of W. P. A. Even if we grant that any effort to deal with 3,000,000 men and women must necessarily cause difficulties, we still do not account for all the complications on this subject. I am in favor of voting W. P. A. appropriations for every needy citizen, but I want to know the facts. Congress finds it far too difficult to obtain complete statistics on W. P. A. The Nation is certainly entitled to know exactly how many men and women are working on W. P. A. at any time. We are certainly entitled to know the nature of every project which W. P. A. is undertaking at any stated date. But we are constantly being surprised by new revelations. We wake up to discover that W. P. A. funds are being used to provide an exhibit at the New York World's Fair; that they are going toward the editing of guide books to Soviet Russia; that they are used to tear down the wrong buildings.

In one breath the President of the United States demands an appropriation for $875,000,000. In the next we hear the mayors' conference holding out for one billion fifty million. Colonel Harrington, of the W. P. A., does not appear to be particularly impressed by either figure. We know that our National Government can spend any given amount. By simply using the technique of calling more and more people to work on W. P. A., any gain in private employment can easily be nullified. In Cleveland, newspapers have been talking about men going back to private industry in constantly increasing numbers for some time. But the W. P. A. rolls scarcely reflect this at all, because all that happens when men go back to work is that a large group of folks who are doing something called "awaiting assignment" simply take their place on W. P. A. W. P. A. does not believe in stopping. This kind of thing could go on indefinitely, and no amount of private reemployment would make the slightest impression on the situation.

In the last 6 years Congress has had one relief "crisis" after another before it. We have been voting funds for C. W. A., P. W. A., and W. P. A. without trying to solve the basic problem of stimulating private enterprise. On the present basis we can go on indefinitely doing exactly what we have been doing until we wind up in the national poorhouse.

I propose that Congress do two things at this time:

First. We are confronted now with another emergency. No matter how earnestly I believe that the national administration through its policy of talking industrial peace on Monday and declaring industrial warfare on Tuesday is in itself causing these emergencies to constantly arise, I recognize that we are faced with a serious situation today.

To meet the need immediately before us, Colonel Harrington must show us exactly what the picture really is. We want him to tell us the entire story, including the figures which the administration occasionally forgets—such as the amount of balance still on hand and the amount which is being figured on for carry-over after the expiration of the period for which the appropriations are voted. We want to know how many people are actually needy as distinguished from the number now on W. P. A. rolls.

When we have this information before us, I am in favor of voting whatever sum is honestly needed; not a nice, round figure of $150,000,000, such as the President has suggested as a means of showing that he was right in his original demand. If the needs of our people honestly require half a billion dollars, I am in favor of voting this sum. If the Nation could get along on $50,000,000, I am in favor of this figure. But whatever figure is really needed must be provided, and neither more nor less is justified.

But there is something else which we must face courageously in dealing with our W. P. A. problem, and this is my second point:

There is no longer the slightest use in deceiving ourselves or the Nation. Relief problems can be approached only if we recognize at the beginning that they are going to be with us for some time to come. We must have a long-term program mapped out before us so that we shall not flounder hopelessly about from crisis to crisis.

The National Government must alter its policies, so that we can look forward to a return of thousands of our working people to private employment. We must take steps to liquidate unemployment through stimulating private work. And we must plan a relief program to take care of those who cannot be employed for years to come.

We must examine our relief rolls thoroughly, weeding out those who are not properly there. We must remove unnecessary personnel, so that relief does not become a career. Projects for relief workers must be planned from the viewpoint of their utility rather than their ability to spend time.

Right now, our job is clear enough. We must not vote a cent of American taxpayers' money unless we know that the need for such an appropriation exists.

For the future, we should plan now to revamp W. P. A. and begin all over with a new program which will be useful and just.

Prospects Ahead for Tacoma, City of Destiny

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 22, 1939

RADIO ADDRESS BY HON. JOHN M. COFFEE, OF WASHINGTON, OCTOBER 5, 1938

Mr. COFFEE of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith a radio speech delivered by me last fall at Tacoma, Wash.

Through the courtesy of the merchants of Tacoma I am happy to address the citizens of this area upon the prospects for Tacoma's future from the standpoint of Federal projects and heavy expenditures of Federal money in this area.

First of all, I congratulate the merchants of Tacoma upon the excellent spirit of unity they are displaying in conducting their 3-day sale of specially priced goods and wares at a city-wide event commencing tomorrow morning. I urge everyone who can possibly do so to participate in this enterprise, to demonstrate to our merchants we have faith in their integrity, that we encourage them to expand and improve their premises, that to the limit of our purchasing power we wish to contribute to an additional circulating medium for Tacoma. Though these are, of course, difficult times, many of us are in a position to create the demand for the products of our local factories which will provide additional employment by the purchase of the products of our factories at Tacoma retail stores.

There is no need for a Tacoma citizen to wander to other cities to buy house furnishings, clothing, or any of the normal needs of life. They can be readily found in our own Tacoma stores. We should patronize mercantile establishments in the community where we make our own home.

The recent action by the Reconstruction Finance Corporation of authorizing a loan of upward of $3,000,000, in addition to the generous gift or grant heretofore made by the Public Works Administration, makes possible the letting of the contracts within the next few weeks for the construction of the great Narrows Bridge. Thus the struggle of civic-minded citizens over a period of 15 years has culminated happily for us all. Soon we shall see the steel girders of this bridge being put into place; ere long we shall speed across this bridge over the Narrows in our cars. High in the air, as we look down upon the Puget Sound waters, we will wonder why this bridge was not erected long ago.

Tacomans, conjure in your minds the advantages which will accrue to the city of destiny by reason of the bridge. The entire peninsula country will become, in fact, our own hinterland. Summer homes will spring up like magic on North, Horsehead, and Henderson Bays; property values will improve; Gig Harbor will be stimulated; Tacoma thus will become the gateway to Hood Canal and the new Olympic National Park. The residents of Port Orchard and Bremerton will find it convenient to trade with Tacoma merchants. The entire peninsula country will be opened up. National defense will be strengthened by making easy transportation of men and equipment between the Bremerton Navy Yard, Fort Lewis, and McChord Field. Nearly six and one-half million dollars will be spent for labor and materials upon this great structure.

On the White River not far from Buckley stands the site of the Mud Mountain Dam. Here there will be spent more than a million and a quarter dollars in the initial construction of the dam. The appropriation has been made, and the money is authorized. As soon as technical details can be worked out and the complicated problem in connection with engineering and land acquisition overcome in the next few weeks, bids will be called for and the contract will be let for this flood-control undertaking.

Mr. Bertram P. Thomas, intercounty river improvement engineer, pioneered this enterprise. Unflaggingly he devoted himself to the task of building up sentiment in its favor. Warm-hearted approval was secured from labor, commercial, and farmers' groups throughout the valley and the city of Tacoma. We were happy in our office to lend our support to the end that the money needed would be assured. The dam will hold in check the turbulent waters of the stubborn White River, which has had a habit through the years of cutting many a swath in rich valley farm land during flood seasons. The great sums of money to be expended upon this engineering feat will have an incalculable effect in promoting the prosperity of Tacoma, as well as the nearby cities of Buckley and Enumclaw.

At Buckley, in our own county, there is now being constructed a State custodial school, for which we secured funds from the Federal Government of a quarter of a million dollars. to be added to the State's share.

One hundred and twelve thousand dollars has been secured for the payment of a turning basin at the northeast end of Hylebos Creek. More than $7,000,000 will be spent in the next 9 months at Fort Lewis and McChord Field on grounds and new construction. Rainier National Park, McNeil Island Penitentiary, American Lake Veterans' Hospital, the United States Tacoma (or Indian) Hospital will pour hundreds upon hundreds of thousands of Federal funds into Tacoma channels of trade during the coming year. We are about to construct a new Federal building, costing a half a million. The Coal Commission and the Weather Bureau, recently secured for Tacoma, are giving us much welcome new funds from the Federal Government. The Hylebos Bridge on East Eleventh Street is costing nearly a half a million. Millions of dollars have been granted or loaned by Uncle Sam to municipal corporations within Pierce County for the purpose of improvements by the P. W. A. or W. P. A. in connection with schools, sewers, sidewalks, paved streets, parks, playgrounds, and general community improvements.

The millions of dollars thus secured for Tacoma presage an era of good feeling within our city. Let us no longer take a pessimistic view. We need imitate none of our neighbors. We are catching up with the destiny we have been talking about. On our onward course we are nearing the outskirts of a new prosperity; we are entering the epoch of better things. Abandon, then, defeatism! Drive hopelessness out of the door! Tacoma can get what she strives to obtain. Behold, a new city spirit is appearing—Tacoma on her toes! Unity has been demonstrated; we have shown a willingness to submerge our differences, to subordinate our petty jealousies, to hold in the background our local quarrels, so as to combine all groups in a strategic, solid battle line to attain the goal sought. By so conducting ourselves you enable me, as your Congressman, with the help of my colleagues, to enlist the cooperation and sympathetic backing of powerful Federal officials and of Congress to bring this money to our people.

I often reflect on the blessings of the Puget Sound country. Though the going may be hard and the way be long, though economic pressure may irritate, yet we are endowed by the Almighty with manifold advantages that make this an incomparable region in which to reside, free from excessive heat and biting cold, from poisonous snakes and insects, exempt as we are from dust storms, hurricanes, and destruction by hail; enriched by matchless scenery of mountain, forest, and salt water; pioneered by fearless forebears who knew not the word "defeat" nor recognized the phrase "it can't be done." Let us be proud of this chance to live in Tacoma and Pierce County on glorious Puget Sound. Let us exult in the fact that we live in a democracy where freedom of speech, of press, of religious worship is scrupulously protected. Yes, we are privileged to live here and be a part of America—not to sense the sword of Damocles which hangs by treacherous threads over the heads of all Europeans tonight. I am proud to have been born in Tacoma and to have been raised in this community. Here one finds real people, stanch friends, and an inspiring atmosphere. Tacomans, let us march forward, hand in hand, shoulder to shoulder, our hearts singing and our minds concentrated upon reaching the glorious objectives just ahead.

The Mississippi River, the Father of Waters and of Floods

EXTENSION OF REMARKS

OF

HON. WILLIAM M. WHITTINGTON

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 22, 1939

ADDRESS BY HON. WILLIAM M. WHITTINGTON, OF MISSISSIPPI, BEFORE THE MISSISSIPPI VALLEY FLOOD CONTROL ASSOCIATION

Mr. WHITTINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I delivered on this day, Wednesday, March 22, 1939, at the meeting of the Mississippi Valley Flood Control Association, Washington, D. C., to wit:

The Mississippi River, since the Louisiana Purchase, has been considered the most important possession of the United States. The Federal Government, from the earliest days, originally to aid navigation, has assumed jurisdiction over flood control in the alluvial valley of the lower Mississippi River.

As citizens of the United States we advocate flood control throughout the country, but as residents of the lower Mississippi Valley, we promote flood control along the Mississippi River and its tributaries.

The project authorized by the act of 1928, except for floodways and diversions, has been largely completed. For the first time in 1937 a great flood was carried without mishap between the levees to the Gulf of Mexico.

The Boeuf fuse-plug diversion, in the act of 1928, was not acceptable to the people directly interested, and the main purpose of the act of June 15, 1936, was to insure the construction of a diversion in order that excess floodwaters of major floods might be permitted to escape from the main river leveed channel and thus remove the hazards to the controlling levee lines.

At the last meeting of this association in the city of Washington, I stated that in my view no legislation to clarify the Mississippi Flood Control Act of June 15, 1936, would be passed unless it applied to both the Eudora and Morganza floodways and further unless it was embraced as a part of a comprehensive flood-control bill for all of the principal drainage basins of the United States. It was my view that Congress would hardly make provision for the lower Mississippi Valley unless protective works were provided for other parts of the country. Moreover, I stated to the association that merely providing for the Morganza floodway and, for that matter for the Eudora floodway, or provision for their separate construction, was not enough. I advocated an additional authorization for increasing the levee foundations and for strengthening the levees in the lower Mississippi Valley.

FLOOD CONTROL ACT OF 1938

The protection of the alluvial valley of the lower Mississippi River is of paramount interest to the entire country. All obstacles to accomplishing such protection should be removed. The modifications of the acts of 1928 and 1936 in the act of 1938 will provide, when the floodways are constructed, the protection contemplated by the act of 1928.

The provisions with respect to acquiring flowage rights are similar for the Eudora and its northward extension and for the Morganza.

FORTY MILLION DOLLARS

The bill authorizes $40,000,000 primarily for channelization, strengthening the levees, and increasing the discharge capacity of the Mississippi River. The Chief of Engineers is given discretion respecting the contemplated engineering features of the Morganza floodway and in both the Eudora and Morganza floodways the Chief of Engineers is authorized to acquire by purchase or condemnation flowage rights.

MORGANZA AND EUDORA

Following the flood of 1927 it was evident that levees only would not protect the lower valley. It was imperative to plan or to perish. The most effective plans are those that cooperate with nature. Before levees, the natural outlets supplemented the main river as the banks overflowed. After all, the greatest plans are the simplest plans. The adopted project provided for supplementing the Mississippi River levees with a floodway in the upper section between Cairo and the mouth of the Arkansas River. Provision was made for the Atchafalaya floodways and the Bonne Carre spillway in the lower section between the mouth of the Red River and the Gulf of Mexico. The middle section between the mouth of the Arkansas River and the Red River was supplemented by the diversion through the Boeuf Basin. The Eudora floodway has now been substituted for the Boeuf diversion.

The present Chief of Engineers and all preceding Chiefs of Engineers since the great flood of 1927 have recommended a diversion comparable to Eudora in the middle section of the Mississippi River and have stated that neither cut-offs nor reservoirs can be substituted therefor. Again, cut-offs in the vicinity of Arkansas City have accentuated the necessity for the Eudora floodway. The Chief of Engineers is given discretion for the condemnation of both Morganza and Eudora and he is given discretion as to the order of their construction. The act of 1938 provides that the authorizations for the Eudora and Morganza floodways cannot be used for any other purpose. Two natural outlets are required to carry major floods below the Red River to the Gulf. There the Mississippi River is supplemented by the Atchafalaya. The main river is aided by the Bonne Carre spillway. An outlet in the vicinity of Morgan City is now under construction to supplement the Atchafalaya. Cut-offs have reduced flood levels. They have been beneficial, but the main river levees in the middle section cannot carry the excess flood waters that require two natural outlets supplemented by three artificial floodways in the lower section to carry from the mouth of the Red River to the Gulf of Mexico.

Both floodways should be promptly constructed. The plans of nature, therefore, to supplement levees in the upper section have been executed by the construction of the New Madrid floodway. The plans of nature have been executed in the lower section by the construction of the Bonne Carre spillway, the Morganza diversion, and the Wax Lake outlet. It remains for the plans of nature in the most critical and probably the most highly improved section between the mouth of the Arkansas and the mouth of the Red River to be executed by the construction of the Eudora floodway.

Now is the time to begin the construction. Prior to 1922 there was a natural outlet through the Boeuf and Tensas Basins. The Eudora follows a natural outlet; 75 percent of the lands are uncultivated.

I regret any litigation growing out of the provision for the fuse-plug levee through the Boeuf Basin. If the Supreme Court of the United States sustains the contention that the Government is liable even though there be no physical invasion or taking, the lands for which the Government pays damages should be promptly utilized for the construction of the diversion. The waters that come down the Mississippi can only find their way to the Gulf of Mexico through Louisiana. The purpose of the Eudora diversion, as well as of the Morganza diversion, is to provide in advance where the excess floodwaters will go so the least damage may be done. Doubt and uncertainty should be removed.

ARKANSAS, WHITE, AND RED RIVER BASINS

Not only did the act of 1938 authorize the expenditure of $40,000,000 for the additional protection of the lower Mississippi Valley, but generous provision was made for the chief tributaries of the Mississippi River. Reservoirs along the headwaters are authorized to detain the waters at their source. Increased protection will thus result to the valley.

A general flood-control plan for the construction of reservoirs along the White River Basin is approved and $25,000,000 is authorized to begin construction for the partial accomplishment of the plan.

The act provides for $21,000,000 for the construction of reservoirs along the Arkansas River. The Chief of Engineers is authorized to select the reservoirs to be constructed.

The Red River is an important tributary and the act authorizes the construction of the Dennison reservoir at an estimated cost of $54,000,000.

Previously, Congress had authorized $48,000,000 for flood control in the Yazoo Basin and $16,000,000 for flood control along the St. Francis River. The Wappapello and Sardis Reservoirs are under construction. The act of 1938 provides that the entire costs of the reservoirs should be borne by the Federal Government and that the Federal Government will maintain the reservoirs when they are completed. It had been evident for some time that reservoirs for flood control would not be constructed unless the Government paid the entire cost of construction.

The lower Mississippi River and its tributaries in the alluvial valley have been given generous treatment in all flood-control legislation.

It will be difficult in the future, as it has been in the past, to secure the passage of additional legislation for only the Mississippi River or for only any other river in the United States. The degrees of protection vary, but the country demands protection for all rivers wherever the benefits will exceed the costs of construction.

APPROPRIATIONS

The act of 1936 contemplates an appropriation of approximately $40,000,000 annually. The President, in his Budget message, recommended $31,000,000. He is entitled to the thanks of the association for a supplemental recommendation of $6,000,000. The total recommended appropriation for the next fiscal year is $37,000,000. It is now for the Senators and Representatives of the lower Mississippi Valley to be on guard to see that the appropriations are made. It is the province of the members of this association to cooperate not only with the Senators and Representatives from the lower valley but with all champions and advocates of flood control in the United States so that adequate appropriations may be made for flood control in all parts of the country.

CUT-OFFS

The most significant development in flood control during the past 10 years has been the construction of 13 cut-offs from Calk Neck to Glasscock, including the natural Yucatan cut-off between the mouth of the Arkansas and Red Rivers, under the supervision of the president of the Mississippi River Commission, Gen. Harley B. Ferguson. The distance from Calk to Glasscock, 330.6 miles, has been shortened, as the river flows, by 115.8 miles. The Mississippi River has thus been shortened 115.8 miles. It is believed that no more successful operation of changing the water-carrying capacity of a stream in all human history has been accomplished. It is claimed that a given flood will be reduced from 9 to 12 feet at Arkansas City, 4 to 6 feet at Vicksburg, and 1 to 2 feet at Natchez. The flood of 1937 was the highest of record above the mouth of the Arkansas River, and while a great flood, it was not a major flood south of the mouth of the Arkansas. It is significant that the gage at Natchez was the highest of record. The cut-offs were made possible because of the genius, daring, and courage of the president of the Mississippi River Commission, Gen. Harley B. Ferguson. The wisdom of Congress in providing for the experimental waterways laboratory at Vicksburg has been vindicated.

The construction of cut-offs constitutes a reversal in flood-control engineering and while some engineers maintain that results are speculative, and that only time and a major flood will tell, the engineering profession seems to be coming around to accept the Ferguson cut-offs as sound. They will reduce floods, especially in the vicinity of the cut-offs. It remains to be seen what will happen below the cut-offs. The cut-off theory is against all precedent.

General Ferguson has dared to do where others faltered, and if the cut-offs are successful in the light of major floods, he will go down in history as one of the greatest engineers of all times. The administration of General Ferguson is a complete answer to the charges that the Corps of Engineers of the United States are not original, progressive, and constructive. The very last word in engineering talent is utilized.

The most effective flood-control reservoirs ever constructed have been constructed in the Muskingum Valley under the supervision of the Corps of Engineers. It should be a source of satisfaction

to the members of this association that the Wappapello Reservoir along the St. Francis and the Sardis Reservoir along the Yazoo-Tallahatchie-Coldwater River System will be among the outstanding reservoirs in the United States.

We accord to General Ferguson credit where credit is due. Cut-offs like diversions supplement the levees. Diversions are still required; they will be utilized less frequently and may be materially narrowed. They should result in fewer acres being required for diversions to supplement the main river levees.

FLOOD CONTROL CONTINUOUS

As we assemble today the muddy waters of one-half the continent are pouring down between the levees past Cairo, Vicksburg, and New Orleans to the Gulf whence they came. We cannot prevent, but we can control these waters.

Our country and the oceans surrounding depend upon rivers. To me there is nothing quite so inspiring and potential as a river. In flood there is nothing so defying as a river.

Rivers have been symbolic in ancient and modern times. A river—the Styx—for the ancients was the barrier between the earth and Hades. In India mothers throw their babes into the muddy Ganges to appease the wrath of the river they worship. The Romans used to pray to Father Tiber, the stream on which Rome became the greatest of empires. The River Jordan, for Christians, lies between earth and paradise.

Great books have been written by outstanding Americans on rivers. Mark Twain has given us Life on the Mississippi. Henry David Thoreau wrote A Week on the Concord and Merrimack Rivers. They have told us of the strength and ruthlessness of rivers. Other writers have been inspired by the music of rivers. We are charmed by Lanier's Song of the Chattahootchie. We are delighted with Beautiful Ohio, On the Banks of the Wabash, and Old Man River.

I live on a river. I have learned much from them. I like to hear the music and the rhythm of flowing waters as—

"It flows along forever,
With trees on either hand."

Rivers are beautiful and powerful. They should serve and not harass mankind.

The problem of flood control along the mighty Mississippi, the father of rivers and of floods, will be completely solved when we find out what Old Man River wants to do and then help him to do it.

International Crisis Has Repercussions for Us

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 22, 1939

Mr. COFFEE of Washington. Mr. Speaker, the newspapers have recently been filled with discussions of current developments in central and eastern Europe. The march to the east of the Fascist powers has again assumed another spurt. Hitlerized Germany seems unaffected by admonitions from the democratic countries. There is honest difference of opinion as to what attitude should be assumed by the United States in connection therewith.

There are those who believe in isolation. These insist that the United States has no concern in the problems of Europe or of the Orient; that we should "mind our own business"; that no matter what happens without our own borders, we are immune from attack. These statesmen contend, in all sincerity, that we should refrain from embarking on any program of unity with other democracies against the Fascist coalition; that we should refrain from boycotting the aggressor nations; that we should not amend our neutrality bill in the interest of discriminating against totalitarian aggressors; that, comforted by the existence of 3,000 miles of the Atlantic and 6,000 miles of the Pacific Ocean, we are safe from molestation and uninterested in the fate of sister democracies beyond the Western Hemisphere.

Then there are those sincere thinkers and students who insist that the fate of the United States is inseparably interwoven with the fate of other democracies; that we are vitally concerned in the territorial integrity and inviolability of nations already established; that we should take reasonable steps by means of embargoes, sanctions, and boycotts to discourage aggressors and refuse to participate in their treaty-breaking invasions of peaceable neighbors. These intellectuals repeat the Biblical injunction: "Can ye not discern the signs of the times, when the skies are red and lowering?"

As an able contribution to this discussion, I include herein an article by one of America's foremost journalists, Mr. David Lawrence. This article, in my judgment, points out soundly the dangers to the United States of our refusal longer to heed the handwriting on the wall:

[From the Washington (D. C.) Evening Star, March 16, 1939]

WHAT SHOULD BE OUR ATTITUDE TOWARD THE NAZIFICATION OF EUROPE?—UNITY NEEDED IN FACE OF FASCISM—AMERICA IS HELD IMPERILED BY PROPAGANDA DUPES

Simply as an example of the new technique of conquest—by undermining a small country and stirring up sentiment for partition of territory—the events in central Europe in the last 24 hours have presented to official groups here a realistic picture of modern dictatorships.

To a government which is being importuned to "mind its own business" and close its eyes to what is happening abroad, the demolition of the Czechoslovakian state after assurances had been given by the German leaders that its independence would be respected is not a development easy to ignore.

Nothing is said officially, of course, but disappointment and chagrin is evident on every side. The pronouncement by Prime Minister Chamberlain that the dismemberment of Czechoslovakia is "contrary to the spirit of the Munich agreement" affords small comfort here to those in the State Department who have believed all along that the British policy of "appeasement" has been wrong. Being confronted with a series of accomplished facts, the diplomacy of the hour is to say nothing but to strengthen the policy of armament building.

DEFENSE SNIPING GOES ON

The administration will have a substantial majority in Congress for its national-defense program, but this is not saying that persons whose views coincide with those of the Fascist leaders would not like to undermine the American project. Thus already one hears sniping here and there about "nobody ever attacking America," about air invasions being fantastic, and the like. But congressional committees have uncovered evidence that agents of foreign governments seek in every way to distract the attention of the authorities from policies which may be unfavorable to foreign countries.

One of the favorite forms of attack against governmental policies of national defense and one in which innocent Americans are being duped is that which accuses the administration of wanting to go to war to assist oppressed persons abroad. These latter peoples are pictured as "the scum of Europe," and there is a complete indifference even to the fact that intellectuals have been persecuted along with the others.

So-called "patriotic societies" are being urged to fight a "letting down of immigration bars," when in truth back of such urging is an effort to develop nationalistic sentiment here coincident with the type of thinking one encounters in the Fascist state. Some of the same elements which would like to see union labor crushed and subjected to the Fascist type of governmental regulation appear every now and then to be backing the propaganda which is being spread against the extension of American sympathies, for example, to unfortunate Czechs or other peoples who have come under the heel of the dictatorship states.

HUMANITARIANISM BRUSHED ASIDE

While it is true that emotionalism does not make and should not dominate foreign policy at any time, it is strange to read some of the propaganda against American interest in oppressed peoples which pours into the National Capital daily from those who profess to be interested only in America. The idea of humanitarian motives in a governmental policy seems to have been brushed aside by these critics as something not to be accepted any more, and as if it were only a relic of bygone days of mistaken sentimentality.

That nearly 2,000 years ago a great religion was founded on the principle of human brotherhood and of seeking to spread tolerance, kindliness, and consideration for one's fellow man, instead of hates and selfishness and indifference to human suffering, has been overlooked in the literature of race hatred emanating from so-called "patriotic" groups. It is as sure a way to divide Americans as the Germans used in Czechoslovakia.

Military wars never settled anything satisfactorily, to be sure, and there isn't in the National Capital any group which believes America must engage in a war with a European power in order to secure respect for her citizens or for her point of view. But it can hardly be denied that the importance of building up armaments now has been fully recognized as a means of preventing war. What is happening in central Europe will insure, if anything was needed to do it, the passage of the President's defense program, and it is assumed here it will speed up the British and French programs, too. For the foreign news carries with it the implication that no material change can be expected in the dictatorship policies until the democracies show much more solidarity than they have to date.

H. R. 2, the General Welfare Act—Townsend Old-Age Pension and National Recovery Plan

EXTENSION OF REMARKS

OF

HON. MARTIN F. SMITH

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 22, 1939

ADDRESS BY HON. MARTIN F. SMITH, OF WASHINGTON, DELIVERED BY ELECTRICAL TRANSCRIPTION AT WASHINGTON, D. C., MARCH 16, 1939

Mr. SMITH of Washington. Mr. Speaker, under leave to extend my remarks, I insert a letter written to me by one of my constituents, Hon. Harry L. Bras, editor of the Centralia Daily Chronicle, Centralia, Wash. Mr. Bras is one of the pioneer newspapermen of southwest Washington, was one of the first editors in the entire country to espouse the Townsend plan and has for several years served as a national trustee of the Townsend organization.

The letter of Mr. Bras is as follows:

CENTRALIA DAILY CHRONICLE,
HARRY L. BRAS, EDITOR,
Centralia, Wash., March 6, 1939.

HON. MARTIN F. SMITH,
House of Representatives, Washington, D. C.

DEAR MR. SMITH: I wish to congratulate you on the wonderful speech you made February 15, 1939, before the Ways and Means Committee, sitting in conference on the Townsend plan, H. R. 2.

I have read it several times and you certainly have made the best argument in its behalf of any yet presented. It shows deep study of the underlying principles of the plan.

Only prejudiced Congressmen can now stand in the road of the bill's release to the House. The Third Congressional District of this State of which you are the Representative is still loyal to the plan and will give you the credit you are entitled to when enacted into law as it surely will in time.

Many aged people have died during the past 2 years in this district who were ardent supporters of the Townsend plan, but unfortunately could not stay with us to rejoice in its passage.

We trust that the Ways and Means Committee will release it soon and that we will be able to know definitely the Congressmen that have the great cause of humanity in their hearts.

Cordially,

HARRY L. BRAS.

I also insert the address delivered by me by electrical transcription at the invitation of Dr. Francis E. Townsend at Washington, D. C., March 16, 1939. It contains many of the salient portions of the statement which I previously made before the Committee on Ways and Means of the House of Representatives in support of H. R. 2.

The address is as follows:

Friends and fellow citizens, my interest in the Townsend old-age pension and national recovery plan is well known not only to the people of my congressional district and State but also to the entire Nation. I first became interested at a time when there was not a single Townsend club in my district, and I placed in the CONGRESSIONAL RECORD on April 4, 1934, the first statement and explanation of the Townsend plan which was made in the Congress of the United States and the first official notice which it received in the Capital. I have studied it continuously since then, and was one of a small group of House Members who drafted the first and second and all subsequent bills, including the present bill, and have taken an active, prominent part in the campaign waged in its behalf in and outside of Congress. I addressed both the Chicago and Cleveland conventions, and on two occasions remarks which I made on the floor of the House were broadcast by the March of Time. H. R. 2 is comparatively simple in its terms and provisions. Briefly stated, it provides for the payment, financing, and compulsory expenditure of a Federal monthly old-age pension of not to exceed $200 per month to all law-abiding citizens 60 years of age and past by levying a 2-percent transactions tax.

It is thereby proposed to retire our senior citizens from gainful employment and utilize their services in placing in circulaton the purchasing and spending power of the pension money. This will make it possible for their jobs to be filled by younger citizens who are now unemployed.

The Townsend plan proposes to apply a 2-percent transactions tax on both big and little business alike—to develop business and prosperity in America. A dollar transaction will be taxed 2 cents; a thousand-dollar transaction will be taxed $20. The man selling a hundred-thousand-dollar yacht will pay $2,000, while a man selling a $10 rowboat will pay 20 cents. Everybody will pay according to the volume of business that prosperity brings to them. The tax will apply to speculative transactions in Wall Street as well as on the sale of a box of face powder.

The transaction tax was endorsed in principle by the largest business organizations in America in 1921. I recently drew the attention of the Ways and Means Committee of the House of Representatives to the extended hearings held in 1921 before the Committee on Finance, United States Senate, Internal Revenue Hearings, May 9–27, 1921, on the then proposed Revenue Act of 1921, as printed by the committee and now on file in the Congressional Library, for a very complete discussion of this entire subject.

Some people fail to differentiate between national income and national business turn-over. They confuse the two and assume that the pension payments must be deducted from the present national income and without any increase of the latter. They confine the volume of the Nation's business to the national income, and consequently place themselves in the position of claiming that every time a dollar of national income is spent that dollar ceases to exist, that it stops right then and there and can never be spent again. No other conclusion can logically follow for they can point to no year in which the amount of business transacted in the United States did not exceed many, many times over the amount of national income. The national cash income in 1929 was $81,000,000,000. The national business turn-over for the same year was $1,200,000,000,000.

A manufacturer may do a gross business, turn-over, of $1,000,000 and have an income of $100,000. Another manufacturer may do a business of $10,000,000 and have an income of only $10,000. Another manufacturer may do a business of $200,000 and have no income—in fact, may lose money. The transaction tax is not based on income or profits, but upon the gross volume of all business transacted.

To illustrate: If a small merchant did a $50,000 business at a net profit of $5,000 in 1935; then, because of increase in sales because of the Townsend plan going into effect he did a $100,000 business in 1939 at a $10,000 profit, the Government would collect 2 percent of the $100,000, or $2,000, leaving a net profit of $8,000 as against only $5,000 in 1935. Thus, by paying $2,000 tax to support the Townsend prosperity plan the merchant increased his business and profit. And his income was not taken or taxed to support the Townsend plan.

The fallacy most often used against the Townsend plan is the statement that the monthly pensions will be paid from the present national income. Economists know full well that money of itself has no value whatever, that it simply is a symbol used in registering the amount of labor or goods involved in a transaction.

Russell Leffingwell, of the firm of J. P. Morgan & Co., recently declared: "Money is not an end to itself; it is a means to an end."

Henry Ford, in the American Magazine, October 1934, said: "The function of money is not to make money but to buy goods. Money is only one part of our transportation system. It moves goods from man to man. A dollar bill is like a postage stamp, it is no good unless it will move commodities between persons. If a postage stamp will not carry a letter, or money will not move goods, it is just the same as an engine that will not run. Someone will have to get out and fix it."

The records show that our national income has increased in the face of increased taxes; or, putting it the other way, increase in taxes does not decrease the national income.

The administration levied a processing tax on farm commodities, better known as the A. A. A. tax. It was a transaction tax on processing. This tax exceeded over a billion dollars before it was nullified by the Supreme Court. Who paid this tax? The highest authorities are in disagreement. Some say the farmers paid it, some say the processors, and others say the consumers paid it. But that is beside the point.

The point is that in the face of this new billion-dollar transaction tax, collected by the Federal Government, the farmers' income increased, the railroad income increased, business income increased, deposits increased in banks, and the national income increased. So much for the claim that the Townsend plan pensions would be paid out of national income—or "involving one-half of the national income."

Walter E. Spahr, of New York University, in a radio address on January 3, 1939, said: "Thus to pay the annual cost of the Townsend pension scheme would require 40 percent of the national income." This, of course, is untrue. The Townsend plan will not "rob Peter to pay Paul," which is another oft-repeated statement made by opponents of the plan.

A man without income in 1935 may, in 1939, invest his money, or credit, employ idle men, buy unused raw products, turn out new goods, and sell the new goods thus produced to men heretofore unemployed. Thus, taxes can be paid, idle men employed, business and freight receipts increased, and a profit made in addition, without taking a single penny from the present "national income"—or from any person now employed.

It is therefore possible to increase taxes, increase freight income to railroads, increase pay rolls, increase the buying of life insurance, increase medical and dental service, increase the consumption and production of food, clothing, and luxuries, and increase the expenses

of operating and building bigger and better mills and factories without taking anything from those who now have property or from those now employed. This is because we have unused materials, unused money and credit, idle men, and idle machinery. These will create new wealth without taking wealth or income from others.

Many confuse the "national income" with what the United States Department of Commerce calls "national business turn-over." For the purpose of clarification, the Department of Commerce reports the national income for 1929 as $81,000,000,000, while the business transactions for that year were approximately $1,200,000,000,000, according to the research department of the Federal Reserve Board at Washington.

A. E. Goldenweiser, Director of Research and Statistics of the Federal Reserve Board, testified before the Ways and Means Committee of the House of Representatives, May 2, 1932 (long before the Townsend plan was proposed): "The total volume of transactions in this country in 1929 was about $1,200,000,000,000, and it decreased by 1931 to about $600,000,000,000. This is a decrease of $600,000,000,000 largely due to decline in velocity."

The Dow-Jones organization, leading business statisticians of New York, December 5, 1934, reported $1,165,000,000,000 in business in 1929.

The United States Department of Commerce, Division of Economic Research, gave out "partial data on business transactions in the United States." This report says that the check transactions in 141 principal cities, "estimated by the Board of Governors of the Federal Reserve System to represent roughly 70 to 75 percent of all checks drawn in the country," was $935,000,000,000 in 1929. Adding 25 percent for the balance of the country, the total check transactions that year would total $1,245,000,000,000. This report says "that around 10 percent of all transactions are settled by currency payments." This brings the total transactions to approximately $1,380,000,000,000. This, of course, includes transfer of funds from one account to another by corporations, which could not be classified as business transactions. But, on the other hand, this report says: "If security purchases are considered a 'business transaction,' it may be noted that such purchases are often settled by adjustment of balances or by debits on brokerage accounts," which are not included in check transactions, but which would be subject to a transaction tax.

Taking the foregoing authorities, it is, therefore, conservative to say that the business transactions in the United States in 1929 amounted to $1,200,000,000,000.

Dr. Goldenweiser's testimony tends to corroborate the figures set forth in an authoritative work, Business Cycles and Business Measurements, by Carl Snyder, published in 1927, pages 144, 148, and 180, respectively, in which it is stated that at that time (when business was normal) the total of all business transactions in the United States amounted to $800,000,000,000 a year.

The Director of Research and Statistics of the Federal Reserve Board has stated that the decrease in national business transactions in 1929 from $1,200,000,000,000 to $600,000,000,000 in 1931 was due largely to "decline in velocity," as we have noted.

The Dow-Jones organization says: "In October 1929 a deposit of $1 in a New York bank was being used fast enough to do $132.70 of work in a year. October 1934 the same dollar was being called upon to do annual work of only $22.50." It is estimated that the annual turn-over of the dollar is now $34. In other words, the money is not circulating. There is great need of not only putting money in the hands of the masses but it must be kept in circulation. Therefore, H. R. 2 provides that the pensions must be spent within 30 days. If, when money was in circulation in more prosperous times, a dollar did $132 worth of work, as against only $34, or approximately one-third of the work when not circulating, it is apparent that money must be made to circulate. The more rapidly it circulates the greater service—the greater work—it will do for humanity. That is the main objective of the Townsend plan.

It was estimated at the social-security hearings in 1935 that the cost of living would rise by 10 to 12 percent, and even the group of University of Chicago professors who oppose the Townsend plan on other grounds stated in the pamphlet issued by them that "an examination of statistics for one or two representative industries (not included in the pamphlet for lack of space) confirms the reasonableness of the estimate that the rise would be on the order of 10 percent." However, if the increase in the price level proved greater, owing to the stimulation of business, trade, industry, and agriculture which would result, it would be governed by the law of supply and demand, the same as in the past and at the present time. Prices would go up and wages go up in proportion. Hence, no damage or injury could be caused to the vendor of any commodity, who would, in the very nature of things, be greatly benefited on account of the improved market and demand for everything that is produced on the farms and manufactured in the factories.

Three years ago there appeared in the Washington, D. C., press the statement that Secretary of the Treasury Henry Morgenthau had submitted several alternative tax proposals to President Roosevelt, and among them a "1½-percent turn-over tax." I recently suggested that the Ways and Means Committee of the House of Representatives question Secretary Morgenthau in regard to this type of taxation.

The General Welfare Act, H. R. 2, provides for a 2-percent transactions or gross business turn-over tax, which is a broader tax base than a gross income tax, which comes the closest to a transaction tax of any form or type of taxation. The transactions tax will raise even more revenue. Instead of being used to defray the expenses of government as in Hawaii, it will be prorated among the pensioners to the maximum amount of $200 per month, to be expended within 30 days, and the surplus to be applied to the reduction of the national debt. It is a pay-as-you-go national recovery plan and far less costly than our present bond-debt-creating system with its appalling interest burden. It will solve the problems of old-age security, relief, business depression, unemployment, and reduce materially our annual crime bill. Mr. J. Edgar Hoover, Director of the Federal Bureau of Investigation, has estimated the latter item to be $15,000,000,000 per year. We have expended for relief $12,000,000,000. The Brookings Institution has estimated our total loss in national income since 1929 to amount to over $200,000,000,000. Is it a sound investment to tax ourselves 2 cents on every dollar transaction to meet these social, economic, and financial conditions? Not one cent of the money is to be borrowed by the issuance of tax-exempt interest-bearing bonds. Do you realize that the interest on the bonds we issued during the World War to finance the Allied powers and our own participation has already amounted to over $12,000,000,000? How much interest will we and our children and our children's children pay on the bonds issued during the depression since 1929 before they are finally paid? The total sum will run into astronomical figures. How much longer are we going to delay the adoption of the tax formula of the General Welfare Act and the Townsend plan, which applies the velocity principle of money turnover and provides a revolving fun upon a pay-as-you-go basis to create active, liquid, working capital, available currently every month in the year, to finance the potential productive capacity of our industrial and agricultural structure? The old-age assistance phase of the General Welfare Act is the means to the more important end sought. The pensions to the aged to be expended currently each month in the purchase of goods and services is the modus operandi by which the working capital is made available to the productive enterprise of the Nation. The General Welfare Act, H. R. 2, is the only proposal pending before Congress which will meet the requirements of the price system, the profit motive, and credit capitalism and should, and will, become the law of the land.

The General Welfare Act

EXTENSION OF REMARKS

OF

HON. NOBLE J. JOHNSON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 22, 1939

RESOLUTION OF THE SENATE AND HOUSE OF REPRESENTATIVES OF THE STATE OF INDIANA

Mr. JOHNSON of Indiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution of the Senate and the House of Representatives of the State of Indiana memorializing Congress to enact suitable legislation providing for the general welfare of the Nation as set out in H. R. 2, now pending before the Congress of the United States:

HOUSE RESOLUTION

Mr. Speaker, I offer the following resolution and move its adoption:

Be it resolved by the house of representatives, That the General Assembly of the State of Indiana hereby respectfully memorializes the Congress of the United States to enact suitable legislation providing for the general welfare of the Nation as set out in H. R. 2 now pending before the Congress of these United States.

SEC. 2. That the clerk of the house is hereby instructed to send a copy of the resolution to the President of the Senate and the Speaker of the House of Representatives of the Congress of the United States and to each United States Senator and Members of the House of Representatives in Congress from Indiana.

Wolf, R. Anderson, Clay, Black, Batman, Klen, G. Slenker, Evans, Beasley, Crawley, Henley.

Adopted March 3, 1939.

SECTION 1. *Be it resolved by the senate general assembly*, That the General Assembly of the State of Indiana hereby respectfully memorializes the Congress of the United States to enact suitable legislation providing for the general welfare of the Nation as set out in H. R. 2, now pending before the Congress of the United States.

SEC. 2. That the clerk of the senate is hereby instructed to send a copy of the resolution to the President of the Senate and the Speaker of the House of Representatives of the Congress of the United States and to each United States Senator and Members of the House of Representatives in Congress from Indiana.

Legal Status of Flood Control in the Mississippi Valley

EXTENSION OF REMARKS

OF

HON. WADE H. KITCHENS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 22, 1939

ADDRESS BY HON. JOHN E. MILLER, OF ARKANSAS, BEFORE THE RIVERS AND HARBORS CONGRESS

Mr. KITCHENS. Mr. Speaker, the National Rivers and Harbors Congress, an unofficial organization attended and supported by patriotic citizens of the Nation, convened in annual session yesterday and is now in session here in the Capital. The State of Arkansas and her people are vitally interested in flood control, navigation, and power development. We have many fine rivers—the Red, Ouachita, Arkansas, St. Francis, White, and Mississippi. We are studying and working to protect ourselves against the periodical losses and damages caused us by floods and overflows, while at the same time converting our rivers into great instruments for the benefit of our people. I now extend my remarks and include therein an address delivered today by Hon. JOHN E. MILLER before the Rivers and Harbors Congress:

Mr. President, distinguished guests, and members of the Mississippi Valley Flood Control Association, I am not unmindful of my limitations in a discussion of the legal phases of the flood-control program of that part of the Mississippi River from Cape Girardeau, Mo., to Head of Passes.

May I at the outset congratulate this organization for the splendid contribution made by it to the solution of those problems? Its members have wrought well in consolidating and coordinating the various programs and projects which have been utilized in the effort to control the floodwaters of this great river. The wisdom of the organization is well reflected in its choice of officers, and particularly in its choice of a president, Senator JOHN H. OVERTON, of Louisiana. It has been my pleasure to personally know him for more than 8 years. During this time I have been more or less closely associated with him and without any intention to detract from the contribution made by others, the record of the achievement of this man justifies not only your faith in him but justifies the unlimited confidence that his colleagues on Capitol Hill have in him. Although a Senator from the State of Louisiana during most of this time, he has viewed these problems from the standpoint of the valley and has sought at all times to promote the general welfare of the valley. He has proposed and advocated measures and compromises which at times did not appear for the best interests of his own State. Such service on the part of any public official who is dependent upon the suffrage of the people within a certain State for continuation in office, is worthy of the praise and commendation of all of us.

In the enactment of legislation dealing with this question, the Congress has for many reasons been compelled to rely upon the judgment of men and organizations in whom the Congress has confidence. In the adoption of the various plans submitted to the Congress by the Chief of the United States Army Engineers in cooperation with the Mississippi River Commission, the Congress has demonstrated its faith not only in the integrity of those organizations, but in their judgment as to the best methods to be followed in the prosecution of the work. To say that no mistakes have been made would be to give to these gentlemen attributes which no mortal man possesses, but the fact that few mistakes have occurred and that great progress has been made is the strongest testimony that can be given as to the wisdom of the policy of the Congress.

To the uninitiate the many intricate problems are not immediately revealed, but the experience of those dealing with these problems over a period of years has been such that they are aware of the many difficulties, and they are in better position now than ever before to adequately and permanently provide for relief. It would be calamitous to the Mississippi Valley and to all other river and harbor and flood-control work wherever situated if the Congress should, as a result of certain influences, ever agree or consent to place the direction and supervision of this work in the hands of any organization other than the engineers of the United States Army. To you this may not seem a possibility, but to some of us it appears a probability, and a word of caution should be a sufficient warning for you to withstand the various influences that are seeking to establish superplanning boards in our Nation and thus probably not utilize all of the experience and knowledge gained over the period of years in which you have been dealing with this work.

The first definite plan for the improvement of the river from Cape Girardeau to Head of Passes is what was designated as the Eads plan. A comparison of the Eads plan with the many other plans that have been submitted to and approved by the Congress discloses most convincingly the extent of the progress that has been made since 1881 in the solution of the flood-control problem in the valley.

Had the Congress authorized and carried into full execution the Jadwin plan which it adopted by the act of May 15, 1928, it is thought that most of the problems would now be solved, but again experience and study indicated that the plan should be modified. Accordingly it was modified by the adoption of the Markham plan by act of Congress dated June 15, 1936, and again the Markham plan and the Jadwin plan were further modified by the adoption of the act of June 28, 1938.

It is not necessary to recall to this audience the provisions of these various plans, but in order to present for consideration by this organization and by the distinguished guests some presently pressing questions it is necessary for me to call attention to some of the provisions of these various acts of Congress. Section 4 of the act of May 15, 1928, provides:

"The United States shall provide flowage rights for additional destructive floodwaters that will pass by reason of diversions from the main channel of the Mississippi River."

This provision may well be treated as surplusage since the fifth amendment to the Constitution of the United States provides:

"Nor shall private property be taken for public use without just compensation."

However, it is a healthy sign for the Congress in its legislation to occasionally recognize that we still have a Constitution.

By the adoption of the Jadwin plan the Congress specifically directed that excess waters should be diverted into the Boeuf Basin and from thence into the Gulf of Mexico. It should be remembered that the Congress undertook in that legislation to take the water out of the stream and to divert it into other passages. An entirely different question would be presented if the Congress had made no attempt to take the water from the stream, but had attempted to confine the water in the channel of the river.

Section 2 of the act of June 15, 1936, provides:

"That the Boeuf floodway authorized by the provisions adopted in the Flood Control Act of May 15, 1928, shall be abandoned as soon as the Eudora floodway provided for in Flood Control Committee Document No. 1, Seventy-fourth Congress, first session, is in operative condition and the back-protection levee recommended in said document, extending north from the head of the Eudora floodway, shall have been constructed."

In section 10 of the same act it is provided that after the Eudora floodway shall have been constructed and ready for operation the fuse-plug levees at the head of the Boeuf and Tensas Basins shall be constructed to the 1914 grade and the 1928 section.

Probably the most important section of the act of June 15, 1936, insofar as the liability of the Government for damages is concerned, is section 11, which reads as follows:

"That the back-protection levee north of the Eudora floodway shall be constructed to the same grade and section as the levees opposite on the east side of the Mississippi River: *Provided*, That this levee extending from the head of the Eudora floodway north to the Arkansas River shall be so located as to afford adequate space for the passage of floodwaters without endangering the levees opposite on the east side of the river and shall be constructed contemporaneously with the construction of the Eudora floodway; except that, until the Eudora floodway is in operative condition, there shall be left in this back levee north of the head of the Eudora floodway openings which shall be sufficient, in the discretion of the Chief of Engineers, to permit the passage of all floodwaters to be reasonably contemplated in the event of any break in the riverside fuse-plug levee prior to the time the Eudora floodway shall be in operative condition."

General Jadwin, in submitting his plan, had said:

"The practical remedy is to raise the levee grade 3 feet on both sides of the Mississippi below the Arkansas River to strengthen these levees so that they will not fail from causes other than accident or overtopping and to preclude overtopping by insuring that the water in excess of the capacity of the leveed channel be spilled out near the mouth of the Arkansas.

"To insure that excess water will leave the main river, a fuse-plug section of the levee in the vicinity of Cypress Creek must be kept at its present strength and at its present grade, viz, 3 feet below the new levee grade. This relatively weak section will be long enough to discharge the greatest predicted possible excess water over and above the capacity of the leveed river below. In order to limit the land in the Tensas Basin overflowed by it, levees will be constructed on each side of the Boeuf River bottom where natural ridges do not serve, from the Cypress Creek levee to back water in the lower Tensas Basin."

It is provided in the act of June 28, 1938:

"That the Chief of Engineers is hereby authorized to construct the Eudora floodway at such location as he may determine in the vicinity of Eudora * * * provided that pending the completion of the northward extension all of the riverside fuse-plug levee extending south from the vicinity of Yancopin to the vicinity of Vau Cluse, Ark., and so as to connect with the existing levee of 1928 grade and section, shall be reconstructed to the 1914 grade and 1928 section."

The northward extension as recommended by General Markham was to consist of a back-protection levee extending from the head

of the newly proposed Eudora floodway north to the Arkansas River and was designed as a safety valve to relieve the pressure on the levees along the east bank of the river until the excess waters entered the Eudora floodway proper. The intake of the Eudora floodway was to be situated 120 miles below the confluence of the Arkansas with the Mississippi.

Other provisions of the act of June 28, 1938, provide that the construction of the Eudora floodway and the guide-line levees shall proceed at the discretion of the Army engineers.

It will thus be seen that the present legislation has designated certain areas along the river as floodways, yet the Government has not taken actual possession of this land, nor has it physically carried out the Jadwin or Markham plans, although the legislation has cast a servitude or easement upon all of the property within the Boeuf Basin; and also by the act of June 28, 1938, has placed a servitude or easement upon all land in the northward extension of the Eudora floodway.

In the enactment of the various statutes to which I have referred, the Congress has created a legal liability on the part of the Government to all property owners within these floodways, and this liability is a continuing one until it is discharged either by payment of damages or by the removal of the easement or servitude which the Congress has placed upon the land by positive enactment.

No doubt the Congress, as well as those charged with the execution of the plans, have proceeded upon the theory that floodwaters are the natural enemy of mankind and that they may be combatted by the building of necessary structures or other means that will afford protection to the land sought to be protected. This general rule exists today the same as before, but the general rule does not authorize the Congress by the enactment of legislation to cast a servitude or easement upon property and to thus use that property without compensating the owner.

In fact, the adoption of the original plan whereby the fuse-plug levee was created was in itself a taking of the property within the Boeuf Basin, and subsequent plans have merely added to the extent of the damage by providing for the utilization of the lands in the Tensas Basin.

Any plan that provides for the protection of one side of the river by the construction of a levee of a certain grade and section, and at the same time prevents the construction of a levee of the same grade and section on the opposite side of the river is a taking of the land thus discriminated against.

No doubt all concerned, the Congress, the Army engineers, the Mississippi River Commission, and others, have relied too strongly upon the decision of the Supreme Court of the United States rendered June 13, 1913, by Mr. Chief Justice White in the case of *Jackson* v. *United States* (230 U. S. 1), in which it was held that an individual landowner had no right to insist that primitive conditions be suffered to remain and that all progress and development be rendered impossible, and that the owner of property might protect it from a common natural danger, but in so protecting it he obtained no right to insist that other owners or that the Government should not adopt the same method or that they should not adopt different methods for the protection of their respective properties or for the public good. The facts in that case were such as to create in the minds of many the opinion that the Congress by the enactment of these statutes heretofore referred to was not violating the fifth amendment to the Constitution, and that the amendment would not apply except and until the property in the floodways was actually taken or used for the purpose. But a close reading of that decision, as well as other decisions cited by the Chief Justice, will convince anyone that, while the decision on the facts in that case is sound, it does not in anywise militate against the proposition that the United States Government must pay for land which it places in a floodway or which it dedicates by any act to a public use, as has been done by the building of leeves of a certain grade and section in certain areas for the express and deliberate purpose of forcing water from its natural course onto and upon individual land.

The Supreme Court in the case of *Hurley, Secretary of War*, v. *Kincaid* (285 U. S. 95) said:

"We may assume that as charged, the mere adoption by Congress of a plan of flood control which involves an intentional additional occasional flooding of complainant's land constitutes a taking of it as soon as the Government begins to carry out the project authorized. (Citing cases.) If that which has been done or is contemplated does constitute such a taking the complainant can recover just compensation under the Tucker Act in an action at law as upon an implied contract, since the validity of the act and the authority of the defendants are conceded. (Citing cases.)"

It will be remembered that this was a case in which a landowner sought to enjoin the carrying out of any work in the Boeuf floodway under the act of May 15, 1928. The injunction was denied because the remedy at law was adequate, but if the remedy at law had been less clear and adequate, because of the large public interest involved the court would probably have not issued the injunction because such would have seriously embarrassed the accomplishment of important governmental ends. In other words, it was not a case where an injunction was necessary to prevent an irreparable injury.

There can be no doubt of the validity of the acts under which we are proceeding nor can there be any question as to the authority of those who are designated to execute the plans. Neither can there be any question that a part of each plan has been executed in that certain levees have been raised to the 1928 grade and section and other levees have been held to the 1914 grade and section in order that they might crevasse and divert the water upon and along either of the two floodways that are now in existence.

Everyone is familiar with the decision of the United States Circuit Court of Appeals, Eighth Circuit, in the case of *Sponenbarger et al.* v. *United States*, decided February 8, 1939. The decision was by a divided court, and while some may consider that this may weaken the force of the decision, on the other hand, the probabilities are that the decision is more sound coming from a divided court because the mere fact that the court was divided is proof conclusive that the case was thoroughly considered.

The court clearly pointed out the distinction between the present case and those cases in which liability has been denied, and where "it did not appear either that the flooding was intended or anticipated by the Government or its officers, or that it was attributable directly in whole or in part to the improvement rather than to natural conditions."

The court pointed out that the guide levees were not necessary except to serve merely to limit the quantity of the lands subject to diversion overflow; that the lands on both sides of the river were bound together as parts of the same section of the alluvial valley, but that under the law as now existing the lands situated in these floodways are subjected to a planned and practically certain overflow in case of any major flood.

The court referred to the opinion of Chief Justice White in the case to which I have called attention, and then held:

"The appropriation of private property for a public use requires the return of a full and exact equivalent to the owner. That equivalent in the case of complete appropriation is the market value of the property at the time of the taking, contemporaneously paid in money. In case an easement only is impressed and taken, the rule is to determine the fair market value before the easement is imposed, next to find that value after the taking, and the difference is the amount of liability."

I hope I may not be considered presumptuous or that I am undertaking to assume the function of an adviser, but in view of the status of the law, I respectfully submit to this organization and to those to whom the Congress of the United States looks for advice and suggestions, that the time has now arrived when we must execute some definite plan and repeal all unnecessary legislation. I consider it my duty as a United States Senator to protect the citizens of Arkansas in their claim for compensation, but at the same time it is incumbent upon the Government to take steps to reduce the damages by removing the cause thereof.

A part of each plan has been executed and certain liabilities have been incurred. This damage cannot be removed but further damage may be prevented by prompt recognition of the legal effect of the existing legislation. If it is necessary that any one of the floodways be constructed then this should be done and the rights of the landowners recognized by purchase or condemnation of such titles as the Congress may determine is necessary. We should not permit these floodways to exist in their present condition. Public interest can best be promoted by a definite and final program of strengthened and uniform levees or by the construction of the floodway and guide levees. In no other way can we make progress and render justice to all.

Michigan State College

EXTENSION OF REMARKS

OF

HON. FRANK E. HOOK

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 22, 1939

LETTERS PERTAINING TO CONDITIONS EXISTING IN THE MICHIGAN STATE COLLEGE

Mr. HOOK. Mr. Speaker, under leave granted to me to extend my remarks in the CONGRESSIONAL RECORD, I include the following letters of Joseph F. Cox to John Hannah, secretary, Michigan State College, East Lansing, Mich., and various newspapers in Michigan:

MARCH 20, 1939.

EDITOR, STATE JOURNAL,
Lansing, Mich.

DEAR SIR: In the Lansing State Journal of March 10 you published an article quoting Mr. John A. Hannah, secretary of the Michigan State College, and using my name in a libelous manner, in view of the erroneous impression conveyed to the public.

Enclosed herewith is a copy of a letter that I addressed to Mr. Hannah on the date of March 20 demanding a correction of his erroneous and libelous statement. I herewith request that you publish in the State Journal a copy of this letter in order to correct the misstatement of fact to your reading public, for which you are jointly responsible with Mr. Hannah.

Yours truly,

JOSEPH F. COX,
Forest Glen, Md.

Copies of the above letter sent to the following papers: Detroit Free Press; Pontiac Daily Press; the Lansing State Journal; the Mining Journal, Marquette, Mich.; the Grand Rapids Press; Flint Journal; the Grand Rapids Herald; the Detroit Evening News.

MARCH 21, 1939.

Mr. JOHN HANNAH,
Secretary, Michigan State College,
East Lansing, Mich.

DEAR MR. HANNAH: My attention has been called to a statement in the Lansing State Journal of March 10, 1939, in which you connect my name with the grand jury investigation of the Michigan State College, in 1932, in a way that is libelous in view of the impression that you conveyed to the public. You also misrepresent the official efforts of Congressman FRANK E. HOOK, of Michigan, to correct present conditions at M. S. C. that are contrary to the public interests.

Following are some facts of the recent past that bear upon the present situation at the Michigan State College:

Judge Leland W. Carr, who conducted this one-man grand jury investigation of the affairs at the Michigan State College, stated to me that his grand jury report did not in any way point to Dr. Kedzie, Mr. Hasselman, or myself, the three members of the college faculty of long standing discharged by the board of agriculture. The three of us were called before the judge and presented facts to him in regard to certain unethical and fraudulent practices to which we had objected in line of duty. These objections were known to the board of agriculture and college executives, and had received previous official attention by the Board under the chairmanship of the Honorable L. Whitney Watkins. The official records of the State board, published in the Michigan State College Record in 1931, disclosed that at that time the State board of agriculture ordered the discontinuance of business transactions by staff members with the Michigan State College that hired them in accordance with sound ethics and Michigan's constitutional law. The board also ordered a clean-up of what the late Dr. Kedzie termed "the music rackets" of an exploitive nature.

However, L. Whitney Watkins and Mrs. Dora Stockman were not named for return to the State board of agriculture, and the board, as constituted in 1932, did not carry out the program of the correction of bad practices ordered by the board in 1931. On the contrary, the board of agriculture of 1932 gave protection to college officials engaged in unethical and illegal banking transactions, land deals, horse deals, theft, and misuse of funds that involved the public funds of the Michigan State College. Mr. Clark L. Brody, Mr. William Birkey, and Mr. M. B. McPherson were members of the board at that time, and their removal was recommended by the senate committee investigating Michigan State College.

It is now apparent that essential facts were withheld or misrepresented by certain college officials and board members to Judge Leland W. Carr in his one-man grand jury proceedings. The report of the Michigan State Senate investigating committee, authorized and paid for by the Michigan State Senate, indicates that board members and college officials gave protection to malefactors. This same senate report states that all statements made by Dr. Kedzie and Mr. Hasselman and myself were found to be true.

On August 27, 1935, the Lansing State Journal carried a statement to the effect that the agricultural board was suing on the treasurer's bond for $20,000 illegally withheld from the college, etc., by the treasurer of the college, who was president of the bank where the funds were deposited.

The report of Judge Leland W. Carr indicated a discrepancy in accounting in the military account. College officials had previously denied before Judge Carr irregular transactions with the faculty-controlled bank. The judge's report was falsely supported by Joseph Baldwin, Special Assistant Attorney General, according to the report of the Michigan State Senate Committee. The report of the Michigan State Senate Committee, substantiated by an investigation at Washington by Congressman FRANK E. HOOK, indicated that over $8,600 was stolen from the military funds and that the financial administrators of the Michigan State College knew of this at the time of testifying before Judge Carr, and that the Board immediately after Judge Carr's decision reimbursed the Federal Government for this theft but did not fix responsibility or reimburse the funds of the State that were thereby filched.

As to the land deals involving officials and faculty members, the records will show, based on my request as dean of agriculture, that the State board of agriculture authorized the expenditure of $25,000 in 1932 for the purpose of buying a farm on which to isolate experimental work with undulant fever and put an end to the rental of farms to the Michigan State College by certain faculty members, thereby causing the college herds and flocks to be infected with undulant fever, and endangering the student body and community, and to a certain extent the livestock interests of the State. This effort to properly isolate this dread disease and to prevent an occurrence, such as the recent epidemic of undulant fever that affected 45 students, and caused the death of one, was frustrated by the avarice of certain members of the faculty and faculty-controlled bank who took over a farm and attempted to secure my approval and recommendation of its purchase. This land was unsuited, and the price asked was exorbitant; hence, the recommendations of the director of the experiment station and the dean of veterinary that the Nickerson farm be bought were not approved by myself as dean of agriculture. The report of the State senate committee shows that this farm, owned by faculty members and officials of the faculty-controlled bank, was actually rented to the college subsequently. The faculty members and bank officials owning this farm are listed in the senate report.

In addition to last month's epidemic, it is stated that over 40 cases of undulant fever have occurred among members of the faculty and students and townspeople during the past 6 years. These cases have resulted from the failure to isolate all experimental work in field and laboratories with this disease.

Congressman FRANK E. HOOK, of Michigan, has officially interested himself in cleaning up graft at the Michigan State College and in protecting students and the faculty, and farmers, and the livestock interests of Michigan from the results of improperly isolated experiments with undulant fever at the present time. He has interested himself as a Michigan Congressman in the protection of Michigan farmers from continued exploitation through the sale of a misrepresented and inadequate livestock feed at exorbitant prices through an agency controlled by a member of the State board of agriculture. The sale of this feed continues at present. Congressman HOOK (as a member of the Agricultural Committee of Congress) also objected to the suppression of the results of experiments with this feed at the Michigan State College during the past 7 years, knowledge of which would have saved Michigan farmers hundreds of thousands of dollars in warning them against paying an excessive price for this misrepresented feed. He refers to malefactors now on the State board of agriculture and the college pay rolls.

Congressman HOOK should be supported by every citizen of Michigan and every honest member of the board of agriculture and friends of the Michigan State College. The purpose of the college is to teach the truth, of the experiment station to ascertain the facts, and of the extension service to disseminate these facts to the farmers and to the public. I need not remind you that every cent of the money appropriated by the Congress of the United States or the Legislature of Michigan carries with it the obligation of using this money for fact-finding and truth-telling.

I demand an early statement from you to the public and through the newspapers to whom you issued your incorrect and libelous statement on March 10.

Very sincerely,

JOSEPH F. COX,
Dean of Agriculture, Michigan State College, 1928 to 1932.
FOREST GLEN, MD.

State, National, and International Trade Barriers

EXTENSION OF REMARKS
OF
HON. WADE H. KITCHENS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1939

Mr. KITCHENS. Mr. Speaker, on yesterday, in a colloquy with the gentleman from Wisconsin [Mr. GRISWOLD] in connection with the discussion by him of Canadian trade treaties and industry of his State, a matter was touched upon in which I am interested. I am interested in facilitating the development of trade not only of our Nation with other countries, but I am vitally interested in the trade here at home between the States. I wish to see demolished, consistent with the best interest of our people as a whole, every barrier that causes friction and obstruction in the exchange of goods and commodities between the people.

There are now being heard before the Interstate Commerce Committee of the House and a similar committee of the Senate the proponents and opponents of a bill to place all transportation agencies under the Interstate Commerce Commission. Frankly, I am not enamored of this proposal. This Commission now has jurisdiction over railroads and their rates, and has not been able to eliminate glaring discriminations in the rates of railroads but has countenanced for half a century a division of this country into arbitrary zones that favor one section at the expense of other sections.

A complaint of over one-half of the Nation is now being made against barriers to State and interstate commerce, and more particularly against discriminatory freight rates and rate structure.

Our country is composed of 48 separate States. Under the Constitution they surrendered to the Federal Government all right to regulate interstate and foreign commerce. It was the intention of our forefathers that all States should have equal rights in commerce among themselves and foreign nations. They did not and could not anticipate or vision the schemes to circumvent the Constitution or obtain advantages, one section against another, as has occurred under the guise

and pretext of regulating interstate and foreign commerce. It is idle to say any Federal law which, by design or operation, favors the commerce of one State or section as against another is vicious and contrary to the spirit and letter of the Constitution.

Mr. Speaker, there are 45 separate countries in Europe, or were a short time ago. For ages those countries have been and are continuously devising and adopting discriminatory trade measures that militate against the good of all. There has been and is friction, bitter antagonism, war and rumors of war at all times. Most of this friction and these wars in Europe and elsewhere have been and are economic or trade wars. Nations are today being destroyed because of trade restrictions and strangulation of commerce by one country against another. The World War was due to ever-increasing trade restrictions by one country against another. Each of those countries, small or large, has been continuously seeking advantages over their neighbors by various ways and means of burdening, profiting from, and limiting traffic across boundary lines. The result was and is retaliatory tariffs, duties, irritating inspections, regulations, and impositions of one character or another at their boundary lines. This attitude and action burden free commercial intercourse between the people of those countries, and generate a progressive spirit of hatred, rivalry, selfishness, isolation, and war.

Are there any who see and observe parallel causes in this country for friction, retaliation, and reprisal by the acts of certain States and sections against other States and sections?

It is unfortunate there exists in Europe a lack of neighborliness, practical, common business sense, statesmanship—lack of vision to see beyond territorial limits. Yet right here in the United States some of us are so short-sighted that we have been and are creating and countenancing conditions that tend to bring about the same results as in Europe. One State and section against another State and section of our own country are devising and permitting parallel State and regional trade restrictions by impositions in the nature of tariffs, zones, inspections, discriminatory freight rates, and other irritating obstructions that interfere with State and interstate commerce. In order to avoid competition, procure an advantage, and prevent the free flow of interstate commerce, certain States enact and enforce laws under the guise and under pretext of protecting their public health, labor, safety, sanitation, and industry. They do this by means of zones, fees, tariffs, licenses, rates, taxes, quarantines, forms of labeling, modes of packing, and special transportation requirements. The admitted discrimination in freight rates existing under Federal law and regulations is the most unfair, injurious, and costly of all the barriers yet devised in this country. It has cost the southern and western people of this Nation billions of dollars. It has retarded their social, cultural, and economic development.

A little over 50 years ago Congress created the Interstate Commerce Commission as its agency for the definite purpose of correcting the abuses and preventing the injustice of discriminatory freight rates. The Commission, under the then-existing conditions and sectional differences, undertook to prevent, as much as possible, the abuses of the railroads. The Commission formulated, or rather adopted, an arbitrary zoning formula for freight rates. This formula operated fairly equitably for a time. Since then conditions have changed very materially. The population has increased, new modes of transportation developed, but that zoning formula has not been materially changed, and today, under modern conditions, is working a grave injustice to about three-fourths of the territory of this Nation. The rate structure of 50 years ago is now archaic, still arbitrary and artificial, and the Commerce Commission still builds flimsily about it.

Mr. Speaker, what concerns me mostly is a concerted effort on the part of those reaping freight-rate advantages to prevent any change of the old rate structure that operates injuriously and unfairly against a large portion of the United States. The present Governor of New York claims that to remove these freight-rate advantages, accruing to his section, or to change the structure for rate-making purposes, will be contrary to the interests of the Northeastern States, including his State. This is a frank statement and admission, but cannot be based on sound reason, and his conclusion cannot be justified, either morally or legally.

The Governor's State belongs to a council of favored States, organized for the purpose of preventing an equalization of freight rates. Those States have made appropriations from their State funds, and have employed the most learned attorneys to sustain the present system of freight rates. In other words, these favored States claim the selfish right to ship their goods into the South, West, and Middle West at a cheaper freight rate, mile for mile, than those sections may ship to them, mile for mile, similar goods of their States. The Governor of New York pleads that to give the other portions of the Nation a nondiscriminatory freight rate for manufactured goods would make it "even more attractive than it now is for industries to move from New York State to the South."

It is unfortunate that the Governor of New York, or any other Governor, should take this view. It is a demonstration of a lack of vision not to see that equitable freight rates over all the Nation will redound equally to the people of the State of New York. It is regrettable indeed that the Governor of New York, and other Governors in that section, fail to visualize the injustice to the many millions of other people in this country.

In the CONGRESSIONAL RECORD of February 27, 1939, appears a letter from the Governor of New York to Hon. W. G. ANDREWS, a Member of this House, giving statistics to show that the number of wage earners in manufacturing plants in his State in 1935 was 22.1 percent less than the number in 1923; while in the Southern States there was an increase. He further shows that the total wages paid by the manufacturing industries in his State in 1935 were 35.6 percent less than in 1923; while in seven Southern States the decrease in wages was only 14 percent. There can be no logic in his favor to justify discriminatory freight rates in those statistics. Some other cause must explain the decrease in wage earners and wages in his section as compared with the Southern States.

The true cause and explanation is that the purchasing power of the other sections of the country has been so reduced that they can no longer support the industry and wages of northern and eastern States by paying the freight both going and coming. The statistics relied upon by the Governor conclusively prove to me that the beneficiaries of unfair freight rates in one section of the country cannot continue to prosper at the expense of other sections of the country by artificial means through discriminatory laws, unfair regulations, or arbitrary trade barriers.

I was pleased to note a few days ago that the Supreme Court of the United States nullified a statute of one of our Southern States which, in the guise of imposing an inspection fee, had placed a tariff on foreign cement. If one State has such a right, then all States should have equal rights. It is no more constitutional or just for one State to place or have a tariff on foreign products than it is to enjoy a tariff or favorable freight rate on products of one or several States. These State and sectional boundary-line obstructions such as arbitrary zones, restrictions, and regulations cause friction, bring about retaliation, throttle, and stagnate business. The people cannot and will not submit forever to such discriminatory rates. We are free and equal as individuals and as States under the letter and in the spirit of the Constitution, and no law can be justified that favors one or more at the expense of others.

The State of Wisconsin, in the guise of protecting the health of the people, has legislated against cottonseed oil of the South used in margarine, a pure, wholesome vegetable oil, from entering that State in competition with the dairy interests. There is no real excuse for the law, and the tax Wisconsin imposes upon this commodity is nothing more than a tariff. However, I wish to commend to the Governors of New York and Connecticut the vision, wisdom, broadmindedness, and statesmanship of the new Governor of Wisconsin, Hon. Julius P. Heil. At Madison, Wis., recently the Governor of that great and progressive State had the courage, intelligence, and patriotism to denounce isolation and erection of trade bar-

riers by one State or section against another State or section. Among other things, he said:

We cannot live within our own shell. We cannot set up a barrier. We must act so that our products will be acceptable to the other 47 States.

Mr. Speaker, such courage and unselfishness in this day and time is rarely shown. Governor Heil is entitled to the admiration of all of the thinking people of America. He knows that the tax of 15 cents per pound on cottonseed oil used in margarine by his State merely furnishes injurious food upon which politicians feed the people. Such a tax, no doubt, appealed powerfully to the dairy farmers. Such a tax, no doubt, was proclaimed from the house tops as a benefit to the dairy industry of Wisconsin. In the long run such a tax can but work a serious injury and permanently cripple the dairy interests of that fine State. The splendid, fair-minded progressive, and thinking people of Wisconsin, if they know the facts, upon mature reflection, will see that such a tax on a pure and wholesome commodity, produced by their neighbors, will limit their trade, cause irritation, arouse a spirit of reprisal and retaliation, bring about competition in dairying, an unfriendly feeling and possible boycott of goods of Wisconsin.

Fourteen other dairy States have similar laws, and they might well heed the wise admonition of the new Governor of Wisconsin. I mention this merely to point out one of the causes that give trouble to all the people of this Nation. It must not be forgotten that more than 40,000,000 of people, occupying the great agricultural and raw-material empire of this Nation, enjoying a fine climate, blessed with rich soil, wishing to live and let live, anxious to improve their economic condition, lift their purchasing power, cannot be mistreated or legislated against unfairly without stubborn and never-ending opposition.

Certainly it must be known today that there is a great awakening, gradual enlightenment, and progressive development in every section of this country. Discriminations of whatever character by or in favor of one State or section as against another will not be tolerated and will be attacked and avoided in one legal way or another, whether that discrimination be by State or Federal legislation.

Mr. Speaker, there is no desire on the part of the South, West, or Middle West to injure any industry or transplant any industry of the North and East to their sections. Their only desire is that new and future industry must not be further curtailed, centralized, or monopolized, under protection of discriminatory laws or regulations. No great section of this country is going to sit idly by, rest supinely on its oars, and allow its people to be exploited, its resources exhausted, and later have nothing but a barren waste land. Is there anyone so deluded as to feel or believe that this country can endure if the people and natural resources of one-half of the Nation be exploited and exhausted and 60,000,000 or more people and future generations be left helpless? Is anyone so selfish or prejudiced not to see the injury that will result eventually to the Nation as a whole if more than one-half of the Nation be utilized solely as provinces from which to draw raw materials? If such a condition is to remain or continue, then this Nation has reached the limit of its growth and retrogression begins. However, I venture to suggest there will be no submissive devolution or dissolution. Today, in large part, the only industry of the South is industry that is removing and exhausting its raw materials and leaving no substitute. Its timber, coal, oil, soil, minerals, and human resources are being depleted and exhausted. Something must be done to maintain the continuous purchasing power of every section of the Nation, and, to accomplish this, special advantages under law cannot and must not exist to any State or any combination of States.

The freight-rate discriminations have been most oppressive to the laboring man in the South and other zoned sections. He and the consumer there have been bearing the burden of the differential in freight rates by lower wages and a higher cost of living. Such little industry as now exists in some sections of the country has been acquired at the expense of labor in those sections. The laboring man knows no factory can compete if it has to pay the same wage and a higher freight rate. To continue such a condition will mean that there can be no industrial enterprises in the South, and such few factories as now exist must inevitably cease or move to some other section. The unfavored sections of this country, the sections suffering from these discriminations and barriers, will use every possible means for their future welfare and preservation. They will give, if necessary, bonuses and sites to new industry. They will be, and now are, exempting in self-defense, industry from taxation. If an exemption for 7 or 10 years be not sufficient, then complete tax exemptions may be given to offset discriminatory rates and other barriers. If this does not succeed, then possible State and municipal subsidies may be offered, and, further, we may have the spectacle of towns, cities, and municipalities bonding themselves or using other means to erect industrial plants. Even compacts may now be entered into between States for self-protection. Thus we can see there can be no end to increasing difficulties if we do not heed the injunctions of men like Governor Heil, of Wisconsin.

I am amazed, Mr. Speaker, at the unrest, congestion, and economic condition of the many people in some of our great industrial centers of the North and East. It is well known that practically all Federal relief money now is spent in those regions. More relief money is spent in one Northeastern industrial State than in all the Southern States combined.

I note with a considerable degree of apprehension the increasing migration, concentration, and congestion of our people in large industrial centers of the North and East. Such a condition is to be expected. Those regions have been profiting by tariffs, advantageous freight rates, concentration of wealth, and the result is that wealth has centered there in a few, industry is centralized, and monopoly flourishes. This migration and congestion has become a critical national problem. Is there a remedy? Unquestionably and obviously a removal of the unfair handicaps to other regions, equitable freight rates to all sections, thereby increasing purchasing power and elevating the spirit of the people in the discriminated sections, will be most remedial. Let us slow up this unnecessary migration, stop immigration for a while, reduce centralization, prevent further monopoly, encourage decentralization, and thereby bring about greater harmony and happiness and a more equitable distribution of jobs, goods, commodities, and wealth.

It is well known that one of the great troubles in this country is lack of proper distribution of goods and commodities. Much is now stored in our warehouses, on which the Government has loaned hundreds and hundreds of millions of dollars, while much is wasted for lack of purchasing power and fair means of exchanging these goods and commodities. We have too much cotton in the South. There are too many apples in Washington and Oregon; too many potatoes in the Dakotas, Vermont, and New Hampshire; too much grapefruit and other fruits and vegetables in California and Texas; too many oranges and vegetables in Florida; too much tobacco in Kentucky, Tennessee, and the Carolinas; too much rice in Arkansas, Texas, and Louisiana; too much corn in Iowa, Indiana, and Illinois; too much wheat in Kansas, Nebraska, and other States; too much milk and butter in Wisconsin, Indiana, and New York; too much wool, meat, and oil in the Middle States, South, and West; too much lumber; too many clothes in our stores, cloth and shoes in our factories; too much money in our banks; and, in fact, it seems and is claimed we have too much of everything, and the result thereof is that millions of our people suffer for the real necessities of life. This is an anomaly rarely, if ever, experienced by any nation or civilized people before us.

Mr. Speaker, we have millions and millions of fine citizens in want today for those very goods and commodities. In great part, the barriers erected by the States against each other and discriminatory freight rates, penalizing one section at the expense of another, cause this condition. In my opinion, we are dealing merely in palliatives, temporary expedients. We seem to be incapable of courageously, unselfishly, and patriotically joining our efforts to remove the causes

of this condition. We must have a better and freer distribution of our goods and commodities and of the products of industry in this country. Nature and justice demand this, and to accomplish the purpose we must increase the purchasing power of discriminated millions, and to do so must remove these State, interstate, and national barriers to a freer exchange of our goods and commodities. In this way only can we halt incessant migration of our people from one section to another, prevent their congestion in large industrial regions. When we accomplish this, we will confer one of the greatest boons ever enjoyed by any people.

The things I am mentioning justify our best efforts for their correction. The evils enumerated, if permitted to continue, will prevent general prosperity over the Nation. Therefore, I plead for an enlightened, unselfish, nonsectional, patriotic consideration of the subject.

St. Patrick's Day Address

EXTENSION OF REMARKS

OF

HON. THEODORE F. GREEN

OF RHODE ISLAND

IN THE SENATE OF THE UNITED STATES

Thursday, March 23, 1939

ADDRESS BY HON. JAMES A. FARLEY, MARCH 17, 1939

Mr. GREEN. Mr. President, I ask unanimous consent that there may be printed in the Appendix of the RECORD an eloquent address delivered by Postmaster General Farley before the Friendly Sons of St. Patrick at Providence, R. I., on Friday evening, March 17, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

You have all heard, I dare say, of that distinguished gentleman who was one day walking quietly down the street when he received a resounding thump on the back from one who had mistaken him for an old friend. The gentleman straightened up and wheeled sharply around, only to find himself looking into the face of a total stranger. "Well," he managed to say when he had regained his composure, "I do not know your name, but your manners are certainly familiar."

In coming here this evening to join you in the celebration of the feast of the great apostle of Ireland, I feel that although I do not know the names of all of you, I am nevertheless among fast friends; for there is something about the Friendly Sons of St. Patrick, wherever you find them, that reminds one of those who have grown up in the same neighborhood, who have imbibed the same lessons of loyalty, and who have followed the same hallowed traditions; and not only are their manners altogether familiar but there is a quickness of mutual understanding that is very reassuring to one who has the privilege to speak before them.

I need not tell you, I trust, that I deem it a distinct honor to address this society which George Washington joined in Philadelphia in 1781, and which had on its roll of membership during the Revolution such noted generals as Wayne, Butler, Hand, Irvine, and Moylan. Since that time it has numbered among its sons, in almost every State of the Union, men who have made a secure place for themselves in the history of the United States, not only as statesmen, poets, historians, and philosophers but also as leaders in business and in the professions.

I do not believe I shall be accused of exaggeration when I say there is no other race on the face of this earth that has had the difficulties and hardships to contend with that the Irish have experienced, and that has still survived and flourished in spite of all the cruelties the mind of man could invent to ruin it. Other races, for the most part, have been protected and guarded by the power called government; they have gone along the even tenor of their way peacefully and quietly; their history is the record of their lives. Erin, however, has had to fight the very power that should have protected her; she has had to flee from the very arms that should have been raised in her defense; her history is the record of her martyred dead. And the only reason she has any history at all to record today, is because of the living faith and sterling character of her sons, who have always loved justice and hated oppression wherever these qualities were to be found.

I am not going back over those years of famine and persecution which you know only too well. In those times everything possible was done to destroy or discourage the Irish people. Their lands were taken away and given to usurpers in the hope that the tyranny of the new landowners would wipe the race out of existence. But those who waged this campaign overlooked one fact. They had not reckoned on the Irish girl. No matter how furious the invaders were when they landed on Irish soil, no matter what means they employed for the annihilation of the Irish, sooner or later they were destined to meet the Irish colleen. And when they did, all their plans were shattered. The English settler married the Irish girl, and from those marriages came the most patriotic Irishmen the world has ever known. They have rightly been called "more Irish than the Irish themselves."

In the time of Queen Elizabeth, the inhabitants of Ireland were put to the sword, their dwellings burned, their cattle and crops destroyed. The country was left in such a pitiable condition that a bird could scarcely find subsistence there. Yet Elizabeth had scarcely gone to her judgment when the exiles came back from the mountains, the woods, and the caverns, where they had been in hiding, and in a remarkably short time the land began to blossom again like a flower.

During the reign of Charles II practically every ship that traded with the colonies in America was an Irish ship, built by Irish hands, and manned by Irish seamen. Irish woolen manufacturers were the most prosperous in the world, and Irish cattle and horses filled every English market. I mention these things simply to remind you that the Irish were always prosperous if given half a chance. They wanted no concessions and no privileges from any government. All they ever asked for was simple justice and whenever they got justice they made their own prosperity.

When I hear men speak of the history of Ireland I am reminded of that big Irishman who came home one night with two of the blackest eyes that were ever seen in the face of a white man. One of his companions meeting him at the door said to him in a rather plaintive voice: "For God's sake, man, who gave you the two black eyes?" The big fellow became indignant, and shaking his fist in the face of his companion he said to him: "Who gave me the two black eyes? No one gave them to me. I had to fight like a demon to get them." And so it has been with the Irish. They have had to fight to the last ditch to have any history at all to record. But through persecution and starvation they have walked manfully, with their face to the stars, and today they look back on those times of oppression and slaughter, not in a spirit of anger and reprisal, not with a feeling of hatred and revenge, but with the spirit of forgiveness that has always burned like a light in the heart of the Irish. When they were no longer able to tolerate or avoid the tyranny of their oppressors, and they came to America, the land of freedom and opportunity, where every man is on an equal footing with his neighbor, where every man is given an opportunity to use his talents and his labor for his own betterment, we still find the Irish among the champions of justice and liberty, and ever grateful for the privileges they have received in the United States. And to prove their gratitude they are and always have been ready to shed their blood and to lay down their lives for the country that has befriended them. Major General Robertson testified before a committee of the House of Commons that one-half of Washington's army was composed of Irishmen. And while that statement may seem an exaggeration, it was nevertheless repeated by Joseph Gallaway on the witness stand before an English tribunal and by General Lee. Both of these men were competent judges, and were certainly in a position to know the facts.

It will be held by some, of course, that it was not American patriotism that caused Irishmen to join an army that was fighting England. Many will believe that they looked upon such a venture as an outdoor sport. One reputable historian tells of a company of Irish who were defending a hill in the Revolution. After the battle it was discovered that all the gunlocks were either bent or twisted, and an investigation proved that when the Irish ran out of ammunition, instead of climbing the hill for more, they used their guns on the heads of their enemies. It is true, of course, that there was little love lost between Ireland and England, but uppermost in the minds of these Irishmen who fought in the Revolution was the safeguarding of that liberty and freedom which they had been deprived of in their own land. And they have amply proved the fact by the number of enlistments in every war in which this country has ever engaged.

When the passion of the hour brought the great Civil War and other wars to this land, we find the sons of the Gael fighting just as courageously in support of their cause as they did in the Revolution; and in all generations they have written their names, not on gold or silver, not on marble or bronze, but on the hearts and minds of a grateful American people.

I trust that this country will never be called upon to enter another war, especially a foreign one. I hope that our time may be given in future days to the straightening out of our own problems and to the making of our land a better and more contented place in which to live. I pray that the Irish, who so well appreciated the opportunities that America gave them in their days of oppression, and who were so ready to lay down their lives that those opportunities might continue will bend all their efforts today in an endeavor to drive from our shores those internal enemies who do not appreciate the liberty that is theirs, and who are trying to undermine and destroy the very foundations on which our Government is built.

In recent years, as you are aware, there have come to our shores from the old world men and women who could no longer tolerate the tyranny of their mother country. These people have been given the same protection, the same liberty, and the same opportunities for which the sons of Erin are so grateful. But instead of showing gratitude for these blessings which were denied them in their own country, instead of being ready to shed their blood that such freedom might continue, they are using their liberty to instill into the hearts and minds of their fellow men a distrust

for American institutions, to arouse religious intolerance, race hatred, class conflict, and even a denial of the God who created them. Some of these have proclaimed openly that they would not engage in even a defensive war to save this Nation. What, we sometimes wonder, do these people want? Is it communism? They can have it at its source for the small price of a trip across the water, without the necessity of tearing down the existing government to build upon its ruins. Is it fascism? The ideal Fascist state has been set up in the old world and welcomes all those who believe in its principles and are ready to work for its success. The fact is that you could not drag any of these agitators with a team of horses to a boat embarking for any of these countries. They know they can have no such freedom there as they have in the United States. And yet they are diverted enough to spend their time and their energies in an endeavor to destroy what is today the best country on earth, in spite of the evils that exist here.

What is there across either ocean that can compare to advantage with American democracy? There are abuses here, of course; and there will be, here and everywhere, so long as humanity is what it is. But can we find a more genuine spirit of devotion to the common good in those countries where the rulers dictate what you shall eat, what you shall drink, what you shall wear, where and at what age and at what kind of labor you shall work; what you may read, what you may listen to, what you may speak? The American citizen has still the final word in government in this country. In spite of politics and propaganda, it is he who will ultimately determine who shall be the President of the United States, who shall sit in our legislative halls, and who shall judge our people. He may be indifferent at times, he may be unwatchful, but when he is aroused, when he is indignant with government policy, he knows that he and his neighbor from coast to coast can put a stop to any kind of arbitrary abuse or injustice.

This country still recognizes that every individual has certain rights which do not come from society, but are the essential claims of those who go to make up society. These rights do not come from the state, because they existed before the state. But it is the duty of the state to protect its citizens in the enjoyment of these rights. Every man not only has the right to live, but also he has the right to the enjoyment of liberty, the right to an education, the right to labor, and the right of worshipping God and of practicing his religion according to the dictates of his conscience. And where, I repeat, are these rights better safeguarded than in our own country?

No one contends, I dare say, that our democracy is perfect. We have unemployment, we have a serious farm problem, we have trouble between labor and capital. But these things can be ironed out, if we have patience and good will, in the American way. When people tell you that foreign countries have no unemployment, that statement should be taken with a grain of salt. For when you come to examine the wages these countries pay their laborers and the purchasing power of their money, you will usually find that a great many of their people are working for what would be starvation wages in the United States. In fact, many of our people on the relief rolls are getting more than some of those who are working 10 and 12 hours a day in other countries.

This, then, is the problem of America at the present time, as I see it. Lord Macaulay said some 80 years ago, when writing to a friend in America: "Your Republic will be laid waste in the twentieth century as the Roman Empire was in the fifth; with this difference: The Huns and the Vandals who ravished the Roman Empire came from without, but your Huns and Vandals will have been engendered within your own country, by your own institutions." Macaulay must have foreseen a condition in our country when numbers of our citizens were swinging to a dangerous left, away from all the traditions and the philosophy of the men who established the foundations of our democracy. These enemies are not so firmly entrenched yet that they cannot be circumvented. And it is to patriotic Americans like the Friendly Sons of St. Patrick to whom we must look if we would keep our country the land of opportunity, the home of civil and religious liberty that our fathers loved and fought for. And there is every reason to believe that you and the members of patriotic organizations of a like character will not be found wanting in your duty any more than were your fathers before you.

Where Stands America in this Hour?

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Thursday, March 23, 1939

RADIO ADDRESS BY HON. J. HAMILTON LEWIS, OF ILLINOIS, MARCH 22, 1939

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the RECORD extracts from a radio address delivered by the Senator from Illinois [Mr. LEWIS] on Wednesday, March 22, 1939, on the subject Where Stands America in this Hour?

There being no objection, the extracts from the address were ordered to be printed in the RECORD, as follows:

Recall the demand of the great tribal leader when, turning to the prophets, he called out: "Hearken ye, and speak to our people."

I say, hear ye—and ask—what is the meaning of this affliction upon our people, designated in the street jargon of "jittery"? Why should our courageous Nation be in tremor, frighted with the danger of being overwhelmed by conflict, our country deluged in war?

From what comes such imagined horrors? Here we recall the great truth law telling us: "Know the truth and the truth shall make ye free." My countrymen, this country has no purpose of having war with any other country. Its people have no intent of having war with any other people. Officials of America do not seek to attack any people or any country. If lands abroad find it to their purpose to shatter civilization, through cannons on the land and bombs in the air, to serve some purpose of military grandeur or seizing of territory, none of this seduces America, save to express amazement and regret. We do not enter into this warring. We do not approve of this contest. We will not allow any country to draw us into such. We will not permit any people to announce us a war ally nor to hold us before the world as willing to enter into any controversy that will take our Nation to arms.

If there be around us circulated report that this United States is to be taken by its officials into conference with foreign nations looking to consolidation of forces for military encounter, let it be answered: This country will attend no such conference in Europe; it will invite no such conference to America; it will not be trapped into designs that shall license any European statesman to announce us to the world as an ally of international murder and appropriating envied territory. We remain America.

America does not endorse a course of any leader or war power who would adopt to self the imperialism of Caesar or the militarism of Napoleon. We behold with sadness that there are captains of military aggression who dream of world domination to achieve personal grandeur. They who would reenact the drama of Napoleon as acted in the presence of the great prelate, the Pope of Rome. History informs us that at Milan, Italy, the Pope being present to crown Napoleon emperor, this military master seized with his hands from the possession of the sacred majesty, this bauble, and crunched it upon his own head, saying, "God has given this to me; war to all who dare to touch it." That we have this event in the shadow of its repeating has awakened the world to fears of another dynasty of the military march and the annihilation of nations.

We ask, Why should America enter this era of fear and suspicion? This is a government of the people, not of kings or princes. This is a country of citizens not of military captains. Our people have chosen at the ballot box their President and officials of control. These represent peace and religion. What purpose have our officials in destroying all this, what object could they have of value or profit? Is there anything in the past history or present experiences of these American officials to justify the citizen in taking to himself the fears that are inspired by the unjust reports and false rumors which have taken possession of the minds and shaken the souls of the American citizens? When President Roosevelt as the head and voice of America was asked in public conference by his legislative colleagues, if he contemplated that anything could arise from his plans that would call for this land using force, or being drawn into a conflict of force from other lands, his reply was promptly "No, under no circumstances can I see such."

I beseech you to recall how falsely have our people been deluded by propaganda that has come from the outside with deliberation, or from our own people through hasty suspicion. When the rumor went forward and the great press of America was imposed upon by the accusation that the President had said "The front line of our interest in international affairs was at France," a natural uncertainty seized us. Now it is seen that no such statement was ever made. No such expression came forth from anywhere. When the charge went forward that the President had had a secret alliance or understanding with a foreign nation to join it in its enterprises of conflict, our people naturally felt a tremor of fear. Now it develops that no such ever existed, no such secret alliance, or suggestion along such line was ever advanced.

These misconceptions have done much to bring upon the President false accusation and unjust judgment. Also to put the administrators of our Government under the suspicion that it had some design of taking our country into conflict, and that there was being held out from the people some conspiracy that would involve our Nation into possible catastrophe.

I ask you to reflect and note that our people have never been tricked or trapped in anything by this administration. Will you not recall that right or wrong in theory, perfect candor, and open frankness has ever been given to the people by the President on all purposes. Why now should there be that want in our citizens of complete confidence? Why the denial of praise by our people to its Government that every other nation is enjoying from its people? England turns from one administration to another at the will of its electorate, praising whatever is in power and supporting it with all the warmth of its patriotism. France forsakes every political distinction to join in conferring complete power on those whom the people have placed in position of authority. Italy, though in the past fighting its government in different forms, joins into one union to praise and accord glory to the leaders in

control of their Government. Germany, without consideration of any past, has her millions swarming about her leaders to proclaim confidence and to give assurance of complete faith in their Government and whatever it does.

Painfully we behold that it is only in free and true America that there is to be seen the reflections of discredit upon its officers and suspicion addressed against its head official. I warn you that the enemy, wherever it is, understands from experiences it has beheld in the divisions between Austrian leaders, the absence of union in Czechoslovakia, the distractions within the smaller countries, that in these oppositions among themselves there is fulfilled the ancient Latin war maxim of "Divide and conquer." If we in the United States allow ourselves to be divided, and upon small matters of politics or personalities continue upon ourselves divisions and distractions, such will be the hour the enemy will seize as the fitting time to open assault and carry to extreme what certain scurces have long desired—the dissension and then the destruction of America. Only a union cemented by patriotism can ward this from us. On this beware!

Citizens, this is the hour that calls for America to stand steady upon its feet, to hold high its head and keep its brain cool, with its heart loyal. We need action of quiet and comfort; kindly to all—fear of none. We request our country to rejoice in our great history. Behold our achievement in industry, our generosity in charity, our guardianship of the poor and humble, our efforts to prosperity—the acknowledged honor and righteousness of our Nation. On all this may we declare, as the Great Master to the Apostle Peter: "On this rock we build our house, and the gates of hell shall not prevail against it."

Here we turn to our fellow citizens in this hour, with complete confidence again restored—all proclaim that ours is a land of peace and faith. Our people are in the arms of loving friends and religious guidance. We this day salute the flag of our Nation, rejoice in the splendor of our Republic, and join anew in the refrain:

"My country, 'tis of thee,
Sweet land of liberty,
Of thee we sing."

The Housing Issue

EXTENSION OF REMARKS
OF
HON. CLAUDE PEPPER
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Thursday, March 23, 1939

EDITORIAL FROM THE WASHINGTON EVENING STAR OF MARCH 23, 1939

Mr. PEPPER. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD an editorial from the Washington Evening Star of March 23, 1939, entitled "Threat to Housing."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Evening Star of March 23, 1939]

THREAT TO HOUSING

The solid Republican bloc in the House which has stood four square against major New Deal legislation under the adroit leadership of Representative MARTIN of Massachusetts was split this week on the shoals of the housing issue.

Reversing a previous action of the House, a large number of the minority party deserted to the Democratic side Monday to help defeat, by a landslide vote of 290 to 77, a Republican amendment that would have paralyzed the entire slum-clearance and low-rent housing program had it become law. The astonishing result was a complete vindication for the United States Housing Authority, subjected to stinging criticism for allegedly excessive construction costs. To supporters of public housing in and out of Congress, however, the vote was even more cheering. For it seemed a convincing demonstration that the elected representatives of the people rightly regard the cause of public housing as one in which partisan politics should have no role.

The defeated White amendment, which would have limited the over-all cost per dwelling unit to $3,500, a cost impossible to achieve, would have resulted in the cancelation of millions of dollars in loan contracts to 140 cities. As soon as word of its earlier passage reached the country, protests poured into Washington from all sides. In Philadelphia, the Republican controlled housing authority felt compelled to call a halt to all housing work until the final outcome was known. The headquarters of the C. I. O. and the A. F. L. realized more than others, perhaps, the disastrous effect a cessation of the housing program would have on the building trades. Forgetting their differences over the control of labor in general, each sent a vigorous protest to Congress.

The U. S. H. A., however, soon found that it had escaped the frying pan only to get burned in the fire. As the Interior Department supply bill containing the housing appropriation passed the House, language was deleted on points of order with the result that the administrative expense allowance will, in effect, be reduced $2,500,000 below the $4,500,000 authorized in the bill. Representative White was again the sponsor of this destructive move which, unless remedied in the Senate and in conference, may compel the Authority to discharge at least half of its administrative staff of 1,307 employes after June 30. The points of order were sustained under the House rules.

When the effect of this drastic curtailment of funds becomes fully realized, it is believed that Republicans in both the Senate and House will rally to correct it before it is too late. The threatened reduction in administrative expenses comes at a time when the work load of the U. S. H. A. is approaching its peak.

The Government's Monetary Policy

EXTENSION OF REMARKS
OF
HON. KEY PITTMAN
OF NEVADA
IN THE SENATE OF THE UNITED STATES
Thursday, March 23, 1939

ARTICLE FROM WALL STREET JOURNAL OF MARCH 22, 1939

Mr. PITTMAN. Mr. President, I ask unanimous consent to have printed in the RECORD an article published in the Wall Street Journal of Wednesday, March 22, 1939, discussing the Government's monetary policy, and particularly the position taken by Chairman Eccles, of the Federal Reserve Board, and myself before the Senate Silver Committee.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Wall Street Journal of March 22, 1939]

ECCLES, PITTMAN CLASH ON LATTER'S DEMAND FOR MONETARY STEPS—WESTERN SENATORS ATTACK SPENDING POLICY AS FAILING TO AID COMMODITY PRICES, RECOVERY

WASHINGTON.—A sharp clash between Chairman Marriner S. Eccles, of the Federal Reserve Board, and westerners on the special Senate silver committee developed yesterday on the currency-inflation controversy as Senator PITTMAN (Democrat, Nevada) joined with his colleagues in a strong demand for some monetary step by the administration to raise the general commodity price level.

The Senators attacked the administration's spending policy as among the "subterfuges" which completely failed as a stimulant to domestic commodity prices or as an aid to economic recovery.

Senator PITTMAN had charged that the enormous expenditures of the Government had completely failed to raise the price level, and wanted to know why the Government did not attempt a controlled currency-inflation program.

Mr. Eccles insisted that price level is much more favorable than it was in 1932, 1933, and 1934. He also contended that the monetary policy of the Government has not substantially raised price levels nor has the silver-purchase program. He contended that if one of the efforts has failed all three have failed.

"You stated that currency inflation would result in a rapid rise in prices," Senator PITTMAN said in questioning Mr. Eccles. "I wonder why you do not do it until the purchasing power of the farmer has reached parity."

Chairman Eccles in reply stated: "I have attempted to point out that no monetary action, unless purchasing power of consumer is increased, is likely to result in increases in prices."

WILL NOT RAISE PRICES

"Merely further increase in excess reserves or bank deposits, unless it results in putting more money in hands of people as a whole, will not raise prices," Mr. Eccles continued. "Now, I would like to know in what way the Federal Reserve can by itself contribute toward increase in prices to which you refer?" Mr. Eccles asked Chairman PITTMAN.

"You have stated that currency increase would do it. You would have complete control," Senator PITTMAN declared.

Mr. Eccles insisted that the Reserve Board could not do that because if it merely issued currency it would not stay in circulation.

The committee started out to propound prepared questions to Mr. Eccles on Reserve operations, but members got into a discussion of inflation and prices and orderly questioning was completely abandoned in favor of informal discussion of the whole monetary and economic problems.

Senator PITTMAN openly criticized the reserve requirement action of the Federal Reserve System between 1936 and 1938. He drew from Mr. Eccles statement that the reserve requirement increases had a psychological effect and perhaps did reduce speculation in securities.

RESERVE REQUIREMENTS

With respect to the reduction in reserve requirements of April last year, Mr. Eccles stated because of the abundance of funds this reduction could not have had more than a psychological effect.

Both Senators PITTMAN and THOMAS of Oklahoma implied that the Federal Reserve, by its reserve requirement action, checked an improvement in business and industry.

Mr. PITTMAN insisted that if the reduction in reserve requirements had the psychological effect of stimulating activities, the reductions in 1936 and 1937 had the effect of retarding efforts toward recovery.

Senator PITTMAN contended that the Government during the past 6 years has attempted by every means, including subterfuge, to raise the commodity price level. He then asked Mr. Eccles if that was not a fact.

"I think everybody felt prices should go up, that it would be desirable to have higher prices," Mr. Eccles replied.

Senator PITTMAN then asked if the effect of currency inflation would not be rapidly raising the price level, and Mr. Eccles said that he thought that that was right.

"Then why not do it?" Senator PITTMAN shouted.

"Because it cannot be done by currency operation alone," Mr. Eccles said.

"I still go back to your answer that currency inflation will raise prices," the Senator declared.

CURRENCY IN USE

"The mere issue of currency doesn't mean inflation unless currency is put to use. I don't disagree with those that want to encourage or hurry private investment in new enterprise. The inducement for new investment at this time is certainly not very great. The problem can't be solved by currency or monetary manipulation beyond the point of having adequate supply of reserves and adequate supply of deposits to sustain full employment," Mr. Eccles said.

Continuing, Mr. Eccles contended that "our trouble today is not the volume but the turn-over of money. Turn-over is very low."

Senator BORAH wanted to know what could be done to increase the volume of turn-over.

Mr. Eccles said that he thought the Government should do all it could to remove impediments to encourage private capital. But to reduce the Government's contribution at this time would make less desirable the use of private capital. The principal problem today, he said, is that the people do not have purchasing power because they do not have money.

"Lack of opportunity to get a profit is the principal impediment to recovery today," Mr. Eccles stated. He said that the opportunity for hugh investment does not exist.

In answering charges that the Federal Reserve had checked prosperity, Mr. Eccles argued that action of the Reserve Board on reserve requirements did not effect the credit policy, and he called attention to the exceeding low Government bill rates.

"Do you think it is good for bills to be selling on a no-yield basis?" Mr. Eccles asked Senator PITTMAN.

Senator PITTMAN said that he did not imply by his questions that that was a good situation.

A Napoleonic Parallel?

EXTENSION OF REMARKS

OF

HON. PAT McCARRAN

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Thursday, March 23, 1939

EDITORIAL FROM THE WASHINGTON EVENING STAR OF MARCH 22, 1939

Mr. McCARRAN. Mr. President, on March 21, as is disclosed by the RECORD, I made some statements on the floor of the Senate on the subject of the analogy between Mr. Hitler and Napoleon, and between the present situation in America and the conditions prevailing under the Napoleonic rule. At this time I ask unanimous consent to have printed in the RECORD an editorial from the Washington Star of March 22 on the same subject.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Evening Star of March 22, 1939]

A NAPOLEONIC PARALLEL?

It is almost exactly 130 years ago this spring that George Canning, masterful young Foreign Secretary of Great Britain, turned to challenge the mounting power of Napoleon in Europe and the "continental system" established by him after a series of conquests that left England isolated and apparently doomed to be his next and final victim.

The "little Corsican" was absolute master of Western Europe. As Historian John Richard Green narrates, "its whole face changed as at an enchanter's touch." Prussia was occupied by the imperial legions. Holland was converted into a monarchy by simple decree of the man on horseback, and its crown bestowed on his brother Louis. Another brother, Jerome, became King of Westphalia, a realm created out of the electorates of Hesse Cassel and Hanover. A third brother, Joseph, was made King of Naples, while the rest of Italy, including Rome itself, was annexed to the French Empire.

It was the hope of eventually crushing the world power of Britain which drove Napoleon to his worst aggression, the wanton attack upon Spain. In May 1808 a French army entered Madrid and proclaimed Joseph Bonaparte King of Spain. Spain rose as one man against the stranger. Desperate as her effort seemed, the news of the rising was hailed with enthusiastic joy by the English people. "Hitherto," cried Sheridan, a leader of the Whig opposition, "Bonaparte has contended with princes without dignity, numbers without ardor, or peoples without patriotism. He has yet to learn what it is to combat a people animated by one spirit against him." Tory and Whig alike, Green records, "held that never had so happy an opportunity existed in Britain to strike a bold stroke for the rescue of the world." Canning determined to abandon the campaign of "desultory descents on colonies and sugar islands" for vigorous warfare in the Spanish peninsula. Pitt, after Trafalgar, 4 years previous, had said in what were destined to be his last public words, "England has saved herself by her courage. She will save Europe by her example!" Nelson having crushed Napoleon's dream of invading England, the Emperor concentrated his energies upon subjugation of the continent. Then Canning ventured to vindicate Pitt's prophecy. In 1815 came Waterloo.

If the latest news from London is verified by events, Neville Chamberlain seems minded to draw inspiration from George Canning by moving to crush the Napoleonic terror of this hour—Hitlerism. The nation stands behind him. It is authoritatively reported that the Prime Minister has proposed an anti-aggression declaration by Britain, France, Soviet Russia, and any other country willing to join a common "stop Hitler" front. Smaller European powers—among them Poland, Rumania, Yugoslavia, Greece, Turkey, and Bulgaria—are mentioned as among the states that might be invited into the proposed coalition. Along with the U. S. S. R., these six states lie directly in the path of the Drang nach Osten thrust which assumed menacing actuality for them after the Nazis' seizure of Czechoslovakia.

It goes without saying that much water will flow under the bridges of the Thames, the Rhine, the Seine, the Neva, the Dnieper, the Volga, the Tiber, and the Danube before any effective "stop Hitler" alliance, either diplomatic or military, can be consummated. But amid fast crystallizing events—now at Memel, tomorrow possibly in Rumania, or in whichever direction the victory-drunk Fuehrer may next decide to goose-step—the conviction is clearly taking root in London that the sands of mere protest and remonstrance are running out, and that nothing but action will now avail to halt the Nazi juggernaut in its tracks.

Fair Labor Standards Act in Puerto Rico

EXTENSION OF REMARKS

OF

HON. SANTIAGO IGLESIAS

RESIDENT COMMISSIONER FROM PUERTO RICO

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 23, 1939

Mr. IGLESIAS. Mr. Speaker, the House Committee on Appropriations has not recommended an additional appropriation of $3,000,000 as requested for the relief work in Puerto Rico because of the great advancement in unemployment that has occurred in consequence of the Fair Labor Standards Act. With respect to the situation represented as having been brought about by the Fair Labor Standards Act, attention is invited to the following excerpt from the hearings of Mr. Fairbank, assistant administrator of the Puerto Rico Reconstruction Administration:

Within the past 6 months several things have happened that have presented us with an unprecedented and unexpected situation. The wage and hour law has worked havoc in Puerto Rico. The needlework industry, employing approximately 100,000 persons, will be practically wiped out by the Fair Labor Standards Act, and, in anticipation of its immediate enforcement, the industry is already folding up and moving to the Orient. In the meanwhile, pending such reorganization as will be necessary to meet the new conditions, the tobacco industry is at a standstill. This year the sugar industry will not employ by many thousands the

usual number because of efforts on the part of the sugar operators to readjust their grinding season and through the installation of labor-saving equipment to meet the increased manufacturing costs brought about by the Wage and Hour Act and aggravated by the present low price of sugar. Practically every sugar mill on the island has reduced its budget for the year by from 20 to 60 percent, and no one cares to predict just what will happen in Puerto Rico after the grinding season.

Today it is estimated that approximately 150,000 employable persons are without work, in spite of the sugar season being at its height and in spite of the activities of the Puerto Rico Reconstruction Administration, Public Works Administration, and other Federal aid. According to figures received by wire this morning, they estimate there are around 110,000 regularly employed people, or people who are regularly employed during the grinding season, who are without work, and about 90,000 or more that ordinarily would try to find work but who could not be considered as having regular jobs during the grinding season. The number of cases certified for relief had risen in November 1938 to 222,606, involving 1,121,035 persons, a sharp increase as the result of the above-mentioned factors, and this number will increase as the year progresses.

We are hopeful that, aside from this request for additional funds for the Puerto Rico Reconstruction Administration, the Congress will take under advisement the necessity of special legislation to correct the disadvantages under which Puerto Rico is laboring and to put the reconstruction program on a sound, self-liquidating basis. However, in the meanwhile we cannot permit these people to starve, especially when they are thrown out of employment through no fault of their own.

The committee thought that the grant of $3,000,000 "would be a poor palliative," and further added that "a cure is what is needed in Puerto Rico, and it is more to accentuate that fact and to stimulate action in that direction that the additional appropriation is not recommended."

It is true that the Fair Labor Standards Act is applicable to the island of Puerto Rico and that it has caused some unemployment among the people in various industries down there. But the philosophy of this argument as it appears in this report means that if Congress is not going to grant the $3,000,000 to help those people is because they are not going to get the results we are looking for. This, in my opinion, seems to be the application of a penalty to the people of the island of Puerto Rico which they do not deserve. Of course, the workers have the ambition, the noble desire, to be assisted and cooperated with in their efforts of uplifting the conditions of the men and women who are working hard over there.

The denying of this relief will be an economic catastrophe at this time. To deny relief will be a terrible blow to the people of Puerto Rico. To deny such assistance and cooperation we asked of the Congress of the United States to the people of Puerto Rico, would never be understood, and it could not be explained to them, that it is because of the wage and hour law applied over there as well as here, that they are going to be penalized. It appears that because of said law Congress is going to cut out an appropriation of $3,000,000, which was suggested by the President and approved by the man in charge of the administration of the Budget.

We have had unemployment in the island for many years, before this law was extended to the island, and there are other economical reasons that cause it. Ultimately the House approved the grant of $1,000,000.

I would like to insert herewith a resolution adopted by the Free Federation of Workingmen of Puerto Rico, affiliated to the American Federation of Labor, in connection with the Labor Standards Act, which reads as follows:

FEDERACION LIBRE DE LOS TRABAJADORES DE PUERTO RICO,
(Afiliada a la American Federation of Labor)
San Juan, P. R., March 17, 1939.

The honorable House of Representatives, Washington, D. C.:

In compliance with instructions of the Free Federation of the Workingmen of Puerto Rico (a State branch of the American Federation of Labor), I have the honor of bringing to your attention and consideration a resolution adopted today by the executive council of this body, as follows:

"This Federation of Labor having been advised that amendments are being considered by the House Labor Committee intended to exempt Puerto Rico from the provisions of the Fair Labor Standards Act of 1938 and providing at the same time that special committees for each industry composed of representatives from the United States Government and from the Government of Puerto Rico will be created to adjust and fix minimum rates for this island, as agreed upon, wants to go on record as follows:

"We cannot deny the fact that strict enforcement of the Fair Labor Standards Act of 1938 in Puerto Rico has caused disturbances in certain industries. However, the big problem for us in this island, as viewed from the standpoint of labor, is to provide adequate working conditions and fair wages for over 400,000 workers employed in intrastate commerce, as against 100,000 workers employed in interstate commerce.

"Excepting tobacco stripping and the needlework industry, in our opinion, all the other industries covered by the Fair Labor Standards Act, such as the manufacture of sugarcane, transportation, hair nets, mother-of-pearl buttons, distilleries, men's hats, diamond polishers, can afford to pay the minimum wages as provided by the Fair Labor Standards Act of 1938, a fact which could be easily ascertained through a fair investigation, and a good number of the above-mentioned industries are actually paying the rate of 25 cents an hour or more.

"The difficulties confronted by the tobacco-stripping industry have been practically met successfully and settled by amendments approved by the Administrator of the Wage and Hour Division on the 23d of February 1939 to the definition of what constitutes an area of production and the creation of a first concentration point at which the tobacco may be stripped. Through these amendments to the original definition of the area of production the difficulties for tobacco farmers and dealers who use the first point of concentration for their stripping have practically disappeared, and the portion of the tobacco-stripping business declared to be covered by the Fair Labor Standards Act of 1938 is that affecting the manufacturers who strip the tobacco to be converted by themselves into cigars or cigarettes.

"This information is intended to prove that the problem even for the tobacco-stripping business has been partially solved.

"It is our honest opinion that the main problem for us at the present is to accommodate the needlework industry, which in most of its main lines, we have to admit, cannot afford to pay the minimum wage of 25 cents per hour.

"Notwithstanding these facts, and in view of our peculiar conditions and the disadvantage in which we are to compete with the mainland industries and with foreign industries, the organized labor of Puerto Rico, as represented by this federation, is ready and willing to help, protect, keep, and stabilize all our industries in Puerto Rico, including the needlework industry which so badly we need, if adequate protection is given to labor interests through insular legislation or through any special Federal legislation that might be deemed necessary to be adopted by the United States Congress in view of special conditions prevailing in this island and providing that in such Federal legislation creating any special board, boards, or committees, adequate representation of organized labor is assured, and providing also that in such amendments a fair minimum wage for the island according to local conditions is assured, and providing further that no provision of such amendments shall justify any employer in reducing a wage paid by him at the present which is in excess of the minimum wage applicable under such amendment, and that no employer would be justified in increasing hours of employment maintained by him which are shorter than the maximum hours applicable under the amendment proposed.

"It has been also demanded by organized labor in Puerto Rico from the insular legislature to provide for adequate legislation to regulate home work and to establish fair minimum wages for intrastate commerce.

"In line with this demand a joint committee composed of three representatives of this federation and three representatives of employers of the needlework industry, at the request of the honorable the Governor of Puerto Rico, has been working hard for several days in the discussion and drafting of bills covering regulation of industrial home work and the establishment of fair minimum wages for intrastate commerce through joint wage boards composed of employers and employees and presided over by a representative of the public, all the members to be appointed by the Governor of Puerto Rico.

"These drafted bills, which are agreeable to both parties concerned, have been already handed to the honorable the Governor of Puerto Rico for study, and it is our hope that same will be considered and passed by the insular legislature.

"If, as stated above, the amendments proposed to the Fair Labor Standards Act of 1938 do provide for adequate representation of labor, for a fair minimum wage in this island, to protect against reduction of wages paid at the present which would be higher than the minimum, and which will assure adequate remedies for industrial home work and minimum wages for intrastate commerce through action of our insular legislation, we have no objection to offer to amendments to the Fair Labor Standards Act of 1938 being considered by the House Labor Committee.

"Conditions at the present in Puerto Rico as to employment are worse than they were ever before in this island, and we urge that adequate remedies be adopted promptly by the administration in Washington and the United States Congress without unnecessary harm to labor and industry in the mainland or in Puerto Rico.

"We also respectfully request that if public hearings are called to consider this most important matter, and particularly to discuss the wage to be fixed for Puerto Rico, that this labor organization be advised with ample time in advance to be heard and present our side on the proposition."

In complying with the instructions of the executive council of this State federation of labor in transmitting to you the above-quoted resolution, I beg to remain,

Very respectfully yours,

NICOLÁS NOGUERAS RIVERA,
General Secretary, Free Federation of the Workingmen of Puerto Rico.

The All-American Canal

EXTENSION OF REMARKS
OF
HON. ED. V. IZAC
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1939

REPORT OF THE DEPARTMENT OF THE INTERIOR

Mr. IZAC. Mr. Speaker, ever since the inauguration of reclamation activities by the Federal Government we of the West and our predecessors before us have come before our colleagues and asked their cooperation in what means not only the prosperity of vast sections of our Nation but the very survival of the people of those sections. But seldom do we report back to our colleagues the progress being made and the resultant good that has been accomplished.

Now that the Interior Department appropriation bill has successfully run the gantlet of well-intentioned economy advocates, I want to make a few remarks in the nature of information so the Members of the House may know what they have made possible by the continuous appropriation of funds for a project of great importance to the whole Southwest.

Upon completion of the Boulder Dam, excavation work for the All-American Canal was begun. This latter has now been practically completed and the water which was turned into the canal last October has now reached a distance of 22 miles. Above Boulder Dam a lake 115 miles long now provides water for the irrigation of the lands of Imperial Valley, hundreds of miles to the south. As soon as the silt-laden water of the Colorado has properly sealed the bottom and sides of the first 22 miles of the canal, similar operations will be conducted throughout the nearly 100 miles of the length of the main All-American Canal.

That everyone may have a clear idea of the nature of the undertaking, I am giving herewith a report released by the Department of the Interior on March 10 of this year.

The report is as follows:

Seasoning operations through the first 22 miles of the All-American Canal were in progress throughout February, while heavy releases of water from Lake Mead were being made at Boulder Dam.

About 1,500,000 acre-feet of water were released from Lake Mead in order to empty the lake to a point where it can handle without difficulty the spring flood of the Colorado River as anticipated on March 1. Snow surveys indicated in February that the run-off of the river would be slightly above the average this spring. If additional heavy snows are received, there will be time to make additional withdrawals from Lake Mead prior to the flood which is expected in late May or early June.

The heavy releases at Boulder Dam provide a flow at Imperial Dam, where the All-American Canal heads 300 miles downstream from Boulder Dam, of approximately 24,000 cubic feet per second, the largest amount which has been noted there since 1933.

These releases also, through scouring the river bottom, carried heavy silt loads. The river carried more silt during February than in any comparable period during the last 5 years.

Bureau of Reclamation officials at Imperial Dam had been awaiting a rise in the silt content of the river to begin large-scale seasoning operations on the All-American Canal, since silty water was desired to seal the sides and bottom of the canal.

The silty water was allowed to flow through the desilting basin to determine the actual compactness of the "fills" or walls enclosing the basins and the tightness of the basin floors. Progress planned on the basis of this and subsequent tests is significant to all of the area to be surveyed by the canal system, for before Colorado River water can be released for actual use in the canal, operation of the desilting works must be demonstrated.

The ultimate maximum diversion of water into the All-American Canal will be 15,155 cubic feet per second. Some idea of the tremendous task which the desilting works must perform, can be gained from studies which indicate that on the average approximately 8,000,000 cubic yards of silt will pass the head gates annually during the first 10 years of operation. The three pairs of basins now installed are designed to remove 70,000 tons of silt every 24 hours when in full operation, eliminating an annual expense of approximately three-quarters of a million dollars which would be necessary for canals and laterals if the silt were permitted to flow into the system. Provision has been made for additional units later, if required.

The desilting basins are located immediately downstream from Imperial Dam, and are equipped with 72 rotary-type scrapers, each 125 feet in diameter. Silt deposits will be moved by the scrapers into trenches, forced through a disposal system into a sluiceway channel leading into the river below the dam. Only water from which the heavy silt has been removed will flow down the canal system. Each basin is approximately 269 feet by 769 feet, with a rated capacity of 2,000 second-feet. The embankments separating the basins are compacted with selected material, and the slopes are paved with 18-inch dry-rock paving.

During the tests the large revolving scrapers were not in operation, and a limited flow of water which was not desilted was admitted into the All-American Canal. On February 7, the flow reached the Pilot Knob Wasteway, a distance of approximately 22 miles from Imperial Dam. At the Pilot Knob Wasteway the flow intermingled with the river diversion of the Imperial Canal through the Rockwood Heading.

While the discharge through the canal was not large in amount, the hydrographic and other observations, taken during its passage and since, will be of value in the seasoning and priming operations.

Current Waterways Program of the Army Engineers

EXTENSION OF REMARKS
OF
HON. WILL M. WHITTINGTON
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1939

ADDRESS BY MAJ. GEN. JULIAN L. SCHLEY BEFORE THE NATIONAL RIVERS AND HARBORS CONGRESS

Mr. WHITTINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Maj. Gen. Julian L. Schley, Chief of Engineers, before the Thirty-fourth Annual Convention of the National Rivers and Harbors Congress, Washington, D. C., on March 23, 1939, to wit:

Mr. President, ladies and gentlemen, it is with genuine pleasure that I come before you once again to recount to you something of the present activities and program of the Army engineers.

Since your last meeting several items of legislation have been enacted, affecting the work prosecuted by the Corps of Engineers and the policies under which it operates. The River and Harbor Act of June 20, 1938, adopted 52 projects and authorized investigations at 67 localities. The Flood Control Act of June 28, 1938, broadened Federal flood-control policy, modified 5 major projects, and adopted comprehensive projects for 13 basins. The act further directed that investigations be made on 96 streams. Since the enactment of the 1936 Flood Control Act there have been entrusted to the Engineer Department the construction of some 370 projects and prosecution of 650 investigations for flood control. The sums authorized for the accomplishment of these flood-control works total $689,074,000, of which less than 19 percent has thus far been appropriated.

I recently reported to Congress that approximately $403,000,000 could be profitably expended during the fiscal year 1940 for river and harbor and flood-control work.

In 1938 the sum of $200,704,000 was expended on similar works by the Department, and for 1939, $218,821,800 was appropriated.

RIVERS AND HARBORS

Although my annual report for the fiscal year 1938, recently released, contains full details, I will outline briefly the present status of the major features of our current program.

At present there are authorized approximately 1,000 river-and-harbor projects. Active work is in progress on approximately 350 of these. Investigations, including preliminary examinations, surveys, and reviews, are under way on over 500 proposed projects. To complete the new work on the authorized projects $227,000,000 additional to that already appropriated will be necessary. I have reported that $102,975,000 can be profitably expended for new work and $51,738,000 for maintenance during the next fiscal year, a total of $154,713,000 for river-and-harbor work. This latter figure compares with $136,483,000 expended on river-and-harbor works in the fiscal year 1938 and $112,020,000 made available for the year ending June 30, 1939.

HARBORS

It was only a decade ago that a port with a controlling depth of 30 feet or over was considered a class A harbor. Since that time development of steamships has so advanced as to demand much greater depths. A depth of 40 feet is being established at harbors frequented by the latest-type vessels, and New York is to be deepened to 45 feet.

INTRACOASTAL WATERWAY

The intracoastal waterway from Boston to the Rio Grande is gradually being attained. Construction of the enlarged Cape Cod Canal is in progress, and the 32-foot project is practically complete. In January I submitted my report on the New Jersey intracoastal waterway and recommended the adoption of a project to provide a channel 12 feet deep and generally 100 feet wide from the Atlantic Ocean at Manasquan Inlet, N. J., to Delaware Bay above Cape May, N. J. A board of officers is now making a study of the New York Bay-to-Delaware River section of the waterway. I expect to receive its report the latter part of next month.

GREAT-LAKES-TO-GULF AND CONNECTING WATERWAYS

During the current fiscal year 4 contracts have been completed and 12 awarded for work on the Federal improvement of the Great Lakes-to-Hudson River waterway, scheduled for completion in 1943.

The project for canalization of the upper Mississippi River is rapidly approaching completion. While there remains much to be done on the project in the way of land acquisition, clearing, construction of esplanades and buildings, all structures essential to the creation of the 9-foot channel have been completed except dam No. 24, which will be in operation next year.

The Missouri River project is progressing at a satisfactory rate. Over 90 percent of the fill has been placed in Fort Peck Dam and construction of the main control gates is in progress. Between Sioux City and the mouth, during the present fiscal year, approximately 19 miles of new dikes have been built, 17.5 miles of revetment placed, and over 8 000,000 cubic yards of material dredged in new-work operations. Bids for seven additional contracts on the project were opened last month. It has been gratifying to note that the depths and widths obtained have been generally well in excess of the present project dimensions, 6-foot depth and 200-foot width. A report has recently been submitted to Congress recommending increasing the project depth to 9 feet from the mouth to Sioux City.

In great measure the navigation improvement program on the Ohio River and its tributaries is in the nature of reconstruction, extension of lock guide walls, and revetment and dredging in connection with open-channel work.

I have recently submitted my report on the proposed Ohio-Great Lakes Canal in which I recommended construction of a waterway extending from the Ohio River through the Beaver-Mahoning and Grand River Valleys to Lake Erie, with minimum depth of 12 feet, and generally 250 feet wide, at an estimated cost to the United States of $207,257,000.

There have been no major changes made or recommended in the Mississippi River project above Baton Rouge. I have just submitted my report on the section from Baton Rouge to the passes in which I recommended increases in depth and width, including the establishment of a 40-foot depth at New Orleans.

Construction of the Tuscaloosa Dam on the Warrior River, which will replace three of the existing dams, will be completed by the end of 1939. Several studies of this waterway and proposed extensions are now under way, of which two are giving consideration to a connecting waterway to the Tennessee River. One route proposed is via the Tombigbee, the other by way of the Black Warrior. A third study covers the feasibility and advisability of replacing four of the existing locks and dams by a new high-lift structure near Demopolis.

Construction of a 15-foot channel in the Columbia River between Vancouver and Bonneville is under way and can be completed with available funds. The full authorized 27-foot depth can be dredged next year at a cost of approximately $2,000,000. The Bonneville Dam including the initial installation of two power units is practically complete. The present work consists largely of installation of four additional power units, with four more to be built as funds become available.

SACRAMENTO RIVER DEBRIS CONTROL

Under the project for Sacramento River Debris Control, the North Fork debris dam on the American River, authorized in 1935, is practically complete. Construction of the $4,000,000 Upper Narrows Dam on the Yuba River is in progress, and the Ruck-a-Chucky Dam will probably be started shortly.

GENERAL FLOOD CONTROL

The need of rapid construction of sound flood-control works was emphasized twice during the year by the occurrence of improbable events. In March an exceptionally heavy downpour over the headwaters of the steep flashy streams in Los Angeles County caused a devastating inundation. Thirty inches of rainfall were recorded at some points within the California storm area. It is rare in this country to record such a precipitation during a single storm and particularly rare to experience such a rate of fall when a storm covers such a great area. Then in September a freakish tropical hurricane swept through New England at a time when the rivers were already swollen. The deviation of the storm from the accustomed hurricane paths, the sudden acceleration of its travel as it passed the coast of Maryland, and the fury with which it struck inland at a latitude where it would be expected to be well spent, were all unlikely events. The disastrous effect was increased by the fact that rivers were at high stages and the resulting flood was second in magnitude in many instances only to that of March 1936.

More recently, high waters in the Ohio, Susquehanna, and other valleys have reminded their dwellers that the work of control is only started. We do not know when or where floods will strike again. We must continue unstintedly the work of protecting our cities and valleys from flood even in years when we do not have these recurrent reminders.

Work has been placed under way on 143 flood-control projects and 17 of these have been completed. Plans are ready or nearing completion for 79 more. I reported to Congress that $195,525,000 could profitably be expended on general flood-control works during the next year. In 1938 the expenditures of the Engineer Department for general flood control totaled $36,584,000 and for the fiscal year 1939 the sum of $75,001,000 was made available.

Under the Flood Control Act approved June 22, 1936, local interests were required to furnish all lands and easements and to pay for railroad, highway, and utility relocation, hold and save the United States free from damages, and maintain and operate all works after completion. The rapidity with which construction could be begun depended very largely on the promptness with which local interests met these requirements. The act approved June 28, 1938, relieved local interests of all costs in connection with reservoir projects and channel improvement or channel rectification projects, and has thus made it possible to start actual construction on these types of projects with a minimum delay.

LOWER MISSISSIPPI RIVER

Since many of you were present yesterday when I spoke of the works on the lower Mississippi River, I will not detail that work. In that area considerable levee work is being carried on in the St. Francis and White River Valleys. The Wappapello Dam on the St. Francis and the Sardis Dam in the Yazoo Basin are under construction, and work on the Morganza floodway and Wax Lake outlet is going forward.

In general, the flood-control program has been progressing satisfactorily and under present law the delays encountered have been fewer and less serious to the work than formerly. I repeat, however, that in spite of the splendid progress of the past years, we must consider the program as just started. Assuming ample appropriations are available, it will require several more years to complete the present authorized work.

RESEARCH

During the past year, more than ever, the research facilities of the Department have been of great value. The major portion of our experimental work in hydraulics and soils mechanics has been carried on at the waterways experiment station in Vicksburg. However, use has been made of hydraulic laboratories at several of the colleges and universities of the country, particularly in connection with design of flood-control structures. Soils research laboratories have been established at the sites of most projects where earth is a principal material of construction. The Department's concrete laboratory at West Point, N. Y., is becoming increasingly valuable.

This laboratory work serves a dual role. Its primary purpose is to serve as an aid to design and a help to perfection of plans so that the constructed works will perform their intended functions properly and yet be as economical as possible. The second role played is in the advancement of scientific knowledge. Nearly every hydraulic experiment adds something to the store of information on the action and characteristics of water and so helps advance the science of hydraulics. Similarly, the young science of soils mechanics is aided. The contributions to our general knowledge of materials of construction, other than soil, while perhaps no less important in themselves, attract less general attention because so much research in this field is carried on elsewhere by other organizations.

NATIONAL DEFENSE

Let us not overlook the defense aspects of the country's waterway program.

We cannot tell when we shall be engaged in armed conflict again. We do not know whether our efforts to preserve the Nation in the next war will be restricted to the continental limits of the country. But we do know that a sound program demands that we be ready to meet any eventuality. Whether or not the theater of operations includes our shores, the entire Nation will be engaged in the service of supply. And no supply system can function without proper communications.

The communications network will require properly equipped and well-distributed termini. This means inland and coastwise harbors with adequate depths and transfer and terminal facilities. If we were required to rely on a few termini only, our traffic would clog and all operations would be delayed. Should a few coastwise harbors fall into hostile hands, our defense would suffer greatly unless we had other satisfactory harbors.

Our internal networks of communications systems must be complete and independent yet interlocking. Railroads, highways, and waterways—each integral and supplementary. We saw in 1918 that available rolling stock of the railroads was wholly inadequate to meet our internal transportation requirements. All existing water carriers were pressed into service and additional ones were built.

We would be guilty of culpable neglect if we did not construct and protect our communications system in time of peace. Consider the unnecessary waste, delay, and setbacks we might suffer if we had to divert men, materials, and money from the urgent, immediate defense problem to protect or rehabilitate our railroads, highways, and manufacturing plants from flood disaster. Consider the needless loss we would encounter should it be necessary to divert a part of our energies to complete waterways we might have finished during time of peace. I can see an untold value to our defense in a well-developed waterway system adequately protected from flood danger. Let us bear in mind that a preparedness program is not limited to

the development of our armed forces and the procurement of necessary military equipment. It includes a development of our commerce and industry to enable mobilization of all our resources with a minimum of effort.

Today, as it has for more than a century past, the Corps of Engineers stands ready to undertake studies and construction projects wherever they may be desired, to the end of advancing proper development of waterways necessary to the existence and progress of our country. It has been a pleasure and a privilege for me to be with you today as a representative of that corps, of which I have been a member since 1903, and to report our present activities and program in the execution of those projects which you and the people you represent recognize as essential to your well-being.

I thank you for your attention and wish you a happy and successful meeting.

Why Direct Appeals to the Supreme Court of the United States Are Asked in Indian Authorization Acts

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1939

Mr. BURDICK. Mr. Speaker, there seems to be some confusion in the House with respect to the appeal in Indian cases. Many Members insist that the Indians do not need a clause in an authorization act permitting them to direct appeal to the Supreme Court of the United States in reviewing a case decided adversely in the Court of Claims. Many lawyers in this body insist that all the rights which Indians need and can secure can be preserved to them under a review by a writ of certiorari. In other words, there is no difference in effect between a direct appeal and a review of the case under a writ of certiorari. These advocates always stipulate that the attorneys, if they know what they are doing, can secure through this writ all that they can secure under an appeal. For the reason that this opinion is so widespread in the House, I desire to set forth the difference between these two methods of reaching the Supreme Court of the United States.

First. An appeal is a matter of right that cannot be denied, and when the petition properly sets forth the jurisdiction of the Supreme Court of the United States, and a proper question is presented, the review comes as a matter of right and cannot be denied.

Under a writ of certiorari the whole proceeding is not a matter of right at all but a matter within the sound discretion of the Supreme Court. They may or may not grant the writ, no matter what the petition presents. Going into the matter further, we find that in cases where the Court is apt to grant a writ of certiorari, some one of the following propositions must appear.

Rule No. 38, Supreme Court of the United States, section 5:

5. A review on writ of certiorari is not a matter of right but of sound judicial discretion and will be granted only where there are special and important reasons therefor. The following, while neither controlling nor fully measuring the Court's discretion, indicate the character of reasons which will be considered:

(a) Where a State court has decided a Federal question or substance not therefore determined by this Court or has decided it in a way probably not in accord with applicable decisions of this Court.

(b) Where a circuit court of appeals has rendered a decision in conflict with the decision of another circuit court of appeals on the same matter; or has decided an important question of local law in a way probably in conflict with applicable local decisions; or has decided an important question of general law in a way probably untenable or in conflict with the weight of authority; or has decided an important question of Federal law which has not been, but should be, settled by this court; or has decided a Federal question in a way probably in conflict with applicable decisions of this court; or has so far departed from the accepted and usual course of judicial proceedings, or so far sanctioned such a departure by a lower court, as to call for an exercise of this court's power of supervision.

(c) Where the United States Court of Appeals for the District of Columbia has decided a question of general importance; or a question of substance relating to the construction or application of the Constitution, or a treaty or statute, of the United States which has not been, but should be, settled by this court; or where that court has not given proper effect to an applicable decision of this court.

The language of that ruling does not say that if any or all of the precedents are present that the writ will be granted. It says, "The following, while neither controlling nor fully measuring the court's discretion, indicates the character of the reasons which will be considered." There you have it. There is absolutely no rule which can be followed in obtaining a writ because, no matter how well the petition sets forth the various reasons which the court may consider, it does not have to consider any of them.

Let me turn to the history of Indian cases that have been headed for the Supreme Court since 1918. It is open and obvious that the method of reaching the Court by the writ of certiorari process is one that is almost certain from percentages of the Court's action to meet with failure. I submit the following table in Indian cases:

Indian cases in the Court of Claims in which appeals were taken to the Supreme Court from May 22, 1918, to Mar. 15, 1939

Docket No.	Name	Decision of Court of Claims (dismissed, judgment for plaintiff, or judgment for defendant)	Type of appeal to Supreme Court	Decision of Supreme Court
29821	Winton *v.* Amos et al.; services Mississippi Choctaws.	Dismissed	Appeal	Affirmed
31002	Omaha Indians	Judgment for plaintiff $117,735.31	do	Modified and affirmed.
33731	Sisseton and Wahpeton Tribes of Indians	Dismissed	do	Affirmed.
H-121	Okanogan Indians et al	do	Certiorari	Do.
B-38	Osage Indians	do	Appeal	Dismissed.
K-335	Chickasaw Nation	do	Certiorari	Denied.
F-205	The Creek Nation	Judgment for plaintiff $86,823.19	do	Reversed and remanded.
		On remand dismissed	do	Do.
		On remand judgment for plaintiff $296,011.42, with interest on $136,357.25 (on mandate).		
J-31	The Assiniboines	Dismissed	do	Denied.
			Appeal	Dismissed.
F-64	The Kansas or Kaw Tribe of Indians	do	Certiorari	Denied.
E-346	Klamath and Modoc Indians	do	do	Affirmed.
	Reinstated under special act of Congress of May 15, 1936, and	Judgment for plaintiff $5,313,347.32, with interest at 5 percent from June 7, 1937, until paid on $2,871,250.	Appeal	Do.
H-76	The Chippewa Indians	Dismissed	Certiorari	Denied.
			Appeal	Affirmed.
H-37	Choctaw Nation	do	Certiorari	Denied.
F-181	The Choctaw and Chickasaw Nations	do	do	Do.
42077	The Eastern or Emigrant Cherokees	do	do	Do.
42081	Eastern or Emigrant Cherokees	do	do	Do.
H-219	Shoshone Indians	Judgment for plaintiff $793,821.49	do	Reversed and remanded.
		On remand judgment for plaintiff $4,408,444.23 with interest (on mandate).	do	Affirmed.
L-51	Seminole Nation	Judgment for plaintiff $1,317,087.27	do	Reversed and remanded.
		On remand judgment for plaintiff $10,099.25 (on mandate).		
J-231	Choctaw Nation	Dismissed	do	Denied.
C-531(3)	The Sioux Indians et al	do	do	Do.
C-531(1)	do	do	do	Do.
H-192	Chippewa Indians	do	Appeal	Affirmed.
C-531(5)	The Sioux Indians et al	do	Certiorari	Denied.
K-345	Coos (or Kowes) Bay Indians	do	do	Pending
H-155	Chippewa Indians	do	Appeal	Do.
K-376	The Chickasaw Nation	do	Certiorari	Do.

When we add to all of these considerations the fact that in all of these Indian cases the Government is the guardian of the Indian and exercises supervision over his property and his independent existence, and the Indians are, through no action of their own, the subservient and helpless wards of this system of protection, why should the Government send the Indians out of this Congress armed with a right to sue where there is in fact no opportunity of appeal, at least a most slim chance of appeal? Is it because we are afraid to trust the facts in the highest court of this land? Are we afraid of our stewardship? Are we fearful that our guardianship has been a most careless, negligent, wasteful, and wholly unauthorized course of conduct that has left the helpless Indians victims of a system that they had no voice in creating?

If this Congress is disposed now, after years of improper conduct on our part toward the first citizens of the United States, to give the Indians their day in court and have our stewardship scrutinized, under the adopted doctrine of strict accountability, as that doctrine obtains in our general court where the ordinary citizen is involved, we will write into every Indian authorization act a provision for appeal. To do less is to avoid our own accountability to those whom we have undertaken to defend and protect.

Theophilus Eaton, First Citizen of New Haven

EXTENSION OF REMARKS

OF

HON. JAMES A. SHANLEY

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 23, 1939

ADDRESS BY LEONARD WOODS LABAREE AT NEW HAVEN, CONN., NOVEMBER 20, 1938

Mr. SHANLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by Leonard Woods Labaree, associate professor of history and fellow of Davenport College, Yale University, at the unveiling of the memorial cenotaph in memory of Theophilus Eaton, founder and first Governor of the Colony of New Haven, in Center Church, New Haven, Conn., November 20, 1938:

"Take you wise men and understanding and known among your tribes, and I will make them rulers over you." (Deut. 1: 13.)

"Moreover, thou shalt provide out of all the people able men, such as fear God, men of truth, hating covetousness, and place such over them to be rulers of thousands, and rulers of hundreds, rulers of fifties, and rulers of tens." (Exod. 18: 21.)

These two texts from the Bible were read by John Davenport, minister of this church, at the first meeting in New Haven for the election of civil officers in 1639, in order to show, as the record has it, how "a magistrate according to God's mind is described. And Mr. Theophilus Eaton," the account continues, "a member of this church, a man well known and approved by the court as fitly qualified for that office according to the said description, was by full consent chosen magistrate for the term of one whole year. And Mr. Davenport gave him his charge grounded upon Deuteronomy 1: 16 and 17," which read as follows: "And I charged your judges at that time, saying, 'Hear the causes between your brethren, and judge righteously between every man and his brother, and the stranger that is with him. Ye shall not respect persons in judgment; but ye shall hear the small as well as the great; ye shall not be afraid of the face of man; for the judgment is God's, and the cause that is too hard for you, bring it unto me, and I will hear it.'"

Such is the official account of the election and installation of Theophilus Eaton as first magistrate of New Haven, an office which expanded with the growth of the jurisdiction into that of Governor of the New Haven Colony.

The man thus chosen was born in 1590 at Stony Stratford, Oxfordshire, the son of Richard Eaton, an Anglican clergyman. Soon afterward his father became rector of Holy Trinity Church in Coventry, and here Theophilus spent his childhood. When the boy was about 7 years old his father was called upon to administer baptism to the infant son of the mayor of Coventry, Henry Davenport. To anyone with the gift of prophecy, the solemn moment when the two fathers, minister and magistrate, confronted one another at the baptismal fount would also have seemed unusually dramatic. For the two sons not only were destined to be intimately associated in later life, but, reversing the religious and secular positions of their fathers, they were to become the cofounders and leaders of a new community. The son of the magistrate, who was this day given the name of John, was to become the pastor of a little band of Christians establishing their church and homes in the wilderness 3,000 miles away. The minister's son, Theophilus, was to become their secular leader, and for almost 20 years was to occupy the position of chief magistrate among them.

Eaton's parents hoped that he would follow his father's footsteps into the church, but in spite of a deeply religious devotion, his preference was for a career in business. Accordingly, he was sent to London as a youth, where he was apprenticed to a merchant. Upon completing his term of service and training, he became himself a merchant and a freeman of the city, engaging in the trade to the Baltic region. In the selling of cloth and the buying of lumber and naval stores—pitch, tar, turpentine, and hemp, which were the chief commodities of this commerce—Eaton soon became so much of a leader that he was made deputy governor—or, as we should say today, vice president—of the Eastland Co., the association of merchants which controlled that trade. For several years he traveled extensively in the Scandinavian countries expanding the company's business. He served for a time as agent of the English Crown at the court of the King of Denmark, and later acted as commercial agent for the Danish King in England. Eaton's mercantile activities were not without their material reward, and, as we are told, he came to be recognized as "a merchant of great credit and fashion in the city of London."

But his attention to business during these years in no way interfered with a deep and sincere interest in the religious problems of the time. About 1630 he became a parishioner of St. Stephen's Church, Coleman Street, whose eloquent young minister was his childhood neighbor, John Davenport. For some years Davenport had been coming more and more under the suspicion of the ecclesiastical authorities as a Puritan and it seems certain that the views of the minister were not far in advance of those held by several of his leading parishioners. In any case Eaton and Davenport, together with Sir Richard Saltonstall, Mathew Cradock, and Samuel Aldersley, all prominent members of St. Stephen's parish, were among the group of merchants and others who in 1628 formed the New England Co., later reorganized as the Massachusetts Bay Co., and secured a grant of land in America. The purpose of the organizers was perhaps largely commercial at the start, but the idea of providing a refuge across the sea for Puritans became more and more a factor in their calculations. When the decision was reached to transfer the company with its charter to the New World under the leadership of John Winthrop; Eaton and Davenport remained behind, but Eaton was appointed one of five men to manage the financial affairs of the company in England.

By 1633 Davenport realized the hopelessness of reforming the English Church from within and, upon the appointment of William Laud as Archbishop of Canterbury, fled to Holland with the help of some of his parishioners. There is no direct evidence of correspondence between Eaton and Davenport during the years of the minister's exile on the Continent, but that the two men kept in touch is probable. Eaton was not without his own troubles during the early 1630's. The affairs of the Eastland Co. were threatened by the course of the Thirty Years' War, necessitating two trips on his part to the Continent, in 1631 and 1633. Two years later he was summoned before the Court of King's Bench as a charter member of the Massachusetts Bay Co. to answer charges brought against it. When he disclaimed any responsibility for the proceedings of the colony in America, he was forbidden to act in any way under the authority of the charter. Religious difficulties were brought closer home to him when a younger brother, a clergyman, was imprisoned as a schismatic. Theophilus succeeded in bailing him out and the minister went into hiding. In the eyes of Puritans, clergymen, and laymen alike, matters were going from bad to worse, and by the time Davenport returned to England in disguise in 1636, Eaton was ready to lead another party of emigrants to the New World with Davenport as their spiritual guide.

It is not necessary here to repeat the story of their trials and tribulations in reaching Boston in June 1637. It is enough to recall the welcome Massachusetts gave the band of prospective settlers, a welcome made unusually warm, partly because of the quality of the group as a whole and partly because of the eminence of its two leaders—Davenport recognized as one of the most distinguished of Puritan divines; Eaton as the prominent London merchant, the man of substance and standing, who would bring fresh capital to the colony's material resources and deep wisdom to its civic councils. Nor need we dwell upon the reasons why these two and their followers declined to stay in Massachusetts but decided to strike out for themselves. At this point Eaton showed himself clearly as the man of action. In investigating possible sites for their new plantation, in heading the expedition which explored the shores of Long Island Sound, and in choosing finally the harbor of the Quinnipiac, to which be brought his company in April 1638, his leadership was clear. In all the many plans and decisions which had to be made before the independent settlement could become a reality, his was the prevailing judgment, his the authoritative voice.

It was a happy circumstance that in every question concerning the form and organization of the infant colony, and particularly in the matter of the relation of church and State, Eaton and Davenport were in complete agreement. From the moment of the first landing at Quinnipiac, and even before, until the two men were

parted by death nearly 20 years later, there is no evidence of serious disagreement between their conceptions of the ideal community organized and managed according to the word of God. Cotton Mather has called them "the Moses and Aaron of the Christian colony" here erected, and the comparison in cooperative leadership is not without foundation.

Unquestionably, before the minister presented his famous series of queries at the meeting of the planters on June 4, 1639, laying the groundwork for church and civil government, he had gone over the whole matter thoroughly with his colleague. It is specially significant that when discussion at the meeting came to the critical fifth query—whether the right to vote should be restricted to church members only—Eaton was the first to speak in favor and moved the question. And when one man, believed to have been his own brother Samuel Eaton, spoke in dissent, it was Theophilus who took up the argument in support of the limitation. In all the steps which followed leading to the final establishment of the church and government Eaton took the foremost part. His name stands first among the 11 men nominated for the "foundation work of the church", he heads the list of the "seven pillars" who actually organized this church on August 22, 1639; and when on the following October 25, the church members met as a court to elect civil officers and begin the formal government of the community, Theophilus Eaton was chosen, for the first of 19 successive times, chief magistrate of the settlement.

In reviewing the years of Eaton's governorship until his death in 1658, in order to form an estimate of the men, we are confronted with one serious difficulty. Unlike William Bradford and John Winthrop, the civil leaders of Plymouth and of Massachusetts Bay, he left no first-hand account of his colony. From Bradford's and Winthrop's histories it is possible to gain insight into the real natures of the men themselves and to judge of their attitudes and feelings on most of the important events in their respective colonies. But from Eaton we have no history of New Haven, no journal, not even a body of correspondence upon which to base our estimate. He was essentially a man of affairs, one who preferred posterity to know him through his deeds rather than through his written words. We are forced, then, to draw our conclusions largely from the official records, formal as they are, and from the accounts of other seventeenth century writers, using such historical imagination as we may possess to read between the lines into the character of the man himself.

In his capacity as a public officer the evidence shows that he fully justified the confidence placed in him at his first election. Cotton Mather emphasizes "the discretion, the gravity, the equity with which he * * * managed all their public affairs." This is borne out in his handling of relations with the Dutch in New Netherland. In this connection his position was particularly difficult. Both colonies had commercial ambitions which were in bitter rivalry, and the Hollanders were far stronger than their English neighbors. New Haven was bitterly disappointed when she failed to win the vigorous support against them of Massachusetts, the most powerful member of the New England Confederation. Yet Eaton maintained a policy of dignified protest at the insulting attitude of the Dutch director, on the one hand restraining his fellow colonists from rash acts of retaliation and on the other quietly encouraging them in their efforts to gain a commercial foothold in the contested region of the Delaware.

As magistrate and lawgiver, we might by twentieth-century standards call him harsh and narrow, but by the standards of seventeen-century Puritanism—that is, of the society in which he actually lived—he was very nearly all a ruler ought to be. Again Cotton Mather reports that "in all his dispensations of justice he was a mirror for the most imitable impartiality, * * * being awfully sensible of the obligations which the oath of a judge lays upon him." Today we criticize the code of laws he drew up for the colony in 1655 as overrigorous, leaning too heavily upon Mosaic authority as a source instead of upon the English common law. Actually the code, especially the section on capital offenses, was largely copied from the Massachusetts laws of 1648 and was in thorough harmony with the Puritan ideas of the times. Eaton has been sharply called to task for abandoning the practice of trial by jury. One historian has explained the omission on the ground of practicality, pointing out that with the relatively small numbers of male church members in the various towns of the jurisdiction it would often have been impossible to draft a sufficient panel of disinterested but properly qualified jurors to hear the cases. Another interesting suggestion comes with the authority of that eminent jurist and historian, the late Simeon Baldwin who believed that the New Haven code called for trial by a bench of magistrates because of Eaton's "preference for the methods of trial with which he had become familiar during his life [on the Continent of] Europe." In either case it is worthy of remark that New Haven's first Governor was in fact anticipating a procedure favored by many thoughtful lawyers of today and actually permitted at the option of the accused in the present Connecticut code.

In the sphere of economic matters Eaton had an unusual breadth of outlook and a constructive imagination bordering on the visionary. In his earlier commercial career he had been no mere provincial Englishman. He belonged to that group of aggressive merchants of Elizabethan and early Stuart times who thought in terms of overseas enterprise and who through their vigorous efforts built the foundations of England's great foreign trade. This broader outlook remained with him when with his merchant associates he came to lay the economic basis for a new settlement in America. New Haven—significantly named—was not to be a mere farming village in the wilderness as were so many of the other New England towns. In Eaton's mind it was to be the nucleus of a commercial development beyond anything which Englishmen had yet achieved in America, a port which tapping the resources of a virgin region, would send its cargoes to wide-flung markets and draw to itself in return a generous share of the world's treasures. Nor was this all. The colony might, under Providence, expand territorially far beyond the borders of the little town itself. The settlements on Long Island fostered by New Haven, the repeated efforts to plant a trading post on Delaware Bay, and the appeal to Cromwell for military aid suggest that Eaton and his associates hoped to drive the Dutch from New Netherland and some day to see the New Haven jurisdiction covering the whole area from the Connecticut River to the Delaware. Had such a dream been fulfilled, His Excellency Governor Cross might be today chief magistrate of a State of New New Haven, which would include not only the southwestern part of the present Connecticut but all of Long Island, at least southern New York, and all New Jersey, with perhaps Delaware and a little piece of Pennsylvania thrown in—in short, exactly the area which is now the richest and most populous part of the United States. That such an expansion of the New Haven colony was thought of at one time may seem to us fantastic, but it is no less a testimony to the wide horizons of its founder.

The collapse of the plan was doubtless inevitable, granting the circumstances surrounding the settlement. With all their comparative wealth, the merchants of New Haven were hardly supplied with enough liquid capital to launch successfully an extensive commercial enterprise. Furthermore, New Haven, for all the attractiveness of the harbor which so appealed to Eaton on first inspection, lacked one great requirement of a thriving commercial port—a rich and easily accessible back country. To the northward lay only a forest wilderness inhabited by unenterprising and poorly organized natives. And even to this region there was no easy access, no great water highway remotely comparable to the Hudson and Mohawk Rivers, which made possible the rich fur trade between the Iroquois country and the Dutch traders of Fort Orange and New Amsterdam. When the New Haveners sought to tap the resources of that other great inland waterway, the Delaware, they found their Dutch rivals not only too strong for them on the spot but also barring their line of communication through the western end of Long Island Sound. All this, we may say, might have been anticipated by Eaton and his associates in planning their commercial colony and in choosing the site for settlement. With our 300 years of hindsight it is easy for us to charge them with a certain lack of practicality. But the fact remains that only through the exercise of such imagination as theirs has the American Continent been settled at all. Only by repeated experiments like this, with failures as well as with successes, has the development of this Nation been made possible.

The failure of Eaton's commercial schemes suggests another quality of the man which justly entitled him to his position of leadership: his courage and persistence in the face of difficulties and sorrows. It was no easy thing for him, on seeing the collapse of his plans and the dwindling of his estate, to turn from trade, which had been his whole business life before, to agriculture. With the Puritans now in power at home, he might have returned to England, as a few of his neighbors did, but rather than surrender to his disappointment, and thereby discourage all the other settlers, he set the example of constancy by staying in the colony and helping as a farmer to establish a surer basis for its economic life.

Eaton faced other tribulations, personal as well as public, with equal courage. Almost upon his arrival in America he developed a physical ailment which called for repeated surgical treatment. The only surgeon available was a bungler who confessed that he did not know how to effect a cure. Yet Eaton encouraged the man to use the knife as best he could—without benefit of anesthetic—by the words, "God calls you to do and me to suffer." With unusual fortitude even for that day of stern repression, he later met the death of his ablest and most promising son. There were in his home life burdens even more difficult to bear. And yet, with all the accumulated sorrows and misfortunes which beset him, there is no record of complaint, no sign of regret for the easier life he had given up in England. Indeed, the testimony on this point is clear. Gov. Edward Hopkins, of Connecticut, a relative, reports with admiration having heard Eaton say "that he never had a repenting or a repining thought about his coming to New England."

The source of this courageous attitude was his deep and abiding Christian faith. His was no lip service to the religion he professed. It was his religious ideals which brought him to America and sustained him here. His ambitious plans for commercial activity in the New World notwithstanding, he never would have surrendered his assured position as an affluent London merchant, high in the membership of one of England's great trading companies, primarily for the sake of possible prosperity in a new environment. Those who, ignoring the realm of the spirit, seek to explain all human history in terms of economic motives, will find small comfort in the example of Theophilus Eaton. The kind of colony he founded, the regard in which he was held by his most sincerely religious neighbors, and the character of his private life all bear testimony to the reality and the power of his Christian faith and to the personal philosophy which sprang from it. "Some count it a great matter to die well," he was wont to say, "but I am sure 'tis a great matter to live well. All our care should be while we have our life to use it well, and so when death puts an end to that it will put an end to all our cares."

Such was the man in whose memory we are gathered here today, the first citizen of New Haven, the man to whom this community is indebted for so much of the courage and idealism that marked its beginnings. As we bring the observance of the tercentenary year to a close with the unveiling of this monument to the founder we can sum up his character and the human qualities of his person no better than by repeating the words in which a contemporary once described him. "This man had in him great gifts," wrote William Hubbard, "and as many excellencies as are usually found in any one man. He had an excellent princely face and port, commanding respect from all others; he was a good scholar, a traveler, a great reader, of an exceedingly steady and even spirit, not easily moved to passion, and standing unshaken in his principles, when once fixed upon; of a profound judgment, full of majesty and authority in his judicatures, so that it was a vain thing to offer to brave him out; and yet, in his ordinary conversation, and among friends, of such pleasantness of behavior, and such felicity and fecundity of harmless wit, as hardly can be paralleled; but, above all, he was seasoned with religion, close in closet duties, solemn and substantial in family worship, a diligent and constant attender upon all public ordinances, taking notes of the sermons he heard, exactly, and improving them accordingly; in short, approving himself, in the whole course of his life, in faithfulness, wisdom, and inoffensiveness before God and man."

Flood Control and States' Rights

EXTENSION OF REMARKS

OF

HON. WILLIAM M. WHITTINGTON

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 23, 1939

ADDRESS BY HON. WILLIAM M. WHITTINGTON, OF MISSISSIPPI, BEFORE THE NATIONAL RIVERS AND HARBORS CONGRESS

Mr. WHITTINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I delivered on this day, Thursday, March 23, 1939, at the Thirty-fourth Annual Convention of the National Rivers and Harbors Congress, Washington, D. C., to wit:

The wise use of land and water is essential to the highest development of any people. Rivers are the friends and not the enemies of man.

Since the last annual meeting of the National Rivers and Harbors Congress, progress has been made in national flood control.

The House Flood Control Committee conducted hearings from March 30 to April 19, 1938, and they are entitled "Comprehensive Flood Control Plans."

All advocates of flood control in the country submitting requests were heard. The Chief of Engineers, division engineers, and district engineers appeared before the committee. These hearings cover substantially all of the drainage basins of the Nation. They constitute complete information respecting flood control in the principal valleys of the United States.

FLOOD CONTROL ACT OF 1938

The Flood Control Act of June 28, 1938, is the most comprehensive legislation ever passed by this or any other country to promote flood control. It authorizes the expenditure, over a period of 5 years, of $375,000,000 for the protection of the lives and property of the people of the United States.

More than 10 years ago Congress, anticipating the public demand for improvements for flood control and allied purposes, authorized comprehensive surveys for the purpose of initiating actual improvements, with tangible results. Great numbers of surveys were completed by the Corps of Engineers and Congress was supplied with the information necessary for sound legislation

The act of June 22, 1936, effected a beginning to accomplish the national purpose, but it did not fully meet the demand. Additional legislation and a largely increased program of construction for flood control were demanded by the people of the country.

In recent years we have heard a good deal about planning. There is a proper place for planning, but much proposed planning respecting flood control has been all theoretical and has been lacking in practical results. The issues have been confused; the need has been legislation for the actual initiation of projects.

The reports of the Corps of Engineers cover practically every drainage basin of importance in the United States. The smaller tributaries are covered in sufficient detail to formulate many more projects than can be financed at the present time. Congress and the country demanded that flood-control works be initiated in all parts of the country.

The act of 1936 established a national policy for flood control and this policy was reaffirmed in the act of 1938. Flood-control improvements on navigable rivers and their tributaries, including the watersheds thereof, for flood-control purposes, were authorized wherever the benefits are in excess of the estimated costs, and where the lives and social security of the people are otherwise adversely affected.

The act of 1938 continues and enlarges the policy for the investigations of watersheds and measures of run-off and waterflow retardation, and soil erosion prevention on watersheds, under the jurisdiction of the Department of Agriculture.

The act covers the drainage basins comprehensively and approves general comprehensive plans for each of the drainage basins considered, but it authorizes only enough money to initiate the more important projects in such drainage basins. The works authorized will fit into the final comprehensive plan. The necessity of delaying the urgent improvements has been avoided. Practical results can be accomplished in no other way. All railroads started as single-track lines, but double-tracking has been done when the funds were available.

Time has vindicated the wisdom of the policy declared for the first time in the act of 1936. Soil conservation, reforestation, measures of run-off and waterflow retardation were placed under the jurisdiction of the Secretary of Agriculture. Flood-control works proper were placed under the Corps of Engineers. The policy is coordinated; the program is national. There has been full cooperation between the Department of Agriculture and the War Department. The act of 1938 enlarges and expands the policy and the program adopted in 1936. No new agencies have been established, but existing agencies, familiar with the problems involved, that have devoted years to studies and investigations, as well as the construction of works, are utilized.

The problem of flood control is attacked on all fronts. Flood walls and river walls are authorized for priority and emergency protection. Reservoirs on the tributaries are authorized to detain the waters at their source. Wherever power can be developed in reservoirs, provision is made for such power. All reservoirs in the act of 1936 and in the act of 1938 provide primarily for flood control. Only two of the dams in the act of 1938 provide for the development of power. These are, Dennison on the Red River, which is primarily for flood control but, in accordance with the policy, where power and flood control can be combined, provision is made for power at the Dennison Dam along the Red River. The other multiple reservoir which provides for both flood control and power is on the New River in West Virginia, and is known as the Bluestone Reservoir.

The Congress and the country believed that we had had enough of theoretical planning. There was universal sentiment that it was time for action. Both the Congress and the country are agreed that the planning and the execution of flood-control projects should be under the jurisdiction of the Corps of Engineers of the United States Army. The act of 1938 reaffirms and declares such to be the policy of the United States.

LOCAL CONTRIBUTION

The principle of local contribution is recognized and reaffirmed, but such local contribution is confined to local protective works, consisting primarily of levees and flood walls. The acts of 1936 and 1938, as well as the Mississippi flood-control acts, all provide that the local interests must provide the rights-of-way for levees and flood walls.

RESERVOIRS

It has been generally conceded that additional reservoirs for flood control, except in a few areas, would not be constructed unless local contribution was abolished. Reservoirs in one county benefit lands in another. Reservoirs in one State protect another State. Not more than five or six reservoirs authorized in the act of 1936 have been placed under construction. The two or three reservoirs under construction above the city of Pittsburgh are the only reservoirs that have been begun where the costs of rights-of-way are considerable. The city of Pittsburgh is one of the wealthiest in the Nation. In other areas where reservoirs are under construction the costs of rights-of-way are negligible. It has been evident that reservoirs for flood control would not be constructed unless the cost of these reservoirs is borne by the Federal Government. The act of 1938, therefore, for the first time provides that reservoirs for flood control shall be constructed at the expense of the Federal Government. Authorizations are made for construction in the several drainage basins. The reservoirs will be constructed in the order of their priority, as selected by the Chief of Engineers. Authorizations for one drainage basin cannot be transferred to another. Many reservoirs are eligible. The reservoirs will, therefore, be first constructed where the local interests cooperate most generally. It will be a long time before reservoirs are constructed in any area where there is not local cooperation. The Federal Government has constructed locks and dams for navigation, but generally the local interests have cooperated in furnishing rights-of-way.

The act of 1938 as it passed the House provided that the Federal Government was to pay 70 percent of the costs of lands, easements, and rights-of-way for reservoirs and dams for flood control. As finally passed it provides for the payment of 100 percent from the Federal Treasury. If the argument for the Federal Government paying the greater part of the costs of reservoirs is sound, the argument for paying all of the costs is much more sound.

For my part I have advocated for years that if reservoirs are to be utilized in solving the problem of national flood control, they would never be generally constructed unless constructed at Federal cost and by the Federal Government.

HEARINGS

It has been stated that there have been no hearings on dams and reservoirs at the cost of the Federal Government. For more than 10 years and ever since the great flood of 1927 along the lower Mississippi River, at all hearings on flood-control projects, including those conducted during the years 1937 and 1938, advocates of national flood control at national expense have appeared before the Food Control Committee. For 10 years and during the consideration of every flood-control bill, champions from various sections of the United States have appeared not only in behalf of dams and reservoirs, but for local protective works at national expense. During the hearings on the flood-control bill of 1938 and previously there were advocates including representatives from New England and Oklahoma who appeared and advocated dams and reservoirs at the expense of the Government.

Sufficient time has elapsed since the passage of the act of 1936 for Congress and the country to know definitely that unless the Federal Government assumes substantially all costs of dams and reservoirs they will not be constructed for flood control.

There is not much difference between 70 percent and 100 percent, particularly when the 100 percent is better safeguarded for the Federal Treasury than the 70 percent.

HYDROELECTRIC POWER

Under the act of 1936, pen stocks may be installed in any dam approved by the Secretary of War upon the recommendation of the Chief of Engineers. The act of 1938 goes a step further. The Federal Power Commission represents the Government in its power policies. The Commission will have an opportunity to examine all dam and reservoir sites. The act provides that pen stocks shall be installed when approved by the Secretary of War upon the recommendation of the Chief of Engineers and the Federal Power Commission. Substantially all of the reservoirs are primarily flood-control reservoirs. It should always be remembered and never forgotten that the reservoirs to be constructed are selected by the Chief of Engineers.

There should be no conflict between the Federal Power Commission and the Chief of Engineers. The provision with respect to pen stocks is fair. Inasmuch as the Chief of Engineers selects the projects, he should have a voice as to the construction and as to the installation of pen stocks.

There should be no apprehension with respect to the Federal Government engaging in power development as a result of the 100-percent cost of dams and reservoirs, because no power can be developed until Congress passes additional legislation. The act makes no provision for the generation of power. If power is to be developed at any dam authorized in the act, except at Dennison and Bluestone, it would be necessary for the plans to be changed and to be approved by Congress. There is no provision anywhere in the act that provides for superseding any existing State law with respect to the use or appropriation of waters.

WORKS AUTHORIZED

The act provides for flood-control works in the Connecticut River Basin; along the Hudson and Mohawk Rivers; in the Ohio River Basin; in the Upper Mississippi River Basin; in the Missouri River Basin; in the White River Basin; in the Arkansas River Basin; in the Red River Basin; in the Santa Anna River Basin; in the Willamette River Basin, and along the Spokane River and tributaries.

COOPERATION WITH OTHER ORGANIZATIONS

The bill authorized the Secretary of War and the Secretary of Agriculture to cooperate with all organizations and to utilize the services of all Federal, State, and other public agencies to carry out the provisions of the act.

EXAMINATIONS AND SURVEYS

Additional examinations and surveys are authorized by the Secretary of War and Secretary of Agriculture. Run-off and water flow retardation and soil erosion prevention are provided for.

WEATHER BUREAU SERVICE

Not to exceed $375,000 per annum is authorized to be appropriated for flood forecasts, flood warnings, and services by the Weather Bureau for furnishing suitable information on precipitation. Many lives and much property can be saved by adequate warnings and forecasts by radio, telephone, and telegraph.

AUTHORIZATIONS

The act authorizes appropriations, but authorizations are not enough. The immediate task is to secure the appropriations authorized. The Budget has recommended $110,000,000 for works under the acts of 1936 and 1938. These two acts contemplate the expenditure of at least $140,000,000 annually. The passage of authorizations should be followed by appropriations. Authorizations are not self-executing. It is for the Senators and Representatives to see that appropriations are made to provide for the construction of the projects authorized. The job immediately ahead in national flood control is to secure the appropriations authorized for the initiation of imperatively needed projects in all parts of the country.

STATES' RIGHTS

The doctrine of States' rights is often used as a cloak to cover up purposes that would otherwise command but little respect. The use of the term with regard to the act of 1938 is running true to form. Much hollow bombast surrounds the alleged invasion of States' rights. It is time for clear thinking; it is time for accurate statements; lives are at stake; there is no time for quibbling; there is no occasion for politics. Flood control is demanded by all political parties; the issue is nonpartisan. No question of States' rights should be injected unless States' rights are really involved. The issue, when injected, should be sound.

It has been alleged that the power to acquire land and rights-of-way for reservoirs is an invasion of States' rights. The spokesman for States' rights is Gov. George D. Aiken, of Vermont. It has been stated that the power to condemn without the consent of the State is an invasion of States' rights.

There is a State sovereignty, but there is also a national sovereignty. If flood control along navigable rivers is a national problem, to be solved by the Federal Government, it must follow as the night the day that the Federal Government is sovereign in the solution of the problem. It is unthinkable that utility companies in Vermont and Pennsylvania have the power of eminent domain to build dams and that power be denied to the United States in the exercise of its Federal function of flood control.

There is nothing revolutionary about the power to acquire property, either by condemnation or by purchase, without the consent of the States. The power to condemn is an inherent part of the sovereignty of any government—National, State, or local. The Federal Government has the power to condemn. It has been decided that property may be acquired for Federal functions without the consent of the States. Exclusive jurisdiction may not be acquired unless the State consents, but all jurisdiction that is necessary for the Federal function can be acquired without the consent of the State. The Government can acquire all of the right, title, and interest in and jurisdiction over property within the State without its consent that are reasonably necessary to build and maintain dams for purposes of flood control. The question has been decided by the Supreme Court of the United States.

It is to be noted, however, that no agency of the Federal Government is empowered to develop hydroelectric energy at any of the reservoirs provided for in the act of 1938, and that further legislation would be required to authorize such development.

Again, where a flood-control project is constructed under the act of 1938, under existing law no governmental agency can develop hydroelectric energy there without further legislation of Congress; and it is to be further noted that as the law now stands, States and municipalities would be given preference as licensees to develop power at such flood-control projects. The right, therefore, of Vermont and of the municipalities of Vermont in the event hydroelectric energy should be developed in the future is expressly protected.

There is nothing new about the power of eminent domain in the Flood Control Act of 1938. The War Department has possessed such power with respect to river and harbor projects for more than 50 years. It has the power to condemn for navigation dams without the consent of the States. As a part of its sovereignty it is essential that the Federal Government have the power of eminent domain.

The people only delegated to the Congress the power that was not reserved in the States. If Congress has the power to pass flood-control legislation, it must have the inherent power to construct the works. If the Federal Government is to pay the entire costs of the reservoirs, the Federal Government should have the power to protect the Federal Treasury by condemning in the event excessive damages are demanded.

But it is said that title to reservoirs in the Federal Government is an invasion of States' rights. The title to the Tygart Dam in Pennsylvania and West Virginia is in the Federal Government; the title to the Parker Dam, the Grand Coulee Dam, the Bonneville Dam, the Fort Peck Dam, and all of the dams in the Tennessee Valley is in the United States. All of the projects mentioned provide for title in the Federal Government without the consent of the States. There is nothing novel in having title vested in the Government. All public improvements made at the sole cost of the Government provide, as I recall, that title shall be vested in the Federal Government.

The title to Farm Security and Farm Tenant projects is in the United States. The title to forests and submarginal lands is in the Federal Government. Under the Reclamation Act, the title to reservoirs for reclamation is in the Federal Government. The act was passed more than 35 years ago, and there have been constructed, as I am advised, by the Bureau of Reclamation, some 80 storage reservoirs for reclamation, while 35 are now in process of construction. The title to every one of these reservoirs is in the United States of America.

Congress has passed legislation to construct reservoirs for national flood control. The localities in which the reservoirs are to be constructed will not pay the costs of the rights-of-way. The State itself will not furnish the rights-of-way if the protection is for another State. The program, therefore, without the power to condemn in the Federal Government would be thwarted. Cities below the dam, in another State, would be left to the fury of the floods without the power in the Federal Government to condemn for the construction of reservoirs in another State. The issue is not States' rights but the issue is whether States prefer floods to reservoirs.

PURCHASE AND NOT CONDEMNATION THE POLICY

State compacts are no longer necessary under the terms of the act of 1933, as the Federal Government is underwriting the entire costs of reservoirs for flood control. While the Federal Government must have the inherent power to condemn if the Federal Government is to construct, it has been the policy of the Federal Government to purchase and not condemn. Ordinarily the Federal Government will not construct public works unless desired by local interests. It has been the universal policy

of the Corps of Engineers in river and harbor and flood-control works to cooperate with the States and with the local interests. It has been their policy to do no work where the local people oppose such work.

REIMBURSEMENT

In Farm Security projects, in forestry and reforestation areas, and in other Federal projects, it has been the policy of the Federal Government to compensate the local taxing units for lands taken from the tax rolls where the title is in the Federal Government. I advocate the extension of such a policy to lands acquired by the Federal Government for the construction of reservoirs. These lands may be leased as they will not be overflowed every year, and it is my view that a part of the proceeds from the income of the lands in reservoir sites should be paid to the local taxing units to compensate them for lands that are required for reservoir areas.

Reservoirs mean the taking of lands in one area for the benefit of lands in another. Adequate reimbursement should be made for the loss of local taxes.

INTERNAL IMPROVEMENTS

I advocate public improvements to relieve unemployment. I favor works that are beneficial. We are still battling with the problem of unemployment. I believe that one of the best ways to solve the problem is to provide for sound and permanent public works. The public knows the enormous loss of life and property from recent floods. The country has been sold on flood protection. I know of no more satisfactory or permanent works than flood-control improvements.

I stand for public works that are permanent and enduring. I stand for public works that will benefit humanity.

BUILDERS, NOT DESTROYERS

We hear much of wars and rumors of war. We hear much of conquest and of persecution. War always destroys; peace always builds. The builder renders a greater service to humanity than the warrior or his legions.

The most constructive achievement of Napoleon Bonaparte was not his victory at Austerlitz, but it was the sale of Louisiana to the United States of America.

I want to live in a constructive age. I want the age in which I live to build.

The constructive works of other ages endure. The columns of Persepolis have crumbled into dust, but its aqueduct still challenges the admiration of man.

Not one stone is left of the costly and magnificent architecture of the Holy City, but the Pool of Bethesda still attracts the attention of travelers.

No one can locate the tomb of Moses, but the Well of Jacob is known to all of the world.

The gorgeous palaces of King Solomon, with their cedar, gold, and ivory, have crumbled into dust, but the great reservoirs of Solomon are preserved.

If any of the achievements of the twentieth century, in our great and glorious country, shall survive in the annals of time, it will not be the temples or the palaces; it will not be the skyscrapers in the cities, but it will be some vast dam, great highway, or mighty reservoir. If one name shall be honored above another, it will be the name of the engineer-builder who promoted the well-being of his fellow man and linked his name with the construction of some mighty work to serve mankind throughout the ages.

The Silver-Purchase Program

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 7, 1939

EDITORIAL FROM THE NORTHERN IDAHO NEWS AND REPLY THERETO

Mr. WHITE of Idaho. Mr. Speaker, that the facts may be presented as to the operation and effect of the Treasury's silver-purchase program, under permission to extend my remarks in the RECORD, I insert herewith an editorial which appeared in a recent issue of the Northern Idaho News and my reply thereto. Particular interest attaches to the operation of the Treasury's silver-purchase program at this time on account of the deliberations of the committees of both the House and Senate on legislation that has been introduced to extend the authority of the President to expand the currency and extend the purchase of silver and maintain the stabilization fund. The editorial and my reply are as follows:

[From the Northern Idaho News]

COST OF OUR SILVER POLICY

Supporters of the silver-purchase plan, enacted by Congress in 1934, are using a quotation from the monthly summary of the National City Bank as refutation of the claim of their opponents, who say that money for the purchase of silver comes out of taxes. The silver people rely upon this passage in the bank circular: "In other words, the effect of silver purchases was not to raise taxes, but to increase the currency."

However, more careful study of the question will show that the conclusion to be derived from that passage alone is not correct in respect to the meaning of the whole statement, nor is it correct as to fact as may be seen by analysis of the statement.

There has been purchased, under the Silver Act, about 1,870,000 ounces of silver, at a cost of about a billion dollars. About a quarter of this amount was paid to domestic producers of silver, leaving the other three-quarters, or about $750,000,000, for foreign silver. At first the Government paid 74 cents an ounce for domestic silver but lately it has been paying only 64 cents, as the market has sagged. The foreign silver was bought at the world price, which was considerably lower. During the past year the price for the foreign silver has averaged 42 or 43 cents.

The outlay for this billion dollars' worth of silver was provided by the issuance of silver certificates for a part of the silver purchased, the certificates which circulate as money being issued in the amount of $1.29 for each ounce of silver, leaving an apparent profit for the Government.

The problem, however, reveals some hidden factors that are not on the surface, and these are mentioned in the bank circular, though the conclusions drawn by the opponents of the Silver Purchase Act are not expressed. This passage from the circular should also be considered:

"To the extent that silver certificates are issued they take the place of Federal Reserve notes in circulation; thus, a currency supported by silver worth in the market about a third of the face value of the currency is supplanting the Federal Reserve note, with all its carefully devised security and elasticity."

Now, let us see how the question of the payment sizes up. It is probable that the domestic producers, who furnished about a quarter of a billion of the currency, accepted silver certificates or their equivalent without any quibble. Our Government keeps all its currency at par because it is in a strong position financially.

But, in paying for the foreign silver, only gold can be used, as with other foreign trade. Our Government, therefore, paid about three-quarters of a billion of its gold for the foreign silver, which it cannot use in any international payments whatever.

While the Government does not follow literally to the full amount the requirement that silver certificates shall be issued for the silver bought, it generally issues sufficient of the certificates to cover the outlay for the metal acquired. For about a billion dollars paid for purchased silver it has issued about a billion dollars' worth of the certificates.

It looks, on the surface, as if the Treasury were made whole, but let us look a little more closely. It has put a billion dollars of the certificates into circulation, but it has also shipped some of its gold to some foreign country to pay for the silver. The certificates are nowhere as good as the gold, but we happen to have a large stock, and we don't miss it so much.

But the catch is in the statement of the bank, quoted above, that the certificates put into circulation supplanted the Federal Reserve notes. These Federal Reserve notes are issued by the Federal Reserve banks to their members when those banks need currency and put up the collateral. When business gets slow and the currency piles up in the bank, it goes to the Federal Reserve bank and puts up the currency it secured and redeems its collateral. The reserve currency is then retired.

That is the meaning of the term "elasticity" as used above in the bank discussion. There is no provision for the retirement of silver certificates when business declines, and they pile up as idle funds earning no interest.

One assumption we should be careful about is in reference to that three-quarters of a billion dollars gold paid for foreign silver. That is not represented by the same proportion of the certificates issued. It must be that the Government still has some of that foreign silver in its vaults. We can get a fairly approximate idea by considering that the Government paid for the foreign silver about 43 cents an ounce, and that it issued the certificates at the rate of $1.29 an ounce.

In other words, the Government paid in gold for the foreign silver about a third of the face value of the certificates—such as were issued upon it. That is, it paid about a third of the face value in gold, or, for the total, say, a quarter of a billion dollars.

This gold reserve we have piled up is not, it is true, derived from taxation. It is the produce of our favorable balance of foreign trade. Nevertheless, it should be husbanded with the same care as if it were tax money.

The fact remains, then, that we paid out three-quarters of a billion in gold for a currency which crowded out another currency that was already supplying our need in a better way and which did not cost anything.

The preceding deals with the effect of the purchase of foreign silver. But the silver people are misrepresenting the effect en-

tirely. We suppose that a mining man like our State mine inspector would be expected to take that side. Yet why should the rest of us be particeps criminis? No earthly benefit accrues to the people of the country for that quarter billion dollars sent abroad for foreign silver. That is the irritating part of it. These silver people are willing enough—indeed, they are anxious—to indulge in any sort of hocus-pocus to conceal the real facts.

The effect of the purchase of the domestic silver is the same, with some qualifications. We pay more per ounce for the silver, but we do not take the money from our gold reserve. We are now paying 64 cents for an ounce of silver to be used as backing for $1.29 of silver certificates, when we are getting the same service as currency from the Federal Reserve notes at almost no cost. That shows what the silver-purchase policy costs us.

HOUSE OF REPRESENTATIVES,
Washington, D. C., February 21, 1939.

EDITOR, NORTHERN IDAHO NEWS,
Sandpoint, Idaho.

DEAR SIR: With reference to the editorial, Cost of Our Silver Policy, appearing in your issue of February 10, for the information of your readers I feel a statement in your editorial discussing the purchase and use of silver as money in our currency system should square with the facts.

As a matter of record, as fast as silver is acquired by the United States Treasury it is immediately put into circulation as money in the form of silver certificates as evinced by the Treasury's daily balance sheet, the amount of silver certificates put into circulation increasing day by day as silver is purchased. In consulting the daily balance sheet of the Treasury, we find on January 10, 30 days before the date of your article, under the heading of silver, there was $1,647,152,490.35 on hand against which there was in circulation in the form of silver certificates and Treasury notes of 1890, $1,592,489,142, leaving $54,663,348.35 in silver in the general fund of the Treasury. Thirty days later, on February 10, the date of your article, there was $1,665,195,233.48 in silver in this account, and the currency in circulation in the form of silver certificates and Treasury notes of 1890 was $1,600,744,889, showing an increase of $8,255,747 in new currency placed in circulation in the month preceding your article.

By this statement there is over a billion and a half dollars in silver in the Treasury, which is in use as money circulating throughout the country in the form of silver certificates which is the only money policy of the Treasury on which the Government is making a profit, and by which the American people are relieved of an interest charge as the cost for the issuance and circulation of money. On its silver purchases the Government is making 100 percent profit on domestic silver bought at 64.64 cents per ounce and issued into circulation in the form of silver certificates in paying Government expenses at $1.29½ per ounce, and 200 percent profit on foreign silver bought around 43½ cents an ounce and issued into circulation in the form of silver certificates, but as large as this advantage appears to be, it is of minor importance compared to the benefit the American people derive from the Government silver monetary policy. When we consider that this currency (legal tender silver certificates) is issued into the channels of trade and business by the Government in paying current expenses, it is paid out minus interest and circulates interest free. As an illustration of how silver certificates are placed in circulation, it is interesting to note that Members of Congress and their clerical help in cashing pay checks at the disbursing office in the Capitol are paid in brand-new silver certificates which they proceed to put into circulation.

You state "A currency which crowded out another currency which was already supplying our needs in a better way and which did not cost anything"—let us examine the facts concerning this currency which did not cost anything. How are Federal Reserve notes created and issued into circulation? To get this money and put it into circulation, the people engaged in business must borrow money from the bank on short-term interest-bearing obligations (eligible paper) which must be guaranteed by the bank and rediscounted by the Federal Reserve bank to secure the issuance of Federal Reserve notes equal to the amount of the promissory notes (eligible paper) deposited with the Federal Reserve bank as security. By this operation business then must pay current rates of interest on every dollar of money in the form of Federal Reserve notes (legal tender money) that is placed in circulation and the businessman must pass this item of interest as a part of the cost of doing business on to the consumer.

If this currency system has "already supplied our needs in a better way," what was wrong with it in 1929 and 1930, and why was it necessary to establish the Reconstruction Finance Corporation to finance business and prevent the collapse of the country's business and financial structure by creating an agency to draw on the collective credit of the American people to finance individuals and business organizations, an agency which at the same time created the greatest reservoir the world has ever known for the storage of wealth out of reach of taxation, relieving the capitalists and financiers of the risk and expense of making and collecting loans and at the same time relieving them of taxes on all money invested in tax-exempt bonds exclusively used to finance the lendings of the Reconstruction Finance Corporation, an agency of the Government that absorbs the bulk of all the money available for investment to finance business and constructive enterprises, with the result that business is forced to turn more and more to the Government as represented by the Reconstruction Finance Corporation for money to finance its operations and development.

Now what is the motive behind this opposition to the Government silver policy? Principally it is the simple matter of collecting interest by the banks of this country on the money in circulation. We have $1,599,577,227 in silver certificates circulating in the form of "a currency which crowded out another currency," that is, the Federal Reserve currency, which forces business to pay the banker an annual interest yield computed at 3 percent, or $47,987,316.81, but we all know that current rates of interest on business notes are more than 3 percent; if we calculate the interest at 6 percent, then the Federal Reserve notes that would replace the silver certificates now in circulation would yield the banks $95,947,633.62 annually. Ninety-six million dollars every year—something for the bankers to fight for, money to come right out of the pockets of everyone every time a purchase is made from a business firm that has a note (eligible paper) made to the bank and rediscounted by the Federal Reserve bank to obtain the issuance of money of "the currency that is already supplying our needs in a better way and which does not cost anything" (?).

You say "when business gets slow and currency piles up in the bank, it (the local bank) goes to the Federal Reserve bank and puts up the currency it secures and reduces its collateral. The reserve currency is then retired." Might I say that is just the trouble with the system. The trick is to get the bank to create and issue the money again when needed at the very time when it is badly needed. Will anyone seriously contend that the kind of money that goes out of existence when business slows up is better than the kind of money that remains on deposit to be withdrawn and put to work at the will of its owner? Does anyone contend that business and employment is made more secure by a monetary system dependent for its creation and circulation on banking conditions and the confidence of the banker in making loans as against a currency (money) that is permanent and remains the property of some owner to be paid to use whenever wanted? Surely a billion and a half of silver certificates (legal tender money) is an invaluable stabilizing influence in the Nation's monetary system.

Let me remind you that this country is $44,000,000,000 in debt on which an annual interest charge must be paid and that all the silver certificates in circulation would hardly pay the interest on this debt for 1 year. As to the part this faulty and unworkable money system foisted on the American people by organized capitalists and financiers has played in creating unemployment, the ruin of business, and the distress of the American people and in sinking the Nation into debt, I leave you to judge.

But let me tell you in all seriousness, my dear editor, that there can be no permanent prosperity in this country until our Government devises and gives to the American people a workable, adequate monetary system free of a continuing interest charge which in my opinion must be based on the unlimited coinage of both gold and silver as a means of establishing a stable monetary unit—the dollar—to provide for the security of business and business commitments. If the Government will do this and protect business by the enactment and enforcement of the necessary laws to eliminate unfair competition and unfair trade practices, a plan which will operate to establish a parity between the prices of the basic industries, farming, mining, and lumbering, with prices of the products of the manufacturers to be secured by the free play of the law of supply and demand through competition, the American people by their business enterprise, industry, and thrift will do the rest in restoring permanent national prosperity.

Sincerely yours,

COMPTON I. WHITE, M. C.

The Film Industry's Pledge of Americanism

EXTENSION OF REMARKS

OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 21, 1939

ADDRESS BY JOSEPH M. SCHENCK, OF BEVERLY HILLS, CALIF., AT A LUNCHEON OF THE FIRST DIVISION ASSOCIATION

Mr. GEARHART. Mr. Speaker, during the course of the National Convention of the American Legion at Los Angeles last September, there were many notable gatherings, impressive events that will linger long in the minds and memories of those, like myself, whose privilege it was to have attended and participated therein.

No one of that long succession of ceremonials could have left a more lasting impression than the midday luncheon of simple appointments which was given in the honor of Gen. Charles B. Summerall, Maj. Gen. Frank Parker, and Brig.

Gen. Harcourt Hervy at the Beverley Hills studios of the Twentieth Century-Fox Corporation by Mr. Joseph M. Schenck, chairman of the board of that internationally known moving-picture concern and head of the Motion Picture Producers Association.

Not only is that assemblage to be remembered because of the graciousness of our most distinguished and genial host, who, it would seem, had provided well for our entertainment, but the occasion became an important and historical one in that there was there pronounced by one of America's foremost business executives a credo of Americanism which will live long in the memories of all of us.

For one, I will never forget that great speech that fell from the lips of Mr. Joseph M. Schenck that day, inspired as it must have been by the presence of the distinguished heroes of our great Republic whom we were endeavoring to honor. As he spoke I saw, as he must have seen, the shadowy forms of those marching men who, two long decades ago, laid down their lives upon the "fields where poppies blow" that we might be free. And my American citizenship took on new values.

It was a pledge to the brave men of the "Fighting First Army" and through them to all the American people, a pledge of militant Americanism, not only in his own behalf but in behalf of the film industry of the United States in the name of which no one can speak with greater authority than he.

Because I believe that there was much in that speech that will impress and interest those who were not so fortunate to have been present I have asked the unanimous consent of the membership of the House of Representatives, the consent that has been so graciously accorded, to include that which he then said in the pages of the CONGRESSIONAL RECORD.

Mr. Schenck said:

We of the film industry are glad to do you honor. Not only because you fully deserve what small meed of praise we can bestow for your proved devotion to your country in time of need but also because you have united to carry on in a tremendously worthwhile cause after your task over there was done.

You men not only endured indescribable hardship, suffering, and danger in your Nation's service in time of war but you are not resting on your well-earned laurels in time of peace.

That this Nation remains a white spot on the world map is due in large measure to your heroic efforts. You have helped make the United States a bulwark of civilization and decency in peace as in war.

You are carrying on your constructive work today. We honor you for it. The motion-picture industry wants you to know that it is willing to cooperate with you in this work in any manner or form you designate. The motion-picture industry stands ready at all times to join you unreservedly and wholeheartedly in any patriotic cause you espouse.

To us who are engaged in the making of motion pictures the rapid and terrifying sequence of events abroad have been deeply shocking. We know we are not alone in this feeling. Democratic government seems to be on the defensive. The rule of the people, by the people, and for the people has been engulfed in many spots on the world map by the aggressive ascendancy of dictatorships.

We feel with you that our most priceless heritage—liberty—is endangered. We are determined to safeguard it not only because we treasure our freedom as individuals but also because we feel it as a duty to the millions of liberty-loving men and women who look to this Nation as a refuge and a hope.

As head of the Motion Picture Producers Association I feel that I am not boasting when I say that motion pictures today have become one of the world's greatest mediums for the transmission of ideas. Therefore it is doubly imperative that the screen stress the American point of view, rally the decent forces of the Nation and the world to the defense of democratic ideals, and emphasize the advantages and benefits of the system of government under which we are privileged to live.

This we are determined to do. It is a trust in which we, as loyal Americans, will not fail.

There is this in closing which occurs to me. All of you here have fought for your country on the battlefield. Many of your comrades gave their lives in defense of the Nation. They did it willingly and unquestioningly. The record of your division forms one of the most glorious pages in the military annals of the Nation. Nothing can mar that record. It stands for all time as a vivifying example of the courage and the gallantry of American manhood.

But that is past now. The drums are silent, the cheers and the plaudits have subsided.

Yet involuntarily we now find ourselves in another war, a different kind of battle in which ideas and words are the major weapons. The attack on our institutions is just as menacing as it was in the days of actual war, perhaps more so. For we are fighting an enemy who seeks to conquer not openly but insidiously by undermining that which we hold most sacred and dear.

Your inspiring example in meeting this new enemy is not lost on the film industry. We are eager to be your comrades. We pledge ourselves with heart and soul in this new war for the preservation of American ideals in which you have taken the lead.

Completing the Bill of Rights

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 22, 1939

RADIO ADDRESS BY HON. LOUIS LUDLOW, OF INDIANA, AT NEW YORK HERALD TRIBUNE FORUM, OCTOBER 26, 1938

Mr. LUDLOW. Mr. Speaker, one of the really worth-while institutions of America is the New York Herald Tribune Forum. As organized and directed by Mrs. Helen Rogers Reid, the gracious and able publisher of that outstanding newspaper, it is one of the greatest clearing houses of public opinion in the world—a forum of free speech without a parallel. It is no longer just an interesting experiment in the realm of public discussion. It is a fixed institution and a credit to American achievement.

It is something very fine to contemplate, for it seems to me to typify in a big way the meaning of America, with its freedom of thought and freedom of speech and all the other priceless blessings which are vouchsafed to us under our Constitution and which combine to make up the inestimable franchise of freedom.

Every year the Herald Tribune Forum brings together in New York City men and women from all parts of our country and its possessions for a week of discussion of all sorts of imaginable subjects, the only requirement being that the topics presented shall be worth-while and shall have a recognized and sustained place in the public interest. Statesmen, politicians, captains of industry, Socialists, authors, sculptors, painters, musicians, poets—indeed, an infinite variety of the human kind—touch elbows with each other on the speakers' platform, and each and every one has carte blanche to tell his own story in his own way. Absolute fairness is observed in allowing both sides—or all sides—of a controversial issue to be presented. All of the addresses go out to the country over a Nation-wide radio hook-up, so that the people in the remotest villages and hamlets and country places may have the same facility of listening to the discourses as those who sit in the front seats before the footlights.

Through the graciousness of Mrs. Reid, I had the honor of being invited to this charmed circle last October 26 to speak on my proposed constitutional amendment to give the people the right to vote on participation in wars in the other hemisphere; and in presenting me to the audience she said:

There is great popular interest in the Ludlow amendment—with considerable emotion but insufficient knowledge on both sides. Its author, a Representative in Congress from Indiana for the past 9 years, was the first newspaper correspondent in Washington who stepped down from the press gallery to the floor of the House. In spite of his part in the political campaign going on in his home State, he has come to New York in order to present to this audience the case for an amendment involving a national referendum on war. I am delighted to be able to present to you a newspaper alumnus, the Honorable LOUIS LUDLOW, of Indiana.

By unanimous consent of the House, I am privileged to submit for printing in the RECORD the address I delivered on that occasion, as follows:

I appreciate immensely the distinguished honor of being invited to the Herald Tribune Forum to discuss the subject that is nearest to my heart, the proposed referendum on foreign wars, although when I contemplate the magnitude of the subject and the limita-

tions of time at my disposal I can visualize the predicament of an eminent divine a few years ago when the moderator of the Presbyterian General Assembly arose and said:

"The next number will be an address by Rev. James McCosh, chancellor of Princeton University. Subject, The Immortality of the Soul. Time allotted, 1 minute."

It is recorded in the annals of the church that the learned doctor consumed his 60 seconds very creditably without exhausting his subject, and I have a very conscious misgiving that when I shall have concluded tonight my subject will not be at all exhausted.

WHAT IS DEMOCRACY?

We boast that we are the world's greatest democracy. What is the meaning of democracy? It means the right of the people to rule themselves—a right which we who subscribe to the faith of the founding fathers believe comes from God Himself.

A nation that is founded on that rock cannot be swept from that rock by the sophistry of academicians and the ingenious arguments of designing individuals who would have us believe that when, for the sake of convenience in administration, we chose representative facilities to execute certain duties and functions we by that very fact changed the fundamental character of our Government so that it became exclusively a representative form of government and the people no longer can exercise direct control.

It is obviously necessary to have a Congress to represent the people in ordinary, every-day functions. If, for instance, the task before us is the enactment of a marine law, a law to construct a Federal building, or a law controlling the rights to public domain, it must be done by a small representative body of legislators. It is not practical in a nation of 130,000,000 souls to submit all the infinite and varied minutiae of legislation and governmental management to a direct vote of the people.

OUR INALIENABLE RIGHT TO RULE OURSELVES

But the thing we must not lose sight of is that all of these delegated functions stem right back into the main principle of our Government, which is our democcracy—our fundamental and inalienable right to rule ourselves.

There is not one of these representative functions that cannot very properly be recaptured, to be exercised in the future by the people themselves. Such recapture would do no violence to our theory of government, but, on the contrary, would be in strict harmony with the spirit and purpose of the founding fathers who had a vision that swept the future, and who were alive to the changes which ages of evolution and progress would necessitate, not at all in our fundamental democracy but in the forms and mechanisms which would be needed to make that democracy secure and operative and effective through all the years to come. It was that gift of foresight which prompted them to write article V into the Constitution, prescribing a procedure by which that instrument may be amended from time to time to meet changing conditions.

It is my contention and the contention of others who think as I do and who, according to the Gallup polls comprise an enormous majority of the people of the United States, that the time has come when our democracy should take over to itself the authority to decide by a referendum vote whether or not under any given set of circumstances our American boys shall be sent to distant parts of the globe to die in foreign wars. This capture of the war power by the people, to be exercised by the people, would be a strengthening rather than a weakening of our basic institutional democracy which has made America outstanding in history as "a government of the people, by the people, and for the people." Assumption of the war power by the people would not destroy or in any way impair the representative character of our Government. For convenience sake the ordinary functions would continue to be exercised by representatives, as usual. The argument so strenuously urged by opponents of the war referendum that the transfer of the war-making power from Congress to the people would break down our representative form of government is utterly fallacious and ridiculous. It would simply mean that in respect to the greatest and most tragic of all issues the people comprising our great American democracy have themselves chosen to make the decision.

That is where this question of paramount importance should be decided, because that is where sovereignty abides.

WHY FOUNDING FATHERS DID NOT FAVOR REFERENDUM

Someone may ask: If the right of the people to decide whether we shall enter nondefensive wars is so essential to a real democracy, why did not the founding fathers write such a provision into the original Constitution? Why did not Washington favor it? Why did not Jefferson include it in his cherished Bill of Rights? Pertinent and proper questions, all of these, and I shall try to answer them.

At the time the Constitution was written there were two trends of thought on this subject. One trend, strongly tinged with monarchism, wanted to vest the power to declare war in the President. The other element, fired with the spirit of the new democracy, wanted the war power lodged in Congress. Jefferson was the leader of the latter school. The constitutional debates show the line of cleavage very clearly. There was a battle royal and after it was over Jefferson wrote triumphantly to James Madison:

"We have already given in example one effectual check to the dog of war by transferring the power of declaring war from the Executive to the legislative body, from those who are to spend to those who are to pay."

Thus the war power was given to Congress, which, under the conditions then existing, was the closest to the people it could be placed.

In that primitive era means of communication were either nonexistent or else so slow and imperfect as to make a referendum on war so obviously impracticable that it was not even considered or discussed. Letters mailed on the eastern seaboard were 6 months reaching the farthermost frontiers, if, indeed, they ever reached there at all. Now it is all different. The express train roars its way across the continent in 100 hours, the airplane in less than 24. The automobile, the telegraph, the telephone, and radio have annihilated time and space.

Sitting before the microphone at Washington the President talks to the entire country. Modern perfection in the means of communication has made a referendum on foreign wars practicable. Can anyone, knowing how Jefferson loved and trusted the people, have any doubt where he would stand today on a referendum on foreign wars? Can anyone doubt that he who wrote into the great Declaration the precious doctrine that "all men are created equal" would hesitate to place all men on a basis of equality when it comes to the most important and tragic of all decisions? The time has come in this twentieth-century era of quick communication to complete the Bill of Rights by adding a provision for a referendum on foreign wars.

DUAL DEMOCRATIC AND AUTOCRATIC CONTROL

We now have in this country a strange combination of democratic and autocratic control, with democracy stopping at the water's edge. In its foreign relations our Government is not a democracy at all, but a pure autocracy. Our people can vote on the election of a constable or dog catcher or on the location of a pesthouse or waterworks, but on the great and tragic question of war, which rips up family ties, tears heartstrings asunder, and throws the lives of millions of our precious boys into the holocaust, the people are singularly impotent, with no vote at all. Surely this is an incongruous situation to exist in a democracy. If the principle of popular rule is to be vindicated in our national life, if it is to have any virility and effect whatsoever, it surely should apply in the great and tragic decisions, as well as in the minor and inconsequential things of life.

Under the existing war mechanism, war is declared by a little coterie in Washington, which is singularly overlorded and impressed and more or less dominated by one other individual—that other individual being whoever may happen at any given time to be the President of the United States. Members of Congress usually are elected on hundreds of different local issues having no reference whatever to war, so it can be seen that Congress has no standing war mandate from the people and never directly reflects popular will in international relations unless it just happens so. After they are elected they are subject to a thousand different kinds of influences and pressures, local and otherwise—influences and pressures that could not possibly be brought to bear on the Nation as a whole to force a declaration of war. The Congress is composed of 531 Members, but war today may actually be declared by 267 individuals, comprising a bare majority of House and Senate, and every one of those individuals is immune from military service. In the Seventy-fifth or existing Congress only 6 Members are women, which shows how pathetically impotent is the opportunity to give expression to whatever may be woman's viewpoint on any particular war proposal. At the present time the women of America are out of the war picture, except the privilege vouchsafed them of doing an awful lot of the suffering when war comes. And why should women not have a vote on declarations of war? Women go down into the valley of the shadow of death to bring our boys into the world. Why should they not have something to say as to whether their flesh and blood shall be hurled into the hell of a foreign conflict?

ANTIDOTE FOR WAR IS DEMOCRACY

Why should the war power be transferred to the people? My answer is simply this: Because the antidote for war is democracy. Woodrow Wilson, scholar and thinker, spoke as with the voice of inspiration when he said that he had known of governments making war on governments but never had he known of "peoples making war on peoples." When the war power ceases to be centralized and becomes democratized, when those who have to do the dying and the suffering and to bear the unspeakable burdens and griefs of war comprise the jury that is to decide this question we will begin to see the end of wars. I repeat that the best antidote for war is democracy. We will get rid of war as we build up the democratic processes.

As we survey public sentiment we behold a strange incongruity. Nearly 100 percent of the people of America, if the question were put to a test, would vote now against America's participation in any war that is waging in any part of the globe. Try that out by canvassing sentiment in your own neighborhood or your own church or your own club. You probably will not find one person who is in favor of going in. And yet a large majority of the people of America tonight are almost worrying themselves sick over the war outlook and are living in daily dread that we will be dragged into another world conflict. How? By the votes of the people? No; not at all.

The general fear—and it has a foundation in realism—is that, with the people having nothing to say about it, we will be maneuvered into a world war by unseen forces and influences over which the people have no control. With such unseen operations going on, it is easy for a situation to arise where we would be headed

straight for war without consulting, even in the remotest degree, the people whose homes are ruined, whose heartstrings are torn asunder, and who have to bear the brunt of war when war comes.

DANGERS OF SECRET DIPLOMACY

So I say, down with secret diplomacy. It has been the cause of much grief and is capable of a great deal more unless restrained. Let us relegate it to oblivion, just as we would any other relic of the Dark Ages. Give the people all of the facts, and let them decide, and I will guarantee that America will be more likely to keep out of unnecessary foreign entanglements than it will if the fate of the Nation is entrusted to the ineptitude of internationalist diplomats and roving ambassadors.

I pause here to refer briefly to the philosophy which I think America must adopt and cling to tenaciously and unswervingly if our Nation is to have permanent peace at home and is to radiate its influence for peace throughout the world. Great deeds spring from great philosophies. In my opinion, the true philosophy that should govern America in its international relations has been stated by two Presidents of the United States with incomparable clarity and forcefulness—George Washington, the first President, and Benjamin Harrison, the twenty-third President. Washington's Farewell Address to the Nation which he founded and fathered, in which he counseled friendly relations with all nations and entangling alliances with none, has always impressed me as one of the most shining examples of inspired wisdom in the literature of the world.

WISDOM OF BENJAMIN HARRISON

In my young manhood I was a reporter on a newspaper of Indianapolis, the city I now represent in Congress. Among the outside papers I represented was the New York World. That was over 40 years ago. At that particular time there was much excitement over some foreign imbroglio—I forget its nature or location—and one day the World telegraphed me to get a statement from President Harrison giving his opinion as to whether the United States should or should not intervene with armed forces. I never knew a public man who could compress as much meaning in as few words, but I was hardly prepared for an answer of such breath-taking brevity as came from his lips. His reply was one sentence of 10 words:

"We have no commission from God to police the world."

The wise words of these two Presidents drive home the point that America will attain the great destiny which Providence seemingly intended for it if it will keep out of foreign wars and free from foreign entanglements. The farther we keep away from the power politics, blood feuds, and boundary disputes of Europe the better it will be for America.

In such a vital matter as a declaration of war (except a war of defense) the principal instead of the agent should act, and in this case the principal is the 130,000,000 people who comprise the American Nation. The proposed referendum on foreign wars would not interfere in any way, shape, or degree with national defense. It would simply reconstruct the war mechanism so that in the case of a foreign war (not a war of defense) the trigger that starts hostilities will be pulled by the people of America and not by a little group or coterie subject to all the heat and pressures that opportunism can invent and special interests can bring to bear. Many advocates of the war referendum believe, as I do, that a combination of adequate national defense and a constitutional referendum on foreign wars is the very best formula to keep America out of war that human ingenuity could devise.

AFTER THE DELUGE COMES THE DICTATOR

After the next war comes the dictatorship. We should bear that in mind. There is not 1 thinker in 100 who believes that our democracy could survive another world war. Freedom of speech, freedom of the press, the personal unregimented freedom so essential to human happiness, all of these blessings that have come down to us from the fathers are at stake in this crisis of our country's history. God forbid that we should ever surrender our heritage of free institutions! In a world where 19 democracies have perished since the war that was to make the world safe for democracy, and where centralization and regimentation are advancing with 7-league boots, we must wake up and be prepared to defend our institutions from these modern trends or run the risk of seeing them perish from the earth.

The will and the resolution of the American people is to stay out of foreign wars. They have no sympathy with the defeatist attitude of overwrought and excitable diplomats and public officials who, when under nervous tension, exclaim over and over again, with parrot-like repetition, so often that it has almost become a stock phrase, that if another world war comes "America cannot stay out of it." The people know we can stay out and they are determined we shall.

There are "defense" wars and there are "policy" wars. All America would rise in its might to fight a war of defense, and no referendum would be had or required. But when it comes to deciding whether or not it is the best policy for America to enter any foreign war the young men who have to shed their blood, and their wives, sweethearts, fathers, and mothers, are entitled to have something to say about it. What could be more elementally just than that?

My proposed constitutional amendment would save America from being pushed into war by unseen forces. If it becomes a law, when a war situation develops which suggests our participation in a foreign war, the cards will be laid before the American people and they will make the decision, which is as it should be. Every citizen of the United States, including both sexes, will have a right to vote on war if this amendment is adopted.

I DO NOT COME ALONE

When I come before you tonight I do not come alone. Three times the Gallup poll has found three-fourths of the people of America to be for my proposal. Standing with me are 188 Members of the National Congress, representing 60,000,000 people, who voted on January last to bring my resolution before the House for action. And back of them are untold millions of honest, God-loving people whose hearts are yearning for peace and who are hoping and praying that something will be done to keep us out of war.

We throw the torch to you. If you who hear me want to be a part of the national jury to decide when our young manhood is to be sacrificed in future foreign wars, I implore you to fall in line and support the great body of representatives of the people who have joined forces back of my resolution in this supreme fight for humanity.

Save the Great Lakes Fisheries

EXTENSION OF REMARKS

OF

HON. J. FRANCIS HARTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, March 24, 1939

ARTICLE FROM THE JANUARY 1939 ISSUE OF OUTDOOR AMERICA

Mr. HARTER of New York. Mr. Speaker, under leave granted me, I am pleased to call the attention of the Members of this House to the following article which appeared in the January 1939 issue of Outdoor America, the splendid publication of that fine organization the Izaak Walton League of America:

[From Outdoor America of January 1939]

SAVE THE GREAT LAKES FISHERIES

(By Dr. John Van Oosten, in charge, Great Lakes Fishery Investigations, U. S. Bureau of Fisheries)

At its meeting in Chicago on December 5, 1938, the Council of State Governments reaffirmed the stand it took at Detroit on February 25, 1938, that the only salvation of the seriously depleted commercial fisheries of the Great Lakes lies in uniform regulations on each lake, which regulations can be obtained only by granting full discretionary powers governing the fisheries to the conservation department of each State involved or to an interestate commission established by a State compact, as authorized recently by Congress, or to an international commission established by a treaty with Canada.

The problem of protecting the valuable commercial fisheries of the Great Lakes is not a local one, but affects the general welfare of our entire Nation because a valuable natural resource which involves both a national food supply and a national sport fishery is threatened with serious depletion. The mass of our people do not realize the grave importance of the situation on the Great Lakes.

Our country consumes approximately 150,000,000 pounds of freshwater fish each year, about two-thirds of which are produced by our fishermen on the Great Lakes. In addition, the Canadian fishermen on these lakes produce another 30,000,000 pounds, most of which are exported to the United States. Further, although we have no statistics to support our statement, yet it may safely be said that in some areas the angler takes out of the Great Lakes more poundage of certain varieties of fish than does the commercial fisherman. For example, it is believed that the sportsmen take more pike, rock bass, sauger, smelt, white bass, yellow perch, and wall-eyed pike out of Lake Michigan than are taken by the commercial fishermen. With the rapid development during the last 2 years of deep-sea trolling for lake trout it was learned that in at least one important locality the anglers' catch of this species exceeded that of the entire commercial fishing fleet operating at this port.

Because many commercial varieties of fish are also important sport fish, the angler has as legitimate an interest in the Great Lakes fisheries as has the commercial fisherman.

Hundreds of thousands of our touring citizens visit the Great Lakes each year primarily for the fishing they provide. Hundreds of Great Lakes communities and villages are dependent for their existence on commercial fishing and the tourist trade. At least ten and a quarter million dollars are expended annually in wages and for Great Lakes fishery products, and numerous allied industries are involved in the welfare of the commercial fishing industry, such as manufacturers of and dealers in marine supplies, trucks, engines, gasoline, oil, twine, boxes, barrels, tin cans, paper, ice, and salt, or builders of boats, or transportation companies, or telephone and telegraph companies and other utilities.

Then, too, it cannot be overemphasized that at least 10 of our most highly prized freshwater species of commercial fish have their

only or chief source in the Great Lakes. I refer to the whitefish, lake trout, wall-eyed pike, perch, blue pike, sauger, chubs, cisco, herring, and suckers. No wonder that several national organizations, such as the Izaak Walton League of America, the American Fisheries Society, and the Council of State Governments, have taken a very active interest in the preservation of the commercial fisheries of the Great Lakes.

There is no longer any excuse for "beating around the bush" in discussing the most effective method of regulating the Great Lakes fisheries. The situation is too critical. One by one the more important species are being exterminated commercially. Drastic measures are needed now to save them, but to be effective these measures must not only be made constructive but also uniform since fish do not recognize the State or National boundaries on a lake. Under the present system of divided State control it has been impossible to obtain the needed uniform legislation. Some 23 international and interstate conferences have been held previous to 1938 in attempts to secure uniform regulations, but all to no avail. Let us hope that the four called by the Council of State Governments in 1938 will lead to more concrete results.

Under the present system of State control the sturgeon has been nearly exterminated in all of the lakes. Likewise the bloater of Lake Ontario, the blackfin of Lakes Michigan and Huron, the bluefin of Lake Superior, and the Lake Superior longjaw in Minnesota waters have either been wiped out completely or now form an insignificant component of the chub catches. The other important varieties of chubs are making their last stand, the 1937 production in Lake Huron, for example, having decreased 64 percent from normal. The famous Lake Superior whitefish has decreased 90 percent in Michigan waters, the only remaining important source, and according to recent testimony of the fishermen the extremely valuable lake trout of this lake is following the same course. In Lake Huron the yellow perch has decreased 56 percent from normal and the whitefish has started a progressive decline from an average of 3,394,000 pounds during the years 1930–34 to 1,121,000 pounds in 1937.

In Lake Michigan the lake trout has declined 42 percent from normal, the whitefish 42 percent—the 1936 catch being the lowest on record—the lake herring 41 percent, the wall-eyed pike 38 percent, the perch 57 percent, except during 1935–36, when they increased somewhat, and the decrease from normal was reduced to 30 percent. In fact, the production of every important species of fish in Lake Michigan is now below normal.

In Lake Erie the most valuable species, the cisco, has been wiped out commercially, the normal production of 18,907,000 pounds having been reduced to 68,000 pounds in 1936. The whitefish has also been seriously reduced in numbers. The Erie perch production has now fallen below normal in spite of the intensive fishing for this species. The 1937 catch showed a decrease of 79 percent from the productive years 1930–34. In 1934 the production reached an all-time record of 14,219,000 pounds and equaled seven and eight-tenths times the normal yield. But in 1935 the poundage dropped to 9,045,000, in 1936 to 2,051,000, and in 1937 to less than 1,750,000.

The Lake Erie blue pike show a similar trend in production. Following the high yield of perch in 1934, the catch of blue pike rose to the unprecedented peak of 19,909,000 pounds in 1936, or three and one-tenths times the normal. In 1937 the blue-pike production decreased 57 percent, and if the story of the yellow perch is repeated this yield will be below normal in 1939 in spite of all the efforts of the fishermen. Then, unless something unusual happens, Lake Erie, the most productive body of water in the world, will suffer the greatest collapse in its fishery ever experienced, for with its cisco, perch, blue pike, and whitefish seriously depleted nothing remains in any large quantities except the yellow pike, sheepshead, and carp, and virtually none of these species are taken in gill nets, the second most important type of gear operated on the lake.

With reference to Lake Ontario, all that need be said is that its once important fisheries have been reduced to insignificance, this body of water now producing only seven-tenths of 1 percent of the Great Lakes production; that is, less than the yield of the small boundary lakes in Minnesota—Lake of the Woods, Rainy Lake, and Namakan Lake. The normal yield in Lake Ontario has been reduced from about 3,000,000 to about 600,000 pounds.

Here in brief is the sorry-looking picture portrayed by the production statistics and developed under the present system of divided control. On every lake our most valuable species of fish have undergone a serious decline in abundance, and no evidence exists that this trend will be reversed. Under present methods of control the Great Lakes fisheries are doomed. What are you American conservationists going to do about it? Remember this, the extinction of the economically valuable commercial fisheries also means the end of the extensive sport fisheries on the Great Lakes and the consequent reduction in the tourist trade in the various lake States. I appeal, therefore, to the sportsmen, businessmen, conservationists, and to every citizen to actively support every move made to save the Great Lakes fisheries.

Bills will be submitted to the 1939 legislatures of the Great Lakes States by committees of the Council of State Governments to grant discretionary powers to the conservation departments or to an interstate committee established by a compact. Further, the State Department at Washington will continue its efforts toward the establishment of an international commission on those lakes bordered by both the United States and Canada.

All of these and other constructive conservation movements initiated by the Council of State Governments (or by any other agency or individual, for that matter) will be bitterly opposed by an organized minority among the commercial fishermen, and unless the public awakens to its sense of duty this minority will win, the present methods of control will continue, and the Nation's most important fresh-water fisheries, both sport and commercial, will follow the forests of the North Central States, which were so thoroughly exploited by the short-sighted lumbermen of the early days. A public united, the fisheries stand; divided they fall. Save the Great Lakes fisheries, Mr. Citizen; they belong to you.

The Keller Analysis of the Dies Committee Reports

EXTENSION OF REMARKS

OF

HON. JOHN G. ALEXANDER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 24, 1939

LETTER AND STATEMENT OF MRS. CHARLES LUNDQUIST

Mr. ALEXANDER. Mr. Speaker, after receiving the letter which I have inserted below with the assistance of my colleagues, I took occasion to read the article entitled "Un-American Activities" in the RECORD, by Hon. KENT E. KELLER, on February 3, 1939.

I note in the fourth paragraph of his statement that he says the report by Congressman DIES is not an honest report. He then goes on to analyze the Dies committee hearings and himself makes the very amazing misstatement to which my correspondent in the following letters refers:

For the benefit of the readers of the RECORD and in order that judgment may be passed on such unfounded statements as used by the gentleman from Illinois, I will say that there is no finer or more public-spirited and honest woman in the country than the writer of the following letter, and I can vouch for the truth and sincerity of every word she has written, which is as follows:

3438 ELEVENTH AVENUE SOUTH,
Minneapolis, Minn., March 18, 1939.

Hon. JOHN G. ALEXANDER,
Representative in Congress, Washington, D. C.

DEAR MR. ALEXANDER: I note in the CONGRESSIONAL RECORD of February 3 that Representative KELLER, of Illinois, made a talk in which he grossly misrepresented the Minnesota people who testified before the Dies committee investigating un-American activities in the United States. I resent some of the things he said very much and have prepared the enclosed statement in correction of them.

I am,
Sincerely yours,

MRS. CHAS. LUNDQUIST.

STATEMENT BY MRS. CHARLES LUNDQUIST

The CONGRESSIONAL RECORD of February 3 contains an address made by the Honorable KENT E. KELLER, of Illinois, in the House of Representatives, purporting to be a statement of the result of his investigation of the methods and procedures of the Dies committee investigating un-American activities in this country, which contains a paragraph about the Minnesotans who testified before that committee that is wholly erroneous.

I am surprised that Mr. KELLER did not check the verity of his information which could have been done by consulting with anyone of the Minnesota delegation in Congress before publication in such a widely distributed document as the RECORD, and I expect him to be pleased to have the correction of his mistake read into the RECORD when he realizes that the source of his information was at fault.

The paragraph in Mr. KELLER's address to which I refer is contained in the CONGRESSIONAL RECORD, page 1107, and reads as follows:

"Another piece of political activity on the part of the Dies committee was in relation to the election in the State of Minnesota. Mr. Gehan, one of the Republican campaign managers, came to Mr. DIES at Detroit and secured six subpenas. He returned to Minnesota, gathered up six stooges, one at least a mental defective, all ardent Republicans, and brought them to Washington and presented their remarkable testimony, which he had written himself for them on the train from Minnesota to Washington. One of these statements was so well done as a piece of political propaganda that it was published as a campaign document and was broadcast against Governor Benson in the campaign as the work of the Dies committee."

None of this statement is true.

The six Minnesotans who testified before the Dies committee were well known Farmer-Laborites, none of us ever has been a "stooge" for anyone, Mr. Gehan made no effort to coach anyone,

and the testimony given by us before the committee was not published until after the campaign.

Ever since women have voted I have been identified with the third-party movement in Minnesota. I have been an official in Farmer-Labor Party, in the Farmer-Labor Association, and the Farmer-Labor Women's Federation in various capacities. For 10 years preceding this last campaign I was chairman of the Farmer-Labor Women's Federation and directed its organization throughout the State.

During the last campaign I worked for a governor from another party because a group of racketeers, including known Communists, had invaded our party and were looting the State, whose welfare I place above any party in my regard. Succeeding events which have so far resulted in the conviction and sentencing of four State officials and the indictment of seven more have fully justified our revolt against the small group who were mismanaging State affairs in Minnesota under the guise of being true Farmer-Laborites.

Respectfully submitted.

MRS. CHARLES LUNDQUIST.

In view of the above statement one wonders as to the source of all of our colleague's information and the objective sought in his diatribe based on such misinformation.

Flood Control and States' Rights—The Vermont Plan

EXTENSION OF REMARKS
OF
HON. CHARLES A. PLUMLEY
OF VERMONT
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1939

ADDRESS BY HON. CHARLES A. PLUMLEY, OF VERMONT, MARCH 24, 1939

Mr. PLUMLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I delivered on this day, Friday, March 24, 1939, at the Thirty-fourth Annual Convention of the National Rivers and Harbors Congress, Washington, D. C., to wit:

It may be true as suggested yesterday by my friend the distinguished chairman of the Rivers and Harbors Committee, Representative WHITTINGTON, of Mississippi, that the assertion by a State of a determination on its part to protect and preserve its rights against invasion and usurpation by the Federal Government, under the cover of an alleged flood-control project, in order to develop hydroelectric energy, is "hollow bombast" as he characterizes it. That may be so, but it is true, however, that there are very few rights left to the States for them to undertake to protect or to defend, and they are growing fewer day by day.

It is also a rather strange situation which confronts us, when a Representative from the sovereign State of Mississippi characterizes the pronouncement of a determination on the part of a sovereign State to attempt to protect its rights and its property as "hollow bombast."

In his speech, which is to be found in the extension of his remarks found in this morning's RECORD, the gentleman states several legal propositions, and so far as he goes he is substantially correct. He knows, however, that the contention of the State of Vermont with respect to all these matters and things involved in the flood-control program rests squarely upon the proposition, a legal one, admitted by the Attorney General of the United States to be correct, and if it were not so admitted it nevertheless is the law, that no agency of the Federal Government is empowered to develop hydroelectric energy at flood-control projects provided for in the Flood Control Act of 1938, and that further legislation of the Congress would be required to authorize such development.

This has been repeatedly recognized as the law, as evidenced by the agreed necessity for the enactment by the Congress of particular statutes for the construction of dams at which hydroelectric energy is developed and the provision therein for compensation to States for tax revenues otherwise lost by the acquisition of their lands for such projects.

The distinguished chairman of the Committee on Rivers and Harbors admits the correctness of this, if I understand him correctly. Moreover, as a matter of information, if you are not familiar with the hearings had before the joint committee on the judiciary of the Massachusetts Legislature relative to flood control, as of date of February 6, 1939, you may be interested in the following colloquy:

"House Chairman SHERMAN. Now, with relation to the Government being allowed to go into another project outside of the flood-control project, Senator, isn't it true that there is no specific authority in either of the statutes passed by the Federal Government relative to the disposition of power generated by the dams, when constructed? Isn't it true there is no power explicitly given in those bills?

"Senator WALSH. None at all.

"House Chairman SHERMAN. Or stated in that legislation?

"Senator WALSH. I want to make it clear. I have it from the President himself, from the War Department, the Secretary of War—I have it from the Federal Power Commission that it will be necessary to get another act of Congress before any power developments can be inaugurated in connection with flood control.

"House Chairman SHERMAN. Then it is true, isn't it, Senator, that once we give the Federal Government exclusive jurisdiction Congress could come along and amend the present act so as to provide for the generation of power and the building of power plants?

"Senator WALSH. That is undoubtedly true."

Someone has well said, in substance, to the effect that the point raised by Vermont is not "a tempest in a teapot," as the President would have it to be, but that it involves the whole question of how far the States are going to permit their rights to be invaded under the bribery of the wasteful, wanton, extravagant, and unjustifiable spending of the taxpayers' money as a bribe.

Neither is the assertion and the contention, as made by Vermont, that a State has a right to say what shall be done to its people, with its property, and with its rights "hollow bombast," as my friend Representative WHITTINGTON would have it.

The truth is, some people will, or can, neither see nor read "the handwriting on the wall"; others know that it is just as true and certain as that one day follows another that in a world where democracy is so viciously attacked by centralized and totalitarian authority, and even right here where sovereign States are being either choked into submission or strangled and robbed by a vast gargantuan bureaucratic robot, the accumulation and centralization of all these rights and powers will not much longer be tolerated by the people of the United States. Evidence of this fact, incontrovertible, is found in the fact that 81 Republican Congressmen were elected and that 16 Democratic Congressmen were returned by "the skin of their teeth" and are holding their seats only by virtue of the plurality of under 1,000 votes, which plurality will entirely disappear, as will the total number of Republican Congressmen be very largely increased at the next election. This may be "a tempest in a teapot"; and if it be "hollow bombast," why, make the most of it.

But enough of this. Let's talk about "the Vermont plan."

THE VERMONT PLAN

In order that you may really understand the position which Vermont has taken with respect to flood control you will have to know something about the people of Vermont, their antecedents and their environments.

"It seems incredible," says Dorothy Canfield Fisher, "in our modern world, so tormented with fears about its safety, that a whole State full of people have no ground for apprehension; but it is true. The Vermonter is so used to the moral freedom of not dreading anything that he is hardly conscious of it. It is the breath he draws, this lack of fear; it is the marrow of his bones. Why should he be afraid of anybody or anything?

* * * * * * *

"This tradition of looking the world in the eye and asking no odds of it, probably seems to the rest of you a rather curious tradition for a small, poor, rustic State with hardly a millionaire to its name, no political pull of any sort, and nothing to distinguish it in the eyes of the outside world. But all Vermonters know where it comes from, straight down from our forefathers who did look the world in the eye and made the world back down. With nothing on their side but their fearlessness and a sense of human rights as against property rights, they held out stoutly and successfuly against oppression and injustice, though dressed up in all the fine names of 'legality' and 'loyalty to the organization of society.'

"Not many people outside Vermont know the dramatic story of the State's early life, but everybody inside the State does. There are fewer people in the whole of Vermont than in the city of Buffalo, which is not at all huge as cities go now. But even at that, there are a good many men, women, and children in the State—over 300,000. There is hardly one of this number who does not know about the history of the New Hampshire Grants, and how our great-grandfathers stood up against all the then existing British state for their naked human rights, and won the fight.

"I know you are vague on this point, though you probably had it as a lesson one day in high school; so I will give you a sketch of it, compressed to a brevity which ought not to bore you too much. After the end of the French and Indian War Vermont was safe ground for American settlers, and the bolder spirits began to come in from New Hampshire and Connecticut. They settled, went through the terribly wearing toil of pioneers, felled trees, reclaimed land, drained swamps, built houses and mills, braved isolation, poverty, danger, health-breaking labor, and made Vermont a region of homes. They had learned to love it as we love it now, silently, undramatically, steadfastly, detesting any florid, high-flown talk about it, burying our love in our hearts, and pretending to outsiders that it is not there. Vermonters are not sentimental, articulate Celts but hermetically sealed Yankees. But they live on this love for their homes, and they have shown themselves quite ready to die for it.

"Well, to make a long and complicated story short, the rough handful of ignorant men did continue to hold the land they had earned; and we, their descendants, are living on it now. They did

more. For 14 years after that those men, our great-grandfathers, ruled Vermont, free of any sovereignty, an independent republic on the continent of North America. You never heard that quaint and colorful fact about our little State, did you? Yes; for 14 years they stood straight and strong on their own feet, owing allegiance to nothing in creation but their consciences. They stood steady in a whirling, shifting world, and proved to their own satisfaction that to stand steady is not an impossible task.

"Down to this day, down to the last corner of our green, wooded, mountain-bedecked State, we all stand steadier because of that memory back of us. Every foot of the land on which we live was held for us by the courage, almost absurd in its simple-heartedness, of our tall, lean, ironic grandfathers, and by their candid faith in the inherent strength of a just cause. They risked their fortunes and their lives on their faith in this principle: That those who work and create have certain sacred rights, no matter what laws may be, more than those who do nothing. With that principle as our main inheritance, we Vermonters can cock our feet up on the railing of the porch and, with a tranquil heart, read the news of the modern world and the frightened guessing of other folks at what is coming next."

So the suggestion to the effect that the Federal Government was coming up into Vermont to take by right of its might our land, and without our consent, did not meet anything like a welcome. However, let me make it plain, and right here, that Vermont, in a spirit of cooperation, has offered its consent for the construction of the much-discussed dam at Union Village. That consent was offered in accordance with a plan which was outlined in a verbal contract and in a written agreement, tentative, submitted by the War Department engineers, which was approved by the State of Vermont but not approved by the Federal powers that be.

I am informed—and correctly, I believe—that Vermont stands ready to cede jurisdiction to the Federal Government over such lands as may be necessarily required to carry out the so-called Union Village Dam project as the same was outlined and defined in the tentative agreement submitted by the Army engineers, to which I have above referred. There should be no misunderstanding with respect to our attitude toward our sister States. It is a matter of record that we joined with them in the contracts originally made and submitted by the Governors of those several States involved which are affected by the flood-control proposals for New England.

Let me reassert, as our Governor has said: "Vermont has an earnest desire to be neighborly to its sister States to the south, and will cooperate with those States and with the Federal Government to secure all possible flood control for those States, insofar as it reasonably can.

"Vermont cannot, and will not, give blank consent to the Federal Government to build dams wherever it chooses, and when it chooses, and as it chooses in Vermont. Vermont has not consented to the unlimited acquisition of our resources by the Federal Government." And, may I add, that it will not do so.

The people of Vermont, speaking through their chief executive, have tried to make it plain that their position as a sovereign State, and as one of the Union, is that it proposed to retain and to defend against all comers those rights which were reserved to the States, namely, those not specifically granted to the Federal Government.

At Hartford, Conn., the other night, when interrogated with respect to the attitude of the State of Vermont in regard to flood control, Governor Aiken took occasion to say:

That "the location of such dams should not be determined by Army engineers alone, but in cooperation with the States whose people such dams affect in the following ways:

"(1) Direct tax loss on farms which are flooded.

"(2) Indirect tax loss through decreased appraisal value of adjoining lands.

"(3) Ruination of residential or recreational development of land within smelling distance of storage reservoirs, which often involve a million-dollar investment and bear on the economic structure of a whole State."

That "the Federal Government is ill-advisedly trying to exploit flood-control dams as power sources for its own selfish purposes, which, if achieved would:

"(1) Involve a wasteful building of dams when a few would suffice to adequately control rivers.

"(2) Be economically destructive to a State that has only a limited number of storage sites.

"(3) Cheat the State of flood insurance, as the State would lack the authority to regulate the amount of free storage maintained back of the dams to check flood waters.

"(4) Cause serious erosion damage, because dams are not built with primary intent to prevent floods."

He criticized dams proposed by Army engineers as "affording no protection whatever to the people of Vermont, because they are nearly all close to the mouths of the larger tributaries emptying into the Connecticut River."

"Ninety-five percent of the September flood damage in the West River Basin," he added, "was above the site of the proposed dam and would not have been prevented in any way had that dam been in existence.

"If flood protection had been the real desire of the Federal Government, there would now be dams nearing completion on tributaries of the Connecticut in Vermont, New Hampshire, and Massachusetts.

"God did not create the hills and streams of New England for the enrichment of the power companies."

May I add on my own responsibility that God did not create the natural resources belonging to the States in order to permit the Federal Government to go into business in competition with them, with their municipalities or their citizens, in furnishing a supply of sufficient power under proper State and municipal regulation as to rates and service for the people of the State, and those contiguous thereto, and for that larger area which they serve.

We know that without our consent the Federal Government under existing laws cannot take our land or resources for power-development purposes. This is the well-established law of the land. This contention is now assented to and acknowledged by the War Department, or so I am advised. It is inconceivable that the sovereign States by their lawfully constituted Representatives in Congress would by the enactment of any proposed statute modify or amend, or extend the present law restricting the rights of the Federal Government with respect to these reserved and fundamental rights of the States, deprived of which they will become nothing but cogs in the wheel of a vast Gargantuan, totalitarian state. The time has not come, as yet, when our Chief Executive of these United States can issue an order and command the States to obey because he says, "L'etat c'est moi!"

We have a State planning board, created pursuant to an act of the legislature, charged with the responsibility of examining that section of the Connecticut River drainage basin, which lies in Vermont, and the development of information as to possible flood-control reservoir sites on tributary streams, and their feasibility for inclusion in a comprehensive plan for the control of floods on the Connecticut River.

The legislature charged this planning board with the instruction that the investigation should be made in order to determine what the character and location of reservoir sites should be in order to be most beneficial to the State of Vermont.

The planning board, so created, has made a preliminary report, from which I quote, as follows:

"In 11 years there have been three major floods in the Connecticut Valley, each following a different pattern, and future floods may follow still different ones."

We Vermonters insist that we know. We do not theorize; we have seen the futility of the attempt to combine flood control and power development in a dam. We have seen the accentuation of devastation caused by that kind of a combination. We do not have to be shown again. It cannot be done.

We have at least two and perhaps three bona fide flood-control dams. The rivers flow uninterruptedly along their channels through the area to be protected by the flood-control dam until there is a flood warning, then the floodgates are closed, the water is impounded, the people and property below the dam are protected and saved. That is flood control 100 percent.

A power dam is a menace as a flood-control dam. "Menace" is right, and no excuse need be made for the use of the word "menace." Full of water, setting back for miles the pond offers no protection whatever. Moreover, the pond itself is rapidly and perpetually being filled with silt which limits the impounding capacity of the dam itself. This is not theory.

No, gentlemen; the two theories mix as do water and oil when it comes to the practical demonstration of the proposition. You are either for flood control or you are for power development, and the answer is found in the position you take relative to the kind of a dam to be constructed. Assuming you are rational human beings, you cannot be for both if you are for either.

The State planning board has been studying the problem, trying to determine whether a system of smaller dams up on the tributary streams would not afford protection to Vermont lives and property, and at the same time by reducing the flood heights of these Vermont streams, measurably assist in the control of the main stream.

In the preliminary report of the State planning board the following statements are made:

"There is possibility of differences of opinion as to location of reservoir sites that would be most beneficial to Vermont in a flood-control development program. It has been argued that, despite any other considerations, dams located to protect St. Johnsbury, Springfield, Bellows Falls, and Brattleboro would fulfill that requirement.

"But in approaching the problem of finding flood-control reservoir sites most beneficial to the State, it seemed that somewhat more comprehensive views of the whole situation of the State, its future as well as its present development, should be taken into consideration if this requirement was fully to be met. For, since it is expected that the dams are to be permanent, it may be anticipated that their effects on development in the area will also be permanent; so it seems axiomatic that the greatest benefit would accrue to the State under a program which took the least toll of other values.

"Of the four reservoir sites in the preliminary plan to which reference has been made, two are located near the mouths of streams tributary to the Connecticut River, and in such location would give flood protection to the main river and little or none to the inhabitants of their respective valleys. Yet, on the other hand, they would not interfere with travel; they would not be detrimental to recreational development; they would not be destructive to the scenic character of the valley or the region; and, if operated for the single purpose of flood control, it is hardly conceivable that they would adversely affect possible future development of the region.

"In these respects these two sites are almost unique among the sites recommended for the larger reservoirs in Vermont.

"The search for reservoir sites that would be most beneficial to the State turned, therefore, to the tributaries of the Vermont

rivers which are themselves tributary to the Connecticut. This is but an application to our rivers tributary to the Connecticut of the underlying theory in the plan for control of the Connecticut itself—namely, dams on the tributaries to control the main stream.

"In some of the basins of Vermont rivers, tributary to the Connecticut, it has been possible to find feasible sites for flood-control reservoirs with combined capacity sufficient to control the whole tributary basin. Not all the basins are susceptible of such development without resort to use of sites on the principal streams.

"As a generalization, it is true of these smaller reservoirs on the tributaries that no first-class agricultural land would be required for them. Their development would require the abandonment of few, if any, farmsteads. They are away from the principal travel ways, particularly from those used by recreational travelers. They would be effective to protect roads and other property in the basin. Those that have possibility for conservation storage, in addition to flood-control storage, would benefit Vermont streams, as well as the Connecticut, by increasing the flow in low-water periods. Finally, the serious objections to the larger reservoirs would not be raised against them.

"The feasibility of constructing dams for flood-control reservoirs on these subtributaries may be denied by those who note that the total estimated cost of development in a basin exceeds the estimate for the larger reservoirs in that basin. It is true, as shown on the accompanying table, that the estimated development cost for the larger number of small reservoirs exceeds the estimated cost for the smaller number of large reservoirs. But it should be noted that there have never been included in the estimates so far prepared for the larger reservoirs any sums as liquidating damages for the permanent losses to agriculture in the region above each dam, and to the recreational industry, locally and State-wide, that would result from the construction of all the proposed larger reservoirs.

"In the investigation of the Connecticut drainage basin field surveys of possible sites were started November 1937. This work was discontinued June 30, 1938, when the flood-control law of 1938 became effective.

"The surveys were designed to supply information on sites which could not be obtained from the United States Geological Survey topographic maps. With one or two exceptions, the surveys were each confined to a small area immediately around the tentative location for a dam. The field work consisted of obtaining a profile along the center line of the proposed dam. Sections at critical points along the center line, and some additional topography to provide data for preliminary designs and cost estimates. Flowage line and data for determining quantities of storage were obtained from the topogrophic maps.

"It should be understood that no survey was sufficiently extensive to provide data for final plans and estimates, and that no examination of subsoil conditions was made at any site. The limitation on funds forbade either procedure.

"The estimates of cost are preliminary only, and are made without knowledge of foundation conditions, except as those conditions might be judged from visual examination of the site. But it is believed that the estimates are sufficiently liberal to cover normal difficulties of construction that may be encountered.

"Field surveys were made at 29 sites. Eighteen sites are recommended in the following pages. Two sites need further investigation and study before definite recommendations can be made.

River	Sites surveyed and studied	Sites recommended	Notes
West	9	7	
Saxtons	1	1	
Williams	2	1	
Mill Brook	1	1	West Windsor Town.
Ottauquechee	2	1	
White	7	4	
Waits	1	1	
Passumpsic	4	1	2 need further investigation.
Mill Brook	1	1	Maidstone Town.
Paul Stream	1	1	

"The flood in the West River Valley which followed the hurricane of September 21, 1938, presented additional evidence of the need of control reservoirs on the smaller tributaries.

"Examinations and surveys on other tributaries of the West River should be made when funds are available for that work.

"In the two reports of the Corps of Engineers, United States Army, for control of the Connecticut River, reservoirs at 23 sites and at 3 alternate sites have been recommended for construction in Vermont. Twelve sites of this number have been investigated from the standpoint of their effect on Vermont. The latest comprehensive plan prepared by the Corps of Engineers contains 13 recommended sites and 3 alternate sites in this State. Eight of the recommended sites have been investigated.

"The recommended reservoirs at East Haven, Lyndon Center (new location), Harveys Lake, South Branch of Waits River, North Springfield, and the alternates at Centerville, Ludlow, and Perkinsville have not been investigated."

It is not to be overlocked, for it is a fact that at present the State of Vermont and the towns in Vermont have an annual income of over $1,000,000 from taxation of hydroelectric energy, and the reservoirs, powerhouse, and transmission lines by which it is generated and transported; that we have there undeveloped locations within the State where electricity might be generated profitably and without serious damage to other lines of development is also acknowledged.

If these sites are developed with public funds, we would not only lose a huge amount of taxable property from our grand list, but under our present law, would incur an annual tax bill of large proportions.

We wish to remain on good terms with our neighboring States, but the water power of Vermont is our heritage, a natural resource bestowed upon us, even as other States have their natural advantages, and it should not be surrendered.

In conclusion may I say, paraphrasing the statement made by the Honorable R. E. Flanders, chairman of the Flood Compact Committee, that Vermont is cognizant of the damage done to sister States by the drainage from her slopes, and is desirous of rendering all possible assistance in reducing the damage to the dwellers in New Hampshire, Massachusetts, and Connecticut.

The compacts as they were drawn provided for the mutual interests of the only States involved, and there was no intention of or endeavor to encroach on existing Federal rights, powers, or laws. On the other hand, the people of the State of Vermont are determined to protect, defend, and retain all or any powers which it now possesses.

In particular the State is determined that no action of its own shall diminish the existing rights of its citizens to say what shall be done with its own valleys. It does not propose to surrender existing rights to its sister States, who do not ask it, or to private power companies, or to the Federal Government.

Did the Communist Party Originate the C. I. O. Proposal for Unity?

EXTENSION OF REMARKS

OF

HON. E. E. COX

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 24, 1939

STATEMENT BY JOHN P. FREY

Mr. COX. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by John P. Frey, president of the Metal Trades Department of the American Federation of Labor:

When representatives of the American Federation of Labor and the Congress of Industrial Organizations met President Roosevelt on March 7, 1939, in response to his invitation, Mr. John L. Lewis used the White House as a sounding board to broadcast his proposals for a united trade-union movement. The substance of these proposals were that a convention should be held in which the American Federation of Labor, the Railway Brotherhoods, and the Congress of Industrial Organizations would participate, and join in organizing a national labor federation which would include the three groups.

In part the C. I. O. proposals read—

"Not later than June 1, 1939, there shall assemble in the city of Washington, D. C., in the hall owned by the Daughters of the American Revolution, a convention of representatives of cooperation (a) the American Federation of Labor, (b) the Congress of Industrial Organizations, and (c) the four brotherhoods in the railroad transportation field, heretofore independent

"This convention is to organize and dedicate the American Congress of Labor, designed to supersede and embrace the membership of the C. I. O. and the A. F. of L., and to include the membership of the before-mentioned railroad organizations. The convention will outline its objectives, adopt a constitution, and elect officers for a term of 1 year."

The C. I. O. proposals were received by the uninformed as an original proposition coming from Mr. Lewis, while those who keep in touch with the Communist Party's efforts to infiltrate the American labor movement so that they could advance their un-American purposes, and secure directive control in the labor movement, were aware that these proposals had been advanced by the Communist Party in the United States for some time.

The evidence in the record is conclusive. The New York Daily Worker, the official organ of the Communist Party, in its issue of July 3, 1937, on page 6, reproduced a resolution adopted at the plenum of the central committee of the Communist Party, June 17–20, 1937. From this we quote:

"We must never cease to demand the unification of the trade-union movement. In line with this policy, the party has raised the question of the convocation of a trade-union unity congress of the unions of the C. I. O., A. F. of L., railroad brotherhoods, and other

unaffiliated unions. Let all those who stand for unity and solidarity come to such a congress. As for those who refuse to come, they would by this very action place themselves outside the movement."

In the New York Daily Worker for October 20, 1937, on page 3, is published an article by William Z Foster, chairman of the Communist Party, under the caption "Regarding Trade-Union Unity."

From this article the following quotation is taken:

"Provision might be made for the holding of a special broad representative trade-union unity convention, to which the railroad brotherhoods and other independents should be invited. In fact, the brotherhoods might well be drawn into the unity negotiations from the outset. This convention could complete the unification process by the adoption of necessary constitutional provisions, elections of officers, etc."

It is evident that the substance of the proposals for unity submitted by the C. I. O. at the White House conference, and those prepared and published by the Communist Party in the United States 2 years ago are identical.

In the C. I. O. News for March 13, 1939, a cartoon on page 4 used the three musketeers as a medium. In heroic poise and cross swords they stand, one labeled "A. F. of L.," one "Railroad Brotherhoods," and the other "C. I. O." Underneath the three are the words "all for one, one for all."

The use of these particular words carry with them an interesting value for the statement "all for one, one for all" is one of the Communists' slogans. It is the statement made by members of the Communist Party and fellow travelers when they addressed trade-union or other meetings by which they identify themselves to each other.

One of the most serious problems presented by the C. I. O. has been the infiltration of communism, Communist policy, and Communist tactics and the control secured in many local unions and national organization affiliated with the C. I. O.

It will not make the problem of unity between the A. F. of L. and the C. I. O. easier to solve when it is understood that the first proposals for unity advanced by the C. I. O. were identical to those prepared by the Communist Party, with Moscow's approval, 2 years ago.

The Red River of the North

EXTENSION OF REMARKS

OF

HON. R. T. BUCKLER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 24, 1939

Mr. BUCKLER of Minnesota. Mr. Speaker, the valley of the Red River of the North has been called the bread basket of this country. For many years the fertile soil left by the once great body of water, former Lake Agassiz, gave every indication that the territory had been named correctly. In the early seventies large agricultural enterprises, called bonanza farms, proved most successful. Their chief purpose was to demonstrate on a spectacular scale the potential wealth of the Red River Valley. And succeed they did. Those were the days of plentiful rain. The streams and rivers were alive, and so thousands of sturdy immigrants came to this valley in the hope of providing amply for their families. They worked diligently and hard, and out of their struggles emerged large cities—Fargo, Grand Forks, Moorhead, Wahpeton, Detroit Lakes, and others. Today the population of that valley is nearly 500,000, about equally divided between Minnesota and North Dakota.

But, Mr. Speaker, no longer are the rivers in this valley "alive." There are many months of every year when the flow of the Red River is practically zero. The continuation of the drought of the past few years has reduced the flow in these streams to such a degree where for long periods the use of water had to be restricted in most of the cities in this valley and only through the most rigidly prosecuted emergency measures was sufficient water made available for ordinary household use. For a number of years the stream flow was simply sewage, the water being reused several times before reaching the lower cities of the valley. Technicians have termed the water supply in this area as probably the most unsatisfactory supply in any part of the United States. It is realized, of course, Mr. Speaker, that the drought cannot continue indefinitely. But a period of 7 to 10 years of critical water shortage, even if such a period occurs only once every 20 or 30 years does call for action on our part.

The Red River of the North is fed by a number of minor tributaries, the most important of which in North Dakota is the Sheyenne River. Although these streams do contribute to the flow of the Red River, data on precipitation and runoff show that these tributaries cannot be relied upon to furnish an insured flow of water to the Red River that will meet the demands of these 500,000 citizens. There can be only one solution, Mr. Speaker, and that is to obtain a sufficient supply from the Missouri River by the proposed diversion of about 600 second-feet annually from this river to the James and Sheyenne Rivers. When one considers the widespread extent of this critical water shortage in the States of South Dakota, North Dakota, and Minnesota it is difficult to believe that this Government would close its eyes to a situation that demands immediate relief.

Importation of Pears from Argentina

EXTENSION OF REMARKS

OF

HON. JOHN Z. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 24, 1939

EXCHANGE OF LETTERS BETWEEN HON. HENRY A. WALLACE AND HON. JOHN Z. ANDERSON OF CALIFORNIA

Mr. ANDERSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following exchange of letters between Secretary Wallace and myself with reference to the importations of pears from Argentina:

FEBRUARY 21, 1939.

Hon. HENRY A. WALLACE,
Secretary of Agriculture, Washington, D. C.

DEAR MR. SECRETARY: I am in receipt of an article recently released by the Oregon-Washington-California Pear Bureau with regard to shipments of Argentine pears to this country. I beg to quote a part of this release:

"The Argentine Williams in today's sale were generally of quality that ranged from fair to ordinary, and many of these pears were quite mean. They had evidently been picked very immature and most of them were a dark, unsightly green. There was considerable bruising, which had developed into discoloration."

I also quote the following from the release:

"There was much crippled stock and considerable russetting in some invoices. The pack on most boxes was satisfactory, although there was quite a little irregularity in pack as well as quality."

The concluding sentence of the release reads as follows:

"However, pear values as low as these are bound to have a downward pull on those pear values already established."

I wish to particularly call your attention to the last sentence, quoted above, with reference to the effect on the market that such pear values as these are bound to have. The pear growers on the Pacific coast have spent many years in developing this great industry. They have at all times striven to place on the market an excellent grade of fruit packed according to or better than United States grade requirements. Such competition as is offered by present imports from the Argentine constitute a serious menace. For instance, if you will ascertain the cost of shipping a box of pears from the Pacific coast to New York as compared to the cost of shipping a box of pears from the Argentine to New York you will then have a fair idea of what is causing us so much concern. Incidentally, if you should make this comparison, I should be interested in knowing the actual figures.

The pear growers of the Pacific coast, especially in California, now pay the highest wages to agricultural labor that are paid in the United States. In other words, protection for the pear growers also means protection for the men who are working for the pear growers.

I also wish to call your attention to the fact that the Argentine is endeavoring to bring about a reduction in purchases from the United States. I have just read an Associated Press item, dated February 15, 1939, which quotes Pedro Groppo, Minister of Finance, as follows:

"Groppo declared that United States imports must be reduced to the level of 3 or 4 years ago because the imports far overbalanced United States purchases of Argentine goods."

I understand a reduction of imports to previous levels would mean a cut of 40 percent from 1938 figures, or about $31,000,000.

The announcement of Minister Groppo was published as a half-page advertisement in the newspaper in Buenos Aires. The implication was felt that Germany and Great Britain would get more of the business that formerly was given to the United States.

I should greatly appreciate hearing from you on this subject at your earliest convenience.

Sincerely yours,

J. Z. ANDERSON.

DEPARTMENT OF AGRICULTURE,
Washington, March 18, 1939.

Hon. JOHN Z. ANDERSON,
House of Representatives.

DEAR MR. ANDERSON: This is in reply to your letter of February 21, 1939, relative to imports of Argentina pears into this country.

Imports of fresh pears from Argentina into the United States amounted to the equivalent of 115 carloads in 1937, or slightly over 1 percent of the total carlot receipts of pears in 66 United States cities. In the same year imports of fresh pears from the Argentine Republic arriving in New York City amounted to the equivalent of 92 carloads, or only about 3 percent of the total carlot receipts of pears in that city. Inasmuch as pears imported from the Argentine are sold in the United States during the first 6 months of the year at a time when a relatively small proportion of our crop is marketed, it appears that competition created by our imports of Argentina pears with the pear industry of the United States is relatively unimportant.

It is recognized, however, that pears from the Argentine may constitute a significant proportion of the sales on the New York auction market on particular days during the months in which they are imported so as to compete directly with the longer-keeping varieties of Pacific coast fall and winter pears. Sales of the inferior quality Argentina pears referred to in your letter no doubt are detrimental to the public acceptance of all pears, but at the present time there appears to be no way of preventing such pears from entering the United States so long as they meet the requirements of the Food and Drug Act and the specifications of local health regulations.

With reference to your inquiry as to the cost of shipping a box of pears from the Argentine to New York City, as compared to the cost of shipping a box of pears from the Pacific coast to New York City, the following figures have been ascertained:

Argentina	Per box of pears	Pacific coast	Per box of pears
Freight from Rio Negro Valley to Buenos Aires.	$0.275	Freight to New York City.	$0.715
Ocean freight to Buenos Aires to New York City, including refrigeration.	.60	Refrigeration	.09
United States tariff on pears at ½ cent per pound.	.22		

Inasmuch as approximately 45 percent of all shipments of Pacific coast fall and winter pears are sold in foreign markets, the prosperity of the industry is dependent largely on the maintenance of this export volume. Under an agreement between the Secretary of Agriculture and the Oregon-Washington-California Pear League, Inc., a payment of 50 cents per box is made to members of this organization who export pears to certain foreign countries which do not normally import pears in any appreciable amount. It is believed that this program has been successful in assisting the Pacific coast pear industry through developing new foreign markets.

With regard to the Associated Press item quoted in your letter, it is regretted that Argentina apparently intends to pursue a course of limiting purchases of American goods but no doubt the State Department is doing what it can to prevent this situation from arising. Although American pear producers do not participate to any great extent in our trade with Argentina, as you know, such producers do benefit indirectly from such trade.

Enclosed for your information is a copy of Foreign Agriculture in which there appears an article on the Argentine pear industry.

Sincerely yours,

H. A. WALLACE, *Secretary.*

MARCH 23, 1939.

The Honorable HENRY A. WALLACE,
Secretary of Agriculture,
Washington, D. C.

DEAR MR. SECRETARY: This will acknowledge your letter of March 18 with reference to Argentine pear importations, which I have read with a great deal of interest.

I cannot agree with your statement that the sale of pears imported from the Argentine is relatively unimportant. Despite the fact that present importations constitute a small percentage of the total carlot receipts in New York City, we must face the fact that pears from the Argentine compete only with those varieties of domestic pears which are marketed after January 1.

It happens that the winter pear industry on the Pacific coast usually has approximately 500,000 boxes of pears to market in the eastern United States after the first of each year. A recent survey of the rapidly expanding pear industry in Argentina would lead us to the conclusion that within 5 years we can expect an importation of about 500,000 boxes of pears from that country. These figures are arrived at after a study of the recently released publication put out by the Department of Agriculture entitled "Foreign Agriculture."

You state in your letter that the sale of inferior quality Argentine pears is no doubt detrimental to the public acceptance of all pears, but that "at the present time there appears to be no way of preventing such pears from entering the United States so long as they meet the requirements of the Food and Drug Act and the specifications of local health regulations." I maintain that if growers in this country are compelled to meet certain requirements as to grading, packing, and labeling of fruit sold in the United States, then competing fruit from foreign countries should measure up to the same standards. You no doubt are familiar with the fact that the term "extra fancy," when stamped on a box of domestic pears, designates that the fruit packed under that specification must be of a quality equal to the "U. S. No. 1" or better.

I am in receipt of a letter from F. G. Robb, of the Bureau of Agricultural Economics, with reference to the designation of the quality of pears and the labeling requirements pertaining thereto. His letter states: "It is our feeling that a term like Extra Fancy, which has been in such general use for apples and pears from the West for the last 25 years, has come to have more than a general meaning. In fact, it is one of the best-recognized of established grades today, and our Food and Drug Administration has repeatedly held that such a quality designation must be interpreted in the light of its established use."

Mr. Secretary, I have seen Argentine pears on the New York market labeled "Extra Fancy" that would not begin to come up to the standard of "U. S. No. 1." Certainly there must be some method of compelling competing fruit from foreign countries to meet our grade regulations.

I note with interest the figures you have furnished comparing the cost of transportation to New York from the Pacific coast and from Argentina. The total cost per box from the Pacific coast, including refrigeration, amounts to $0.805. The total cost from Argentina amounts to $0.875. Added to the cost of transportation from the Argentine is a tariff of one-half cent per pound, amounting to 22 cents per box. However, the South American pears go on the market immediately, without storage costs, whereas pears from the Pacific coast selling during this period have been held in storage for several months, and the additional cost per box amounts to 22 cents. This just about evens the cost of transportation, refrigeration, and storage. Assuming that packing costs are about equal, i. e., $0.50 per box, we come to the cost of production, and here is where the fruit growers of the United States are at a decided disadvantage.

The August issue of Foreign Agriculture states that the average farm wage in Argentina is approximately $1 per day. The fruit growers on the Pacific coast pay an average wage of approximately $3 per day. I maintain that the present low rate of tariff on pears imported from Argentina places our domestic industry at a decided disadvantage. An increase in the present tariff rate, which would equalize the difference in the cost of production between this country and Argentina, would certainly give our domestic growers no more than they are justly entitled to in their efforts to maintain their high standard of farm living and farm wages.

You state that approximately 45 percent of all shipments of Pacific-coast fall and winter pears are sold in foreign markets and that the prosperity of the industry is dependent largely on the maintenance of this export volume. The industry recognizes this fact and I am sure asks no more than an even break where their home markets are concerned. I think you will agree that they are entitled to that.

Your present agreement with the Oregon-Washington-California Pear League, for the further development of markets, both at home and abroad, is generally recognized as one of the most helpful and forward-looking plans ever adopted by the industry in conjunction with the Secretary of Agriculture. However, while these new markets are being established, the present domestic markets which have been established over a period of many years, must not be ignored.

Sincerely yours,

J. Z. ANDERSON.

Trade Agreement With Great Britain

EXTENSION OF REMARKS
OF
HON. HARRY SANDAGER
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1939

LETTER FROM THE MERCHANT TAILORS ASSOCIATION OF PROVIDENCE, R. I.

Mr. SANDAGER. Mr. Speaker, during the comprehensive address on trade agreements yesterday by the distinguished

gentleman from Massachusetts [Mr. TREADWAY] he took occasion to comment upon the invasion of the tailoring business in New England by British merchant tailors as a consequence of the trade agreement with Great Britain. In corroboration of these facts I desire to present a letter received by me from Mr. Julius A. Lofdal, president of the Providence Merchant Tailors Association. You will note in his letter Mr. Lofdal gives the name of a representative of a British firm who is making a tour of the most important cities of the United States and who has on his business cards that "owing to the new trade agreements the duty on imported clothing is now only 30 percent, which makes a reduction of approximately $15 per suit."

Mr. Lofdal and his associates know where to fix the blame for this competition. They recognize the right of the British firms to compete; but in the last paragraph of his letter you will notice whom he holds responsible for any possible loss of business. Certainly no one can criticize the celerity with which British business has taken advantage of the new opportunity created for foreign trade, but our own stupidity in this instance is revealed when we consider the blow dealt to both the American woolen manufacturers and the American tailors.

As I pointed out in my comment during the course of Mr. TREADWAY'S remarks yesterday, the trade agreements in this particular instance do not hurt the big-business man but, instead, affect the little fellow when, burdened with heavy taxes, he can ill afford to lose any part of the small amount of business he enjoys in these days of the Roosevelt depression.

I wonder if Assistant Secretary of State Francis B. Sayre would classify the merchant tailors among the "autocratic and selfish forces" which are attempting to "cripple" the New Deal trade-agreements program?

The letter from the Merchant Tailors Association of Providence follows:

MERCHANT TAILORS ASSOCIATION OF PROVIDENCE,
March 17, 1939.

Hon. HARRY SANDAGER,
House Office Building, Washington, D. C.

MY DEAR CONGRESSMAN: As president of the Providence Merchant Tailors Association I have been delegated by that group to draw to your attention the invasion of our business by a representative of British merchant tailors who have been soliciting business in our city.

A Mr. W. F. Lovegrove, representing the well-known British firm of J. Hoare & Co., of Piccadilly, London, England, has been recently in our city, as one of the many stops he has made in a tour of several of our more important cities which started January 26.

We recognize the right of British firms to compete on an equal basis with us for such business as is obtainable. Though it is not a fact, many persons are laboring under the impression that British fabrics and manufactures, as far as men's clothing is concerned, are superior to our own. Any well-informed person who knows textiles and who appreciates the skill of our tailors, who have made Americans the best dressed people in the world, will confirm the fact that American products and American skill in manufacturing have no superior anywhere.

The particular reason that we are writing to you is that for some months we have followed the discussion of reciprocal trade agreements in the public press and we note the vigor with which Secretary Hull has defended this plan and his frequent assertions, direct or implied, that American industry and American workers have nothing to fear from this competition. In this contention we believe Secretary Hull to be definitely mistaken.

The British representative who has been here in Providence has been taking away business from American tailors and American workmen and has been enabled to do so by the reduction in tariffs on men's clothing granted by the Department of State when the reciprocal-trade treaty with the United Kingdom was executed.

On his business card this gentleman states that "Owing to the new trade agreements the duty on imported clothing is now only 30 percent, which makes a reduction of approximately $15 per suit."

There can be no quibbling or hairsplitting on this statement. There it is, definitely and without evasion. For every order this gentleman has taken away from American tailors we hold the reciprocal-trade treaty with the United Kingdom and its proponents directly responsible.

We protest emphatically against the provisions of the trade treaty which makes this condition possible. We respectfully inquire if this was the intent of the agreement, or was Secretary Hull mistaken in his expectations as to what might happen?

Very sincerely yours,

JULIUS A. LOFDAL, *President.*

The Public Domain

EXTENSION OF REMARKS
OF
HON. FRANK O. HORTON
OF WYOMING
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1939

JOINT MEMORIAL OF THE LEGISLATURE OF THE STATE OF WYOMING

Mr. HORTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following joint memorial of the Legislature of Wyoming:

Senate Joint Memorial 4

Joint memorial memorializing the President of the United States to amend Executive orders withdrawing all vacant, unreserved, and unappropriated lands of the public domain from settlement, location, sale, or entry, to permit and facilitate the entry and development of suitable lands under the provisions of the act of Congress of August 18, 1894, popularly known as the Carey Act, and acts amendatory thereof and supplemental thereto

Whereas the act of Congress of August 18, 1894 (28 Stat. 422), popularly known as the Carey Act, and acts amendatory thereof and supplemental thereto, have for many years been effective in assisting the settlement of arable lands of the public domain by providing homes for many people; and

Whereas the Congress of the United States has expressed the intention and policy of retaining the benefits obtained under the Carey Act, and acts amendatory thereof and supplemental thereto, by granting in section 7 of the act of June 28, 1934 (48 Stat. 1269), as amended by the act of June 26, 1936 (49 Stat. 1976), popularly known as the Taylor Grazing Act, authority to the Secretary of the Interior to make classification and segregation of such arable lands of the public domain and to open the same for entry; and

Whereas Executive Order No. 6949, dated February 5, 1935, and Executive Order No. 6910, dated November 26, 1934, by the President of the United States, as amended by Executive Order No. 7084, dated May 20, 1935, and Executive Order No. 7599, dated April 1, 1937, withdrawing all vacant, unreserved, and unappropriated public lands in 12 Western States, including the State of Wyoming, remain in force and effect, thus delaying the classification of and effectively preventing the segregation and entry of arable lands of the public domain, and rendering inoperative the provisions of the said Carey Act and amendments thereof; and

Whereas there remain large areas of arable lands, adjacent and supplemental to existing developments in the livestock industry and suitable for the production of needed forage crops, within the said Western States including the State of Wyoming, which if permitted to be developed under the uninterrupted operation of the Carey Act and acts amendatory thereof and supplemental thereto, would rehabilitate and provide homes and employment for the many people now suffering from the effects of drought and dust storms: Now, therefore, be it

Resolved by the Senate of the Twenty-fifth Legislature of the State of Wyoming (the house of representatives concurring), That we hereby memorialize the President of the United States to so amend the above-described Executive orders that development of arable lands of the public domain may be made under the provisions of the Carey Act and acts amendatory thereof and supplemental thereto by facilitating the classification and permitting the segregation and entry of such lands under the provisions of the said Carey Act and amendments; be it further

Resolved, That certified copies of this memorial be sent to the Honorable J. C. O'MAHONEY, the Honorable H. H. SCHWARTZ, and the Honorable FRANK O. HORTON for transmittal to the President of the United States.

Managed Money

EXTENSION OF REMARKS
OF
HON. JERRY VOORHIS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1939

EDITORIAL FROM THE LONDON TIMES OF FEBRUARY 7, 1939

Mr. VOORHIS of California. Mr. Speaker, frequently England is pointed to, especially by Republican speakers, as

an example of a nation that has done an excellent job of coping with her economic problem. The same speakers, however, are prone to laud the gold standard and criticize even the very small measure of monetary management which the present administration has exercised. The recent statement of the Federal Reserve Board, moreover, ought to be compared with the experience of foreign nations. In view of these two facts the following editorial from the London Times is, I think, most illuminating:

[From the London Times of February 7, 1939]

MANAGED MONEY

It may be that the year 1938 will prove a fertile source of education for the economic historian; but, seen at close quarters, it does not fit into any simple pattern at all. The Financial and Commercial Review of the year, which is published as a supplement to the Times this morning, leaves the inevitable impression of a patchwork year—a year of mixed influences from first to last. If it has any educative value, it lies in the experience which it has provided of the ability of our economic institutions to cope successfully with a period of abnormal instability and financial caprice. It was certainly designed to put our financial system to a severe test. In terms of pure trade cycle, in the first place, it might well have been a year of severe slump. A long period of business expansion came to an end in the middle of 1937, and according to precedent the ensuing slump should have proceeded to its extremes during 1938. During the first half of the year, in fact, international trade fell heavily in volume and value, and primary commodity prices completed a collapse resembling that of the early thirties. In relation to the preceding boom, indeed, the past 12 months could not unreasonably be compared with the period from the spring of 1930 to the spring of 1931. During the latter part of 1938, moreover, the financial system was subjected to very much the same kind of strain as it was during the summer of 1931. Although the motives were different, we had the same large-scale drain of foreign funds from London as we experienced during the period which immediately preceded our abandonment of the gold standard. The fear of war colored the whole of the latter part of 1938; and, coming as it did hard on the heels of a severe international recession in business, it was a burden of discouragement for which business was ill prepared.

It might well be argued therefore that the financial system was afflicted in 1938 by an even more formidable collection of adversities than it was in 1931. But it needs no effort to realize that we have suffered few of the financial difficulties and relatively little of the business depression which we experienced in those dark slump days 8 years ago. What, then, have been our defenses this time against the difficult circumstances with which we have been beset? The answer is one which is suprisingly at variance with the financial and economic teachings on which most of us have been nourished. We have had a heavily unbalanced budget—far more heavily unbalanced recently than even the estimated deficit suggests. While foreign funds to the amount of some £250,000,000 have taken flight from London, we have continued to have a 2 percent bank rate, while short-money rates, apart from a brief interval in which they rose just over 1 percent during a serious war scare, have remained at one-half percent or thereabouts. In addition the national currency has been unstabilized and has become almost completely divorced from any strict relation with gold reserves. We have thus enjoyed nearly all those conditions which pre-war doctrine decisively taught—and pre-1931 doctrine was inclined to suggest—to be the inevitable signposts of the road to ruin. But in fact experience has proved that in this condition we have been able to surmount a combination of difficult circumstances with probably a greater degree of success than ever before. The currency and credit position has remained stable. The cost of living started to decline appreciably during the year. The price of Government securities has fallen by only a few points, and that fall can be mostly explained by sales on the part of the war scared—sales which no policy could have averted. The decline in business at the same time has been very moderate, and total employment (though admittedly only with the aid of a slight statistical accident) was actually higher in December 1938 than in December 1937. For better or worse these results are undeniable. It may be rash to leap to the conclusion that the former canons of orthodoxy have been disproved. But it would be unreasonable and churlish to deny that extremely satisfactory results have been achieved by the use of systems which were the heresies of yesterday. It is hardly to be wondered that much of the financial doctrine which centered around the old form of orthodox gold standard has fallen into disrepute.

There is no sphere, even in a world of great changes, where standards have so much altered as in that of monetary policy. Already the automatic working of the old system tends to be forgotten, although it is only necessary to go back to 1931 for an example of how the gains and losses of gold governed the credit position, how big increases of the bank rate automatically followed on the efflux of foreign money, and how in one way and another domestic monetary conditions turned on the maintenance of a fixed foreign exchange rate for sterling. It is almost forgotten, too, how the original replacement of an automatic system by one of management was originally a result not of deliberate choice but of inability to retain the former. If that is remembered, the extent of progress can be better appreciated. The last 12 months have seen a steady and deliberate advance in the technique of creating a currency system to suit domestic needs and of isolating that system wholly from external influences. The extreme tests to which that system has been put during the past year are well known. And it is well to remember the amount of planned management which has been necessary in order to operate it successfully. The Exchange Equalization Account has sold gold and foreign currency to the amount of well over £200,000,000 and has withdrawn gold to the value of £350,000,000 from the Bank of England. Over £200,000,000 of treasury bills have been withdrawn from the market. Finally, if we include the proposed change under the new currency bill, there have been two major and two minor changes in the Bank of England's fiduciary note issue within a year. In big matters, as well as small, management has been nothing if not thorough.

The new bill, which received its second reading unopposed yesterday, completes a process which has long been on the way. Under it the gold in the Bank of England reserve will in future be valued at its market price, and even the formalities of a pure gold standard will be abandoned. It is a logical step, and few people will question the necessity under present conditions for developing the technique of monetary management to its highest pitch. Some sections of city thought, however, have felt a certain uneasiness at the implied suggestion that the system of pure monetary management is likely to be permanent. That uneasiness is not unnatural, for the system of management has its weaknesses—most obviously in the instability of the exchange rates—and no monetary policy which involves any wide fluctuations in exchange rates can be considered ideal. But even so, the fullest possible development of the technique of monetary management must be the only course to pursue. There is no longer any real faith in the old orthodox gold standard as such. The valuable elements which it contained may be well recognized; but there can be no actual going back. It may indeed be remembered that the virtues of a managed currency without a fixed gold value are most apparent in unstable circumstances like the present, and that, if conditions should become more stable again in the future, so the virtues of a currency with a fixed gold value would again thrust themselves to the fore. But experience in recent years has confirmed the view that in any monetary policy management must be the first objective. The old system cannot, as such, be restored; and it is impossible to do more than consider how much of it is valuable and how much can be grafted on to the new.

Helping the Democracies of the World

EXTENSION OF REMARKS

OF

HON. ROBERT F. JONES

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, March 24, 1939

ARTICLE BY PAUL BLOCK

Mr. JONES of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Paul Block:

MR. ROOSEVELT'S OPPORTUNITY

To help the democracies of the world without joining them in war is the wish of every true American and, of course, must be the wish of President Roosevelt.

Well, there never was a greater opportunity for a man to do just this, than the opportunity which now lies in the hands of our President.

What is most necessary at this time to combat the actions and arguments of the dictators, is to help the democracies to attain a stronger economic position. This is something our country can do.

Every statesman in England and France agrees that if business in the United States will improve and flourish, this will have a great effect on their business and on the business of the smaller democracies.

No one need question Mr. Roosevelt's desire to see this occur, but some do question his willingness to accept the advice of those most experienced in business and economics.

Some feel that the reason the President has not listened to this advice to give actual cooperation to industry, is because it might mean that he would have to reverse himself on some of his statements and actions of the past. Surely, this would be no disgrace, and surely no one will find fault with such reversal, if by such actions he first helps business in our country to revive, helps millions of men and women to get jobs in private industry, and indirectly helps to stimulate business conditions in the free countries of the world. This would help destroy the lawless dictators more certainly than powder and cannons.

Surely, Mr. Roosevelt will not allow this great opportunity for world help to be passed by, because of a possible stubborn desire not to give in.

We trust not. It means too much to us all.

What P. W. A. Has Accomplished in St. Louis County, Mo.

EXTENSION OF REMARKS
OF
HON. C. ARTHUR ANDERSON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1939

STATEMENT BY HON. C. ARTHUR ANDERSON OF MISSOURI

Mr. ANDERSON of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following brief outline of what the P. W. A. has accomplished in my district:

Mr. Speaker and Members of the House, committees of the Congress now have under consideration, and I know each one of us has given some thought to, proposed continuation of the Public Works Administration, possibly as a permanent agency. For its bearing on the broad national subject, I wish to summarize today P. W. A.'s operations in the district which I have the honor to represent.

The situation in St. Louis County and the adjacent Missouri area prior to the establishment of P. W. A. in 1933 was no different from that in other sections of our country. We were practically at a standstill in public construction. Our communities needed schools, hospitals, sanitary sewers, and other public works, but were by themselves unable to finance such construction. At the same time our workers needed employment at living wages to support themselves and their families.

The Congress created P. W. A. and directed it to put its shoulder to the wheel of industrial recovery. P. W. A. was expected to give the push which would help our communities to help themselves. At the outset we had very little definite information as to what a program such as that assigned to P. W. A. could accomplish.

Today St. Louis County has obtained, or is obtaining, fine new schools, public buildings, and other developments—66 projects in all. That is the number of allotted P. W. A. non-Federal projects under all programs in the county. It does not include the numerous P. W. A. developments in the city of St. Louis, which, because of their number and scope, are deserving of a separate summation.

Every section of our county will have gained one or more of these projects. More than a score of cities, towns, and villages within its borders are obtaining the public improvements they needed and wanted. These non-Federal projects have a total estimated cost of $10,806,965.

At the conclusion of P. W. A.'s current program we will have built, added to, or remodeled 35 schools at a cost of $4,561,046. New, modern structures will have replaced outmoded, overcrowded, unsafe, and insanitary buildings, thus providing safe and sanitary havens for our children and centers of community life for our adults. Throughout Missouri, under the current P. W. A. program alone, educational facilities costing more than $10,000,000 are being constructed. Reporting on this phase of the program more than one paper in my district recently used this headline: "P. W. A. comes to the rescue of schools." That's just what it has done.

Also, among these St. Louis County developments are seven sanitary sewer projects requiring $3,350,781; two disposal plants costing $100,700; three hospital projects, $639,700; two park improvements, $358,165; four street and highway projects, $1,203,498. Ten new public buildings, such as a city hall, libraries, a municipal building, fire station, etc., will have been erected at a total cost of $482,063.

Of these projects, 32, with a total estimated cost of $4,424,248, are being erected under the 1938 P. W. A. program. These range in type from schools, hospitals, and sanitary sewers to park improvements, a police radio station, a fire department, and a standpipe. They vary in cost from $14,000 for a highway bridge and $12,070 for building improvements up to $1,700,571 for sanitary sewers.

In addition to these non-Federal projects the county and State of Missouri is sharing in the benefits of Federal projects for which P. W. A. allotted funds to other agencies. These Missouri Federal allotments now amount to $39,070,806. Among projects of this type are the channel developments on the upper Mississippi and the Missouri Rivers, developments of the utmost importance to the St. Louis area, situated, as it is, at these waterways crossroads. The non-Federal projects in Missouri, numbering 562, under all programs, have a total estimated cost of $120,139,894, of which P. W. A. allotments amount to $47,079,695.

What the F. W. Dodge Corporation said recently as to the manner in which P. W. A. is functioning in the national economy undoubtedly also is true as regards my State. You will recall that T. S. Holden, vice president in charge of statistics and research for the Dodge Corporation, reported to Administrator Ickes that 1938 was the "fifth consecutive year of increased construction volume," and said that major credit for the increase was "due to public construction expenditures, principally those stimulated by P. W. A. loans and grants." In other words, P. W. A. has been the backbone of public construction—and of all construction—in the country.

A purpose of the Public Works Administration allotments of these projects was to put men to work in useful jobs. Men have been so employed on the St. Louis County construction. On the basis of studies made by the Bureau of Labor Statistics of the Department of Labor the P. W. A. projects within the county would provide about 10,000,000 man-hours of gainful work. Much of the pay these workers received was spent for goods and services within the area, the economic benefits accruing directly to local enterprises and indirectly to Nation-wide industries.

Men were employed not only on the construction sites but also in the behind-the-lines industries, in producing, processing, and transporting the materials for this construction. Production of the brick and tile, sand and gravel industries, the cement plants, and the other materials and equipment works in and around St. Louis climbed upward to fill the resulting orders. As the St. Louis area supplied materials for construction elsewhere, so also did it receive products from other regions.

University City's sewage project well might serve to show how P. W. A. functions. This residential suburb of the city of St. Louis obtained a P. W. A. grant for sewer-system additions and improvements, costing $1,700,000, because existing facilities were very inadequate and were blocking its further growth. Now under construction, this improvement requires a vast amount of materials, of cement, etc. It will release as much as $631,000 in orders for materials, equipment, and supplies. The city estimates that about 431,610 man-hours of employment will be afforded on the site and that it will place wages totaling some $416,316 in the pockets of these workers. Unskilled labor, semiskilled and skilled workers such as carpenters, steel setters, hoisting engineers, bricklayers, and concrete finishers will fill the jobs. And when their work is finished University City will have a system that should last for more than half a century—a fine example of planning for the present and for the future.

To summarize: The communities in my district have obtained some of the public improvements they had to have. Their construction provided employment, keeping men and families off relief rolls. Undertaken at a time when industry and business in general were at a low ebb, these developments immediately began and continue to exert a strong bolstering effect.

I said that at the outset we had few ways to determine with any degree of accuracy the probable effects of P. W. A. We now have that information. We know, and the people back home know, what P. W. A. can do. As Administrator Ickes so well said, "We saw strikingly demonstrated in the last half of 1938 the soundness of the economic theory that by properly timing a public-works program it would be possible quickly to stimulate industry.

In concluding, I say that by all standards P. W. A. has met the test. It has operated successfully in my district and, I am sure, in yours. We must not stop here. We should continue this splendid organization—a machine which will be ready for action when economic emergencies threaten in the future.

Amendment of Reciprocal Trade Act

EXTENSION OF REMARKS
OF
HON. FRANK O. HORTON
OF WYOMING
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1939

JOINT MEMORIAL OF THE LEGISLATURE OF THE STATE OF WYOMING

Mr. HORTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following joint memorial of the Legislature of the State of Wyoming:

Senate Joint Memorial 2

Joint memorial memorializing the Congress of the United States to consider and pass proposed Federal legislation relating to the Reciprocal Trade Act

Whereas there is now pending, or will be pending, in the current session of the Congress of the United States of America proposed legislation amending the Reciprocal Trade Act so as to require a two-thirds vote of the United States Senate to confirm any reciprocal-trade agreement negotiated in the future; and

Whereas thousands of Wyoming citizens, especially all citizens interested in the livestock interests in Wyoming, are keenly interested in the passage of said amendment: Now, therefore, be it

Resolved by the Senate of the State of Wyoming (the house of representatives concurring), That the Congress aforesaid be, and is hereby, memorialized to promptly consider and pass said amendment; and be it further

Resolved, That certified copies hereof be promptly transmitted to the President and Vice President of said United States, the Speaker of the House of Representatives of said Congress, United States Senator JOSEPH C. O'MAHONEY, United States Senator HARRY H. SCHWARTZ, and Representative FRANK O. HORTON.

Rivers and Harbors Congress

EXTENSION OF REMARKS

OF

HON. SANTIAGO IGLESIAS

RESIDENT COMMISSIONER FROM PUERTO RICO

IN THE HOUSE OF REPRESENTATIVES

Friday, March 24, 1939

ADDRESS BY HON. BLANTON WINSHIP, GOVERNOR OF PUERTO RICO, BEFORE THE NATIONAL RIVERS AND HARBORS CONGRESS

Mr. IGLESIAS. Mr. Speaker, since the inauguration 5 years ago of our Governor of Puerto Rico, Hon. Blanton Winship, he has always and at all times dedicated his intelligence and continued activities in the island and here in Washington to the promotion and defense of the well-being and welfare of the people of Puerto Rico in every direction.

I have the pleasure at this time to print in the RECORD his illuminating address before the Rivers and Harbors Congress, as follows:

Once more the people of Puerto Rico, 1,800,000 loyal American citizens, thank you for the help and cooperation you have given us through your splendid organization—the National Rivers and Harbors Congress. Our island depends for its commercial, industrial, and social development on its water-borne commerce. Its native products—sugar, coffee, tobacco, citrus fruits, embroideries, linens, cigars, etc.—must be exported, while its imports include machinery, clothing, shoes, lumber, cement, rice, and practically everything worn and consumed in the island.

The improvement of Puerto Rico's harbors, and additional maritime facilities, are thus vital to the island's welfare.

The work on San Juan Harbor, now being carried out, includes widening the entrance channel and enlarging the anchorage basin, all to a depth of 30 feet, which will accommodate large liners. A graving dock of the most modern type will also be under construction in a short time.

Puerto Rico is "where the Americas meet," less than 1,400 miles from New York and only 1,000 miles from the Panama Canal. Its strategic value has been recognized by naval and military authorities and a naval air and submarine base is now in prospect at San Juan.

In 1936, Puerto Rico was the best customer of the United States, south of the Rio Grande, buying more American goods from American manufacturers than any other Latin American country—more than Argentina, Brazil, Cuba, and Mexico.

As shown by the 1937–38 figures, 97 percent of the Island's exports and 91 percent of the total imports, were with the United States. Among the different commodities imported from the mainland, I desire to mention the following:

One and a half million dollars' worth of automobiles, one and a half millions worth of beans, three millions worth of shoes, three and one-fourth millions worth of cigarettes, six and one-third millions worth of cotton fabrics, two and one-tnird millions worth of fertilizers, two and one-third millions worth of wheat flour, and one-fourth millions worth of cigarettes, six and one-third of lard, seven and one-half millions worth of rice, and three millions worth of wood manufactures.

Sugar is our principal export, then coming needlework. In the whole world you cannot find any finer needlework than that made in Puerto Rico, done largely by hand, its reputation rests on high quality and beautiful and delicate design.

Puerto Rico rum is known all over the world as the rum of quality and age. Its shipment to the United States increased from a little above $1,000,000 in 1935–36 to more than $3,000,000 in 1937–38.

As I stated before, the American public has had no opportunity of really knowing Puerto Rico. The insular government therefore has entered into a wide publicity and advertising campaign to let the American people know that Puerto Rico is part of the United States, its people American citizens, and the only spot under the American flag where Christopher Columbus really set foot. In time we hope that it will become the preferred American tourist resort.

Visitors to the island, including naval personnel, have increased from 6,027 three years ago to 29,076 last year. New hotels, restaurants, beaches, and places of entertainment are in development. Certainly no other area of equal size on the face of the globe is more favored in the three important respects of a perfect climate, beautiful scenery, and a courteous and hospitable people, and no place in the New World has examples of Spanish architecture of greater antiquity and historic interest. Add to this the picturesque and charming traditions of 400 years of Latin culture, and we find in our island a blend of attractions that may justly be called unique.

I could continue at length to enumerate many things we have done or are doing to develop Puerto Rico into a true connecting link between North and South America. Our school of tropical medicine, we expect, will be supplemented in the near future by schools of tropical forestry and tropical agriculture. We expect further to establish a permanent industrial exposition in Puerto Rico where firms and manufacturers from North and South America may exhibit their products.

In closing, I thank you once more for everything that you have done for Puerto Rico in improving our harbors. I want to extend to you all a most cordial invitation to "discover Puerto Rico" and come down and visit the island "where the Americas meet."

Importation of Canned Meat

EXTENSION OF REMARKS

OF

HON. CARL T. CURTIS

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 24, 1939

EDITORIAL FROM THE OMAHA (NEBR.) DAILY JOURNAL-STOCKMAN OF MARCH 21, 1939

Mr. CURTIS. Mr. Speaker, at this time, when we are considering the agricultural appropriation bill, I want to take this opportunity to insert in the RECORD for the benefit of both Congress and the Nation a very pointed editorial. It was published in the Omaha Daily Journal-Stockman on March 21, 1939, which is published at Omaha, in the great State of Nebraska.

The editorial is as follows:

[From the Omaha (Nebr.) Daily Journal-Stockman of March 21, 1939]

STILL IMPORTING CANNED MEAT

It certainly seems strange that a country as rich in livestock resources as the United States should continue to import so much canned meat from abroad. Comparatively few live cattle are being brought into this country, but our imports of canned beef are enormous. According to the National Provisioner, during the first week in March alone Argentina sent 170,137 pounds of canned beef to New York, and Brazil sent us 270,000 pounds of canned beef.

In the record of canned pork the figures are even more formidable. For the week ending March 10, New York reported 25,817 pounds of "cooked ham in tins" from Denmark; Estonia sent us 91,155 pounds; Germany, 5,866 pounds; Holland, 120,760 pounds; Hungary, 62,907 pounds; Lithuania, 24,425 pounds; Poland, 143,901 pounds; and Rumania, 46,156 pounds. All this in addition to thousands of pounds of other cooked and cured pork.

Since the above imports of beef and pork were made in a single week, it is not difficult to figure out that America's imports of foreign canned and cured meat would amount to a tremendous volume for 52 weeks, or an entire year. And these importations, of course, displace just that volume of American meat.

It would seem to be about time for American livestock producers and farmers to look into the matter of protecting their home market. If we are barred from foreign markets, why should our own market be wide open to foreign meats?

Coinage of Fifty-Cent Pieces in Commemoration of Fiftieth Anniversary of the Admission of Wyoming to Statehood

EXTENSION OF REMARKS

OF

HON. FRANK O. HORTON

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

Friday, March 24, 1939

JOINT MEMORIAL OF THE LEGISLATURE OF THE STATE OF WYOMING

Mr. HORTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following joint memorial of the Legislature of Wyoming:

Senate Joint Memorial 5

Joint memorial memorializing the Congress of the United States to consider and act upon a bill now pending in the Congress of the United States authorizing the coinage of 50-cent pieces in commemoration of the fiftieth anniversary of the admission of Wyoming into the Union as the first State guaranteeing equal suffrage to women

Whereas there is now pending in the current session of the Congress of the United States of America, proposed legislation authorizing the coinage of 50-cent pieces in commemoration of the fiftieth anniversary of the admission of Wyoming into the Union as the first State guaranteeing equal suffrage to women; and

Whereas the Legislature in the State of Wyoming now in session believes that this fiftieth anniversary should be fittingly commemorated: Now, therefore, be it

Resolved by this Senate of the State of Wyoming (the house of representatives concurring), That the Congress aforesaid be and is hereby memorialized to promptly consider and pass said bill: and be it further

Resolved, That certified copies hereof promptly transmitted to the President and Vice President of said United States, the Speaker of the House of Representatives of said Congress, United States Senator JOSEPH C. O'MAHONEY, United States Senator HARRY H. SCHWARTZ, and Congressman FRANK O. HORTON.

Monetary Education

EXTENSION OF REMARKS

OF

HON. ED. V. IZAC

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 22, 1939

DISCUSSION OF THE MONEY QUESTION ON CONGRESSIONAL BREAKFAST TALK, MARCH 21, 1939

Mr. IZAC. Mr. Speaker, I have obtained this permission to extend my remarks in the RECORD for the sole purpose of making available to all the American people information on the money question. Each Tuesday at the breakfast hour, through the facilities of WOL radio station here in Washington, a 15-minute period is given over for the enlightenment of the general public in a matter of the greatest national importance. I congratulate the management of WOL and the Mutual Broadcasting System, and I cannot praise too highly the unselfish efforts of those courageous souls who are showing us the way to real monetary reform.

Former Congressman Binderup, of Nebraska, is conducting the broadcasts and is rendering to the American people a service beyond recompense. On last Tuesday Mr. Binderup presented two of our best-qualified colleagues, Congressman HILL, of Washington, and Congressman OLIVER, of Maine, and their contribution to this fine educational endeavor is well worth the consideration of not only our colleagues in the House and the Senate but of the people generally. I submit herewith the radio program of last Tuesday morning:

ANNOUNCER. Once again we bring you the Tuesday morning congressional breakfast talks, conducted and arranged by Mr. Charles G. Binderup, former United States Congressman from the State of Nebraska. Mr. Binderup.

Mr. BINDERUP. Thank you, Mr. Brown, and once again thanks to the WOL broadcasting station for this privilege. It is a pleasure to introduce my friends and colleagues, the guest speakers who will take part in our congressional breakfast talk this morning. They come from the remotest corners of the Nation. First, we have a Republican from the extreme Northeast, Congressman JAMES C. OLIVER, from Maine; and a Democrat from the extreme Northwest, Congressman HILL, from Washington; and I shall take a small part representing Nebraska, which is about the geographical center of the Nation. It should be interesting to hear the opinions and political conclusions of men living thousands of miles apart and of different political parties expressing themselves on this all-important and timely question, "Government monetary control and constitutional money."

Our program this morning consists of answering letters from the Members of the Senate and House relative to the plan for Government control of the people's money supply, which determines progress or poverty.

I will ask Congressman OLIVER to read the first letter, which was received from Congressman PIERCE of Oregon.

Mr. OLIVER (reading):

Hon. CHARLES G. BINDERUP,

3200 Sixteenth Street, Washington, D. C.

MY DEAR FRIEND: I listen with a great deal of interest to the broadcast at the breakfast hour that you have promoted on the money question.

I want to congratulate you on the fine education you are giving the American public. I know of nothing more important than education of the people on the question of money.

Under the Constitution the Congress is delegated the sole right to manage the currency. Why does Congress not do this?

I shall watch with deep interest future broadcasts that you may give on this very interesting subject.

Very sincerely yours,

(Signed) WALTER W. PIERCE, M. C.

Mr. HILL. That to me is an outstanding question. Also I would like to ask Congressman OLIVER, Why do you Republicans set up a wailing howl in Congress about sticking to the Constitution which we heard so much about in the last session of Congress when we tried to add a few members to the Supreme Court. You would have thought from the cries in and out of Congress the Democrats were going to swallow up the entire Constitution. But when it comes to the constitutional provision in article I and section VIII, which definitely and positively provides that Congress must coin all the peoples' money and control the value thereof, these same Republicans shout horrors, inflation, fiat money, and printing-press money. They try to make it appear that you are a criminal of the first rank because you want to defend and live up to the Constitution. This part of the Constitution, to them, seems to be merely a scrap of paper.

Mr. OLIVER. Now just a minute, my good friend and colleague, Congressman HILL. You are turning this discussion into politics, and I would like to remind you of the old saying. People living in glass houses shouldn't throw stones. I received a letter—followed up by a telegram—a few days ago from the Constitutional Money League of America. I think it was written by our friend Mr. BINDERUP. I understand similar letters and telegrams were sent to 600 Senators and Representatives, the President, and others in and around the Capital. This telegram and letter called attention to the promise you Democrats made to the people in every platform you have written for 40 years in which you declare for constitutional money.

Let me read a portion of this letter. It is headed: "Why do we fiddle while Rome is burning?" The Democratic platform for 1932 reads: "We maintain the depression of 1920 and 1929 were due to the indefensible contraction of credit for private gain at public expense (that is, by the banks calling old loans and their refusal to make new loans), and we pledge the Democratic Party to preserve a sound currency at all hazards. We promise to restore property values and to endeavor to establish a dollar of uniform permanent debt-paying purchasing power. * * * We approve the objective of a permanent sound currency established so as to prevent the former wide fluctuations in value, injuring in turn the producers, debtors, and property owners on the one hand, the wage earner and creditor on the other hand—a currency which will permit full utilization of the country's resources."

That was a beautiful statement, wasn't it?

And now I would like to remind my good friend and colleague, Congressman HILL, from Washington, that apparently your Democratic Party considers your national platform a mere scrap of paper, for during all these years you have carried this plank in your platform you have had a Democratic majority in Congress and if you had wanted to could have established this dollar without the aid of a single Republican. In fact, right now and for the past 6 years you have had a Democratic President and an overwhelming Democratic majority in the House and Senate, with a Democrat at the head of every committee. The way was clear for you, and what have you done?

Mr. HILL. All right, my friend Congressman OLIVER, from Maine. How about your own platforms? The letter you refer to also contained the plank in your Republican platform referring to Government monetary control, constitutional money, and, while I will admit your party has been in the minority and the Democratic Party has taken leadership, thereby assuming the greater responsibility, yet this did not relieve the Republican Party from making a fight for the principles contained in their platform and you as a party have not made a single effort to carry out the plan for constitutional money as not alone your platform promised but as the Constitution demands.

Let me read to you from this same letter. "The Republican platform of 1932 reads, 'We pledge a sound currency at all hazards. We will restore to the Congress the authority lodged with it by the Constitution to coin all money and regulate the value thereof.'" And that statement is just as fine a statement as the Democrats made, and again your platform for 1936 reads: "We advocate a sound currency." And again repeating: "We will restore to Congress the authority lodged with it according to the Constitution to coin all money and regulate the value thereof." And that was another beautiful promise.

And so when you speak of people in glass houses throwing stones you might examine the architecture of your own house.

Mr. BINDERUP. You have both referred to a certain letter from the Constitutional Money League and to the platforms of your parties as quoted therein, so let me also refer to this same letter and remind you there are two more party platforms contained in this letter. First, the Progressive platform for 1938, which reads as follows:

"The ownership and control of money and credit, without qualifications or reservations, must be under public and not private control." Well, that's another good statement.

And the Farmer-Labor platform for 1934 is short but definite: "Congress shall exercise its constitutional power to coin all money and regulate the value thereof." The truth in a nutshell. But I am pleased to have observed that every Progressive and every Farmer-Laborite did remember their party platforms when the opportunity presented itself to vote or work for constitutional money.

And I am pleased to extend to you, our much appreciated guest speakers this morning, a well-earned compliment, and in this I know I speak the sentiment of the multitude who are looking for courageous leaders in this hour of political darkness. You and many others in Congress never forgot as individuals your party pledges.

Mr. OLIVER. Since we are airing out the platforms of the different political parties relative to their stand for constitutional money, I have a plank of the Democratic platform following the crime of 1920. I think it is in the platform of 1924. I overlooked this when reading the Democratic platform before:

"We denounce the recent cruel and unjust contraction of legitimate and necessary credit currency, which was directly due to the so-called deflation policy started on May 18, 1920. * * * We demand that the Federal Reserve banking system be so administered as to give stability to industry, commerce, and finance, as was intended by the Democratic Party which gave the Federal Reserve banking system to the Nation."

That is really the most specific of all planks in the Democratic platforms.

Mr. HILL. And I would like to add that the cause for constitutional money is a holy cause. For did not every Member of Congress, the Senate and the House, pledge to the people they would carry out this constitutional mandate to provide constitutional money? And in order to make it still more sacred and binding and still more forceful, did not every Republican, Democrat, Farmer-Laborite, and Progressive, as well as the President of the United States, when they accepted office and assumed the responsibility, hold up their right hand and take a solemn oath that they would uphold the Constitution of the United States, which so plainly and definitely stipulates that Congress shall coin all money and regulate the value thereof; in other words, that Congress and not the money changers shall regulate the measurement used to determine the compensation of labor and farmer?

Mr. OLIVER. Now, what I would like to know, Mr. Binderup, and I think our radio audience would also like to know; what in your judgment is that powerful factor that can hold back this righteous cause when all political parties in their platforms have made solemn pledge to the people and taken an oath before their God to carry out this constitutional mandate?

Mr. BINDERUP. In answering this question, let me be frank and fearless. How well do I realize that I am making myself vulnerable not alone to the money powers but to an uninformed prejudiced society, and having answered this question without fear, telling the whole truth, I am prepared to hear the shouts and the hisses and the ridicule of bigots and the intolerant and the uninformed who are still plodding in the old monetary rut that was created and supported by a Rothschild that spoke through an Alexander Hamilton, that echoed through a Wall Street and is today amplified through a Federal Reserve banking system that extracts from the people the products of their hands and brains that so justly belongs to them and gives it to the money changers. And so with a full realization of the cost, fully conscious of the price I shall pay, I challenge the enemy of humanity with an irrevocable determination. It shall be done!

Congressman OLIVER. I would like to shout this reply from the mountain top that the people might know. It is the invisible government, the power behind the throne that by the power of money, compels our Congress against its desire to repudiate the will of the people. It is Wall Street and the international bankers, clothed in the raiment of the American Bankers Association and large organizations and corporations and associations of vast capital. These, my friends, are the political cancers at the heart of our great Government.

The threatening communism, nazi-ism, or fascism, or any other isms are but the symptoms of a nation in decay on which feed the worms of war. These are but the pimples of the body politic of our Uncle Sam, the outgrowth of money monopoly, economic dictatorship. Believe me, the issue is the money changers versus the people, the same enemies that fought Christ and they are still fighting the principles of Christ. Every great government that ever was and is no more, encountered this enemy and died, and out of the mists and the clouds and the shadows of money monopoly, born of the money changers and economic dictatorships, some day will come a blacksmith, or a paper hanger, or a steel worker who will say to the people, "You are hungry. I will give you a crust of bread for your liberties. Trade your economic dictatorship and what you have left of your great democracy for me. I will at least give you food to eat. I will take from the rich and give it back to you. Your economic dictator has taken from you your homes and your farms, your jobs and your constitutional rights to life and liberty and the pursuit of happiness. I promise you bread." And the great multitude, sorrowfully, woefully, and reluctantly will reach out their hands for the crust of bread, and they will reply in the words of Shakespeare's old apothecary, "My poverty and not my will consents." And the new dictator will reply in the words of Romeo, "I pay thy poverty and not thy will."

Mr. HILL. In conclusion let me say to Members of Congress listening in, in reviewing this morning the platforms of our political parties I am sure you will all understand this is not done in the spirit of reproach as much as it is just a gentle reminder to all of us, but these platforms do suggest some explanation. Why do we not act collectively against this common enemy, the money changers. Is it because, recognizing the power of money, we are afraid to fight? Then let me suggest to you that this fight is ours, and the sooner we take up the fight the sooner can our great Nation be brought back and in no other way can we solve the political problem facing us in Congress today.

Mr. BINDERUP. I don't really think our talk this morning needs an apology; we have only reminded Congress. This was the covenant we made with our people, this was our promise, and in reply they said to us by their ballots, "Go you to the Nation's Capital. We have confidence in you."

And then when President Roosevelt reiterated in his inaugural address, "The money changers must be driven from the temple"—oh, how we rejoiced and answered back, "Then you are the peoples' champion come from wealth and plenty down to fight for the cause of humanity. Then you are the great leader for whom the toiling masses have so religiously hoped and prayed for over a hundred years."

And then do you remember when we heard the echo from that most notable message our President Roosevelt sent to the London monetary conference: "Let me be frank in saying that the United States seeks the kind of dollar which a generation hence will have the same purchasing power and debt-paying power as the dollar we hope to attain in the near future." And we shouted back to our President, "Yes, yes; amen"—for with such a dollar there can be no more money panics and depressions and without such a dollar there can be no justice nor economic freedom.

And when our President called attention to the one-third of our people ill fed, ill clothed, and ill housed—suffering humanity, like the shipwrecked, floating on a raft—cold and hungry, waving their garment that a passing ship might see, dried their tears and whispered, "He has seen us. Thank God; now we will be saved."

But the hidden government, the money changers, were at the helm and the winds of selfish greed wafted the old ship of state in the opposite direction and so today the raft with its one-third are still adrift, still waiting and hoping and praying that someone will take the place at the helm of the great ship of state with the courage to save them.

And now in conclusion let me again thank you, Congressman HILL and Congressman OLIVER, for this contribution to our congressional breakfast talks.

ANNOUNCER. I understand you have a very interesting discussion planned for next Tuesday morning's congressional breakfast talk. We would like to know who will be your speakers and what will be the topic for discussion.

Mr. BINDERUP. Yes; I am pleased to announce for our next Tuesday congressional breakfast talk: Senator GUY M. GILLETTE, of Iowa, and Congressman JOHN F. HUNTER, of Ohio, on the subject The Quantity Philosophy of Money, the Control Lever for a Permanent Dollar.

And at this time I wish to announce that we invite Members of the Senate and the House to come to WOL and sit at the table with us in discussion of this question on Government monetary control. We welcome especially anyone having an opposing viewpoint on Government monetary control.

ANNOUNCER. Mr. Binderup, that sounds interesting, all right. So until we have another congressional breakfast talk, we say, "So long," until next Tuesday morning.

The Old Gray Mule, He Ain't What He Used To Be

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Saturday, March 25, 1939

LETTER FROM HON. GEORGE H. HEINKE, OF NEBRASKA

Mr. BENDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter written by Hon. GEORGE H. HEINKE, of Nebraska:

JANUARY 30, 1939.

Mr. EDGAR HOWARD,
Editor, Columbus Telegram, Columbus, Nebr.

DEAR FRIEND EDGAR: My attention has been called to your editorial of January 18, 1939, in which you intimate that you discern spavins and ringbones on my political legs because of my negative vote on that wicked 1939 W. P. A. deficiency appropriation.

Edgar, what you perceive on my political legs are not spavins or ringbones. They are the remains of the scratches, welts, and Charley horses that I received going through some of those political fences in my race for Congress last fall, but I assure you that you

would have to look mighty close to see any evidence of them now.

Talking about mules, I am reminded that a number of years ago, when I was scouring the countryside buying cattle, a friend came to me and said, "George, while you are riding the country, I wish you would keep your weather eye open for mules. I am in the market for mules, and here is what I am interested in: I want a span of molly mules, matched either in black, bay, or gray; aged 6 or 7 years; height, 14 hands; weight, 1,400 pounds or thereabouts; broke to work; and that will stand without hitching, and if they are in foal, all the better. I want them worth the money. I want no pointed rumps, no drooping rumps, no crooked legs, no swinney, no spavins, no ringbones, nor cold shoulders. Examine the eyes, the teeth, and the wind. Look at their kidneys, their appetites, and their intestines if you can."

Edgar, I tell you a mule like that is hard to find.

I remember the mule you had on or about March 4, 1933. I refer to the one that those New Deal bureaucratic mule skinners have been herding around for almost 6 years.

I was never overly fond of that mule and especially his braying. I must admit, however, that he did a little work, had a little shape and some good mule sense. But look at him now, mooneyed, blind staggers, a whisky cough, shimmies, and walks in circles. His whole constitution is undermined and it takes appropriations of nine or ten billions of dollars to even keep him on his feet. At his best he is nothing now but a common, no-account, flea-bitten, knot-headed jackass and a stump-sucker, besides.

Edgar, the only mule you ever had is ruin't.

Sincerely yours,

GEORGE H. HEINKE,
Member of Congress.

Our Foreign Policy

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1939

Mr. SABATH. Mr. Speaker, on March 18, 1938, answering an attack upon Secretary Hull and the administration's foreign policy, I made a lengthy speech giving my opinion of European conditions. By that speech I hoped to draw attention to the menace of Hitler to world peace, and particularly to the shadow he cast over Poland, Czechoslovakia, Yugoslavia, and Rumania.

I was convinced that Great Britain and France could weigh gravity of coming events, but suspected those nations of viewing the sweep of fascism and nazi-ism as preferable to the growth of communism. They have sanctioned dismemberment of a sister democracy, Czechoslovakia, and are poised to deprive other countries of their independence. I cannot help wondering whether they do not approve of the barbaric and bloody policies of Hitler.

In my speech on March 18, 1938, I said:

Not until 1912, when I had the pleasure of obtaining the privilege of the House floor for Count Luetzow, ex-Austrian statesman who visited the United States to warn of the dangers of the approaching European war and advocate measures tending to universal peace, and shortly thereafter, when I heard the late President of the Republic of Czechoslovakia, Professor Masaryk, lucidly explain the aspiration of Germany to acquire by any means necessary not only control of middle western Europe and the countries of the Danube but also another outlet to the sea, did I really begin to give serious thought to the danger of the then approaching war.

EXPRESSED BELIEF IN SECRET CONSPIRACY 3 YEARS AGO

Three years ago I voiced belief that a secret or tacit agreement existed between Hitler, Mussolini, and Japan, but my warning went unheeded. The strategy practiced by those countries conformed exactly to that predicted by Professor Masaryk, who was intimately aware of Germany's ambitions.

In the Orient Japan pursued a course toward domination of the yellow races, apparently with preassurance that Italy and Germany would so engage the attention of the European democracies that interference in China would be impossible.

In Ethiopia Mussolini's war machine grinded to its conquest while Hitler's silence gave approval.

Internal dissent in Spain, nourished by the dictator countries, finally flamed into civil war, and the legions of Italian and German soldiers took stand in battle against the established government.

Hitler, demanding the return of Germany's lost colonies, only cloaked his purpose of European aggression, and it was long ago clear that he would one day climax the years of planned propaganda in Austria by an invasion of that country. His seizure of Austria is but a prelude of more ambitious plans. Peace- and liberty-loving Czechoslovakia, Rumania, Hungary, and the other small independent nations now see his shadow across their lands—Memel, Danzig, and the Polish Corridor, Alsace-Lorraine, and the much-desired Ukraine.

For the time being, engaged in consolidating his gains, he may utter reassuring words to Poland and Yugoslavia. But they have only to recall his utter disregard of treaties, and his oft-repeated statements as to his ultimate aims, to realize how necessary it is that they prepare to resist invasion, for invasion is bound to come.

IL DUCE MAY BE MAKING SAD MISTAKE IN TRUSTING HITLER

Whether Il Duce is as smart as he thinks he is in cooperating with the imperialistic-minded Hitler only the future will tell. But there are many sapient observers who have their doubts. They believe that Hitler will not hesitate to throw his now comrade, Il Duce, overboard when and if he becomes strong enough to be able to get along without him.

AMERICA MUST TAKE NOTE OF WHAT IS GOING ON IN THE WORLD

One may properly ask how does all this affect America? Who knows? In this fateful hour, with all the civilized world well-nigh breathless, I do not feel that we should follow the vacillating policy of Great Britain, who, in the opinion of many well-qualified students of international affairs, may be the next prey of the remorseless triumvirate. Many ripe scholars feel that the suppression of Great Britain will mean the consummation of a plan to form three great powers outside of North and South America. I doubt very much that France, which is fighting domestic problems with her back to the wall, and Russia, despised by the capitalistic groups of the world, could, after the disappearance of the other countries I have named, long withstand being dismembered also. There is not the slightest doubt in my mind but that Hitler, Mussolini, and the raving-mad Japanese war lords are in a conspiracy to divide the entire world among themselves, or at least as much of it as they can manage to grab.

POLISH LEADERS SHOULD NOT FORGET TREATMENT ACCORDED POLES IN PRUSSIA

Great Britain, rather late, is commencing to realize its danger. Does Poland realize her danger?

The leaders in Poland might well hearken back to other days, and consider the former treatment of Poles in Prussia. I remember in 1908 how Prussia prohibited, by edict, the teaching of the Polish language in their own schools, and how they proposed in their Parliament a compulsory dispossession of the homes of Polanders. For 2,000 years the Poles and their fathers before them had occupied this land, but notwithstanding and in contravention of the Congress of Vienna of 1815, and in violation of Prussia's organic laws prohibiting distinctions between citizens of the Kingdom, that Kingdom's Parliament even then showed its prejudice and discrimination against the Polish.

At the time I speak of, Congressman Arthur L. Bates, of Pennsylvania, was impelled to introduce into this House a resolution extending good wishes and sympathy to the Poles in Prussia in their efforts to maintain their property rights.

Recalling this, and viewing the present prejudice which governs in Germany, Poland should properly estimate the future insofar as her relations with that country are concerned.

AMERICA MAY NOT BE AS SAFE AS SHE FEELS

Up to about 12 years ago we confidently believed ourselves properly protected against possible attack from any and all quarters; but in view of the increased and ever-increasing knowledge of aviation and mammoth airplane carriers, are we really free from military danger?

If this nefarious triumvirate should effect the dismemberment of the great British Empire, what would become of Canada? Could we still feel free and at ease without present-day Canada?

Only a little while ago I read in the public press about concessions that had been or were contemplated to be granted by Mexico to Japan in Lower California. That recalled to my mind the tentative offer by Germany in 1917, in the Zimmerman note, to give Mexico a part of the United States if Mexico would join Germany, and the offer to Japan of the Philippine Islands in return for military aid. When those audacious offers were first brought to light it was thought they were sheer allied propaganda, but we were convinced of the authenticity of these reports by documentary evidence that came into possession of our Government.

In view of all this and our enemies within, I feel that it behooves us adequately to protect ourselves against even the remotest eventuality. I have heard it said with plausibility that if England had stated her position unequivocally in the early days of 1914, and if America had been prepared in 1916, these acts would have had a most salutary effect, and it would not have been necessary to send millions of our young men across the sea and expend billions of dollars. Consequently, and repeating, I feel that we owe it to ourselves to prepare for any, even the most imaginable possibility. Therefore, I am ready to vote for the construction of a navy and an air force that will be unmistakably adequate for our proper defense.

DO NOT CLAIM TO BE MORE PATRIOTIC THAN THOSE WHO DISAGREE

It is not my aim to try to make anybody believe I am more patriotic than those who do not favor this increased naval plan. We all recognize among that group a highly patriotic impulse. They, too, think their judgment would be better for the country. The only interest I have in the problem of national defense is the welfare of our whole country, to which I owe much and for which I am ready to give everything I possess. This great country of my adoption has been kind to me, and if I leave behind only one legacy, I want it to be a contribution, weak though it be,

to the defense, not offense, and the promotion of the welfare of the land that made me whatever I am and gave me whatever I have.

Let me say that I feel a grave mistake was made by some of the political leaders of 20 years ago, who, for purely political purposes, prevented the United States from joining other peace-loving nations in a hopeful effort to outlaw war and all its frightful consequences by the League of Nations. That failure unquestionably weakened the League at the outset, and it has in no small measure destroyed its usefulness.

I well remember when President Wilson returned from his first trip to Paris and invited the members of the Senate Committee on Foreign Relations and the members of the House Committee on Foreign Affairs to the White House to hear his explanation of the League plan, because I was at the time a member of the Committee on Foreign Affairs. The only sitting members of the Committee on Foreign Relations are Senators PITTMAN and BORAH. I am the only sitting Member of the House who participated in that historic meeting.

Mr. Wilson made a confidential report to the members of these two committees, and in a 3-hour session he endeavored to obtain the advice and consent of those present. All present were asked to question the President on each and every provision, which many, as I recall, did, and all were apparently satisfied by the President's lucid and masterly exposition of the infinite possibilities of that great humanitarian plan. In addition to securing the advice and consent of the members of those two committees, Mr. Wilson consulted such eminent Americans and Republicans as former President Taft, former Secretary of State Elihu Root, and others, all of whom acquiesced in the President's conclusions. I especially remember that the chairman of the Committee on Foreign Relations of that time, Mr. Lodge, of Massachusetts, propounded to President Wilson many questions and appeared satisfied, yet a few months later, unfortunately, the same Senator Lodge who had given unmistakable assurance of accord with the plan, became, in his important official position, the spearhead, largely for political purposes, of the opposition to the League plan. It is a fact that there was opposition to the League of Nations, simply because it was the only issue Republican leaders of that day could evolve in opposing the Democratic Party. In this opposition they were aided by the disgruntled, vitriolic Jim Reed, then a Senator from Missouri.

It was alleged that the League Covenant provided for sending our boys across the sea; while in fact there was nothing in the League Covenant that justified such a conclusion. I maintained then, and I repeat, that the underlying opposition to the League, aside from the political consideration, was the objection of industrial leaders of the Nation to the international labor provisions, which provided, in article 20 of the Covenant of the League, that—

"The high-contracting parties will endeavor to secure and maintain fair and humane conditions of labor for men, women, and children, both in their own countries and in all countries to which their commercial and industrial relations extended, and to that end will agree to establish as part of the organization of the League a permanent bureau of labor."

BELIEVE AMERICA'S MEMBERSHIP OF THE LEAGUE WOULD HAVE BEEN BENEFICIAL

I am confident today, beyond all doubt, that had the United States joined the League of Nations it would have strengthened and preserved the League in full vigor and effectiveness and we would not have present-day conditions, with all democracies of Europe either destroyed or on the verge of destruction. I still believe that under the terms of the League Covenant we could have precluded the mad rearmament race by close adhesion to and renewal of the provisions of the Washington Arms Conference after the 10-year limit, to the lasting benefit of all civilization. At the conclusion of the Washington Arms Conference the United States felt fairly easy; and it was only our absence from membership in the League that led first Germany, then Italy, and, shortly thereafter, Japan to withdraw from membership in the League. Then trouble began. The plot thickened. Now we have the fruit.

Moreover, I feel that if Great Britain and France had taken a firm stand against the initial rearmament of Hitler, Mussolini, and Japan, and had not been lulled to sleep by undependable peace assurances, they would have been in position 2 years ago to stop Mussolini and Hitler in their mad rush toward a menacing world conquest. Should we, then, follow the vacillating and always unloading policy of Great Britain or should we be ready to properly defend ourselves and our possessions against any and all?

I LIKE TO FEEL THAT I CAN CHANGE MY VIEWPOINTS IN ACCORDANCE WITH CHANGED CONDITIONS

And so, in conclusion, let me say that in view of the alarming world conditions to which I have alluded, I shall vote and work for the passage of the pending bill. This may be surprising to some of the critics who have accused me of being a pacifist, charging that I was against adequate national defense; but let me say to them it is not they who have changed my view. I was just as conscientious when I opposed large Army and Navy appropriations in past years as I am conscientious today in supporting this bill. I have changed my views because and only because world conditions have changed. When I get so old or so benumbed of brain and character that I cannot change my view in accordance with changing conditions and a changing world, it is time for me to be carried out feet first, and I want to be.

I have criticized conditions and things at times, and I shall do so again whenever I see anything that I think merits criticism. But I love this country. I will vote any amount of money necessary to protect it from enemies either within or without. Today, perhaps more than at any other time in its history, the United States of America stands out against the dark and stormy seas of racial persecution, intrigue, conspiracy, and jealousy as the one and only enduring beacon light of hope.

I am grateful to the people of my district for having permitted me for so many years to be a Member of this great American Congress, the greatest democratic legislative body on earth, wherein every man is accorded the unfettered right to say what he pleases. Let us strive to preserve and promote this priceless heritage for ourselves and posterity. I do not expect to be here forever, but I do want the Stars and Stripes and a democratic form of government to endure here forever.

These are words I spoke a year ago. Today they are as true as they were then. I can only hope that England and France, realizing their mistakes of this past year, will no longer permit Hitler to dictate their diplomacy and to move their statesmen about as players on a chessboard.

The Fish Industry and Reciprocal-Trade Agreements

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, March 25, 1939

Mr. REED of New York. Mr. Speaker, since this industry to be prosperous must have an export outlet for some of its products, as well as a large domestic market, it is reasonable to conclude that it would be the policy of the Government to protect the American fishing industry through true reciprocal-trade agreements. This is a very important industry, especially to the northeastern and northwestern sections of this country, employing over 125,000 fishermen in 1935, and 13,000 additional persons in the canning and curing of fish. The value of the products of this industry in that year was estimated to be over $104,000,000.

The United States received concessions in 13 of the 16 trade agreements which had been negotiated and were effective prior to January 1, 1938. Of the agreement countries, Canada, the Netherlands, and France were important outlets for our fish and fish products in 1929. To two of these three countries—Canada and the Netherlands—we gave concessions on fish and, in turn, Canada and France gave this country concessions.

Figures from official sources show that agreement countries as a whole took slightly more than 29 percent of our total export market in value in 1929. Our total fish exports in 1937 were but 58.4 percent of their value in 1929. However, in 1937 our exports to nonagreement countries had recovered to 65.1 percent of 1929, while to agreement countries which gave us concessions they were but 49.6 percent of the 1929 level in value. It is evident that our recovery of our former fish market has been more rapid to the non-trade-agreement countries than to the agreement countries. Thus it is apparent that the concessions received under reciprocal-trade agreements have not been of particular value to this country. On the other hand, we in turn gave concessions on fish in both the Canadian and the Netherlands agreements which were generalized in our tariff schedules to the entire world. We likewise gave concessions to Cuba, but these were not generalized because of the special treaty in effect between this country and Cuba.

While the value of fish exports in 1937 was nowhere near the 1929 level, the value of fish imports for 1937 was 85.3 percent of the 1929 level. Our imports from agreement countries in 1937 were 86.6 percent of the 1929 level, while to nonagreement countries they were 84.2 percent. From these figures it is obvious that the trade-agreements program has helped foreign countries to recover their market in this country, while the concessions we received from agreement countries have not been of any help to us in reacquiring our former foreign market for fish.

It is especially noteworthy that, while the Netherlands received a concession from us which has been very helpful to them in bringing their volume in this country back to approximately the 1929 level, they did not in turn give us the concession which would have made it possible for us to have reacquired our former market in the Netherlands. In 1929 we exported to the Netherlands 19,833,000 pounds of canned fish, while in 1937 this figure had dropped to 1,791,000 pounds.

Another country which has materially increased the sale of its products in our home market is Japan. In 1929 Japan exported to this country 26,543,000 pounds, while in 1937 they exported 47,703,000 pounds. Here is another industry which the New Deal claims to have helped through its reciprocal trade agreements program. However, all of the evidence shows the contrary to be true.

Dr. Towne Nylander

EXTENSION OF REMARKS

OF

HON. THOMAS F. FORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, March 25, 1939

DOCUMENTS FROM THE NATIONAL LABOR RELATIONS BOARD

Mr. THOMAS F. FORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following documents from the National Labor Relations Board:

N. L. R. B. LIFTS SUSPENSION OF DR. TOWNE NYLANDER AS REGIONAL DIRECTOR OF TWENTY-FIRST REGION

The National Labor Relations Board on February 27, 1939, announced the suspension of Dr. Towne Nylander as regional director of the twenty-first region, at Los Angeles, pending an investigation of the accuracy of the reporting of an address made by Dr. Nylander at Inglewood, Calif., on February 6. The newspaper account of the address quoted Dr. Nylander as expressing views which are in no sense those of the Board.

An investigation was undertaken at the request of the Board by Prof. James E. Brenner, lieutenant commander, U. S. Navy, (retired), professor of law at Stanford University. His findings have been received and studied by the Board. In them the Board does not find cause to continue Dr. Nylander's suspension. It has therefore advised Dr. Nylander that his suspension has been lifted, and has requested him to reassume his duties as regional director.

A copy of Professor Brenner's findings in the matter, and of Chairman Madden's letter of transmittal to Dr. Nylander, are attached.

NATIONAL LABOR RELATIONS BOARD,
Washington, D. C., March 24, 1939.

Dr. TOWNE J. NYLANDER,
2638 West Adams Gardens, Los Angeles, Calif.

DEAR NYLANDER: As you know, the Board requested Prof. James E. Brenner, of Stanford University, to investigate the accuracy of an article in the Inglewood Daily News which reported an address made by yourself before the Ingleside Community Forum on last February 6. In addition to the inquiries made of yourself, Professor Brenner in the course of his investigation has interviewed many of those who listened to your address and has taken the testimony of the writer of the Daily News article, Mr. Roy Rosenberg. The Board has received Professor Brenner's findings. A copy of them is attached.

You will note that the findings go directly to the statements which disturbed the Board and which was the cause of its action in suspending you. The purported statements were to the effect that, when a complaint is actually served, the Twenty-first Regional Office does not have a scintilla of doubt as to the employer's guilt, and that the employer "hasn't got a chance."

Professor Brenner finds that you did intend to convey the meaning of the first statement to your audience; he finds conflicting evidence as to your words and meaning on the second point. As an overall finding, Professor Brenner presents a failure on your part to describe Board procedure in such a way as to convince listeners, unfamiliar with that procedure, that it affords an employer adequate opportunity to defend himself against allegations made against him in a complaint.

The Board recognizes that it is the duty of a regional director not to issue a complaint in a case unless his investigation of the facts has led him to conclude that an unfair labor practice has been committed. It is assumed that your remark, "When a complaint is actually served the twenty-first regional office does not have a scintilla of doubt as to the employer's guilt," is an expression of confidence that you in your investigation have so sifted the facts that you are certain a complaint can be sustained. You may claim that cases in your region are so carefully investigated and prepared that only those in which the unfair labor practices are certain of proof under testimony could reach the stage of a public hearing. However, the Board regrets that your discussion of procedure dealt only with those early stages of our cases entrusted to the regional director, and failed to deal with the later stages which are the responsibilities of the trial examiners and the Board.

Your error in judgment according to our reading of Professor Brenner's report, arose from not "* * * laying a foundation by making a complete and accurate explanation of the National Labor Relations Board procedure." Such an explanation would have involved a clear demarcation between your duty in presenting the case and the totally different functions of the trial examiner who hears the testimony, of the Board itself which must review the testimony, and of the circuit court of appeals which passes on the entire record. Your role in the first stage of this familiar and legally-approved procedure is so routine that you were perhaps blinded to the possible effects on listeners of a presentation which left them to believe that employers have no recourse after a complaint is once served upon them. Unless you had so informed them, your listeners could not know that complaints are in proper cases dismissed upon subsequent presentation of pertinent facts, that employers have opportunity to refute allegations in complaints by sworn testimony, that trial examiners can and do dismiss complaints upon proper evidence, and that the Board itself in numerous cases has, upon its consideration of the transcript of evidence taken at the hearing, dismissed a part or all of a complaint issued by a regional director.

In respect that your error in judgment caused an unfounded alarm in the minds of parties to Board proceedings and in members of the public, with reference to the fairness of Board proceedings, the Board finds reason for reproof in your Inglewood address as weighed in the findings of Professor Brenner. Those findings also state the opinion of Professor Brenner that you "did not intend to convey the impression that the procedure of the National Labor Relations Board does not provide a full and impartial hearing for employers against whom formal complaints have been filed."

The Board also accepts this finding and upon it concludes that there is no valid cause, in the facts themselves, for further disciplinary action against you. You are reminded, however, that your suspension took place after the Board had waited for several days for a report from you concerning your remarks.

Your suspension as regional director is hereby lifted and you may immediately reassume your duties.

Sincerely yours,

J. WARREN MADDEN, *Chairman.*

FINDINGS OF PROF. JAMES E. BRENNER, SUBMITTED TO N. L. R. B. AFTER INVESTIGATION OF ACCURACY WITH WHICH ADDRESS BY TOWNE J. NYLANDER WAS REPORTED

The article in the Inglewood Daily News appears to be a case of reasonably accurate reporting, but it includes interpretations not intended by the lecturer.

There is a square conflict as to whether Dr. Nylander used these exact words: "I'll tell you frankly when we go into a hearing the employer hasn't got a chance."

With the exception of this controversial sentence, Mr. Rosenberg's statement made at the hearing is substantially correct, that "The statements which appear in the adjoining starred box are Dr. Nylander's words in every instance. The article is the running account, of the running story, is a review of what happened at the meeting in an effort to hit the high spots and does not purport to be a verbatim account of what Dr. Nylander said."

The content of the paragraphs in the body of the article is substantially correct, but in some instances the interpretation which results from taking statements from their context and joining them as consecutive statements was not that intended by the speaker.

The title of the article "National Labor Relations Board Is for Workers and Against Employers, Claim" might be inferred from the remarks of Dr. Nylander by members of the audience who were not familiar with the part of the National Labor Relations Board procedure, which was not explained by Dr. Nylander, but Dr. Nylander did not intend that such an inference should be drawn.

Dr. Nylander made a qualified statement that he personally hoped the A. F. of L. and C. I. O. would remain two distinct organizations.

The captions "Communism Feared" and "Favors C. I. O." are the reporter's own phrasing.

Dr. Nylander did not always make clear to his audience when he was quoting another person and when he was expressing his own views.

Dr. Nylander did not intend to expressly state or to imply that the Board is partial in its views concerning complaints filed against employers.

Dr. Nylander did not intend to convey the impression that the procedure of the National Labor Relations Board does not provide a full and impartial hearing for employers against whom formal complaints have been filed.

If Dr. Nylander intended to restrict his statements regarding the procedure of the National Labor Relations Board to the procedure of the twenty-first region, the record shows that he did not make his intention clear to all of his audience. Dr. Nylander did

intend that his audience should be impressed with the fact that when a complaint is actually served the twenty-first regional office does not have a scintilla of doubt as to the employer's guilt.

The Inglewood audience was a receptive one and there is evidence which indicates that Dr. Nylander became very enthusiastic about the subject matter of some of his remarks and made statements which could reasonably be interpreted in more than one way.

Dr. Nylander did fail to fully describe the procedure of the National Labor Relations Board and the lack of that explanation or knowledge resulted in a number of the members of the audience misinterpreting remarks made by him.

Dr. Lylander, as regional director of the National Labor Relations Board, should have recognized the necessity for his laying a foundation by making a complete and accurate explanation of the National Labor Relations Board procedure if he desired to make statements which might reasonably be misunderstood if this precaution were not taken.

J. E. BRENNER.

That Cash and Carry Plan

EXTENSION OF REMARKS
OF
HON. GEORGE W. GILLIE
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Saturday, March 25, 1939

Mr. GILLIE. Mr. Speaker, America is hovering dangerously near the brink of another European conflict. Our war-minded Chief Executive is directing us on a course of international intrigue that will surely and certainly lead the United States into a second world war.

Unless Congress intervenes to strengthen existing neutrality legislation as a counterstroke to the current administration effort to weaken such legislation, the history of the Wilson administration will be repeated. Only this time our boys will be sent to the Old World slaughterhouse on the pretext of making democracy safe for the world.

Senator PITTMAN, with the blessings of the administration, has introduced a bill that would scrap the present neutrality law in favor of one permitting the sale of war supplies to foreign nations on a cash-and-carry basis.

Cash and carry sounds inviting, but how long would the cash hold out? If Europe can pay cash for new war supplies, she can pay debts incurred for purchase of supplies in the last European bloodletting.

Millions of Americans hungry and in need can furnish customers for more than we have ever yet produced without going into the murder merchandising business whose ultimate consequence must be destruction of civilization and creation of the very conditions that brought dictators to Russia, Germany, and Italy.

The way to keep out of war is to keep out. Since Congress has the responsibility of declaring war, Congress should hold the reins to prevent the President from following a course of international meddling that will make such declaration a mere perfunctory formality.

The President has usurped the power that belongs to Congress and the people. I intend to condemn this procedure by signing at once the petition to discharge from committee the Ludlow war referendum resolution. I urge my colleagues to join me in this effort to give the mothers of America the right to decide whether their sons and husbands shall again be sacrificed on the European slaughter block.

I also urge my colleagues to study carefully the following editorial from the Fort Wayne (Ind.) News-Sentinel of March 23, 1939:

THAT CASH-AND-CARRY PLAN

Says Representative LOUIS LUDLOW, Democrat, of Indiana, "With the war spirit sweeping the world; with every great nation weighing itself down with clanking armaments; with international friendships long so prized and so eagerly sought breaking down and giving way on a wholly unprecedented scale to international hatreds and discord—if there ever was a time when Americans should set aside all other matters and give their best thought to the problem of how to keep America out of war now is that time."

There are as Representative LUDLOW points out no signs that any nation intends to attack us either with arms or with the economic weapons which are secondary only to arms as a means of offensive action—economic weapons applied through such discriminatory foreign policy as in the case of current American proposals is hypocritically labeled as "new neutrality legislation." But—

"There are" as Representative LUDLOW reminds us "forces that are likely to pull us into war unless we take some effective steps to prevent it. These forces—financial, political, or what not—reach across the seas and constitute the danger element of the situation, as far as America is concerned."

In this juncture, Senator PITTMAN'S cash-and-carry proposal appears very well—on the surface. But it is utterly unrealistic.

For—just where are the European nations to get the money with which to pay cash for the war supplies they are to be permitted to obtain in the United States? They haven't been able—or so they have said—to pay a penny on their old war debts for years! And most of their great armaments programs have been financed with recklessly borrowed money!

When their other sources of credit have been exhausted, when they are in the middle of a war, when they have (by means of loans) pumped up a great artificial structure of blood-soaked prosperity here in the United States—what then?

Will not World War history repeat itself? Will not the administration at Washington, dreading collapse of such a bubble of apparent economic well-being, follow in Woodrow Wilson's footsteps to arrange, either openly or secretly, extension of, first, private, then public credits to those nations which it makes no secret about favoring in the curernt European brawl?

We dare not fail to count the cost of such a policy's most probable—nay, almost certain—consequences. The Roosevelt-Welles-Pittman road is the road that leads straight to war.

And, as Mr. LUDLOW asserts, "A declaration of war is no idle and inconsequential thing. It sounds the knell of our fine young manhood. It breaks up family ties, tears heartstrings asunder, and dooms countless thousands to premature death."

We hear much sentimental talk about the suicides in Czechoslovakia. Surely there is in no quarter a lack of sympathy for those who have felt constrained to take their own lives in consequence of the new shift of the map of Europe. But can we bring back those lives by slaughtering millions? Is a Czechoslovakian suicide sadder than the ghastly deaths of hundreds of thousands of American (and other) soldiers ripped from their homes and firesides and sent into the awful shambles that is war?

Should not, at the very least, our representatives in Congress have the say-so as to specific foreign-policy commitments even potentially tending toward involvement of the United States in foreign strife when the ultimate responsibility for declaring war rests with those representatives?

If our neutrality legislation is repealed or relaxed, then, talk all our rulers will about democracy, ours will not be a democracy at all, but a pure autocracy.

Please bear all these things in mind as you prepare a message to Representative GEORGE W. GILLIE, and Senators FREDERICK VAN NUYS and SHERMAN MINTON, Washington, D. C., urging them to hold out to the last against the effort to make us scrap our Neutrality Act!

J. Burrwood Daly

EXTENSION OF REMARKS
OF
HON. JOHN M. HOUSTON
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Saturday, March 25, 1939

On the life, character, and public service of Hon. J. BURRWOOD DALY, late a Representative from Pennsylvania

Mr. HOUSTON. Mr. Speaker, when I entered the House of Representatives 4 years ago and met my colleagues from Pennsylvania, I was a stranger to the group, but as time passed, I learned to know and appreciate them, and there was none in the distinguished list of Congressmen from Pennsylvania for whom I had higher regard than J. BURRWOOD DALY. His recent death has taken from me a personal friend, and the people of the State of Pennsylvania have lost a legislator of ability and high standing. He was experienced and of sound judgment. I was always glad to consult him on many questions coming before the Congress and it was my pleasure to serve with him on several committees.

As a lawyer and as a citizen, he stood for the best interests of his community and his country. He traveled life's highway without hyprocrisy or cant; his duties he took seriously, and his obligations he discharged faithfully.

The finest words that can be spoken of him tell of devotion to his family. They were always uppermost in his thoughts and he gave them a full measure of service.

J. BURRWOOD DALY was an unusual man in that he could hold the respect and esteem of his adversary, notwithstanding

the fact that he brought to his work a grim determination and an unfaltering purpose. Through the force of his strong personality he managed to achieve that which seemed impossible to the man of ordinary strength. His rugged honesty and integrity of purpose aroused and held the confidence of those with whom he worked, and no man rendered a greater measure of service than he was called upon to perform during the hectic days of the Seventy-fourth and Seventy-fifth Congresses and this session of the Seventy-sixth Congress.

By electing him as its United States Representative, the State of Pennsylvania greatly honored J. BURRWOOD DALY; and in turn, he greatly honored the State of Pennsylvania.

Discriminatory Freight Rates

EXTENSION OF REMARKS

OF

HON. MALCOLM C. TARVER

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, March 25, 1939

RESOLUTION OF THE GEORGIA LEGISLATURE

Mr. TARVER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following memorial from the legislature of the State of Georgia:

Whereas on February 27, 1939, Commissioner William E. Lee and Examiner Michael T. Corcoran reported to the Interstate Commerce Commission that rates on 13 commodity groups were "unduly prejudicial" to southern producing points "to the extent that such rates are beyond levels higher than at present in effect on like articles within the North"; and

Whereas the said report further stated that there was no substantial argument while the rate level for a given commodity shipped from a southern to a northern point should be higher than the level of rates between two northern points of equal distance; and

Whereas it is fitting and proper that the Interstate Commerce Commission immediately equalize rate structures so as to have uniform rates on like articles which are or which may be produced in different sections of the country from such sections to common markets in conformity with the aforesaid report: Therefore be it

Resolved by the senate (the house of representatives concurring), That the Interstate Commerce Commission be memorialized and petitioned by the general assembly of this State to immediately effectuate the said uniform rate structures in conformity with the said report of February 27, 1939; be it further

Resolved, That a copy of this resolution be dispatched to the Interstate Commerce Commission, to each member of the Georgia delegation in the National Congress, and to the press of this State and Nation.

Poor Economy

EXTENSION OF REMARKS

OF

HON. JOHN Z. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, March 25, 1939

EDITORIAL FROM THE NEW YORK TIMES

Mr. ANDERSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times with reference to the second deficiency bill recently passed by the House of Representatives:

[From the New York Times, Friday, March 24, 1939]

POOR ECONOMY

Although economy is increasingly necessary in Washington, the House of Representatives has used poor judgment in deleting from the second deficiency bill appropriations of $4,000,000 in cash and $6,000,000 in contract authorization asked by the National Advisory Committee for Aeronautics for the creation of an additional research center in California, as well as $250,000 to enable the committee to stimulate research in scientific institutions. This is a case of penny wise, pound foolish. The total appropriations asked by the N. A. C. A. are a drop in the bucket compared with the sums already authorized for the procurement of aircraft. Yet fundamental research in aerodynamic problems is the very thing which has given us our technical superiority in aircraft.

Before the Appropriations Committee of the House Dr. Joseph S. Ames, chairman of the N. A. C. A., expressed the opinion that additional research facilities are now more than ever required because "another power has recently developed aircraft of greater military effectiveness than any American aircraft," and this same power "has expanded its research organization to such a degree as to constitute a foundation for enduring supremacy in the technical development of aircraft, unless the United States takes effective action." Curtailment elsewhere in our new aircraft program would be preferable to the deletion of this necessary item.

Everything "Short of War"?

EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Saturday, March 25, 1939

EDITORIAL FROM THE MIAMI (FLA.) HERALD

Mr. SPRINGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Miami Herald, Miami, Fla., March 21, 1939:

[From the Miami (Fla.) Herald of March 21, 1939]

EVERYTHING "SHORT OF WAR"?

While Europe is seething with war hysteria at the moment, there is ample evidence that the United States apparently is about to be seized with the same virus; perhaps, in degree less violent than that afflicting Britain and France, but a bit hysterical nonetheless.

Our State Department started it last week when Sumner Welles took occasion to cuss out Hitler for the seizure of Czechoslovakia. That was followed by plans to exercise economic pressure upon Germany, raising her import duties 25 percent and putting the former Czech territory on the blacklist. Formal denunciation of German lawlessness in taking Czech land will follow. In fact, the President has announced that the administration will do everything "short of war" to make Hitler feel the displeasure of the United States over the situation in Europe. To this he has added Italy and Japan.

All of which is a little confusing.

The American tradition, if we understand it correctly, has been to keep itself out of other peoples' quarrels.

We were propagandized into the European war in 1917, and sent many hundreds of thousands of American youths to France to fight for the safety of democracy. It wasn't our democracy that was endangered then, and our democracy isn't endangered now.

The worries of Great Britain and of France and of Russia are not of sufficient importance to us to justify taking any steps that conceivably might lead this Nation into another war for the preservation of the European conception of democracy.

The President undoubtedly is sincere in taking action "short of war," but the question is: Will Germany, Japan, and Italy be willing for him to stop "short of war?"

The President may find himself unable to determine at what point economic pressure ends and war begins. The nations against whom the pressure is exerted may answer it with gun and bayonet. Japan, for example, could drop a few bombs on American possessions in China, drop a few more on Manila, send a portion of her fleet into Philippine territory on a marauding expedition. What answer could our President give to that sort of argument "short of war?"

If we are going to scold the dictator governments, punish them by economic sanctions, rule them out of the league, for foulness, we must be prepared to follow such action all the way through.

The people of the United States do not want war, Mr. President. They are not of a temper to send their sons into battle with Germany, Italy, or Japan, just because the leaders of those nations have revived the barbaric standards of Attila the Hun, Timur the Lame, and Baber the Tater, and are attempting to apply them to modern civilization.

The American people want peace, to stay in their own back yards, and be so well prepared for war that all other nations will stay in theirs, so far as we are concerned.

If we get off on a tangent of writing persnickety notes to nations that haven't stepped on our toes we simply are heading into war.

The note-writing proclivity of our war-time president, Woodrow Wilson, had considerable to do with our getting drawn into the World War. We still are more than $10,000,000,000 in the red on account of it, and many thousands of Americans remain in shattered

health because of it, while thousands of stone markers over American graves in foreign soil bear silent witness to the futility of it all.

Today our pens are shaping themselves into swords as the administration in Washington moves toward doing everything "short of war" to help Czechoslovakia, to help England and France.

We would better serve the American people by giving central Europe all the silent sympathy which we feel for it in our hearts, but keep our fool mouths shut, sheath our pen-swords, and look to our own defenses.

The Railroad Problem

EXTENSION OF REMARKS

OF

HON. BURTON K. WHEELER

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Monday, March 27, 1939

RADIO ADDRESS BY HON. HARRY S. TRUMAN, OF MISSOURI, MARCH 26, 1939

Mr. WHEELER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able and interesting address on the railroad problem, delivered by the junior Senator from Missouri [Mr. TRUMAN] over the Mutual Broadcasting System on Sunday evening, March 26, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I thank the Mutual Broadcasting Co. for this opportunity to discuss a subject in which the Congress and the entire Nation is so vitally interested—the railroad problem.

Our great country, to preserve its economy and to maintain its social order, must have an adequate and efficient system of transportation; one which will move to the markets and to the distant consumer, at the lowest possible cost, the cotton of the South, the manufactured products of the East, the potatoes of Idaho and Maine, the fruits of California and Florida, the grain of the Northwest, and the mules of Missouri. Such a system, to be truly adequate, embodies more than a single form of transportation. It embraces the fullest use not only of railroads but also of motor transport, waterways, and air lines.

The economic importance of railroads cannot be overestimated. They constitute the Nation's most important form of transportation. They are at present beset with conditions which endanger their continued operation. Approximately one-third of all the railroad mileage in this country is bankrupt; another third totters helplessly on the very brink of bankruptcy. The railroads have reached a crisis. Their financial condition challenges the right of the public to unimpaired rail service.

Our whole economic structure is at present suffering because of the financial condition of railroads. In 1923 railroad purchases of fuel, materials, and supplies totaled over $1,700,000,000. Their average purchases of supplies between 1921 and 1930 was about $1,400,000,000. In 1938 their purchases of such goods amounted only to about $600,000,000. Any time a billion dollars a year, or any sum approaching that amount, is taken from the stream of commerce, you have there the difference between prosperity and a so-called depression or recession. A billion-dollar purchase is a pretty good pump primer in itself.

Another of the most serious phases of the railroad problem is the shocking amount of unemployment among railroad workers who, because they have devoted a lifetime to the service of that industry, cannot without the greatest difficulty readjust themselves to another field of endeavor.

Unemployment and the undermaintenance of rail properties, with their resulting effects on the economic life of the Nation, are most serious. And as yet I have not mentioned the investor in rail securities. A tremendous loss will be his if no solution to the railroad problem is found in the near future. While the railroad worker suffers, while the railroad plants suffer, while those industries with whom railroads deal suffer, while the railroad investor suffers, the public faces an equal danger. The Nation is menaced with the prospect of a completely ruined transportation service—a service vital to the country.

While the future of the railroads does not appear any too bright, I cannot believe that it is as black as many people predict. I am not alone in my optimism. Senator WHEELER, the chairman of the Senate Interstate Commerce Committee, has repeatedly stated that there is a solution for the railroad problem, and I am collaborating with the distinguished senior Senator from Montana in the introduction of a legislative program based upon facts gleaned from years of study and investigation. We feel that this program will do much toward solving a problem which many regard as the key to economic recovery.

Of course, no legislation can correct the fundamental cause of the railroad problem—lack of enough tons of freight to pay a profit—but legislation can materially aid the railroads in the readjustment of their financial structures and their physical plants. It can at least place rail carriers upon a basis of equality with competing forms of transportation, and do it in such a manner as to protect and preserve the advantages of motor, water, and air carriers for the public. Legislation can place the control of rail properties in the hands of the men who actually operate the railroads.

As a member of a special subcommittee of the Senate Committee on Interstate Commerce I could enumerate almost without end examples of railroad mismanagement, of costly and scandalous practices which contributed materially to the present financial distress of the railroads. Nothing can be gained by dwelling upon them, but our knowledge of these destructive practices has prompted the introduction of legislation which will empower the Interstate Commerce Commission to investigate and obtain all necessary information from railroad subsidiaries and railroad bankers. This, with the regulation of the issuance of rail securities, will guarantee that the recurrence of many abuses will be less likely in the future.

Last Monday Senator WHEELER and I introduced a railroad reorganization bill. It is not a drastic measure, but we believe that it will be effective It was drafted with great care and is designed to correct and to facilitate the processes of reorganization by providing certain standards which must be met and by creating a special court to handle financial reorganizations. We believe that this is a step in the right direction.

The need for a sound procedure in financial reorganizations can be clearly shown by the following statement: Companies which operate over 75,000 miles of railroad, employ over 250,000 workers, and whose stocks and indebtedness exceed five and one-half billions of dollars are already in the bankruptcy and receivership courts. However, no reorganization at all is to be preferred to a reorganization which is to be followed only by another period of insolvency and another bankruptcy. Such practices have occurred in the past, and while no benefits from these reorganizations have come to the public, to the company, or to the workers, the highly paid lawyers and great bankers have enjoyed fees of hundreds of thousands of dollars.

On the other hand, a reorganization on a sound basis will rehabilitate the railroads by providing a capital structure which will permit the payment of obligations from the revenues of a lean year. Such a reorganization is not only desirable but is urgently necessary in the interest of all concerned.

Railroads have been subjected to unfair competition. They have been compelled to observe certain regulations, make certain rates, and provide certain facilities for the public while their competitors have been free to engage in cutthroat activities injurious to themselves and to the railroads. The railroads at the outset refused to recognize trucks and other forms of transportation as real competitors but now they do. They saw us build thousands of miles of concrete highways for the use of 30,000,000 automobiles and trucks, and they still thought they had a monopoly in transportation. They have awakened at last and have asked us to introduce and secure the passage of legislation which will place them on a basis of equality. In making their requests, I feel that they have in some measure disregarded the public interest, and for that reason Senator WHEELER and I are studying and redrafting their legislative recommendations. We will introduce our several bills this coming week.

The legislation which the senior Senator from Montana and I will offer represents the requests of the railroads and the railroad workers, and will be in the public interest. We are rewriting the entire Interstate Commerce Act and are subjecting all forms of competing transportation to the regulation of a single independent regulatory agency. Neither Senator WHEELER nor I propose to destroy motor carriers or water carriers. Those asking for the destruction of either the motor or the water transportation industries are entirely selfish. They are disregarding the right of the public to the lowest possible freight rates which are compatible with a sound national transportation system.

No form of transportation, by legislative act, should be favored over another. No form of transportation should be destroyed to favor another. But no form of transportation should be permitted to enjoy an unnatural advantage over its competitors.

There are many problems in the transportation field with which the Congress is not familiar and which are deserving of a study not hitherto possible for one reason or another. Therefore, Senator WHEELER and I are drafting legislation designed to create an impartial board whose purpose and function would be to make a thorough study of transportation and its related problems. The results of this study and the recommendations of the investigating board will constitute a basis for future legislation by Congress.

Consolidation, unification, or merger of facilities may tend toward a solution of the railroad problem, but the greatest care and caution must be used in affecting any proposed mergers. Proper regard for the communities served by the railroads, for the workers, and for the public must be exercised.

Still other phases of the railroad problem are altogether beyond the scope of Congress. States, counties, and cities levy taxes on the railroads which are greater and greater each year. Railroads have been the victims of every tax racket known to the country. Payment of these taxes are a real financial burden, even to the most prosperous roads. Too often, to my knowledge, State regulatory

agencies compel a railroad to operate lines that are unprofitable, and then levy exorbitant taxes on these unprofitable lines. Before the problem can be completely met the city, county, and State governments will have to correct this situation and show a proper cooperative spirit if we are to save our greatest system of transportation.

Before I close let me say that while it is difficult to offer any hope for immediate relief of the railroads, more debt is certainly not the solution for these debt-ridden carriers.

However, we can promise to the railroads, to railroad labor, to railroad security holders, and to the public, the right for the roads to meet competition on an equal basis; the means for sound reorganizations based on changed economic and commercial conditions; freedom from banker and holding-company control; a careful and impartial study of transportation; and the cooperation of a Congress that is anxious to assist in solving their problems.

It Must Not Happen Again

EXTENSION OF REMARKS
OF
HON. H. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Monday, March 27, 1939

EDITORIAL FROM CLAREMONT (N. H.) EAGLE

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the RECORD an editorial from the Claremont (N. H.) Eagle entitled "It Must Not Happen Again."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Claremont (N. H.) Eagle]

"IT MUST NOT HAPPEN AGAIN"

Sunday paper headline: "United States Aid Sought in Hitler Crisis—Ambassador Kennedy Discusses Situation in Long Conference With Lord Halifax."

The late Will Rogers touched the heights of truth in an utterance we will do well to remember at this time. Rogers said in effect "The United States of America has never lost a war or won a conference."

In Europe today there is a crisis. Call it a Hitler crisis if you like, but when the history of these last 20 years is written, that history if it be accurate and honest will call it the crisis of national dishonors, of national dishonesties, of broken faiths, and worthless agreements, of hypocritical pledges and worthless guarantees, of national avarice and intrigues—and to the indictment none of the major nations of the Old World may plead innocence.

The Sunday headlines quoted above are ominous. We harbor no Anglophobia, but we do remember.

We remember 1914 and the propaganda years immediately preceding the entry of the United States into the World War. We remember those war debts—they were word-of-honor debts—contracted by England and France and the other Allied nations and since repudiated, their payments now left to the wage earners of America, to you and to me, who raised the money that was loaned abroad.

We remember we were sold the idea that we were fighting in democracy's cause—and we remember that England and France already had a secret agreement on the "split" of the spoils of victory before we even entered into that frightful conflict. We remember that in the post-war adjustments, England and France did divide those spoils.

We remember Versailles. We remember that in the treaty terms imposed by pressure and intrigue on the President of the United States, who could neither comprehend nor combat the subtleties of Old World diplomacy in his own fine high idealism, there was laid the groundwork of the holocaust now confronting Europe.

We remember that if nations now so concerned had given their magnanimous support to a new German republic in its formative stages, rather than imposing terms so harsh—yes, and so intent on acquisition—as to make existence that of virtual enslavement, Hitler would still be hanging wallpaper in his native Austria or languishing in a prison cell. We remember that if England and France had thrown their earnest weight behind the League of Nations, Japan would have hesitated long before her aggression against luckless China. We remember that if England and France had thrown their earnest influence and power behind their fellow league member, Ethiopia, Italy's conquest of that hapless nation would have been halted. We remember that had France and England, invoking the alliance with Russia, been less indifferent to the fate of Czechoslovakia in the months prior to the Sudeten crisis a firm stand then might have halted "Europe's No. 1 Gangster." We remember that as Hitler has violated every international and every humane and civilized decency, those nations which are now panicked into action have ignored their commitments, obligations, and pledges and if experience is any criterion will do so again if it best serves their interests.

We remember "the war to end all wars." We remember the "noble experiment." We remember the making of a world "safe for democracy." We remember the thousands of American boys sprawled in the grotesqueries of death on the blood-soaked battlefields of Europe. We remember the thousands of American youths whose shattered minds and bodies find today little surcease from pain on the hospital cots in institutions throughout this country. We remember some four millions of American lads snatched from homes and work for a period of a year or two in the most formative stages of careers and turned back into society with lives too dislocated by their experience to adjust themselves to old routines.

And we remember—and reiterate here and now—the words of President Warren Harding, spoken over the flag-draped caskets of the American soldiers returned from France to their home shores for burial: "It must not happen again."

Our sympathies are with the democracies of Europe in this crisis. What we can do, without active involvement, we should and must do in support of international decencies and in absolute and unmitigated horror at the ruthlessness of the master rapist of our time. Beyond that we must not go.

Our physical frontier is not on the Rhine, it is not anywhere in Europe or in Asia. If and when war comes to Europe we'll be told otherwise. Propaganda, not too new or too different from that of pre-World War days, is already being pressed here.

But our frontier is our own shoreline, and if the veterans, organized or otherwise, of the last war, if the press of this Nation, if the pulpits of this country do not insist that this is so; if they do not insist that not one drop of American blood be spilled beyond the confines of our own boundaries and in defense thereof, then they will have betrayed America.

Because if England or any other overseas nation succeeds in involving us again in active participation in another foreign conflict to save their "democracy," we shall find, in the course of trends and events, that we have sacrificed and lost our own.

Fiorello H. LaGuardia

EXTENSION OF REMARKS
OF
HON. HENRY F. ASHURST
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Monday, March 27, 1939

REMARKS OF HON. HENRY F. ASHURST, OF ARIZONA, ON SEPTEMBER 14, 1938, IN PRESENTING HON. FIORELLO H. LaGUARDIA, MAYOR OF NEW YORK CITY, TO AUDIENCE IN PRESCOTT, ARIZ.

Mr. ASHURST. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the remarks made by me on September 14, 1938, in presenting Hon. Fiorello H. LaGuardia, mayor of New York City, to an audience in Prescott, Ariz.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

Mr. Mayor Timerhoff, of Prescott, ladies, and gentlemen, our distinguished guest is Prescott's most constant, most famous, and most powerful friend and champion; and we are assembled here in this city where many of the radiant days of his boyhood were spent to welcome him and to pay tribute to his worth and work.

Doubtless many persons of a reflective turn of mind have wondered how and in what manner the far-shining fame and stupendous destiny of our great friend was achieved.

Where does he find that superabundant energy, that genius for success which seemingly triumphs easiest in what at times might appear to be unfavorable, if not hopeless, situations?

What is the secret of the wonderful progress of this aggressive, romantic, and intensely practical statesman, who is so fascinating that he appears like some classic figure from the antique world?

The secret is his courage, his militant honesty, his deep enthusiasm for justice, and his unconquerable willpower.

He knows that character speaks with ampler utterance than words can give; he has unfailing sympathy for the sufferings and sorrows of mankind; and he knows that while beautiful words are the choice sons of the earth, good deeds are the choice daughters of heaven.

I need not introduce, but present to you Prescott's pride and joy, the home-town boy who has achieved world-wide renown, brave soldier, honest public servant, capable administrator, brilliant orator, mayor of New York, the world's largest city, Hon. Fiorello H. LaGuardia.

Foreign Policy

EXTENSION OF REMARKS
OF
HON. HENRY F. ASHURST
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Monday, March 27, 1939

EDITORIAL FROM THE ARIZONA DAILY STAR OF MARCH 21, 1939

Mr. ASHURST. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial appearing in the Arizona Daily Star on Tuesday morning, March 21, 1939, entitled "A Suggested American Foreign Policy." Although one may not agree with all the editor's conclusions, one will perceive that the editor clearly sets forth his own views.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From The Arizona Daily Star of March 21, 1939]

A SUGGESTED AMERICAN FOREIGN POLICY

With Senator BORAH seeking to prohibit the sale of munitions to all belligerents; with Senator PITTMAN seeking to revise the neutrality law so as to permit the sale of munitions in time of war on a cash and carry basis; with Senator CLARK advocating the Ludlow amendment; with President Roosevelt asking for authority to take action against aggressors "anywhere," and to distinguish between aggressors and victims; and with the State Department attempting to put up a bold front, American foreign policy is in a state of flux marked by widely varying differences. Yet these very differences, so apparent in the different demands of high officials, represent accurately the differences and bewilderment of the American people.

While it is most advantageous that this matter of foreign policy be thoroughly discussed in order that the people of the country may be informed on its maze of ramifications, yet the time is coming when the people, through Congress and the President, must make a decision as to what American foreign policy should be. The past 3 years have shown how, in the case of France and Britain, timidity and indecision have brought humiliation and encouraged the forces of Mars. From a study of past history and more recent events common intelligence should be able to formulate an American policy which would call for universal respect and thus protect American interests.

At a time when the Nation is being deluged with propaganda seeking to arraign American power on one side or the other, seeking to get a political commitment from Washington, there are certain fundamental principles which should be learned by heart Since the days of bluffing are over, the first of these fundamental principles should be that in no circumstances shall the American Government make any political commitments abroad. America in no instance should ever make a promise that her people might refuse to keep. For the American Government to promise to come to the aid of Britain, France, or any other nation outside of the Western Hemisphere would be making a promise which the American people might repudiate, just as the French repudiated their promise with Czechoslovakia. Let us not give our word, and then we will not break our word.

Just as definitely as we refuse to make political commitments anywhere, just that definitely let it be the very heart of our policy to maintain at all times complete freedom of action. Unentangled and uncompromised by any political engagements, complete freedom of action would permit a wide range of policy and thus enable us to act in given circumstances as our interests would dictate.

If our policy of complete freedom of action is to command respect, it must be backed by strong force. Events in recent years have shown that certain powers in the world respect only force. By keeping ourselves strong, particularly on the high seas, even the most daring of dictators would be inclined to leave us alone and cautiously would avoid provoking us. Complete freedom of action would allow us to act as our interests might require.

Our present neutrality law restricts our freedom of action and is, moreover, grossly unjust. For the United States of America to haul down its flag from the high seas just because a war happens to be going on is a shameful display of cowardice. It is a denial of our own existence. We would not be a nation today if other nations had in the past imposed such a policy. To tell belligerents fighting for their lives that we are afraid to send our ships out on the oceans just because such voyages might be dangerous would be cowardly. It would mark a moral disintegration and forecast the consequences such morale decadence always brings.

Instead of seeking to avoid danger we should follow our historic policy of the freedom of the seas. By all means we should respect effective blockades, just as we demanded respect for our blockade of the South during the Civil War. But we should insist on our right to trade with neutrals and with belligerents not surrounded by an effective blockade. That insistence would, however, have to be backed by force. If belligerents, irrespective of who they might be, should attempt to interfere with that trade, then we should assign warships to convoy our ships and dare anyone to touch them, and no belligerent would dare touch them. Dangerous? Of course, such a policy would be dangerous, but not nearly as dangerous as hauling down our flag from the oceans and literally sneaking for cover.

Such a policy would mean sale of munitions and food supplies to belligerents. We bought munitions and other supplies from abroad during wars in which we have fought, and there may come a time when we might need the same kind of help. Do we want to establish a policy which might react harmfully to us at some time in the future?

To assume that the people of this country are so lacking in virility as meekly to withdraw their commerce from the seas during a great war would be a false assumption. With no place to sell our wheat, our copper, and our cotton, the internal reverberations would bring about a profound internal reaction. Our life would become so stifled that we might easily face a disintegration which such policy would justify. But in adopting the policy of trading, it should be distinctly understood that its entire effectiveness would be ruined, if we as a government should adopt an unneutral policy of discriminating between aggressors and victims. If we are to keep out of war we must at all times be neutral.

The significant part of this suggested policy is that by making no political commitments we will not be bound; by keeping at all times our freedom of action, keeping ourselves strong, and maintaining our neutral rights by force if necessary, we will be highly respected by all nations. To attempt to plan for every eventuality, to attempt to outline a policy in detail as our neutrality law does, and as the Ludlow amendment would do, we would be tying our hands and giving exactly the encouragement certain of the dictator nations want.

The adoption of this suggested foreign policy would, of course, imply the recognition of certain other facts. It would mean we would go to war overnight against any threat by a European or Asiatic power to use military force anywhere in the Western Hemisphere. It would mean that we recognized the fact that change, often by aggression, would take place from time to time in other parts of the world. It would mean that we would keep aloof and maintain our neutrality in such instances, and neither be bullied or denied our just rights, nor bamboozled into believing that it was our duty to guarantee the plunder of previous wars. We would recognize the just rights of others with full reciprocity, but we would expect those who claim the privileges of a sovereign nation to accept all the responsibilities such sovereignty implies.

The gist of this entire suggested policy is that a strong, just nation, uncompromised by any political engagements, filled with determination to protect its rights and minding its own business, will not be bothered, will not be bullied or threatened by any other power on this earth. Instead it will be respected and carefully allowed to pursue its destiny without provocation from others.

Possible Results of a European War

EXTENSION OF REMARKS
OF
HON. BURTON K. WHEELER
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Monday, March 27, 1939

RADIO ADDRESS BY HON. WILLIAM E. BORAH, OF IDAHO, MARCH 25, 1939

Mr. WHEELER. Mr. President, I ask unanimous consent to have printed in the RECORD a very timely as well as a very able speech, which was delivered by the senior Senator from Idaho [Mr. BORAH] over the radio on March 25, 1939, on the subject of what would happen in this country if we should permit ourselves to be drawn into a European war. I wish to say that in my judgment it is a great American speech and one which should be widely read.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Ladies and gentlemen, what would happen in this country if we should permit ourselves to be drawn into a European war? It is a legitimate question to propound and about which we ought all to be thinking, for powerful influences at home and abroad are

seeking by all kinds of methods to bring us to that end, to involve us in all the racial, territorial, and financial problems of Europe, and ultimately, in war. What will happen to the American people, their homes, their children, and their liberty? What will happen to this Republic? For war, of all things on earth, is freedom's greatest enemy. We are told that we may have to go to war. Nevertheless, it is proper to ask: What will happen if we do? If we reflect sufficiently upon these matters, it will at least help us to weigh carefully—and may I say, prayerfully—the steps by which we may be led into these European controversies and into European wars.

First, what are the conditions in these days of peace, the conditions which will confront us, if war comes, for upon these conditions we will have to build for war. We now have a national debt, including obligations underwritten, of $45,000,000,000, a Budget of something over ten billion, a deficit somewhere around three and one-half billion. We have a tax burden so heavy that it is breaking the spirit and paralyzing the energy of millions of our people. Do these things have anything to do with preparedness for war? Do they have any bearing upon the stability or perpetuity of this Government? We also have eleven million unemployed, and we have the squalor and the misery, the sorrow and the discouragement which come with such unemployment. We have one-third of our industrious, law-abiding citizens, it is estimated, men and women anxious to win back prosperity and a decent way of living, to rear in respect and happiness their children, living on the bare necessities of life or upon charity. Do these things have anything to do with the question of whether we should enter a war? Do not these conditions show we are wholly unprepared for war, regardless of the extent of our armaments? Do they not show that we are indeed a sick nation and that in this condition of affairs is to be found the real danger to our democracy? Are not these things which make for confusion and demoralization, socially and politically, the very things which are sapping the foundation of this Republic? Do they not create the soil from which spring the isms and systems which constitute the real menace to democracy?

But, had I the time and you the patience, I would take you to the legislative Isle of Patmos, that is, to the congressional files where rest the bills introduced and to be considered and probably passed in case of war. You will find there such revelations, and you need not possess the vision of the apostle of old, as I venture to say you have never dreamed of. You will get an intimation of what will happen when war comes to this country. These measures would not leave untouched or uncontrolled any duty or any right of the citizen except that of paying taxes and going to war. These bills are offered in good faith by able men, by men who confidently believe that in case of war they would be an essential part of the war program. They ask for your money, if you have any. There would be no free speech, no free press, no liberty, except such liberty as would be essential to serve the cause of war.

It is urged, especially by our friends abroad, that we as a nation and as a people have great responsibility. We certainly have! Our first and supreme responsibility is to put our own house in order, to demonstrate that this free enterprise, this democracy of ours, is a success. At a time when doubt and challenge rest like mildew upon the faith of men and women in free government and free institutions, our first responsibility is to drive want and hunger from our midst, to give men and women an opportunity to work. Ours is an imperative responsibility to prove to the world that there is such a thing as free government with a free people—a happy, prosperous, contented, and loyal people. This would give inspiration to people everywhere who covet freedom, and above all, it would be the very best security we could have for our own peace and liberty. But, if in addition to our own tremendous task, we undertake to place all other peoples in their proper places, to designate what kind of a government they should have, to guarantee boundary lines, to cleanse and purify the inhuman creeds of other lands, I venture to say this Republic would break down in the effort and our people would be compelled to take up a load they could not possibly carry.

Twenty-two years ago we laid the conscriptive power of this Government upon the youth of our land and took them across the sea to fight and die in an effort to adjust other peoples' problems. I have no intention of reflecting upon either the wisdom or the patriotism of that sublime adventure. But has it no lesson to teach? Do we not now realize how toughly engrained and how inherently imbedded in the whole structure and civilization of Europe are the ambitions of rulers, racial antipathy, intolerence, and, most of all, the belief that only by force can such matters be dealt with. We entertained the hope then that in the presence of the power of this Republic, these things would give way, governments would become more liberal, and liberty more secure, and, above all, the people would have a happier outlook. We returned home, leaving our dead in foreign soil, bringing with us the maimed and the insane, leaving behind a Europe poisoned and torn with bitteress and hate, the breeding ground of many wars, and saturated with more imperialistic schemes and personal ambitions than have been known since the days of the Caesars. All these things were embodied in so-called peace treaties to be preserved, fostered and nurtured until the time should ripen them for action. Not since the Hundred Years' War was Europe so embittered and impoverished as it was the day the Versailles Treaty was signed and the great Frenchman, Clemenceau, truly said, in substance: "This is a continuation of the war."

About the only treasure we brought home was the story of endurance and undaunted heroism of the untrained American boy, taken from the factory or the farm and thrown almost overnight into the hell of European battlefields—a story without precedent in all the annals of war.

It is important that we discuss among ourselves and fully realize what the issue is in Europe. What is it that is threatening the world with another war? I must say that, in my opinion, it is imperialism—that is, territory, colonies, raw material, trade. These are the things which are dominating the movements of the different governments regardless of what may be said by individuals of these governments as to the issues. Let the imperialistic questions be adjusted satisfactorily to democracies and the creed of intolerance, war upon liberty, are passed over, condoned. In no official coming together of the totalitarian states and the democracies, in the discussion of differences, has the question of nazi-ism, with all its teachings, ever been brought forward, much less made an issue.

No better friend since Hitler became the master of Germany has Hitler had than the British democracy. Apparently regarding arbitrary, centralized government in Europe as the best guarantee of stability, it has built up Hitler's strength and favored his cause in every crucial situation. There is material in Europe for a crusade in behalf of morals and liberty with which a Gladstone could fire a continent, but democracies with more than half of their subjects denied such guarantees and privileges as may be found in our Bill of Rights will not make use of this material. I will say in fairness they cannot under the circumstances make use of this material or make it the issue. I will give some facts in support of my contention.

When Japan seized Manchuria and our government asked that Great Britain join in a protest, the British government sent one of her ablest men to Geneva and, in the face of two treaties, defended the lawless act of Japan. It was argued that British interests would be better protected by Japan. This seizure of Manchuria and its success laid the foundation for the present war against China.

When Hitler was preparing for the taking over of Austria, a representative of the British Government let Berlin know that it might be well for Europe if Austria passed into stronger hands. As the time drew near for the use of the political guillotine on this weak nation, Ribbentrop, Hitler's special friend and representative, visited London, arriving March 9th, and spent several days with the members of the British Government. He dined with the King, with Mr. Chamberlain, Lord Halifax. On March 11th, after the preemptory ultimatums of Hitler began to pour in upon Austria, Schuschnigg, Austria's Prime Minister, in his desperation, began a hunt for friends among the democracies. He used the phone. He called up Paris, but no member of the government could be found. He tried London, but he could not contact with any member of the government. It was at this time, this very time, when it was fully known what was transpiring, that the representative of Hitler was visiting with the King, with Mr. Chamberlain, Lord Halifax, and others. It is reported that the Archbishop of Canterbury was among them. There was no voice to be found here against the seizure of Austria or in behalf of democracy.

During the dismemberment of Czechoslovakia, no mention was ever made of the teachings and practices of nazi-ism or of the danger of enlarging its influence in Europe. Although they were turning over a vast number of people, some of whom it was too well known, bore the mortal enmity of their new master, no suggestion was ever made in the settlement of territorial matters in behalf of or as to proper treatment and reasonable protection of these people. Can anyone find anything unfriendly in these proceedings, or any antipathy, to nazi-ism, as such, during the period in which the only real Republic in Europe was on the operating table. After the deed had been done and the two republics had sent the ultimatum of September 19th near midnight, to Czechoslovakia calling for a decision within a few hours, Mr. Chamberlain made his settlement with Hitler and exhibited it to the world saying, in effect, that you can trust this man. I take up my place alongside of him. I ask for no modification of his philosophy of government. In doing so, he gave greater power and greater prestige to Hitler throughout Europe than he perhaps himself ever hoped to enjoy. Nothing was said, nothing was suggested that the individual with whom he had taken up his position was to change his creed or to modify in any respect his views which had startled the world and which in the near future was to enact a scene which in its cruelty and hideousness beggars description.

My time is limited, and I shall not follow up the facts demonstrating beyond all question that what the democracies are contending for is the realization of their imperialistic schemes and not the destruction of nazi-ism. I will call the roll of the States who can testify to this fact. The roll, as given to the world by one of England's distinguished statesmen: China, Ethiopia, Austria, Czechoslovakia, and the Republic of Spain.

For myself, I would adhere closely to the advice of Washington—no entangling alliances, express or implied. I would regard the Monroe Doctrine as a part of our national defense and a cornerstone of our foreign policy. I would send no money to European war chests, no munitions to any nation engaged in war, and above all, no American boy to be sacrificed to the machinations of European imperialism.

Extracts From Diary of Senator Ashurst

EXTENSION OF REMARKS

OF

HON. HENRY F. ASHURST

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Monday, March 27, 1939

EXTRACTS FROM DIARY OF HON. HENRY F. ASHURST, OF ARIZONA, UNDER DATE OF OCTOBER 14, 1918

Mr. ASHURST. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an extract from a diary kept by me, the entry being under date of Monday, October 14, 1918.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

MONDAY, OCTOBER 14, 1918

When the Senate convened the galleries were empty (no visitors allowed because of influenza); the sun shone but the day was cold. Senators charged that Wilson had softened toward Germany and that (by opening correspondence with the German Government) he was resuming "note writing."

Senators were mystified, as the President had not taken any of them into his confidence. Many feared that the President's "altruism" would lead him to a reply to Germany that would lack directness. We knew that an ambiguous reply would chill the ardor of the people and depress the Liberty Loan. The strain was enormous; the rumors were that the President's mind was not made up, so I resolved upon my own course; I called an automobile and went to the Executive Offices of the White House, where the President's secretary, Mr. Tumulty, read me a three-page letter he had just sent to W. W. urging that a firm reply be sent to the German note. Mr. Tumulty's letter was eloquent and embraced a coherent plan for future peace. I then dispatched a note to W. W., saying that I was in the Executive Offices and desired an interview with him. He received me graciously; we exchanged salutations, whereupon the following dialogue took place:

"Sen. H. F. A. Mr. President, you might as well know in advance that I am going to say plain and unpleasant things. The time for plain talk is here.

"Pres. WILSON. Why, my dear fellow, sit down and tell me what is the matter.

"Sen. H. F. A. Mr. President, the Senate, the press, and the people are nervous; they expect and desire that you demand an 'unconditional surrender' of the German armies. Please give assurances that your reply to the German note will be one that will meet America's expectations. If your reply should fail to come up to the American spirit, you are destroyed. It is now widely feared—indeed, charged in the Senate—that by your 'notes' to the German Government you are signing away with the pen much of the advantage that our valorous soldiers won with the sword.

"Pres. WILSON. So far as my being destroyed is concerned, I am willing, if I can serve the country, to go into a cellar and read poetry the remainder of my life. I am thinking now only of putting the U. S. into a position of strength and justice. I am now playing for 100 years hence; I laid down my terms to Germany in my fourteen points speech to Congress on January 8th last, and in my 4th of July speech and my speech of September 27th. When Germany fully meets our terms, we are through. Can it be that the people do not remember my fourteen points and my speeches of July 4th and September 27th?

"Sen. H. F. A. No, Mr. President; they do not remember the details of those speeches.

"Pres. WILSON. Well, I remember.

"Sen. H. F. A. Mr. President, it is feared everywhere that an armistice would permit Germany to gain some advantage by diplomacy that she could not obtain militarily.

"Pres. WILSON. I am not making armistices, they must be left to the commanders in the field.

"Sen. H. F. A. Do you intend to demand that Alsace and Lorraine shall be restored to France?

"Pres. WILSON. Read my speech of January 8th, 1918, wherein I said: 'The wrong done to France by Prussia in the year 1871 in the matters of Alsace and Lorraine must be righted.' Now what was that wrong? It was the taking of Alsace-Lorraine.

"Sen. H. F. A. The Allies should demand of Germany a ship for every ship sunk by the German submarine.

"Pres. WILSON. Such matters can be left safely to the peace treaty.

"Sen. H. F. A. Mr. President, you should, as a symbol, require the German commander actually to deliver his sword to General Foch, Haig, or Pershing in Berlin.

"Pres. WILSON. Why?

"Sen. H. F. A. Because symbols, next to habit, most powerfully influence human beings."

He then asked me to speak in the Senate and say that the country need have no fear as to what he would do. I started to leave, and told him I was "somewhat" cheered. He said, "Why are you only 'somewhat' cheered?" And I told him that his failure to demand unconditional surrender would give him leisure in which to read poetry, and that he would read it in a cellar to escape the cyclone of the people's wrath, and I then walked out.

The Plight of the Rich

EXTENSION OF REMARKS

OF

HON. HOMER T. BONE

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Monday, March 27, 1939

ARTICLE BY ERNEST K. LINDLEY

Mr. BONE. Mr. President, a few days ago a bill was introduced, S. 1885, looking to the capture of the major part of incomes within certain brackets for the purpose of paying for the conduct of a war while a war is being fought.

In view of the interest aroused in that measure, and the misinformation regarding it which seems to exist in certain quarters, and the inability of certain folks to understand its terms—which are in large part a restatement of the orthodox provisions of our regular revenue law, with the taxes on incomes in certain brackets very drastically raised—I send to the desk, and ask unanimous consent to have printed in the RECORD, an article by Mr. Ernest K. Lindley, entitled "The Plight of the Rich," dealing with this particular measure.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post of March 27, 1939]

THE PLIGHT OF THE RICH

(By Ernest K. Lindley)

WAR CONSEQUENCES

My colleague Miss Dorothy Thompson is aghast at Senator BONE's bill to take the profit out of war by limiting corporation profits and drastically taxing personal incomes.

She says that, for example, if a man with an income of $1,000,000 paid Senator BONE's war income tax, plus the present New York State income tax, he would be minus $61,000.

I can think of worse consequences of war than the loss of $61,000 by a man with an annual income of $1,000,000.

Miss Thompson can, too. That we may appreciate the full horror of Senator BONE's bill, she describes what it would do in New York City to the head of a family of four with a gross income of $20,000 a year. At present his Federal and State taxes leave him a net income of around $17,445. Under Senator BONE's war tax, plus the present State income tax, he would have left only about $8,774. You can see already that his plight is going to be terrible.

First he has a 3-year lease on an apartment at $3,000 a year. He keeps two servants at a total cost of $2,200 a year. He spends at least $1,000 a year on schools for his two children because the public schools are notoriously overcrowded. There are other fixed charges: for laundry, food, dry cleaning, outside valeting, hand laundry, etc. And there is the $2,000 annual premium on his insurance policy.

These fixed charges add up to $9,300 a year, without counting maintenance of a car, doctor's bills, entertainment, clothes, amusement, or anything else. So, according to Miss Thompson, our hero must move into a cheaper "flat," dismiss a servant, send his children to public school, and let his insurance policies lapse.

His family won't starve; she concedes that.

But, she warns us, the same thing is going to happen all at once to everybody getting $5,000 or more, and the result will be "the most awful panic imaginable."

Miss Thompson's gripping account of the disaster Senator BONE would inflict on "Mr. $20,000-a-Year" left me sleepless. On reflection it seemed to me that she made the picture unnecessarily black. With a little ingenuity "Mr. $20,000-a-Year" and his thrifty wife could mitigate the blow.

For example, they might ease the rent bill by taking in a roomer—or paying guest. It has been done. If we are fighting in Europe, the port of New York will be busy and there will be a housing shortage.

Maybe one of their two servants is a man of military age. He may be drafted and "Mr. $20,000-a-Year" may find that he cannot get another manservant at any cost.

A FEW POSSIBLE SAVINGS MENTIONED

Khaki, or something like it, will be in vogue. "Mrs. $20,000-a-Year" may spend her afternoons in uniform at a canteen, with a

consequent saving in expense for afternoon gowns and the cost of dry cleaning, hand laundering, or outside valeting them.

How to keep the children in private school may be a more serious problem. Who knows? Perhaps all the private teachers of French will have been drafted as translators for the intelligence service, so that the children might as well go to public school anyway.

Perhaps one of the children is a boy nearing military age. If so, he can escape the public school. With his parents' consent he can enlist, even if he is not 18, and his further instruction will be taken care of by the United States Army or Navy. No more tuition fees! Here "Mr. $20,000-a-Year" can get something substantial in return for the money wrested from him by Senator BONE's taxes. If both children are boys near military age, the saving will be at least twice as great. "Mr. and Mrs. $20,000-a-Year" should be able to get along comfortably with only one servant and will have another room or two free to rent to paying guests—perhaps permanently available.

"Mr. $20,000-a-Year's" annual premium of $2,000 on his insurance is a big item, which requires special study. It becomes an especially tough problem if his children are young, so that he cannot effect the savings outlined in the preceding paragraph. But if they are too young to be accepted for military service, even with their parents' consent and assistance, "Mr. $20,000-a-Year" himself probably is still young enough to put on a uniform. He may be too old for the first and second drafts—which means that he must undergo 2 hard years of managing on $3,744 a year. But the third draft probably will catch him—and so save his family from the disaster envisioned by Miss Thompson.

During the first months in the Army, the ordeal for his family will be severe—worse than the worst that Miss Thompson has depicted. For Miss Thompson spared our nerves her conception of the catastrophe that will befall the Nation when all the "Messrs. $20,000-a-Year" and their families have to get along on the monthly income of a mere colonel or major—not to mention a buck private. But obviously it will be worse than "the most awful panic imaginable" to her when she wrote her column, because the monthly income of "Colonel" or "Major $20,000-a-Year" will be less than Senator BONE's tax would allow him in private life. It's pretty clear, at least, that the children will have to drop out of private school.

But the darkest moment's just before the dawn; remember Valley Forge, etc. With a little luck "Mr. $20,000-a-Year's" problems—including that formidable item, the $2,000 insurance premium—will be solved. With the same bit of luck, his wife can be supplied with funds to pay the rent on the apartment, the children's tuition, and all the costs of hand laundering, dry cleaning, and outside valeting—and the Nation will be rescued from Miss Thompson's panic

One well-directed bullet will do it.

Live Poultry and the Reciprocal-Trade Agreements

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 27, 1939

Mr. REED of New York. Mr. Speaker, any legislation which affects the poultry-raising industry of the country has some effect on nearly every farm home in the country. Since the magnitude depends on the amount of production on the individual farm and in the individual section, the Middle Atlantic and Pacific Coast States would be more seriously affected because of the specialized poultry farms located in those sections, but poultry raising is important to all the farmers of the United States not only as a source of food but also as an income producer. In 1934 production of live poultry was 2,372,800,000 pounds and had a value of about $300,000,000.

As a step toward insuring the domestic market for domestic producers, in the Tariff Act of 1930 the Republican Party raised the tariff from 3 cents a pound to 8 cents. The wisdom of this policy is shown by the drop in the value of imports of live poultry from $355,856 in 1929 to $17,016 in 1932 and $7,841 in 1933.

In the reciprocal-trade agreement with Canada the Democratic Party lowered the tariff to 4 cents a pound effective on January 1, 1936. Although total imports showed a large decrease in value from 1929 to 1935—the last year in which the 8-cent rate was effective—imports increased tremendously as soon as the tariff was lowered. In 1936 they were 8 times greater than in 1935 and nearly 34 times larger in 1937 than in 1935. Even more significant is the fact that the value of total imports increased 121.5 percent from 1929 to 1937, while over the same period the value of imports from Canada—the country which received the concession on live poultry—declined 35.2 percent and the value from all other countries increased almost sixty-two fold. Thus the present administration has opened our markets not only to Canada but to the rest of the world as well.

Of equal significance to American producers is the type of poultry entering the country today. During the period of the higher tariff the import price per pound was well above the price after 1935, due to the fact that imports consisted largely of poultry for breeding purposes. However, with the lower tariff the price per pound dropped because of the increased imports for consumption. This factor threatens to retard further the growth of this important farm industry.

These increased imports and lower import prices have been a definite handicap to an important and growing farm industry, and have been of little, if any, benefit to the consumer. The big problem of this branch of farming has not been production but the development of better marketing procedure. The lowering of this tariff through the Canadian trade agreement has worked a hardship on this industry and has handicapped the poultry farmer in developing better marketing methods.

Extracts from Speeches of Senator Ashurst

EXTENSION OF REMARKS

OF

HON. HENRY F. ASHURST

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Monday, March 27, 1939

EXTRACTS FROM SPEECHES OF HON. HENRY F. ASHURST, OF ARIZONA

Mr. ASHURST. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an extract from a speech I made in the Senate on March 30, 1938, regarding sea power, and an extract from a speech which I delivered on April 8, 1938, regarding taxation.

There being no objection, the extracts were ordered to be printed in the RECORD, as follows:

IN THE SENATE MARCH 30, 1938

Mr. ASHURST. Mr. President, it was sea power that saved Rome from Greece.

It was sea power that saved Greece from Persia.

It was sea power that gave to the Phoenicians the command of the ancient maritime world. Sea power built up the far-flung commercial empire of Carthage. Sea power made Athens ruler of vast territories, and it was sea power that made the Rome of antiquity mistress of the civilized world. Rome could not have subsisted without her sea power, because nearly all her wheat came overseas.

When Spain had great sea power she dominated Christendom; and Spain's decline began when storms and British seamanship wrecked her great armada.

The sea power of the American Colonies with the sea power of France won the American Revolution and the naval blockade defeated the Confederacy.

During the World War the Allies would had starved had it not been for sea power.

IN THE SENATE APRIL 8, 1938

Mr. ASHURST. Mr. President, this bill—or, at least, the spirit of the bill—is an encouragement to the country. I congratulate the able chairman of the Senate Committee on Finance, the Senator from Mississippi [Mr. HARRISON], upon his courage and vision in handling the bill; and in saying this I am assuming that the undistributed-profits tax is repealed.

Doubt and fear, twin spectral forms of evil, have descended upon business. Whether or not business is justified in its fear of Congress is a question I do not now discuss. It is sufficient to know that such fear actually exists.

The person who now addresses you during his youth time believed in ghosts, and was morbidly and frenziedly afraid of any man who was dead. It would be the subject of an interesting homily, if the Senate had the time to hear it, for me to relate

the circumstance which permanently eradicated my fear and dread of ghosts and wraiths. I may do so some day, but not at this time.

The country will not recover, nor will it make progress, unless and until Congress gives assurance that when citizens engage in legitimate business enterprises they will not be the subject of unnecessary taxes and amercements. Business now fears that should it launch legitimate enterprises its activities would be pounced upon by Congress and penalized by unnecessary taxes, and that some sort of invisible radiation, such as a ghost or wraith of the enterprise, would be all that would ever flow from the undertakings.

Congress must dispel this fear and doubt with which it has enshrouded business. Congress should say to labor, "You shall have a fair day's wage for a fair day's work," and should say to business, "You shall not be exploited."

Taxes will be, to say the least, moderately heavy during the lifetime of all persons now in existence. Taxes may be reduced only by reducing expenditures. The remedy for heavy taxes is somewhat within the hands of the taxpayers themselves. If and when taxpayers quit the practice of telegraphing Congress for more appropriations, and begin instead to telegraph Congress to vote against appropriations, Congress will grant relief from heavy taxes.

But I do not entirely despair. There are in this world some laws that may not be repealed, such as the law of the survival of the fittest, the law of supply and demand, the law of compensation, and the law of reactions. Even if Congress should refuse to grant relief from excessive taxes, the law of reactions would ultimately do its perfect work.

As jealously is the concomitant of violent love, as Aristides the Just was banished because people grew weary of hearing him called Aristides the Just, as a fiercely raging fire will burn itself out, as a rapidly running river will create obstructions for itself, likewise an era of prodigal expenditures will be followed by economy to the point of parsimony.

I therefore declare to the Senate, as I said last autumn in my addresses to various civic organizations, "You are wise in getting money from Uncle Sam's Treasury 'while the getting is good'; for under the law of reactions, this prodigal era in due time will be followed by a regime that will make Calvin Coolidge look like a spendthrift." [Laughter.]

The Prospect of War

EXTENSION OF REMARKS
OF
HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1939

EDITORIAL FROM THE CHICAGO TRIBUNE OF MARCH 25, 1939

Mr. ARENDS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Tribune of March 25, 1939:

[From the Chicago Tribune of March 25, 1939]

THE PROSPECT OF WAR

Prime Minister Chamberlain in his speech last Friday laid the blame for the Czech-German controversy of last autumn on the Treaty of Versailles and the failure "of the statesmen of the last 20 years to take a broader and more enlightened view of their duty."

Because Mr. Chamberlain did not amplify his remarks about Versailles, several interpretations are possible. He may have meant to agree with the great majority of American critics of the Treaty of Versailles who have insisted that to the cruel terms inflicted upon Germany by the Allies may be attributed the reaction we have seen and the emergence of a Hitler. On the other hand, he may have meant to agree with those Europeans who have held that the crisis was due to a failure of the Allies in restraining Germany when she began to rebuild her military power.

Whatever was the purport of his remarks, it is clear that the Allies owe the crisis to their own deeds. By the Versailles Treaty they exacted from Germany an acknowledgment of guilt for the World War and a promise to pay for the damages done by the war. By that instrument they also took away her colonies and some of her adjacent territory for the convenience of newly created states. They also destroyed her Army, Navy, and air force. This was done by the Allied Powers, by which is meant principally England and France. In that the United States did not join. It is true that President Wilson participated in the drafting of the treaty, but the Senate refused to give its approval. Peace between the United States and Germany was established by another treaty having none of the provisions which Prime Minister Chamberlain agrees created the present crisis.

The United States participated in the World War because Germany refused to respect our rights on the seas. What was done to Germany at the conclusion of the war was not of our doing. What we might have hoped for in the peace was not the arrangement which was set up. The treaty which France and England exacted from the Germans could result in a long peace only if France and England were willing to keep Germany from rearming. The severity of the treaty terms was bound to lead to a rearmament on Germany's part to deliver herself of the onerous terms and to rewin her lost territory if she were permitted to rearm.

In 1933 Hitler came to power with the declared program of breaking the Versailles Treaty. If peace was to last on the basis chosen, Hitler would have to be stopped in the beginning from carrying out his plans. But recall what was done. In 1935, in the midst of Mussolini's Ethiopian campaign, Hitler introduced universal conscription. There were protests from England and France but no action. And so rearmament proceeded. The next year, while England and France were arguing about sanctions against Italy, Hitler moved his reichswehr into the Rhineland. At this point the superiority of the French Army was such that it could have terminated the Rhineland occupation quickly. But that was not done. The Allies did nothing when Austria was taken and gave their consent and even coerced Czechoslovakia when the Sudeten land was demanded by Germany. All the while the German's military strength was increasing. Now it is the greatest military power in Europe.

The present crisis is the result of the failure of France and England, having insisted upon a peace treaty which we refused to have anything to do with, to use the necessary implements to see that the treaty was carried out. Hitler may well intend to get back all the rights, power, and territory which Germany and her close ally, Austria-Hungary, had at the outbreak of the war. Hitler probably intends to try to obtain all that Germany and its satellite would have had if there had been a German victory in 1916.

It may well be recalled what the American position was then. A President was elected in November of that year on the platform "He kept us out of war." That was long after the Belgium atrocities had been widely publicized. The people didn't like what Kaiser Wilhelm did, but they were opposed to going to war about it.

There can be no question but what the American people do not like what Hitler is doing. But they are as much against going to war with Germany about it as they were in 1916 for what the Germans did then. However, the popular will against being drawn into war again is likely to be defeated unless some restraint is placed upon our President, our Ambassador to France, and our Acting Secretary of State.

Labor Not Falling for the Chains

EXTENSION OF REMARKS
OF
HON. FRANK W. FRIES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1939

ARTICLE FROM THE BRICKLAYER, MASON, AND PLASTERER

Mr. FRIES. Mr. Speaker, I am inserting herewith an editorial from the Bricklayer, Mason, and Plasterer, which shows that the effective propaganda of the interstate chain stores spread throughout the Nation and on the front pages of most of the daily newspapers to the effect that the American Federation of Labor in convention at Houston, Tex., last October denounced the Patman chain-store bill, of which I am a coauthor, is absolutely untrue. I hope that the newspapers that were misled by this clever and nefarious propaganda will make the proper correction.

The editorial is as follows:

[From the Bricklayer, Mason, and Plasterer]

LABOR NOT FALLING FOR THE CHAINS

The public press gave generous space to the January conference of the executive council of the American Federation of Labor in Miami, but it overlooked one interesting and important feature—the refusal of the council to react favorably to an intensive and expensive drive by the chain-store interests to enlist labor on its side and against the Patman bill.

In the drive were men, rated as influential in the labor movement, engaged for the purpose of helping the chains prevent enactment of the bill.

Profiting through influence with labor unions and labor men is not new. Men have flourished in the traffic. Some few have grown wealthy. Every experienced labor man has known of these persons. Many an honest fellow has been used by them.

Few, however, are fully cognizant that selling influence with the labor movement has become an industry, organized more or less loosely, to serve the needs of business, big or little.

The inception of the Miami drive to line up the council came after Representative PATMAN, of Texas, announced his intention of reintroducing his bill, calculated to put chains on the big chain stores. To beat it, the chain-store moguls felt it necessary to get the aid of the labor unions they had despised and fought.

The thing came into the American Federation of Labor convention in Houston in the form of two resolutions presented by a veteran labor man whose desire to help the people he has served long and faithfully made it easy for him to be imposed upon. The resolution interlocked neatly.

One recited that enactment of the Patman bill would dislocate 1,000,000 workers and increase the cost of living of those who labor.

If adopted, it would have placed the federation, and those for whom it speaks, squarely on record as opposing "the Patman bill and all forms of taxation which prostitute the taxing power of the Government * * * for the destruction of worthy enterprises by business rivals."

The other, after reciting the desire of business and the well-to-do, to shift the burden of government to "the necessaries of life" declared:

"Inequitable, discriminatory, and punitive taxes have detrimental effect not only on the cost of living but upon wages, hours, working conditions, and employment," and concluded with a provision for the executive council "to establish a committee for the study of and appropriate action on the crucial problem of equitable distribution of the tax burden with especial reference to taxes of discriminatory and punitive character."

The latter resolution was adopted. The other the convention sent to the executive council with directions that if it deemed proper to consider it in connection "with the tax study authorized by the previous resolution."

Immediately followed a campaign in State and central bodies and among representative labor men asking the adoption of comparable resolutions in an attempt to induce action favorable to the chains in the council.

In some instances, bodies did as asked, not being fully familiar with the antiunion activities in the past of the chains, and of the further fact that promises of the chains to reform were on a par with the facts recited in the ancient doggerel:

"When the devil was sick,
The devil a monk would be.
But when the devil was well,
The devil a monk was he."

Thus armed, the chains proceeded to put on a big show in Miami.

Some of the big shots in the chain-store game were early on the ground. With them were lawyers and lobbyists. Also on the ground were men selected because of their acquaintance with labor to help secure denunciation of PATMAN and all his works by the council.

There was wining and dining at the expense of chain-store people for those of the council and international union heads in attendance on its sessions who would accept either or both plus solicitation for action desired by the chains.

Few cared for either the drinks or the eats.

As the meeting progressed, the soliciting, at first subtle became open and brazen, so much so that it was almost impossible to escape the chains' friends in the hotel lobbies.

The executive council broke the hearts of the chain people and their friends, when after a full discussion of the chains and their records, it deferred action on the Patman bill and all other taxation matters pending the report of a special committee.

The Problem of the Present and the Task of the Future

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 27, 1939

ADDRESS BY HON. JOHN W. McCORMACK, OF MASSACHUSETTS, OCTOBER 20, 1938

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me before the members of the Associated Industries of Massachusetts at its twenty-third annual meeting and industrial conference, held at Boston, Mass., October 20, 1938:

Mr. Chairman and gentlemen, needless to say, I am very appreciative of the invitation of the Associated Industries of Massachusetts which enables me to address you on this occasion of your twenty-third annual meeting. I also welcome the opportunity of sharing this platform and this discussion with Mr. Batty and Mr. Ching. To me, it is a stimulating and heartening sign of better things to come that we can meet here on the plane of a fair, friendly, and constructive exchange of ideas. Congratulations are certainly in order to the Associated Industries of Massachusetts for providing this opportunity. And yet this should not be a rare occasion. Business groups throughout the country and in fact all economic and social organizations should hold such meetings where the problems of each can be discussed, the views of different groups expressed, and an attempt made to harmonize differences in the common welfare of all.

I am happy in the confidence that you do not expect me to say things which I think you might like to hear, nor would you respect me if I did. While it may sound nice to hear things that we want to hear, it is not always good or advisable. The wise man hears and considers the views of all. It is nice to hear self praise but it is sometimes wiser to hear self criticism. Whatever criticism I might express or indicate will be in the hope that it will serve a constructive and beneficial purpose and you may be sure that it will not fall upon any one group.

It is no startling observation, even from one who is an elected representative in government and a strong advocate of much of the social legislation of the last 6 years, that the primary need of the present is of a tolerant and understanding state of mind on the part of all in approaching the solution to the great problems that confront us. It is a plea which I have made many times before to men in business and industry and to the public in general. It is my thought that if all of us—and that includes those who are temporarily entrusted with the control of government—should approach our problems from a tolerant and understanding viewpoint, the good flowing therefrom will quickly bring about the compromising of conflicting views and the establishment of policies in all walks of human activity and in government that will result in the national unity that is absolutely necessary for our success.

You and I will agree that the attainment of this ideal demands leadership possessed of vision and courage. It demands leadership that can, without regard for political affiliation or any other group affiliation, accept the simple fact that our paramount interest is the welfare of this Nation and the people that it represents.

I need not inform you that considerable hostility and honest misunderstanding exists among the most important factors in our national existence. It is this very fact that proves the necessity of cooperation, of mutual respect, and willingness on the part of all to work together in providing for the highest measure of security and justice to all the peoples of our country, and it is this fact which prompts me to accentuate as strongly as I can, the necessity of tolerance and understanding.

You and I accept the philosophy of the democratic form of government. We reject the ideology of the totalitarian state. You and I know that our type of government pays dividends of a spiritual and material nature that are not offered by the totalitarian state or by any other system of government that man has devised. While we realize these facts we also recognize that our system of government places such a reserve of power with all the groups in our Nation that a common objective of social betterment cannot be fully realized or even well served without a harmony of approach by all.

A benevolent dictator might, by the exercise of power, resolve all conflicting interests, misunderstandings, and quarrels into a unity of action. But we do not want that type of government. We would rest uneasy under the yoke of servitude and would fear its future consequences. But we must prove, at a time when it is the fashion of the world to sneer at democracies, that democracy, by the harmonious union of its forces, can meet and most successfully overcome any obstacle of an economic nature.

I have no illusions that our task, present or future, is easy of accomplishment. All of us are creatures of limited wisdom. We are all victims of human emotions that make it difficult for each of us to eliminate selfish and self-serving motives from our approach to questions of great public moment. I have no desire to attempt to conceal from you that men in public life, whether in an appointive or elective position, are not possessed of superhuman intelligence, or that mistakes have been made and will continue to be made. This reference also applies to persons engaged in all other human activities. We account for these departures from the most enlightened course, with the generalization that all of us are human, none of us is perfect.

In the thoughts that I have expressed and will express I speak to you as one who believes in the right of individual initiative, of the profit system, and as one who believes that an individual is entitled to the legitimate profits of his or her efforts, but who also believes that the exercise of this great right and the fruits derived therefrom must be with a regard to the welfare of all. We all recognize the distinction between liberty and license. I also speak to you as a legislator who must keep in mind that no person or group can consider their position and problems separate and distinct from the problems of others and that the problems of each State and each section of the country are interrelated.

The position of a legislator is, in a sense, somewhat different from the position of most persons engaged in the activities of private life. That fact should be recognized and respected. One of the most powerful influences that men in public life must and should consider is public opinion. In a democracy, public opinion is the source of all power. We must bear in mind that legislation invariably follows public opinion, and a full appreciation of this fact will serve to prevent misunderstandings among various groups. The viewpoints of these groups make public opinion. Thus, one

of the practical functions of government is to try to keep a proper balance between the various economic groups that make up the people of this Nation. The general opinion in one group cannot be ignored, nor should it be ignored by other groups whose views might differ, if a satisfactory compromise of conflicting views is to be arrived at and accepted.

Let me illustrate. Those dependent upon the soil for their livelihood and a degree of happiness which they feel that they are reasonably entitled to for themselves and their families, contend that the tariff discriminates against them, The farmer says, "I buy in a protected market and I sell in an unprotected market." He further says, "No matter how high a tariff the Government gives the farmer to protect him from loss in wheat, cotton, and other farm products, an exportable surplus exists. The tariff is of no effect. Our domestic prices are determined by world prices."

The farmer claims that the best interests of the country require that this great group of our citizens, so important to the life of our Nation, be given compensatory consideration. This is a practical question. We must face the cold hard facts. For industry and finance to take a complete position of opposition would be inequitable, unjust, and inconsistent with the best interests of our country. The proper attitude to take, I submit, would not be one of opposition but understanding, in an attempt to bring about, as far as is humanly possible, a satisfactory solution. None of us, not even the farmer, wants to see a condition exist where legislation is necessary but the fact remains that the condition does exist and something has to be done about it no matter what political party is in power.

Business might say, "No. Such legislation is unnecessary and would create a dangerous precedent." Government, however, must give it consideration. If business recognized the equities and, instead of opposing, collaborated in the solution of these problems, how much better it would be for all of us and how valuable would be their advice and counsel in arriving at the best solution.

In like manner, legislators must apply themselves to the considerations of all other problems that arise from the force of public opinion. How much better it would be for the welfare and peace of mind of the Nation if the various groups having conflicting interests would recognize or accept the necessities of action, give unselfish ear to the viewpoints of other groups, resolve their differences in a spirit of compromise, and collaborate with Government in the solution of the problem.

Let us not make the mistake of believing that we have no problems. We have problems and problems of a serious nature. Not only history but our own personal experiences teach us that serious legislative problems arise during and following a period of great economic progress. We must realize that the problems of a strictly agricultural nation are more simple and different than the problems of a distinctly industrial nation. We must also realize that the problems of a nation such as ours, where two-thirds of our people are dependent for their material—and, yes, spiritual welfare—upon business of all kinds, and one-third upon agriculture, make the difficulties of our Government and our people more complicated than if we were distinctly an agricultural nation or an industrial nation.

We must also realize that great legislative problems become uppermost when people are in pain. During times of prosperity, even that legislation which everyone admits should be passed, is unable to command the attention of those forces which operate in the making of public opinion. Legislative problems that should have been considered prior to the depression were deferred. Public opinion could not be aroused, but with the pain of the present depression, the demand quickly crystallized itself in a brief period of time in support of the passage of legislation—much of which should have been considered years ago. A tolerant and understanding mind would appreciate the fact that under such circumstances mistakes were bound to be made. Such a mind would also appreciate the fact that with the passage of time and the attaining of experience, such mistakes are bound to be corrected. The nature of the broad legislative program would likewise demonstrate the necessity of unselfish cooperation among all groups to make it accomplish its purpose.

I have said that legislative problems arise when rapid progress is made in our national economy. Let me sketch briefly what I mean by this statement.

On December 17, 1903, the first flight in heavier-than-air machines was made. The flight lasted for 20 seconds. As we look back we realize, in a sense, that a new economic era started with that event. We have seen the progress that the inventive genius of man has made in the production of automobiles. Today 25,000,000 automobiles are on our highways. Out of this basic industry have developed other business activities on a broader scale than even the keenest mind of 30 years ago could visualize. New roads, repair facilities, new means of transportation, new hotels, new oil fields to meet the increased demands for petroleum and many other new important avenues of activity appeared.

Since that period, the planning and construction of buildings have greatly changed due to lowered construction costs. New structural materials have been made available for our everyday use. Rapid strides were made in the improvement and installation of telephones, telegraph and wireless and there was great progress in rail and water transportation, bringing all sections of the country and yes, of the world, closer together. As a result, competition that was local for the most part became Nation-wide and in many instances, world-wide. The radio at that period was undeveloped where today it is an integral part of our national life, and rapid improvement was made in the development and use of electricity. This great economic progress resulted in social changes out of which rose new and great problems. Readjustments were necessary to meet these radically different conditions of our economic life. We are transferred from a country that was in great part agricultural, to a highly geared and rapidly moving industrial Nation. The adjustment which had to be made was deferred and we experienced the crash of 1929.

There are some who in all sincerity believe that government should not concern itself with the solution of the problems presented in 1929 or with the control or correction of existing abuses. I respect their opinions and their right to entertain such opinions but I disagree with them. Government is a living organism and no matter what form it takes, it must serve its people. To serve, it must work. That applies to a democracy just as it does to other forms of government. When, as today, we see the people of other nations accepting the totalitarian state, willing to sacrifice personal liberty for economic security and ultimately receiving neither, we should and must realize that democratic processes of government, because of necessity if for no other reason, must follow at times, policies that will stay our people from following the journey of the people of other nations where they heeded the arguments of their false prophets. While I am not intimating such a possibility and I do not entertain the thought that we will ever take such a journey, nevertheless, an understanding mind will not want conditions to exist which might be exploited along such lines.

Let us then inform ourselves clearly that the times immediately preceding and immediately following 1929, brought with them tremendous problems of adjustment. No group and no social force can be adequately prepared to perform their rightful function during this period of readjustment unless they fully understand that drastic readjustment is necessary, not only for the welfare of the Nation but also for their own personal good.

With the exigencies of 1929 and with the need for immediate adjustments to protect ourselves against a demoralized state of mind, government was the only agency organized to assume the leading role. Now, however, we have become so thoroughly conversant with the situation and the nature of our problems that the interests of business and the interests of labor should be prepared and willing to assume the major role in combatting our economic ills. This role very properly belongs to business and labor; it is only because of the exigencies of the time that government was compelled to shoulder the burden with which the other factors in our national existence were unable to cope.

Let me explain this thought in another way. To my mind, and in the minds of the legislators who have the proper understanding of their responsibilities, the essential duties of any government are fourfold. They must provide adequate defense against foreign invasion. They must adequately police the peoples of the Nation to preserve good order. They must maintain diplomatic relations with foreign countries, and to bear the expense of this function they must levy and collect taxes. All other activities of government are the result of pure necessity that arise when the other forces in our national economic life are unable to provide for the things which a nation owes its people. These activities result from public demand and public opinion which cannot be ignored, and when other agencies in our social economy are unable to meet these demands of public opinion there is the irresistible force upon government to make the secondary duties primary responsibilities.

I now feel, however, that the time has come when the interests of business, the interests of labor, the interests of finance, and the interests of agriculture should be prepared, in a spirit of sympathetic understanding and tolerance, to take up the burden of readjusting our social economy so as to meet the exigencies of the time and to provide ways and means of absorbing our 10,000,000 unemployed into private business and activity. The problem is here, and it is much better that the interests other than government should assume the primary responsibility of instituting constructive action to meet this problem.

I should like to treat briefly of some matters which appear to assume undue importance in the minds of some of the people of this country. In recent years there has been tremendous agitation over the thought of dictatorship in this country. Now, while I recognize the fact that one might not agree with the legislation that has been proposed, in all fairness, the cry of dictatorship is purely a political one. I refer to this as an illustration of a political appeal to the emotional rather than the rational mind, and yet I have seen many close friends of mine in business affecting great concern and fear over such an emotional appeal.

We also hear the argument of States' rights. I believe in States' rights. States' rights is a principle consistent with our dual system of government that is and must be applied to the current conditions. This application varies from time to time and from generation to generation, as is quite apparent from the decisions of the United States Supreme Court. The question of States' rights during and preceding the Civil War was purely a political question centering around the problem of slavery. Today the application of States' rights is dependent upon an economic system and the rapid advances we have made in recent years calls for the application of the principle of States' rights in accordance with present conditions. The arguments of States' rights in relation to the slavery question cannot be practically or properly applied to present-time conditions. This fact must be borne in mind and given consideration.

I have spoken at length on the necessity of tolerance and understanding. I have tried to give you some picture of the duties and problems of a legislator. I have also tried to present a broad

picture to you in the hope that you, as I try to do, will attempt to understand the problems of another person or another group and from this broad sympathetic viewpoint to attempt to create a spirit of partnership in the attention to our national problems.

I do not want to close, however, without expressing some of the opinions which I entertain—opinions that I would like to see enacted into law, and yet opinions which must be compromised with those of my colleagues in Congress who entertain different views. I must approach these opinions in a spirit of compromise in order that the passage of such legislation as I consider to represent progress and to be conducive to the best welfare of our people may be assured.

Believing as I do in the system of individual initiative, and our unemployment problem being the most serious of the problems that confront us, I know that it is only through the encouragement of private business that this problem can be properly met. In the attainment of the objective of solving our unemployment problem, all of us should cooperate with one another and with government, and government should cooperate with all of its people. The happy solution of this problem demands men of vision and courage, not alone in business and other avenues of private activity, but also in government. The man who cannot adjust himself to the recognition of a new social outlook and to the attempt of obtaining objectives in a manner consistent with our ideals of democracy should step aside and let some other person assume his place of leadership.

Parenthetically, during the past several years we have seen the passage of very controversial legislation. The cry of radicalism has been hurled at it. It is amazing how often, as we look back through history, the radical proposals of one generation became the accepted conservative policies of another.

While I have agreed with the objectives of social legislation that have been passed, there are portions of this legislation passed that I have not agreed with. The mere fact that I have opposed the provisions of a bill is not of itself sufficient justification for my opposing the passage of the bill—with the objective of which I am in agreement. Furthermore, let us hold in mind that important legislation is always amended from time to time as experience shows the necessity.

Likewise, we must accept the fact that the legislation of the past several years is here to stay. Its passage was the result of the demands of a strong public opinion. While amendments from time to time will be made, the present legislation will stand. To those who are opposed to all of such legislation or to some particular bill, it seems to me to be the logical course to accept this legislation, and if there are provisions of existing law which should be amended, to constructively advocate proper amendments that will serve to strengthen the existing law and to make it work more equitably. This would appear to be more desirable than to continue the useless effort of trying to repeal the law or to engage in a campaign of hatred and destruction by overemphasis upon the mistakes of the human agencies that administer the law.

Among the most controversial laws enacted in the past several years are the National Labor Relations Act, the Social Security Act, and the Securities and Exchange Commission. All of this legislation is here to stay. I remember when the bill regulating stock exchanges was pending in Congress, and I remember the charge that was made, and honestly, although erroneously entertained by some, that the passage of this bill would result in the destruction of business. In the few years following its passage, we have seen such a change that the very people who formerly vigorously opposed it, would today oppose its repeal.

Whether one agrees with it or not, and I do, the right of labor to collectively bargain is now provided by law. It is here to stay. Instead of blind opposition, why would it not be sound business course to recognize that it is here to stay, to accept it and to try to improve upon it by amendments that will enable this important legislation to operate with satisfaction to both employer and employee. There is no doubt in my mind but that amendments will be made to this act—amendments which experience shows to be necessary. Blind and intolerant opposition will only defer the arrival of that time. Blind and intolerant insistence that no amendments be accepted which experience shows to be necessary will also defer the time when both capital and labor will reap the benefit of proper understanding and sympathies.

We all recognize that there is one common ground upon which business and industry and labor stand, and that is that industry shall function, employ fully, and produce abundantly, and to do so in such a manner as to perform their essential social functions to other groups and to government. But it is only through a broad and general economic recovery that all of our people and classes can fully participate in the benefits of democracy and the material possibilities of our Nation.

Let me speak of the Social Security Act. This legislation, like other social legislation, is the natural and probable consequence of the great economic changes that have taken place since the beginning of the century. Why not acknowledge this fact and accept the principle of this legislation? Personally, I believe that it is unnecessary under the Social Security Act to maintain the large reserve fund that is evolving at present. It is only a matter of time, in my opinion, when we will adopt a policy which is somewhere between the present large reserve fund and a pay-as-you-go plan. If such a policy were enacted into law, it would result in a reduction of the tax and contribution provided for in the existing law. Such an amendment would constitute a great relief to business.

In the solving of this problem we all have one interest in common. We all want business and industry to function as freely as possible, and we want abuses of industry and business and labor controlled so that the honorable businessman will not be subject to the tactics of the unscrupulous competitor.

It is only through investment of capital in productive enterprise and a distribution of earnings in a proper manner, that our economic system can function in a normal and proper manner. Disagreements have existed, and disagreements will exist in the future, but disagreements cannot and will not be adjusted, unless the spirit of understanding and of compromise exists in the minds of all.

In the matter of encouragement to private enterprise, I am of the opinion that our surtaxes on incomes are too high. I believe that capacity to pay should be the test for the imposition of taxes. However, there is a saturation point beyond which we should not go. Taxes that limit or restrict the incentive to invest in productive enterprises are not wise. Not only do such taxes reduce sharply the amount of revenue that Government receives but insofar as they prevent capital investments in production, they increase unemployment, or to put it in converse language, they prevent reemployment.

I believe that the capital gains and loss tax should be improved upon, allowing greater capital investment, more revenue for Government, and contributing toward the solution of our unemployment problem. While the undistributed surplus tax might be theoretically correct, experience has shown that it works a hardship upon business. I believe that a permanent return to the normal tax would be a proper and desirable incentive to business.

I have come very close to the end of my remarks. I am hopeful that I have made some contribution to your understanding and appreciation of the problems of the present and that the honest viewpoint of a man in Government will assist in bringing all of our groups closer together in the work that lies before us. I believe that I can, with perfect assurance, express the opinion that Government in the next few years will concern itself with the refinement and equitable adjustment of the social legislation of the past.

You and I will agree that we have had great problems of readjustment in the recent past and have great problems today. Let us all accept the fact of the presence of these problems. Let us all agree that these problems cannot be solved while the great forces in our Nation—business, industry, finance, labor, agriculture, and government—are fighting themselves and not the depression. Let us all accept that a nation cannot be legislated into prosperity, that government can only assist the natural forces of democracy in stimulating economic progress, and in its efforts must heed the demands of public opinion and resolve the different opinions of various groups. Let us all admit that it is unfortunate that government is compelled to tackle these problems, that it would be much better if business, industry, finance, labor, and agriculture were collectively able to compromise their differences, determine upon constructive programs, and seek the assistance of the Government in putting them into operation. In 1929, these groups were not able to quickly provide the leadership necessary. Today, however, they have had the experience of living with these problems for 10 years and now they should and must assume their proper responsibilities. It can be done only when there is leadership in all these groups possessed of broad human sympathies, broad understandings, and broad tolerances.

In closing I want to make some definite recommendations.

To labor I would recommend that it solve the differences within its own ranks, that it seek to provide for responsible leadership throughout its vast organization, and that it be prepared to work in a spirit of compromise and sympathetic understanding with all other groups to the end that malice toward none and justice to all will result.

To business and industry I would recommend that they accept the fact that readjustments are necessary, that they vie with government and labor in suggesting and putting into operation constructive and affirmative progress that will best serve the needs of our times, that they will accept the fact that labor organizations on a broad scale are here to stay, that the labor movement today is subject to growing pains, and that a strong advance toward peace will result through the encouragement of proper bargaining agencies for labor. I would also suggest very strongly that all men in business and industry should closely study all legislation, approach it with a broad viewpoint, and appear in person before the committees of Congress to present the facts and suggestions they might have. You can become a strong factor in molding public opinion along proper lines if you appear openly and in numbers before committees and not be betrayed into feeling that the most effective work can be done behind closed doors.

To government, the necessity of wise and tolerant administration of laws—that public officials always remember "that this is a Government of laws and not of men," and to act accordingly, judiciously, not arbitrarily.

To all of us as individuals, as groups—economic, social, and otherwise—to realize that the common welfare of all will be more quickly and advantageously obtained, without harmful misunderstandings, and bitter antagonisms eliminated, by an approach to all problems with a tolerant and understanding mind.

"We're Blundering Into War"—Article by Charles A. Beard

EXTENSION OF REMARKS
OF
HON. ARTHUR CAPPER
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Monday, March 27, 1939

ARTICLE BY CHARLES A. BEARD

Mr. CAPPER. Mr. President, I wish every American, and especially every American in public life responsible in any way for the direction of our foreign policies, might read an article in the current issue of The American Mercury, by Dr. Charles A. Beard, the eminent historian and scholar.

Dr. Beard sees the United States blundering into war, largely because of lack of understanding of Old World affairs, aided by the missionary zeal of native Americans, and the racial passions and prejudices of hybrid Americans in our midst.

I ask unanimous consent to have printed in the Appendix of the RECORD the article, which I send to the desk, entitled "We're Blundering Into War," by Dr. Charles A. Beard, taken from the April issue of The American Mercury.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From The American Mercury, April 1939]

WE'RE BLUNDERING INTO WAR

(By Charles A. Beard)

In her column recently Dorothy Thompson, after speaking of the riches of the United States, said, "No country with such economic power can avoid international political responsibilities." In the same column she said, "In practically each American heart there is a timid soul pursuing hapiness and wishing to avoid the burden and the headaches of power." These two sentences, so noble in emotional urge, express the vague sentiments which make difficult realistic thinking about foreign policy for the United States and tend to drive the country in the direction of war.

The first sentence is an empty truism. Of course, the United States has "international political responsibilities." But at the very touch of exploratory questions the flimsy structure of the aphorism falls into meaningless dust.

What responsibilities? To help France, Britain, and Russia police the world? To take part in suppressing all disturbers of world peace, everywhere? To give the world's billions of poverty-stricken people economic goods sufficient to satisfy them? To see that the present distribution of territory and resources is altered only by "negotiation" in a manner to bring justice to all? What justice? Who are to be the judges of the justice or equity?

Responsibilities to whom? To the peoples of the fifty-odd nations possessing independence? To the peoples of the British, French, Belgian, Dutch, Portuguese, and Italian dependencies? To the Negroes of British South Africa? To Nationalists in India? To the natives of Zululand as well as the natives of Ethiopia?

And how much responsibility? Responsibility equivalent to the full economic and military power of the United States? To the uttermost limits of physical and moral capacity? Responsibility equal to the ability of the upper and lower income groups in the United States to pay the bills? And who is to fix the limits of capacity and ability?

Besides uttering a Peter-the-Hermit cry, Miss Thompson tries to spur Americans on by shaming them. Americans are timid souls. They are selfish. They love their happiness. They shrink from the dreadful task she has laid before them. They are, in short, a cowardly crew.

President Roosevelt is apparently Miss Thompson's flaming knight ready to lead embattled hosts. In other places she has portrayed him as a man in a mess at home, and yet in foreign adventurism she makes him the hero competent to straighten out the whole world by assuming "international responsibilities." Who, in such circumstances, wants to be a coward? The psychological trick is simple and telling. The fact that it draws such cheering crowds indicates that a lot of American thinking about international complications is no more realistic than the apocalyptic visions of a backwoods camp meeting.

If we look less ecstatically on the world's nations and governments and consider their practices, as distinguished from their general professions, we do not find them wholly controlled by noble conceptions of their international responsibilities—responsibilities to other peoples and governments. On the contrary, we see them pursuing their national interests. But when it is proposed that the United States look to American interests and security, this is denounced as cowardly, selfish, and immoral—before the world of moral nations. According to this strange ethic, it is indecent for the United States to take advantage of its geographical position and seek to maintain peace and security in its sphere, where it is able to accomplish its purposes. How can this strange state of affairs be explained? Why is it that loose thinking and passionate cries evoke loud echoes?

One clue to the anomaly is the fact that the United States is treated by resident foreigners as a boarding house, not as the permanent home of a people engaged in trying to make a civilization in their own land. These foreigners in letter or spirit are actuated by emotional interests in conationals in other countries and yet look with contempt upon Americans whose primary affections are attached to ties of their own.

When a British-born American delivers an oration on the duty of the United States to join Britain in saving democracy in Europe, he is acclaimed as noble in motive, high-spirited in morals, and generous in outlook—by one crowd. When an American of German or Italian origin argues against serving notice on Germany and Italy that the Monroe Doctrine applies to them, he is greeted as heroic—by another crowd. When an American of whatever national strain refuses to have anything to do with either of these crowds and insists upon protecting the American sphere of interests against all alien intervention and upholding democracy here, he is condemned by members of the boarding-house and home-grown missionaries as ignoble, narrow, and greedy.

Between the boarders and the missionaries it has become well-nigh impossible for the United States to follow any realistic foreign policy based upon its geographical position and its democratic ideals. No other government in the world is compelled to the same extent to shape its foreign policy under the pressure of powerful interests whose hopes and passions are linked with the fate of foreign governments and nationalities. If to aliens in fact are added missionaries hell-bent on spreading the American brand of democracy from Rhodesia to Formosa, and the communistic dreamers dedicated to saving Russia at any cost to America or making a world conflagration, it becomes painfully clear that the task of framing and pursuing an American policy is staggering in its proportions.

A few figures illustrate the fantastic situation. Of the 130,000,000 people in the United States, about 40,000,000 are either foreign-born themselves or are the offspring of foreign-born or mixed parents. In this class are 7,700,000 Germans and 4,500,000 Italians, 3,300,000 Poles, 7,600,000 British and Canadians, and 3,100,000 Irish. About one-fifth of the total American electorate is potentially composed of men and women from this group. And what a din they can make about an American policy for the United States as distinguished from a British or German or Italian policy for the United States!

II

But putting aside for the moment all the conflicting domestic interests which make American foreign policy a muddle and granting that the United States has unlimited responsibilities in Europe, it seems proper to inquire a little about the responsibilities assumed by the European powers themselves. What are they doing to bring peace, security, prosperity, a fair distribution of the world's goods, and stability in Europe? What are they doing to brighten up the corner where they are?

Judging by all the weeping, wailing, and hand-wringing in the United States, the poor, little peace-loving countries of Europe are threatened by two monster powers, Germany and Italy, and could not, if they would, defend themselves against these frightful Leviathans. The truth of the matter is far different. The countries threatened by Germany and Italy outnumber them in population by at least three to one. For every soldier that Germany and Italy can put in the field, they can put three or more. These menaced nations far outstrip the two foes in wealth, natural resources, metals, and war materials of every kind. They have command of the seas and can impose an iron blockade on Germany and Italy.

And this reckoning leaves out of account all the man power and material power of the natives in the British, French, and Dutch Empires. Even if Japan should throw herself on the side of Germany and Italy in a new world war, the overbalance of power for war would still be on the side of the opposing nations immediately affected.

Poland, Yugoslavia, Rumania, and Turkey alone, to say nothing of France and Russia, have about 80,000,000 inhabitants, and surely they are directly and immediately interested in escaping German and Italian domination. Their combined population is equal to that of Germany, counting Sudetens and Austrians. Their combined armies, including trained reserve troops, number nearly 6,000,000 men. According to the estimates of Col. Frederick Palmer, their present armed forces are nearly double those of Germany.

In other words, the countries immediately, directly, and palpably interested in preventing German and Italian domination are Great Britain, France, Belgium, Poland, Russia, Yugoslavia, Rumania, Turkey, Greece, the Netherlands, the Baltic States, and Scandinavia. By their side we may also place the British Empire, the French Empire, and the Dutch Empire. And they have overwhelming power in men and materials.

These are the helpless pygmies that must be saved from the menacing Leviathans by the blood and treasure of the United States. Here is the American responsibility.

Such are the ponderables. Then there are the imponderables to be considered with reference to the formulation of American foreign policy in this relation. What are the secret wishes, hopes,

and maneuvers of Great Britain and France, so immediately concerned with the doings of Germany and Italy? I do not refer to any hints, notes, and friendly communications that they have sent to the State Department at Washington or that have been revealed to the Olympian columnists who daily instruct the people of the United States. I refer to the real intentions and preferences cherished by the Governments of Great Britain and France. On this point we have no authentic information. Not for fifty or a hundred years will the archives of London and Paris be open to our children or grandchildren. For the Government of the United States to operate on the ostensible fiction that a mere test of despotism and democracy is at hand would be nothing short of childish.

Some obvious facts run counter to the fiction. As to some real or pretended issues the objectives are clear. The quarrel between France and Italy is plainly over the spoils of empire in Africa. Italy demands more loot. The Italians were not given their "share" of the German spoils at Paris by the Treaty of Versailles. In fact the treatment of the Italians in 1919 was, from the point of view of French and British imperialism, nothing short of scandalous. They were greeted by noble words about self-determination while France and Britain carried off German colonies in Africa, under the high-sounding phrase of "mandates in sacred trust for civilization." Now Italy demands her share of the loot. I do not say that France should surrender it, but I do say that the present quarrel between Italy and France is openly, without palaver and hypocrisy, a quarrel over imperial spoils.

Should the United States pour out blood and treasure to help France hold Tunisia or Djibouti, or even Corsica?

And what has the Tory government of Britain really been doing in the past few years? I do not pretend to know. I suspect that its primary aim is to let Hitler liquidate Soviet Russia. Should the United States pour out blood and treasure in support of that British Tory policy?

If the countries of Europe that are directly and immediately involved in preventing German and Italian domination are primarily or even fundamentally interested in that operation, they can call the bluff and stop the peril within 48 hours. They can establish solidarity, if that is their real and secret wish. They have the men, the materials, the money, and the power. But they do not establish solidarity. And my guess is that they do not for the reason that other hopes, fears, and ambitions enter into their designs.

Convinced that this is the truth of the business, I come to the conclusion that the intentions and enterprises which the United States is asked to underwrite with blood and treasure are only incidentally related to the fear of German and Italian domination. The business is far more complex than any such simple hypothesis. The internal conditions of the countries affected, as well as their external relations, are involved in their various maneuvers.

In saying all this I do not mean to condone in any way the recent conduct of the German, Italian, and Japanese Governments. It has been, in most respects, barbaric, indecent, cruel, and inhuman. What I do say is that the underlying issues accompanying their conduct cannot be reduced to a single issue—democracy against despotism, humanity against inhumanity. And I insist that the business of preventing German and Italian domination in Europe is the business of the powers immediately and directly interested and that they have the men, money, and materials to do the work, if that is what they really want to accomplish.

For the United States to rush in and do what they obviously do not want to do seems to me quixotic beyond anything Cervantes ever imagined.

III

What, then, should the Government of the United States do in this situation? First of all, its officials, high and low, should stop preaching, lecturing, and hectoring the governments of other countries. They have done enough of that. Far from checkmating the egomaniacs of Berlin, Rome, and Tokyo, this tongue lashing merely inflates their importance, gratifies their egotism, flatters their vanity, swells their self-importance, and evokes retaliations. It defeats its professed ends.

Of all the crazy institutions ever established in the United States, the press conference on foreign relations is the worst. On its face it is preposterous for the President of the United States or the Secretary of State to allow himself to be heckled by 25 or 30 newshawks bent on snatching sensations even out of burning homes and new-made graves. There is dignity—and power—in silence, especially about ticklish matters, when light words may be seized upon and twisted and slips of speech are sure to be made, even by the coolest President and Secretary. The press conference on foreign affairs should be abolished. If the President or the Secretary of State has anything to say of importance on foreign affairs, let him write it out in measured words and give it to all newspapers, without fear or favor.

As to the passion of underlings for ego inflation through criticizing other countries, that should be suppressed immediately. No subordinate in the national administration has any business thundering at foreign governments in the press. It would be well, too, if the chairmen of congressional committees in charge of foreign affairs held their tongues and confined their sermonizings to the floors of their respective chambers.

The President of the United States is the official channel of communication with foreign governments, save in such matters as he chooses to delegate to the Secretary of State. Toward all countries with which the United States is at peace, the President should maintain a correct, formal, and reserved attitude. He should put his personal likes and dislikes aside when speaking to the public about foreign affairs. If he feels duty bound to tell the minister of a foreign government something unpleasant, he should call that minister to the White House, look him straight in the eye, give him the message in terse English, and let him guess as much as he likes. If the President is convinced that peace with any country is impossible, he should formulate his case, lay it before Congress, and call for action—for war, if he deems that necessary. In my opinion this is the only way to make the United States respected and feared in all matters in which respect and fear redound to the national interest. Any other procedure is both undignified and dangerous.

If the Roosevelt administration had really wished to put the screws on Germany, at a cost far below that of any war, it could have stopped the sale of war materials to Germany long ago by applying preexisting law and without resorting to any hostile acts under the laws of war. Lawyers have argued, and with force, that the sale of certain munitions to Germany has been in contradiction to express treaty obligations and that the State Department has winked at these obligations. However that may be, the State Department could have interpreted the law in a way to stop the sales of airplane materials and other specific articles of war demanded by Germany. But it has refused to take advantage of this power, while clamping the embargo on Loyalist Spain in clear violation of treaty obligations and the established rules of international law.

A still more important power belongs to the administration under our own tariff acts, which have been on the books for years. The antidumping provisions of those measures are drastic, and the administration has wide authority to retaliate against any country that engages in such practices. Germany has flaunted her defiance of these legal barriers by dumping goods in the United States, and the administration has winked at it. Only by violating antidumping rules can Germany buy necessary raw materials in the United States. By applying these rules the Government can stop this life stream that flows into Germany without committing any acts of hostility.

All the reasons for failure to act in this manner are not known, but it is known that Germany is also a buyer of agricultural products, including cotton, and the influence of farmers and planters with the administration is immense. Although it would be cheaper for the Government to buy up the farm produce and cotton than to prepare for and get into war, the administration pursues the policy of cursing Germany publicly and allowing private interests to supply her with the sinews of economy and war.

So much for official procedure. On the other hand, citizens and newspapers are free to express their opinions on foreign as well as domestic affairs. And foreign governments are to be informed that such is the situation in the United States, if they are so foolish as to protest against private utterances.

Now as to policy: in my opinion, the United States should and can stay out of the next war in Europe and the wars that follow the next war. The countries immediately and directly concerned have the power to prevent German and Italian domination if they want to do it. If they do not want to do it, then it is certainly not the business of the United States to take on the job.

If, as assumed at the outset, it is the duty of the United States Government to promote, protect, and defend the security and welfare of the American people, then its foreign policy should be determined with reference to that objective. It should maintain correct diplomatic formalities with all governments which it recognizes as de facto and de jure. It should take no notice of the fulminations made by the reptile press of dictatorships or the roaring speeches of their tyrants. It should deliver no sermons against them and make no threats that are not to be backed up by deeds. It should not dabble in quarrels and squabbles in Europe or Asia, about the origins and intentions of which it knows little or nothing. It should make known to the world clearly and positively that it does not propose to take part in any European or Asiatic war over any European or Asiatic interests. It need not say any more about the exclusion of alien interests from this hemisphere under the principles of the Monroe Doctrine. Enough has been said. Naval preparations adequate to this purpose are more important than words. They tell their own story and call for no verbal embellishments.

Under this American policy the countries that may want to prevent German and Italian domination will know what they must depend upon; that is, their own power and ability. They will not be able to shirk their own responsibilities and in a pinch shift an enormous burden to the shoulders of the American people. Nor will they be deceived any longer by the American practice of lecturing and eating crow, threatening and scuttling, boasting and writing letters of humiliation, asserting and denying.

IV

Can the Government of the United States pursue a policy of nonintervention and stay out of the next European war and the subsequent European wars? "Can" is an elusive word. Legally this policy can be followed. No treaties of alliance commit us to upholding any status quo in Europe. The Constitution permits the President and Congress to formulate and maintain such a policy. In respect of economic necessities, the policy is possible. Another war in Europe would no doubt materially disturb American economy, but appropriate domestic measures could mitigate the difficulties and internal adjustments could even raise the level of American production and consumption. It would be foolish to minimize the task; but, judging by the experiences of the World War, the perplexities, strains, and burdens connected with neutrality would scarcely equal the

costs, dislocations, and explosions inevitably associated with participation in a European war.

Legally and economically, abstention is possible. Will passions permit it? Is the prospect of a temporary escape from the impasse in American political and economic life too great for politicians to endure? There is nothing in human knowledge that permits unequivocal answers to these questions. If and when war comes in Europe, the emotional explosion in the United States will be immense and frightful. Missionaries and members of the great American boarding house will seek to bend American policy to fit their ideological or national or racial passions. The difficulty of maintaining any reasoned policy will be increased by the fact that Germans and Italians in the United States will be shouting for peace. When it is remembered that man has been and is a warlike animal—none more warlike than most peace advocates—then we can easily foresee an emotional storm of the first magnitude and a sacrifice of national welfare to the violence stirred up by sentimental attachments to the belligerents.

To any administration in power at Washington, Republican or Democratic, a foreign adventure in war would be a temporary godsend—after us the deluge. All the politicians, as well as businessmen and the rest of the people, are bewildered, befuddled, and baffled by the economic crisis that has continued practically unabated since 1929. They talk bravely about lowering trade barriers and other political thimblerig, but they know that they have no answer to the problem of business stagnation and unemployment that has stared them in the face for nearly 10 years and still stands there before them, stark and brutal in its reality.

Are there any politicians in America as courageous as Lincoln in 1861? The Government of the United States was then in a frightful jam. It confronted a major domestic crisis. The slick and sinuous William H. Seward saw a way out for his crowd in a war with Great Britain. Lincoln would not have it. He insisted on facing his domestic crisis and applying his talents and energies to it. The analogy is suggestive, and readers can make their own applications and deductions.

No less important for thought about American policy than the posture of our own domestic economy and politics is an inquiry into the nature of policy itself. The very essence of great statecraft at home and abroad is a sense for the limitations of power and for the consequences that may flow from the exercise of power. Theoretically, the sovereignty of the state is absolute; practically, it is limited. As a matter of cold fact—men, guns, ships, and equipment—the United States cannot "whip creation" and police it. Nothing is easier than to get into a war and to hurl armed forces into a war. But participation in any war likely to break out in Europe would be participation in a coalition as an "associate" if not an "ally." What the United States could do and would be called upon to do would depend on the posture, designs, demands, and intentions of the associates or allies.

In a coalition the very attributes of sovereignty disappear. The will of the state must be bent to other wills and purposes. On this point the experiences of Woodrow Wilson are illuminating. And what guaranty is there now that so-called "democratic purposes," if actually espoused by the United States, would prevail in any coalition with which this country might be associated in a war against Italy and Germany? No guaranty. On the contrary, experiences indicate that the United States would merely become a tail to the coalition kite, would receive lip praise, would have to supply more and more men and materials to the bitter end.

Beyond victory, immediately and at a distance, would be the consequences. Practice under the Wilson administration makes it as certain as death and taxes that civil liberty would perish in the United States as soon as war is declared. We are not yet rid of the persecution mania let loose by the last World War, and the prospects of another emotional rage are alarming to contemplate. Nor are the almost certain effects of a war upon our domestic economy, now deranged and debt-ridden, to be contemplated with any less anxiety. Even a victorious army on its return home will not accept the misery of unemployment and destitution such as we now have and which is likely to be augmented after the war speed-up and let-down. Why should it? Merely to authenticate the speeches of the war cheer leaders?

And what of the consequences in Europe and Asia? Far more than the last World War, the next one would be for the avowed purpose of making internal revolutions in enemy countries. Immense propaganda efforts would be directed to that end—revolutions in Germany, Italy, and Japan. But would the revolutions to follow the defeat of these powers be to the liking of the United States and its associates? (Remember the Allied and American intervention in Soviet Russia.) Could the revolutions be confined to the introduction of Sunday-school methods and the moderation of the New England town meeting? If not, what will the associates do after the war has nominally closed? Assuming, without warrant, the best of will on their part, could they assure to the defeated countries an economic underwriting that would sustain representative democracy in politics? Experiences after 1919 and knowledge of the economic conditions of Italy, Germany, and Japan make the very idea ridiculous—as ridiculous as the Communist idea that out of a universal conflagration Utopia will spring in full panoply.

No, the United States could not hold the war to any alleged democratic purpose, and a rational adjustment of the consequences would be beyond the power of any government, in Washington or anywhere else.

In these circumstances, underwriting Great Britain and France in advance, allowing them to count upon the aid of the United States in whatever hidden schemes they may be pursuing, seems to me to be the policy of reckless gambling, not of reason or idealism. No better illustration of the follies inherent in such underwriting can be found than the action of the United States Government in imposing an embargo on the republican government of Spain—presumably to aid the beautiful nonintervention policy of Great Britain and France which may help to bring Germany and Italy into the Atlantic. It is one thing to underwrite Great Britain and France in their tortuous diplomacy. It is another thing to prepare to meet the possibility that German and Italian Navies may acquire dominance in the eastern Atlantic.

To entagle ourselves in the mazes and passions of European conflicts and tie our hands to British and French manipulators on the remote contingency of a German and Italian domination in the Atlantic seems to me to embrace immediate calamities when the possibility of security and peace in this hemisphere is clearly open to us. If this be immorality, the foreigners now boarding here and the home-grown missionaries can make the most of it.

Utah State Income Tax—Opinion of United States Supreme Court

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Monday, March 27, 1939

DECISION OF THE SUPREME COURT

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the Appendix the decision of the United States Supreme Court, delivered by Mr. Justice Black, which seems to have been a unanimous one, in *State Tax Commission of Utah et al., Petitioners,* v. *W. Q. Van Cott.*

Mr. KING. Mr. President, I understand that case was sent back to the State court.

Mr. BARKLEY. Yes, Mr. President.

Mr. MINTON. The Court says in the opinion:

Salaries of employees or officials of the Federal Government or its instrumentalities are no longer immune, under the Federal Constitution, from taxation by the States.

Which would seem to overrule the decision in *Dobbins* v. *Commissioners of Erie County.*

There being no objection, the opinion was ordered to be printed in the RECORD, as follows:

[Supreme Court of the United States—No. 491—October term, 1938—*The State Tax Commission of Utah et al., petitioners,* v. *W. Q. Van Cott.*—On writ of certiorari to the Supreme Court of the State of Utah.—March 27, 1939]

Mr. Justice Black delivered the opinion of the Court.

The State of Utah's income-tax law, effective in 1935, exempts all "amounts received as compensation, salaries, or wages from the United States * * * for services rendered in connection with the exercise of an essential governmental function."[1] In his return of income taxes to the State for 1935 under this law, respondent claimed "as deduction" and "as exempt" salaries paid him as attorney for the Reconstruction Finance Corporation and the Regional Agricultural Credit Corporation, both Federal agencies. The exemptions were denied by the Tax Commission of Utah, but the Utah Supreme Court reversed.[2] Before the commission and in the Supreme Court of Utah respondent asserted, first, that his salaries were exempt by the terms of the State statute itself, and, second, that they could not be taxed by the State without violating an immunity granted by the Federal Constitution. In holding respondent's income not taxable the Supreme Court of Utah said: "We shall have to be content to follow, as we think we must, the doctrine of the Graves case (*Rogers* v. *Graves,* 299 U. S. 401) until such time as a different rule is laid down by the courts, the Congress, or the people through amendment to the Constitution."[3] The Graves case applied the doctrine that the Federal Constitution prohibits the application of State income taxes to salaries derived from Federal instrumentalities. We granted certiorari in the present case because of the importance of the principle of constitutional immunity from State taxation which the Utah court apparently thought controlled its judgment.[4]

Respondent contends that the Utah Supreme Court's decision "was based squarely upon the construction of the Utah taxing statute, which was held to omit respondent's salaries as a subject of taxation, and therefore that decision did not and could not

[1] Revised statutes of Utah, 1933, sec. 80–14– (2) (g).
[2] 79 Pac. (2d) 6.
[3] *Id.,* 14.
[4] — U. S. —.

reach the Federal question and should not be reviewed." But that decision cannot be said to rest squarely upon a construction of the State statute. The Utah court stated that the question before it was whether respondent's salaries from the agencies in question were "taxable income for the purpose of the State income-tax law," and that the answer depended upon whether these agencies exercised "essential governmental functions." But the opinion as a whole shows that the court felt constrained to conclude as it did because of the Federal Constitution, and this Court's prior adjudications of constitutional immunity. Otherwise it is difficult to explain the court's declaration that respondent could not be taxed under the "doctrine of the Graves case until such time as a different rule is laid down by the courts, the Congress, or the people through amendment to the Constitution. If the court were only incidentally referring to decisions of this Court in determining the meaning of the State law and had concluded therefrom that the statute was itself intended to grant exemption to respondent, this Court would have no jurisdiction to review that question.[5] But if the State court did in fact intend alternatively to base its decision upon the State statute and upon an immunity it thought granted by the Constitution as interpreted by this Court, these two grounds are so interwoven that we are unable to conclude that the judgment rests upon an independent interpretation of the State law.[6] Whatever exemptions the Supreme Court of Utah may find in the terms of this statute, its opinion in the present case only indicates that "it thought the Federal Constitution (as construed by this Court) required" it to hold respondent not taxable.[7]

After careful review of this Court's decisions on the question of intergovernmental immunity, the State court concluded that the Reconstruction Finance Corporation and the Regional Agricultural Credit Corporation were "instrumentalities" performing "essential governmental duties" and that State taxation of respondent's salaries violated the Federal Constitution as interpreted by the Graves case. Anticipating that this Court might reexamine that interpretation and apply a "different test," the State court said that "Until such is done the States are bound by the decision of the Supreme Court in * * * *Rogers* v. *Graves*, supra."

We have now reexamined and overruled the doctrine of *Rogers* v. *Graves* in No. 478, *Graves* v. *O'Keefe*, this day decided. Salaries of employees or officials of the Federal Government or its instrumentalities are no longer immune, under the Federal Constitution, from taxation by the States. Whether the Utah income tax, by its terms, exempts respondent, can now be decided by the State's highest court apart from any question of constitutional immunity, and without the necessity, so far as the Federal Constitution is concerned, of attempting to divide functions of government into those which are essential and those which are nonessential.

"We have frequently held that in the exercise of our appellate jurisdiction we have power not only to correct error in the judgment under review but to make such disposition of the case as justice requires. And in determining what justice does require, the Court is bound to consider any change, either in fact or in law, which has supervened since the judgment was entered. We may recognize such a change, which may affect the result, by setting aside the judgment and remanding the case so that the State court may be free to act. We have said that to do this is not to review, in any proper sense of the term, the decision of the State court upon a non-Federal question, but only to deal appropriately with a matter arising since its judgment and having a bearing upon the right disposition of the case."[8]

Applying this principle, we vacate the judgment of the Supreme Court of Utah and remand the cause to that court for further proceedings.

Judgement vacated.

The Chief Justice took no part in the consideration or decision of this case.

The Case of Dr. Nylander and the N. L. R. B.

EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 27, 1939

CORRESPONDENCE CONCERNING SUSPENSION OF DR. TOWNE NYLANDER

Mr. GEYER of California. Mr. Speaker, under leave to extend my remarks, I include letters to Dr. Towne Nylander, myself, and to the National Labor Relations Board. These letters, except to myself, are copies sent to me from the writers and were supplied by neither the Board nor Dr. Nylander.

These are only a few chosen from my files containing many others coming from both A. F. of L. unions and C. I. O. unions, civic groups, and individuals.

I have inserted them into the RECORD because the suspension was discussed on the floor of the House and the editorial that caused that suspension also was placed in the RECORD.

I have waited until the case was closed in order that no one could claim that I was trying to influence the decision of the Board. Now that Dr. Nylander has been vindicated and reinstated into his former position, it seems but just and fair that the other side of the story be told. Let those who were close to the picture tell the story.

The letters follow:

HAWTHORNE, CALIF., *February 24, 1939.*

Mr. LEE GEYER,
Congressman, California Seventeenth District,
Washington, D. C.

DEAR MR. GEYER: I am enclosing a copy of a letter from our club to the Labor Relations Board, as our members feel that we can look to you for fair representation in Washington and we believe that you will be interested in the action we have taken regarding the perverted report in the Inglewood Daily News, of an address made by Dr. Nylander in that city on February 6.

Yours for democracy,

ELIZABETH MOON,
Secretary, Labor's Nonpartisan League,
46th A. D. Club, 250 Washington Ave., Hawthorne, Calif.

HAWTHORNE, CALIF., *February 24, 1939.*

NATIONAL LABOR RELATIONS BOARD,
Washington, D. C.

DEAR SIRS: At a regular meeting of the Forty-sixth Assembly District Club of Labor's Nonpartisan League in Inglewood, on Monday evening, February 20, I was, by unanimous vote, instructed to communicate with you regarding an address given by Dr. Towne Nylander before the Inglewood Community Forum on February 6, and the report of this meeting in the Inglewood Daily News of February 7.

We wish to compliment Dr. Nylander on his analysis of the present labor conditions and the National Labor Relations Board's part in correcting the evils of "unfair labor practices."

We also wish to point out that the story told in the Daily News was very misleading, conveying the impression that Dr. Nylander stated that N. L. R. B. is prejudiced in favor of labor and therefore not qualified to give the employer a fair trial in cases brought before it. Members of our club who attended the forum feel that the entire report was extremely biased and unfair, giving an incorrect impression of Dr. Nylander's address.

An item in the editorial column of the Daily News of February 8 leads us to believe that they are using this method to discredit the National Labor Relations Board and the Wagner Act.

This club wishes to inform you that its members are well satisfied with Dr. Nylander and the N. L. R. B.'s work and are wholeheartedly against amendments to the Wagner Act.

Yours very sincerely,

ELIZABETH MOON,
Secretary, Labor's Nonpartisan League, Forty-sixth Assembly District Club, 260 Washington Avenue, Hawthorne, Calif.

UNITED RUBBER WORKERS OF AMERICA,
Los Angeles, Calif., March 2, 1939.

Mr. LEE GEYER,
Member of Congress, Washington, D. C.

DEAR BROTHER GEYER: Enclosed please find copy of letters sent to Dr. Nylander and Mr. Warren Madden, Chairman of the National Labor Relations Board, regarding the suspension of Dr. Nylander as regional director of the twenty-first region. The same are self-explanatory.

I will not attempt to pour out my thoughts to you on this matter as I know that you have lived in our community long enough to understand the conditions that exist and I think it needless to suggest that you do everything in your power to clear Dr. Nylander's name and restore him back to the position where he may continue to serve the people in a fair and honest manner. It is still evident that we have certain groups of people who do not desire to have honest men holding office and representing all the people.

In conclusion might I take this opportunity in congratulating you on the wonderful work you are doing and hope in time to come that the people will have more Representatives in Washington who are interested in representing all the people instead of a privileged few.

With kindest regards and best wishes for your continued success, I am

Sincerely and fraternally yours,

GEORGE B. ROBERTS, *District Director.*

MARCH 2, 1939.

WARREN J. MADDEN,
Chairman, National Labor Relations Board,
Washington, D. C.

DEAR MR. MADDEN: It is evident that there are still a group of people in the State of California that do not desire an honest person in any position where they must represent all the people without fear or favor. I am speaking of none other than the case of Dr. Nylander.

I have had the opportunity and pleasure of dealing with many regional directors as well as trial examiners throughout the United States and I might say, although I have had the highest respect for all of them, I have never dealt with any that I felt were more honest and fair in their dealings than Dr. Nylander. There have been times when I thought a case warranted the action of the Labor Board but after careful study, he has refused to handle the case unless and until there was sufficient evidence to substantiate the charges that I wished to prefer.

I fully appreciate that no one could be selected as regional director who would meet the 100 percent approval of both the manufacturers, businessmen, and organized labor. I don't mind telling you that when I go to the polls to elect judges, governors, representatives, etc. I do not vote for them because I want them to always agree that I am right or because they will always vote in my favor; I vote for them because I feel that they are honest, fair, and fearless and will make decisions without fear or favor.

I am sure that you will give serious consideration to this matter and return Dr. Nylander to the position that he was so ably filling. I would like to conclude by saying that he not only holds the respect of many employers but he has the respect of both the American Federation of Labor and Congress of Industrial Organization groups in this district.

Hoping that this matter will soon be corrected and that we may continue to handle our problems as we have in the past.

With kindest regards and best wishes, I am

Respectfully yours,

GEORGE B. ROBERTS,
District Director, United Rubber Workers of America.

MARCH 2, 1939.

DR. TOWNE NYLANDER,
Regional Director, National Labor Relations Board,
Twenty-first Region, 2638 West Adams Gardens,
Los Angeles, Calif.

DEAR DR. NYLANDER: That which has happened was to be expected sooner or later from the reactionary newspapers and people with whom we must deal in this community.

Although I did not attend the meeting in question, I have had the pleasure of hearing you speak on other occasions, and I did not, at any time, ever hear one thing that could have been frowned upon by either organized labor or members of the manufacturing association. From all my past experiences with you, I know you have taken a neutral stand and carried out your duties as fairly and honestly as you knew how. I even know that there have been times that I thought a case warranted the action of the Labor Board, but after your careful study you refused to handle the case unless there was more evidence to substantiate my charges and until I could present better arguments.

I have had the occasion to deal with regional directors of the National Labor Relations Board, as well as many trial examiners throughout the United States, and I might say, although I have had the highest respect for all of them, I have never dealt with any that I felt was more honest and fair in their dealings than yourself. Knowing you as I do, I have too much respect for your intelligence than to believe such an article as was printed in the Inglewood paper.

I am a firm believer that right is right and wrong is wrong and all Hell won't change it. If there is anything humanely possible that I, as an international-labor representative, might do to correct this wrong that has been done, please call upon me and you can rest assured that I will be more than glad to help.

I sincerely trust that this matter will be cleared up entirely in a short while and that you may continue to serve the people as you have in the past.

With kindest regards and best wishes, I am,

Sincerely and respectfully yours,

GEORGE B. ROBERTS,
District Director, United Rubber Workers of America.

LONG BEACH CENTRAL LABOR COUNCIL,
Long Beach, Calif., March 9, 1939.

HON. LEE GEYER,
Congressman, Seventeenth District of California,
Capitol Building, Washington, D. C.

DEAR SIR: Enclosed herewith find verbatim copy of resolution introduced in our meeting of March 7, 1939, and adopted by the undersigned council, which you will find self-explanatory.

Yours respectfully,

CENTRAL LABOR COUNCIL,
GEO. C. BENTSON, *Secretary.*

Whereas Dr. Towne Nylander has been known to our organization since his appointment in March 1935;

Whereas it has always been our experience that Dr. Nylander discharged the duties of his office as directed by the National Labor Relations Board without prejudice toward any of the parties involved;

Whereas we, in the twenty-first region, have felt fortunate in having so fair a director; and

Whereas because of Dr. Nylander's record in the twenty-first region we cannot believe that he ever uttered the statement alleged by the Englewood newspaper: Therefore be it

Resolved, That the National Labor Relations Board and the Congress of the United States of America conduct a complete investigation of the charges against Dr. Nylander, and that he be granted every opportunity to prove the falseness of the charges against him.

In Memoriam—Allard H. Gasque

EXTENSION OF REMARKS
OF
HON. MARTIN F. SMITH
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1939

RESOLUTION OF COMMITTEE ON PENSIONS

Mr. SMITH of Washington. Mr. Speaker, under leave to extend my remarks, I insert the resolution in honor of the memory of our late colleague and committee chairman, ALLARD H. GASQUE, of South Carolina, which was unanimously adopted by the Committee on Pensions on March 23, 1939.

The resolution reads as follows:

The Committee on Pensions in regular meeting assembled, desires to spread upon its records the deep regret and sorrow of its members owing to the death of Hon. ALLARD H. GASQUE, of South Carolina, who departed this life immediately after the adjournment of the Seventy-fifth Congress.

Our late colleague was first appointed to the Committee on Pensions on February 22, 1924—Sixty-eighth Congress—and served continuously on the committee until December 15, 1931—Seventy-second Congress—when he was made chairman. He served as chairman of the committee to the date of his death on June 17, 1938. He rendered able and distinguished services in the capacities in which he served and was beloved by the veterans of our wars, whose true and loyal friend he ever proved himself to be. He was held in high esteem by his colleagues in the House, who mourn his passing. The members of the Committee on Pensions crave the privilege of tendering to his widow and children sincere sympathy in their loss and bereavement.

Unanimously adopted this 23d day of March, 1939.

Boys' Republic

EXTENSION OF REMARKS
OF
HON. ROBERT R. REYNOLDS
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Monday, March 27, 1939

SPEECH BY COL. T. S. WILCHER

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very interesting address delivered by Col. T. S. Wilcher, founder of the Boys' Republic and the Girls' Republic, of Arlington, Va.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

Preamble of the constitution of the Boys' Republic: "In order to foster, encourage, and perpetuate the ideals of true Americanism among the boys and girls of the United States of America, and for the purpose of inculcating and cultivating the highest duty of civic responsibility, as well as to uphold, guard, and protect the honor and integrity of our National Government, its flag, and the principles it represents; to mold our lives and characters around the principles of self-government based upon the ideals, self-respect, and self-sufficiency of our illustrious forefathers; we, the young people of America, believing that faith in our God, truth, justice, democracy, liberty, and freedom should guide us in our every endeavor; and further believing that acceptance of the brotherhood of man and reverence for law and order are conducive to the welfare of our country, do hereby ordain and establish this constitution and bylaws of the Boys' Republic and the Girls' Republic."

Americanism defined: "Americanism is the recognition of the truth that the inherent fundamental rights of man are derived from God and not from governments, societies, dictators, kings, or majorities." This is the faith by which our people have existed for over 150 years as the United States of America, and this is the faith which is now passing through the acid test of insidious and undermining influence of foreign propaganda.

I have had a lifetime of experience in dealing with boys and girls and in other social work, and it is becoming more apparent to me as time goes on that a counteracting influence must be instituted among our youth if we are to save our youth for what our forefathers intended them. Since the World War we have let down our barriers to foreign influence to such an extent that various countries have been enabled to establish spheres of influence on our territory. It is a well-known fact that there exists today in the United States a college which advocates the principles of communism as interpreted by the Communist International, derived from the Communist manifesto, or Manifesto of the Communist Party, by Karl Marx and Friedrich Engels, first published in January 1848. The students of this college are expected to go forth and, by various methods of assuming position by way of parliamentary procedure, contradictory and subversive literature, and word of mouth, to spread their doctrines among the weaker-minded members of our college group. I say weaker minded advisedly, because certainly no strong-minded person could embrace that which the Communists proclaim to be their way of living.

To quote the report of the Dies Investigation Committee on Un-American Activities: "The Communists in the United States openly admit their allegiance to the Communist International at Moscow, and glory in the fact that they obey all the orders issued there immediately and implicitly." September 1919 saw the institution of the Communist Party in the United States. The first meeting was held at Chicago and was composed mostly of foreign-born workers. The organization of this party was found to be illegal and it was consequently driven under cover. Two years later a "front group" was organized under the name of the "workers' party of America" in order to cover the Communists, who because of their illegality were forced to remain quiet. However, in 1928 the Communists came out in the open under the name of "the Communist Party of the United States of America, section of the Communist International." At this point they embarked on a vast campaign of propaganda with which they were to assume power in this country. The Communists have stopped at nothing to gain their ends by propaganda. The statement by George Dimitrov in an address to the Seventh Congress of the Communist International in Moscow on August 20, 1935, was made showing clearly their methods: "Comrades, you remember the ancient tale of the capture of Troy. Troy was inaccessible to the armies attacking her, thanks to her impregnable walls, and the attacking army, after suffering many sacrifices, was unable to achieve victory until with the aid of the famous Trojan horse it managed to penetrate to the very heart of the enemies' camp. We revolutionary workers, it appears to me, should not be shy about using the same tactics." It would surprise the average person to know that this plan is working to perfection within our "walls" today. Communists, and in turn, Nazis and Fascists, are boring like termites into the foundation of our great Nation. They make our churches, synagogues, schools, social organizations, etc., stand the stead of a "trojan horse." They assume precedence in meetings, they lead children in games, while at the same time they express by doing their respective doctrines.

Any number of approaches are used among the workers in industry, farming, and other walks of life. Positions of strategic impor ance are seized and placed in charge of full-fledged Communists. Disputes are created, and the superiors of the workers, or the capitalists directly involved, are always put in a bad light, and while the persons who are being impressed have their better judgments clouded, they are filled with the subtle campaignings which have originated in Moscow, Berlin, or Rome. In the early days of the present vast system of industrial unionism, when the founders were in need of organizers, the foreign interests had an easy time of securing key positions in these unions. At this point it must be said that the founders of the unions were in full faith with America and her affairs, but the "pup" got out of hand and became a Great Dane, and the agitators were anticipating a field day within the unions. Then came William Green and other conscious, competent Americans, putting a temporary quietus on un-Americanism. As to the morals, ethics, and character of the Communist code, it is nil. They openly admit and boast of the bombings, beatings, robberies, perjuries, and murders that have been committed to stifle any and all opposition that their party has met. Lenin condensed this code perfectly in his speech to youth, published in 1936: "Our morality is entirely subordinated to the interest of the class struggle of the proletariat. For the Communist, morality consists entirely of compact united discipline and conscious mass struggle against the exploiters. We do not believe in eternal morality, and we expose all the fables about morality." Such things as the love and respect that we have for our women in America are unheard of in the Communist creed. In their place exist contempt, lust, and corruption of principle. And this is what they expect us to embrace.

It is little known to the average person that there are over 200 separate and distinct organizations among our youth which embody the principles of Marxian socialism, and the present-day interpretation of communism. The American Student Union, part of the World Student Association for Peace, Freedom, and Culture, formerly known as the Student League for Industrial Democracy and the National Student League, is one of the chief organizations among youth of this type. The American Student Union was conceived in the coalition convention held at Columbus, Ohio, in 1937. Moscow heralded this as one of communism's greatest triumphs (p. 80, report of the Dies Committee on Un-American Activities). The American Student Union claims to have a following of over 500,000 in its movement against constituted authority, known to us in the form of secondary and collegiate faculties. Our investigations show that a definite attempt is being made to attract the Negro to the fallacy of communism. This movement was uncovered and exposed to light as the "Provisional International Trade Union Committee of Negro Workers." On the face of it this is seen as just another of our many labor unions, but in reality it is a section of the red international of labor unions, part of the Third International, the organization which controlled communism in our labor unions.

While not as quiet moving and underhanded as communism, nazi-ism and fascism are as equally destructive of American principles as communism. Within the organizations known as the Teutonia Society, the Friends of New Germany, the Italian Blackshirts, and the German-American Bund, one finds high-powered methods of organization, spreading of propaganda, and other procedures which are regarded as definitely un-American. We have classified these methods into the following subtitles:

(1) Storm troops, (2) correspondence and records, (3) youth movement, (4) consular aid, (5) funds and propaganda, (6) guns, (7) rifle ranges.

The German-American Bund and the Italian Blackshirts have merged in principle to form a clearing house for the propagating of their ideas among the Latin-American countries. These organizations are centralized to such a high point of thoroughness that they can receive advance information from their home countries almost before an event takes place. This is shown in the official newspaper of the German-American Bund by its ability to give more accurate information of events of civil interests in Germany than the American newspapers.

Foreign propaganda, then, is something more than a topic to discuss during idle moments. It presents a real danger to the granite-like foundation of Americanism as long as it is allowed to continue. It is not necessary for anyone to tell an intelligent adult that children learn by observation and a natural tendency to mimic. What, then, is in store for our country if these alien influences are allowed to perform before the youth of the Nation? No concerted effort is made to keep boys and girls away from these influences, although we all realize this danger, and the foreigners are thereby given a rich field, unopposed.

The stopping of this movement is the basic principle of Boys' and Girls' Republic. We hold that to fight un-Americanism, we must use the fencing method of parry and thrust, parry by occupying the attention of the boy or girl in healthy, American activities, and thrust by driving home the traditions, customs, and methods that have been ours as Americans since July 4, 1776.

We now have in process of organization a number of units of the Boys' Republic. Citizens are writing in and demonstrating their interest and support. This results from its widespread and systematic method of operation, with fundamentals that no sensible person could justly criticize for the reason that it appeals to all creeds, classes, and religions. It is not a charity, but a self-supporting organization. We believe that we have found a formula for the solution of a great problem where all—and I must lay emphasis upon the words "Where all"—boys and girls, irrespective of his or her station in life, underprivileged or privileged, religion or creed, can meet without fear of restraint or self-consciousness on a common meeting ground and understand each other's problems, yet retain their individuality.

This movement will do more to educate youth in the traditions of our American democracy than any other movement that we know of and will offset any tendency toward the inculcating of foreign "isms" in the impressionable minds of our boys and girls. This is a field of young people's work that has no real competition because in this country we have been too long divided up into little cliques and selfish interests; that the time has come for a unity of purpose, a unity of spirit, and tolerance.

We have been prone to look only at material gain, paternalism, and political expediency. This modus operandi will eventually destroy initiative, self-respect, and self-sufficiency. We have built great buildings, new homes, increased our bank accounts, clipped our coupons and watched dividends and in our desire to build material things we have either through commotion, procrastination, or lackadaisical attitude or unknowingly forgotten that the county, State, and Nation's greatest asset is human values and community achievement. This, to me, is a far greater asset than all material success because human values are lasting while material gain depreciates and fades into oblivion, or, like the snowball in the river—one moment here is gone forever, for fame is like the poppy's spread, you seize the flower and the bloom is dead.

We, in the boys' republic and the girls' republic, are interested only in human, spiritual, and community assets. Our only desire and determination is to build men and women to become better American citizens and educating them by a practical application of civic responsibility, self-respect, and self-sufficiency and at the same time taking care of the body through athletics and other progressive measures. Our compensation and profit shall be human assets and not monetary profits. Human depreciation results in degradation, sin, and lack of respect for law and order. Excessive paternalism is the father of iniquity and the only way to begin to build is to lay a foundation, solidified with honor, integrity, and courage.

The Townsend Plan

EXTENSION OF REMARKS
OF
HON. R. T. BUCKLER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1939

LETTER FROM ANDREW TROVATON, OF McINTOSH, MINN.

Mr. BUCKLER of Minnesota. Mr. Speaker, under leave to extend my remarks in the RECORD, I ask permission to include a short letter which I have received from a strong advocate of the Townsend plan who is a friend of mine in my home county of Polk, in Minnesota.

This letter expresses some very important views and observations concerning the Townsend plan and old-age pension legislation.

Since the general public, and especially our constituents back home, do not have the opportunity of offering their ideas and suggestions concerning the old-age pension problem, I think it essential that we respect and study correspondence we receive on the subject.

I believe that the Townsend plan would benefit the whole population of this country. Its adoption would result in the reemployment of the millions of jobless, and I am satisfied and convinced it will bring prosperity back to this country.

Many of our counties, and some of our States are not able to match the Federal share of the old-age assistance under the present program.

This situation discriminates against the States which are in poor financial circumstances. The Townsend plan would remedy this and also would do away with a lot of red tape, and I believe it would be much easier to administer than the present social-security, old-age program.

To give you some additional views and observations on the Townsend-plan legislation, I offer the letter which I have received from Mr. Andrew Trovaton, of McIntosh, Minn. The letter follows:

DEAR FRIEND: Being I could not appear before the Ways and Means Committee to testify at their public hearings on social-security legislation, I wish you would try to get permission to put into the RECORD the following points against some of the social-security provisions and favoring the Townsend plan—H. R. 2—as I would like to have a voice in this testimony, but cannot come to the Capital.

The title of the Social Security Act, establishing old-age pensions, should be carefully contrasted and compared with the pending H. R. 2, which is the Townsend plan. If all Members of Congress would do this there can be no doubt in my mind but what they could pass H. R. 2, and repeal this title of the Social Security Act.

The social-security pensions only cover a minority of the country's population. The Townsend plan, H. R. 2, covers the whole population.

The Social Security Act taxes only certain workers and their employers, H. R. 2 taxes all estates, gifts, and transactions, except workers' pay and governmental securities transactions.

The Social Security Act takes money out of circulation and ties it up in United States bonds, which represent funds already spent. The Townsend plan puts all pensions or annuity payments back into productive circulation 30 or 60 days, except in certain cases, 10 percent which shall be applied on old debts.

The Social Security Act will not pay pensions before 1942, and full effect of the law will only be due about 1976 or 1980. The full effects of the Townsend plan will come in about 90 days after its passage.

The Social Security Act will pay annuities on a basis of pay received by workers covered. H. R. 2 will pay pensions on a pro rata basis of money collected the previous month, each one receiving an exactly even amount if applied for.

The Social Security Act makes no provision for the pensioners to spend any of their annuity, so they may hoard it or invest it in bonds and thus keep the money out of production direct. The Townsend plan requires that they spend it all for commodities and for services except as stated.

The Social Security Act does not require annuitants to quit working for pay. H. R. 2 does.

Thus it will be seen that as an emergency measure to reemploy the jobless, the Social Security Act is much worse than nothing until 1942, and for years afterward the pensions will be too small—mostly minimum of $10 per month, while under the H. R. 2 the most conservative estimates are $60 to $70 per month.

The Social Security Act dishonors the old folks by requiring them to declare their extreme need for aid. H. R. 2 is a public acceptance of and obedience to the Lord's Commandment, "Honor thy father and mother, etc."

ANDREW TROVATON,
McIntosh, Minn.

Shall We Limit the Rights of Political Groups With Alien Ties?

EXTENSION OF REMARKS
OF
HON. J. PARNELL THOMAS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1939

RADIO ADDRESS BY HON. J. PARNELL THOMAS, OF NEW JERSEY, MARCH 23, 1939

Mr. THOMAS of New Jersey. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following address which I delivered over the radio at America's Town Meeting of the Air program, broadcast from the Town Hall, New York City, Thursday, March 23, 1939:

Under the Constitution of the United States Congress shall make no law abridging the right of the people to assemble peaceably. Therefore political groups, even though with alien ties, at least have the right to assemble, but such assemblage must be without disorder. The municipal fathers of New York City recognized this constitutional right when they recently granted the German-American Bund a permit to assemble in Madison Square Garden. However, when the bund assembles for the purpose, among others, of advocating and fostering religious intolerance, it tends to incite riot, as a result of which its meeting is not a peaceable assemblage. The performance outside the Garden that same evening was clearly a riot caused by another un-American group, the Communists.

From what happened inside of the hall and from what took place outside of the hall, I would judge that the whole affair was a case of the kettle calling the pot black. The bund and the "reds" are two peas in a pod. They differ only in their methods. Both the German-American Bund and the Communists, in fact, the Silver Shirts and other newfangled versions of political artistry, have the same aims. They would make over what has taken the citizens of this great Nation 150 years to build. They would destroy our democracy in order that we might have a government patterned after some foreign ideology. If they should complete their task there would be no free press, no free speech, no free religion, no private enterprise, and no individual opportunity. As in Russia, we would be slaves of the Comitern, or, as in Germany, we would be pawns of a Hitler.

I admit, though, that the recent world tide has been away from freedom; that government after government has gone off the reservation; that we have seen one power after another take from the people almost their last vestige of individual liberty. In most nations today the people are much less free than they were only a few years back. Throughout the entire world it has become fashionable for the central government to assume more control and more power over its citizenry. I deplore and detest this trend.

Even here in the United States, on the question of added centralized power, we have witnessed a disposition of late to get in step with the proletarian or dictator nations. Aided by the silvery-toned Chief Executive, and by the incessant boring from within of the political bureaucrats the New Deal unequivocally has grasped for everything but for the moon. The Court-packing plan, the 1938 version of the reorganization bill, and the purge are but some of the examples of the administration's attempted shift. Thanks to the people, many of the schemes misfired, so we still have a democratic form of government. We have not yet been carried away by the world tide.

Changes in the governmental fashions are in the main caused by economic conditions. If it were not for the prolonged adverse economic conditions here in the United States, political groups with alien ties, such as the German-American Bund and the Communists would have made little headway. Subversive groups feed on economic adversity. When the economic barometer rises one is not interested in communism, nazi-ism, or fascism.

Now that we have these un-American groups, however, the question occurs: What should be done about them? Our natural inclination is to forcefully disband them, but this is America, a land of free people and free institutions, where individuals and groups of individuals have definite rights given to them by their Constitution. If this were Germany or Russia those who belong to such groups would be quickly incarcerated in detention camps.

If you and I were to travel to Russia and Germany and there attempt to form the Russian-American league or the American-German league for freedom of the Jews, we would last about 30 seconds. One thing which we can do and which will help some is to ship back all Communist aliens and Nazi aliens from whence they came. Although even to accomplish this we must first look for a definite change in the attitude of our present Secretary of Labor and a few of her associates who have not only been coddling outstanding Communist aliens, but have suspended the deportation of all Communist aliens pending a further clarification of Federal statutes. Some years ago the Congress of the United States presented a mandate to the Secretary of Labor relating to the deportation of aliens who advocated the overthrow of the Government by force and violence. Every Secretary of Labor up to the present one recognized such mandate. Therefore, it is difficult to understand why our present Secretary of Labor should persist in deportation delays. Frances Perkins is to be severely criticized for her dilly-dallying.

In addition to existing statutes which would aid us to curb un-American groups with alien ties, we also need new legislation. I advocate the enactment of legislation which would force these groups into the open. I advocate incorporation and license. I would register and fingerprint the membership. I would make them publish periodical statements of purpose and financial condition. I would see to it that they divulge the source of their funds and a list of their expenses. I would make it necessary for them to publish the salaries of their officers. Such a scrutiny would place them foursquare before the microscopic eye of public attention, and, believe me, I have tremendous faith in the healing qualities of public opinion.

Communism, nazi-ism, and fascism serve no good purpose in America, so let us make it difficult for them to function. Let us not attempt to limit their constitutional rights, but let us freeze them out of existence. They are un-American, political termites, whose philosophy is political and economic chaos, social and religious intolerance, and individual and institutional destruction.

Surely, it is just as important that we protect our form of government, our institutions, and our people from these dangers as it is to protect them from any others. We want none of Stalin's new deal for Russia. We want none of Hitler's new deal for Germany. Irrespective of what may happen in foreign lands, we in the United States are satisfied to live a peaceful, happy life under a democratic representative government, with its guaranty of justice, domestic tranquillity, and individual opportunity. And if I judge the people of this Nation rightly, they'll not tolerate very long any ism but Americanism. Further, we intend to preserve America for Americans who believe in the American way.

New York State Income Tax

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Monday, March 27, 1939

OPINION OF THE UNITED STATES SUPREME COURT

Mr. BARKLEY. Mr. President, today the Supreme Court rendered a decision which I regard as an important decision, touching the ability of States to tax the salaries of employees of the United States Government. I ask unanimous consent to have printed in the Appendix of the RECORD the majority opinion, delivered by Mr. Justice Stone, and the dissenting opinion, delivered by Mr. Justice Butler, and the separate opinion of Mr. Justice Frankfurter, in order that the Senators may have those decisions available.

The hearing arose in the particular case of an employee of the Home Owners' Loan Corporation. The question was whether the State had the power to tax the income of an employee of the Home Owners' Loan Corporation, and, by analogy and implication, whether the State had the power to tax the salaries of all employees of the United States Government.

Mr. KING. Mr. President, is the decision based upon the ground that the employee of the Home Owners' Loan Corporation was not engaged in an activity essential for the maintenance of the government of the State?

Mr. BARKLEY. I have not read the full decision carefully. I have but hastily glanced through it. I wish to put it in the RECORD for the benefit of Senators. I understand that it establishes the principle that the States have the power to tax generally the salaries of the employees of the United States. I understand, though I would not state, that an implication arises from the decision, although it is not a decision, that the Government of the United States might tax the salaries of State employees. If that is the full effect of the decision, it may have some bearing upon pending legislation, which is described as a reciprocal-tax measure, which authorizes the Federal Government to tax State employees, and the States to tax Federal employees.

Mr. KING. I was interested to know whether or not there had been a departure from the original case decided many years ago, and its modification in the recently decided Gerhardt case. In the latter case it was held, as I recall, that the employees of the port of New York were not engaged in a work essential to and indispensable to the maintenance of the government of the State, and therefore they were subject to taxation. I should be surprised if the Supreme Court has held that Congress has the right to tax the employees of States who were engaged in matters essentially governmental, and relating to the States; and I should also be surprised if the Supreme Court should hold that the Federal Government, by the policy of reciprocity, could tax the employees of the States. However, the opinion itself will indicate what the decision is.

There being no objection, the majority and other opinions were ordered to be printed in the RECORD, as follows:

[Supreme Court of the United States—No. 478—October term, 1938—Mark Graves, John J. Merrill and John P. Hennessy, as commissioners constituting the State Tax Commission of the State of New York, petitioners, *vs.* The People of the State of New York, upon the relation of James B. O'Keefe—On writ of certiorari to the Supreme Court of the State of New York—March 27, 1939]

Mr. Justice Stone delivered the opinion of the Court.

We are asked to decide whether the imposition by the State of New York of an income tax on the salary of an employee of the Home Owners' Loan Corporation places an unconstitutional burden upon the Federal Government.

Respondent, a resident of New York, was employed during 1934 as an examining attorney for the Home Owners' Loan Corporation at an annual salary of $2,400. In his income tax return for that year he included his salary as subject to the New York State income tax imposed by article 16 of the Tax Law of New York (Consol. Laws, c. 60). Subdivision 2f of section 359, since repealed, exempted from the tax "Salaries, wages, and other compensation received from the United States of officials or employees thereof, including persons in the military or naval forces of the United States * * *." Petitioners, New York State Tax Commissioners, rejected respondent's claim for a refund of the tax based on the ground that his salary was constitutionally exempt from State taxation because the Home Owners' Loan Corporation is an instrumentality of the United States Government and that he, during the taxable year, was an employee of the Federal Government engaged in the performance of a governmental function.

On review by certiorari the Board's action was set aside by the Appellate Division of the Supreme Court of New York (253 App. Div. 91), whose order was affirmed by the court of appeals (278 N. Y. 221). Both courts held respondent's salary was free from tax on the authority of *New York ex rel. Rogers* v. *Graves* (299 U. S. 401), which sustained the claim that New York could not constitutionally tax the salary of an employee of the Panama Railroad Co., a wholly owned corporate instrumentality of the United States. We granted certiorari December 19, 1938, the constitutional question presented by the record being of public importance.

The Home Owners' Loan Corporation was created pursuant to section 4 (a) of the Home Owners' Loan Act of 1933 (48 Stat. 128; 12 U. S. C., sec. 1461 et seq.), which was enacted to provide emergency relief to home owners, particularly to assist them with respect to home-mortgage indebtedness. The Corporation, which is authorized to lend money to home owners on mortgages and to refinance home-mortgage loans within the purview of the act, is declared by section 4 (a) to be an instrumentality of the United States. Its shares of stock are wholly Government-owned (sec. 4 (b)). Its funds are deposited in the Treasury of the United States and the compensation of its employees is paid by drafts upon the Treasury.

For the purposes of this case we may assume that the creation of the Home Owners' Loan Corporation was a constitutional exercise of the powers of the Federal Government. (Cf. *Kay* v. *United States*, 303 U. S. 1.) As that Government derives its authority wholly from powers delegated to it by the Constitution, its every action within its constitutional power is governmental action, and since Congress is made the sole judge of what powers within the constitutional grant are to be exercised, all activities of government constitutionally authorized by Congress must stand on a parity with respect to their constitutional immunity from taxation (*McCulloch* v. *Maryland*, 4 Wheat. 316, 432; *Van Brocklin* v. *Tennessee*, 117 U. S. 151, 158–159; *South Carolina* v. *United States*, 199 U. S. 437, 451–452;

Helvering v. *Gerhardt*, 304 U. S. 405, 412–415). And when the National Government lawfully acts through a corporation which it owns and controls those activities are governmental functions entitled to whatever tax immunity attaches to those functions when carried on by the Government itself through its departments. (See *McCulloch* v. *Maryland*, supra, 421–422; *Smith* v. *Kansas City Title Co.*, 255 U. S. 180, 208; *Federal Land Bank* v. *Crosland*, 261 U. S. 374; *New York ex rel. Rogers* v. *Graves*, supra.

The single question with which we are now concerned is whether the tax laid by the State upon the salary of respondent, employed by a corporate instrumentality of the Federal Government, imposes an unconstitutional burden upon that Government. The theory of the tax immunity of either Government, State or National, and its instrumentalities, from taxation by the other has been rested upon an implied limitation on the taxing power of each, such as to forestall undue interference, through the exercise of that power, with the governmental activities of the other. That the two types of immunity may not in all respects stand on a parity has been recognized from the beginning (*McCulloch* v. *Maryland*, supra, 435–436), and possible differences in application, deriving from differences in the source, nature, and extent of the immunity of the governments and their agencies, were pointed out and discussed by this court in detail during the last term (*Helvering* v. *Gerhardt*, supra, 412–413, 416).

So far as now relevant, those differences have been thought to be traceable to the fact that the Federal Government is one of delegated powers in the exercise of which Congress is supreme; so that every agency which Congress can constitutionally create is a governmental agency. And since the power to create the agency includes the implied power to do whatever is needful or appropriate, if not expressly prohibited, to protect the agency, there has been attributed to Congress some scope, the limits of which it is not now necessary to define, for granting or withholding immunity of Federal agencies from State taxation. (See *Van Allen* v. *The Assessors*, 3 Wall. 573, 583, 585; *Bank* v. *Supervisors*, 7 Wall. 26, 30, 31; *Thomson* v. *Pacific Railroad*, 9 Wall. 579, 588, 590; *People* v. *Weaver*, 100 U. S. 539, 543; *Mercantile Bank* v. *New York*, 121 U. S. 138, 154; *Owensboro National Bank* v. *Owensboro*, 173 U. S. 664, 668; *Shaw* v. *Gibson-Zahniser Oil Corp.*, 276 U. S. 575, 581; *Oklahoma* v. *Barnsdall Corp.*, 296 U. S. 521, 525–526; *Baltimore National Bank* v. *State Tax Comm'n*, 297 U. S. 209, 211–212; *British-American Company* v. *Board*, 299 U. S. 159; *James* v. *Dravo Contracting Co.*, 302 U. S. 134, 161; *Helvering* v. *Gerhardt*, supra, 411, 412, 417; cf. *United States* v. *Bekins*, 304 U. S. 27, 52.) Whether its power to grant tax exemptions as an incident to the exercise of powers specifically granted by the Constitution can ever, in any circumstances, extend beyond the constitutional immunity of Federal agencies which courts have implied, is a question which need not now be determined.

Congress has declared in section 4 of the act that the Home Owners' Loan Corporation is an instrumentality of the United States and that its bonds are exempt, as to principal and interest, from Federal and State taxation, except surtaxes, estate, inheritance, and gift taxes. The Corporation itself, "including its franchise, its capital, reserves and surplus, and its loans and income," is likewise exempted from taxation; its real property is subject to tax to the same extent as other real property. But Congress has given no intimation of any purpose either to grant or withhold immunity from State taxation of the salary of the Corporation's employees, and the congressional intention is not to be gathered from the statute by implication. Cf. *Baltimore National Bank* v. *State Tax Commission*, *supra*.

It is true that the silence of Congress, when it has authority to speak, may sometimes give rise to an implication as to the congressional purpose. The nature and extent of that implication depend upon the nature of the congressional power and the effect of its exercise.[1] But there is little scope for the application of that doctrine to the tax immunity of governmental instrumentalities. The constitutional immunity of either government from taxation by the other, where Congress is silent, has its source in an implied restriction upon the powers of the taxing government. So far as the implication rests upon the purpose to avoid interference with the functions of the taxed government or the imposition upon it of the economic burden of the tax, it is plain that there is no basis for implying a purpose of Congress to exempt the Federal Government or its agencies from tax burdens which are unsubstantial or which courts are unable to discern. Silence of Congress implies immunity no more than does the silence of the Constitution. It follows that when exemption from State taxation is claimed on the ground that the Federal Government is burdened by the tax, and Congress has disclosed no intention with respect to the claimed immunity, it is in order to consider the nature and effect of the alleged burden, and if it appears that there is no ground for implying a constitutional immunity, there is equally a want of any ground for assuming any purpose on the part of Congress to create an immunity.

The present tax is a nondiscriminatory tax on income applied to salaries at a specified rate. It is not in form or substance a tax upon the Home Owners' Loan Corporation or its property or income, nor is it paid by the Corporation or the Government from their funds. It is laid upon income which becomes the property of the taxpayer when received as compensation for his services; and the tax laid upon the privilege of receiving it is paid from his private funds and not from the funds of the Government, either directly or indirectly. The theory, which once won a qualified approval, that a tax on income is legally or economically a tax on its source, is no longer tenable (*New York ex rel. Cohn* v. *Graves*, 300 U. S. 308, 313, 314; *Hale* v. *State Board*, 302 U. S. 95, 108; *Helvering* v. *Gerhardt*, *supra*; cf. *Metcalf & Eddy* v. *Mitchell*, 269 U. S. 514; *Fox Film Corp.* v. *Doyal*, 286 U. S. 123; *James* v. *Dravo Contracting Co.*, *supra*, 149; *Helvering* v. *Mountain Producers Corporation*, 303 U. S. 376), and the only possible basis for implying a constitutional immunity from State income tax of the salary of an employee of the National Government or of a governmental agency is that the economic burden of the tax is in some way passed on so as to impose a burden on the National Government tantamount to an interference by one government with the other in the performance of its functions.

In the four cases in which this Court has held that the salary of an officer or employee of one government or its instrumentality was immune from taxation by the other, it was assumed, without discussion, that the immunity of a government or its instrumentality extends to the salaries of its officers and employees.[2] This assumption, made with respect to the salary of a governmental officer in *Dobbins* v. *Commissioners of Erie County*, 16 Pet. 435, and in *Collector* v. *Day*, 11 Wall. 113, was later extended to confer immunity on income derived by a lessee from lands leased to him by a government in the performance of a governmental function, *Gillespie* v. *Oklahoma*, 257 U. S. 501; *Burnet* v. *Coronado Oil & Gas Co.*, 285 U. S. 393, and cases cited, although the claim of a like exemption from tax on the income of a contractor engaged in carrying out a government project was rejected both in the case of a contractor with a State, *Metcalf & Eddy* v. *Mitchell*, *supra*, and of a contractor with the National Government, *James* v. *Dravo Contracting Co.*, *supra*.

---

[1] The failure of Congress to regulate interstate commerce has generally been taken to signify a congressional purpose to leave undisturbed the authority of the States to make regulations affecting the commerce in matters of peculiarly local concern, but to withhold from them authority to make regulations affecting those phases of it which, because of the need of a national uniformity, demand that their regulation, if any, be prescribed by a single authority. (*Cooley* v. *Board of Wardens*, 12 How. 299, 319; *Minnesota Rate Cases*, 230 U. S. 352, 399–400; *Kelly* v. *Washington*, 302 U. S. 1, 14; *South Carolina State Highway Dept.* v. *Barnwell Brothers*, 303 U. S. 177, 184–185; *Milk Control Board* v. *Eisenberg Farm Products*, decided February 27, 1939. As to the implications from congressional silence in the field of State taxation of interstate commerce and its instrumentalities, see *Western Live Stock* v. *Bureau of Revenue*, 303 U. S. 250; *Gwin, White & Prince, Inc.*, v. *Henneford*, decided January 3, 1939.)

[2] In *Dobbins* v. *Commissioners of Erie County* (16 Pet. 435), a Pennsylvania tax, nominally laid upon the office of the captain of a Federal revenue cutter, but roughly measured by the salary paid to the officer, was held invalid. The Court seems to have rested its decision in part on the ground that a tax on the emoluments of his office was the equivalent of a tax upon an activity of the National Government, and in part on the ground that it was an infringement of the implied superior power of Congress to fix the compensation of Government employees without diminution by State taxation.

In *Collector* v. *Day* (11 Wall. 113), this Court held that the salary of a State probate judge was constitutionally immune from Federal income tax on the grounds that the salary of an officer of a State is exempt from Federal taxation if the function he performs as an officer is exempt, citing *Dobbins* v. *Commissioner of Erie County*, supra, and that there was an implied constitutional restriction upon the power of the National Government to tax a State in the exercise of those functions which were essential to the maintenance of State governments as they were organized at the time when the Constitution was adopted. The possibility that a nondiscriminatory tax upon the income of a State officer did not involve any substantial interference with the functioning of the State government was not discussed either in this or the Dobbins case.

In *New York ex rel. Robers* v. *Graves* (299 U. S. 401), the question was whether the salary of the General Counsel of the Panama Railroad Co. was exempt from State income tax because the railroad company was an instrumentality of the Federal Government. The sole question raised by the taxing State was whether the railroad company was a Government instrumentality. The Court, having found that the railroad company was such an instrumentality, disposed of the matter of tax exemption of the salary of its employees by declaring: "The railroad company being immune from State taxation, it necessarily results that fixed salaries and compensation paid to its officers and employees in their capacity as such are likewise immune" (*New York ex rel. Rogers* v. *Graves*, supra, 408).

In *Brush* v. *Commissioner* (300 U. S. 352), the applicable Treasury regulation upon which the Government relied exempted from Federal income tax the compensation of "State officers and employees" for "services rendered in connection with the exercise of an essential governmental function of the State." The Court held that the maintenance of the public water system of New York City was an essential governmental function, and in determining whether the salary of the engineer in charge of that project was subject to Federal income tax the Court declared, citing *New York ex rel. Rogers* v. *Graves*, supra, 408: "The answer depends upon whether the water system of the city was created and is conducted in the exercise of the city's governmental functions. If so, its operations are immune from Federal taxation and, as a necessary corollary, 'fixed salaries and compensation paid to its officers and employees in their capacity as such are likewise immune'" (*Brush* v. *Commissioner*, supra, 360).

The ultimate repudiation in *Helvering* v. *Mountain Producers Corporation, supra,* of the doctrine that a tax on the income of a lessee derived from a lease of government owned or controlled lands is a forbidden interference with the activities of the government concerned led to the reexamination by this Court, in the Gerhardt case, of the theory underlying the asserted immunity from taxation by one government of salaries of employees of the other. It was there pointed out that the implied immunity of one government and its agencies from taxation by the other should, as a principle of constitutional construction, be narrowly restricted. For the expansion of the immunity of the one government correspondingly curtails the sovereign power of the other to tax, and where that immunity is invoked by the private citizen it tends to operate for his benefit at the expense of the taxing government and without corresponding benefit to the government in whose name the immunity is claimed. (See *Metcalf & Eddy* v. *Mitchell, supra,* 523–524; *James* v. *Dravo Contracting Co., supra,* 156–158.) It was further pointed out that, as applied to the taxation of salaries of the employees of one government, the purpose of the immunity was not to confer benefits on the employees by relieving them from contributing their share of the financial support of the other government, whose benefits they enjoy, or to give an advantage to that government by enabling it to engage employees at salaries lower than those paid for like services by their employers, public or private,[3] but to prevent undue interference with the one government by imposing on it the tax burdens of the other.

In applying these controlling principles in the Gerhardt case the Court held that the salaries of employees of the New York Port Authority, a State instrumentality created by New York and New Jersey, were not immune from Federal income tax, even though the Authority be regarded as not subject to Federal taxation. It was said that the taxpayers enjoyed the benefit and protection of the laws of the United States and were under a duty, common to all citizens, to contribute financial support to the Government; that the tax laid on their salaries and paid by them could be said to affect or burden their employer, the Port Authority, or the States creating it, only so far as the burden of the tax was economically passed on to the employer; that a nondiscriminatory tax laid on the income of all members of the community could not be assumed to obstruct the function which New York and New Jersey had undertaken to perform, or to cast an economic burden upon them, more than does the general taxation of property and income which, to some extent, incapable of measurement by economists, may tend to raise the price level of labor and materials.[4] The Court concluded that the claimed immunity would do no more than relieve the taxpayers from the duty of financial support to the National Government in order to secure to the State a theoretical advantage, speculative in character and measurement and too unsubstantial to form the basis of an implied constitutional immunity from taxation.

The conclusion reached in the Gerhardt case that in terms of constitutional tax immunity a Federal income tax on the salary of an employee is not a prohibited burden on the employer makes it imperative that we should consider anew the immunity here claimed for the salary of an employee of a Federal instrumentality. As already indicated, such differences as there may be between the implied tax immunity of a State and the corresponding immunity of the National Government and its instrumentalities may be traced to the fact that the National Government is one of delegated powers, in the exercise of which it is supreme. Whatever scope this may give to the National Government to claim immunity from State taxation of all instrumentalities which it may constitutionally create, and whatever authority Congress may possess as incidental to the exercise of its delegated powers to grant or withhold immunity from State taxation, Congress has not sought in this case to exercise such power. Hence these distinctions between the two types of immunity cannot affect the question with which we are now concerned. The burden on government of a nondiscriminatory income tax applied to the salary of the employee of a government or its instrumentality is the same, whether a State or National Government is concerned. The determination in the Gerhardt case that the Federal income tax imposed on the employees of the port authority was not a burden on the port authority made it unnecessary to consider whether the authority itself was immune from Federal taxation; the claimed immunity failed because even if the port authority were itself immune from Federal income tax, the tax upon the income of its employees cast upon it no unconstitutional burden.

Assuming, as we do, that the Home Owners' Loan Corporation is clothed with the same immunity from State taxation as the Government itself, we cannot say that the present tax on the income of its employees lays any unconstitutional burden upon it. All the reasons for refusing to imply a constitutional prohibition of Federal income taxation of salaries of State employees, stated at length in the Gerhardt case, are of equal force when immunity is claimed from State income tax on salaries paid by the National Government or its agencies. In this respect we perceive no basis for a difference in result whether the taxed income be salary or some other form of compensation, or whether the taxpayer be an employee or an officer of either a State or the National Government, or of its instrumentalities. In no case is there basis for the assumption that any such tangible or certain economic burden is imposed on the government concerned as would justify a court's declaring that the taxpayer is clothed with the implied constitutional tax immunity of the government by which he is employed. That assumption, made in *Collector* v. *Day, supra,* and in *New York ex rel. Rogers* v. *Graves, supra,* is contrary to the reasoning and to the conclusions reached in the Gerhardt case and in *Metcalf & Eddy* v. *Mitchell, supra; Group No. 1 Oil Corporation* v. *Bass,* 283 U. S. 279; *James* v. *Dravo Contracting Co., supra; Helvering* v. *Mountain Producers Corp., supra; McLoughlin* v. *Commissioner,* 303 U. S. 218. In their light the assumption can no longer be made. *Collector* v. *Day, supra,* and *New York ex rel. Rogers* v. *Graves, supra,* are overruled so far as they recognize an implied constitutional immunity from income taxation of the salaries of officers or employees of the National or a State Government or their instrumentalities.

So much of the burden of a nondiscriminatory general tax upon the incomes of employees of a government, State or National, as may be passed on economically to that government through the effect of the tax on the price level of labor or materials is but the normal incident of the organization within the same territory of two governments, each possessing the taxing power. The burden, so far as it can be said to exist or to affect the government in any indirect or incidental way, is one which the Constitution presupposes, and hence it cannot rightly be deemed to be within an implied restriction upon the taxing power of the National and State Governments which the Constitution has expressly granted to one and has confirmed to the other. The immunity is not one to be implied from the Constitution, because, if allowed, it would impose to an inadmissible extent a restriction on the taxing power which the Constitution has reserved to the State governments.

Reversed.

Mr. Chief Justice Hughes concurs in the result.

Mr. Justice Frankfurter, concurring.

I join in the Court's opinion, but deem it appropriate to add a few remarks. The volume of the Court's business has long since made impossible the early healthy practice whereby the Justices gave expression to individual opinions.[1] But the old tradition still has relevance when an important shift in constitutional doctrine is announced after a reconstruction in the membership of the Court. Such shifts of opinion should not derive from mere private judgment. They must be duly mindful of the necessary demands of continuity in civilized society. A reversal of a long current of decisions can be justified only if rooted in the Constitution itself as a historic document designed for a developing nation.

For 120 years this Court has been concerned with claims of immunity from taxes imposed by one authority in our dual system of government because of the taxpayer's relation to the other. The basis for the Court's intervention in this field has not been any explicit provision of the Constitution. The States, after they formed the Union, continued to have the same range of taxing power which they had before, barring only duties affecting exports, imports, and on tonnage.[2] Congress, on the other hand, to lay taxes in order "to pay the debts and provide for the common defense and general welfare of the United States," article I, section 8, can reach every person and every dollar in the land with due regard to constitutional limitations as to the method of laying taxes. But, as is true of other great activities of the State and National Governments, the fact that we are a federalism raises problems regarding the vital powers of taxation. Since two governments have authority within the same territory, neither through its power to tax can be allowed to cripple the operations of the other. Therefore State and Federal Governments must avoid exactions which discriminate against each other or obviously interfere with one another's operations. These were the determining considerations that led the great Chief Justice to strike down the Maryland statute as an unambiguous measure of discrimination against the use by the United States of the Bank of the United States as one of its instruments of government.

The arguments upon which *McCulloch* v. *Maryland* (4 Wheat. 316) rested had their roots in actuality. But they have been distorted by sterile refinements unrelated to affairs. These refinements derived authority from an unfortunate remark in the opinion in McCulloch against Maryland. Partly as a flourish of rhetoric and partly because the intellectual fashion of the times indulged a free

---

[3] The fact that the expenses of the one government might be lessened if all those who deal with it were exempt from taxation by the other was thought not to be an adequate basis for tax immunity in *Metcalf & Eddy* v. *Mitchell* (269 U. S. 514); *Group No. 1 Oil Corporation* v. *bass* (283 U. S. 279); *Burnet* v. *Jergins Trust* (288 U. S. 508; *James* v. *Dravo Contracting Co.* (302 U. S. 134); *Helvering* v. *Mountain Producers Corporation* (303 U. S. 376).

[4] That the economic burden of a tax on salaries is passed on to the employer or that employees will accept a lower Government salary because of its tax immunity, are formulas which have not won acceptance by economists and cannot be judicially assumed. As to the "passing on" of the economic burden of the tax, see Seligman, Income Tax, VII Encyclopedia of Social Sciences, 626–638; Plehn, Public Finance (5th ed.), p. 320; Buehler, Public Finance, p. 240; Lutz, Public Finance (2d ed.), p. 336, and see *Indian Motocycle Co.* v. *United States* (283 U. S. 570, 581, footnote 1). As to preference for Government employment because the salary is tax exempt, see Dickinson, Compensating Industrial Effort (1937), pp. 7–8; Douglas, The Reality of Non-Commercial Incentives in Industrial Life, ch. V of The Trend of Economics (1924); vol. I, Fetter, Economic Principles (1915), p. 203.

[1] The state of the docket of the High Court of Australia and that of the Supreme Court of Canada still permits them to continue the classic practice of seriatim opinions.

[2] Article 1, sec. 10, U. S. Constitution.

use of absolutes, Chief Justice Marshall gave currency to the phrase that "the power to tax involves the power to destroy" (Id., at p. 431). This dictum was treated as though it were a constitutional mandate. But not without protest. One of the most trenchant minds on the Marshall court, Justice William Johnson, early analyzed the dangerous inroads upon the political freedom of the States and the Union within their respective orbits resulting from a doctrinaire application of the generalities uttered in the course of the opinion in McCulloch against Maryland.[3] The seductive cliché that the power to tax involves the power to destroy was fused with another assumption, likewise not to be found in the Constitution itself, namely the doctrine that the immunities are correlative—because the existence of the National Government implies immunities from State taxation, the existence of State governments implies equivalent immunities from Federal taxation. When this doctrine was first applied Mr. Justice Bradley registered a powerful dissent,[4] the force of which gathered rather than lost strength with time. *Collector* v. *Day* (11 Wall. 113, 128).

All these doctrines of intergovernmental immunity have until recently been moving in the realm of what Lincoln called "pernicious abstractions." The web of unreality spun from Marshall's famous dictum was brushed away by one stroke of Mr. Justice Holmes' pen: "The power to tax is not the power to destroy while this Court sits" (*Panhandle Oil Co.* v. *Mississippi*, 277 U. S. 218, 223 (dissent)). Failure to exempt public functionaries from the universal duties of citizenship to pay for the costs of government was hypothetically transmuted into hostile action of one government against the other. A succession of decisions thereby withdrew from the taxing power of the States and Nation a very considerable range of wealth without regard to the actual workings of our federalism,[5] and this, too, when the financial needs of all governments began steadily to mount. These decisions have encountered increasing dissent.[6] In view of the powerful pull of our decisions upon the courts charged with maintaining the constitutional equilibrium of the two other great English federalisms, the Canadian and the Australian courts were at first inclined to follow the earlier doctrines of this Court regarding intergovernmental immunity.[7] Both the Supreme Court of Canada and the High Court of Australia on fuller consideration—and for present purposes the British North America Act (30–31 Vict., c. 3) and the Commonwealth of Australia Constitution Act (63–64 Vict., c. 12) raise the same legal issues as does our Constitution[8]—have completely rejected the doctrine of intergovernmental immunity.[9] In this Court dissents have gradually become majority opinions, and even before the present decision the rationale of the doctrine had been undermined.[10]

The judicial history of this doctrine of immunity is a striking illustration of an occasional tendency to encrust unwarranted interpretations upon the Constitution and thereafter to consider merely what has been judicially said about the Constitution, rather than to be primarily controlled by a fair conception of the Constitution. Judicial exegesis is unavoidable with reference to an organic act like our Constitution, drawn in many particulars with purposed vagueness so as to leave room for the unfolding future. But the ultimate touchstone of constitutionality is the Constitution itself and not what we have said about it.[11] Neither *Dobbins* v. *Commissioners* (16 Pet. 435), and its offspring, nor *Collector* v. *Day*, *supra*, and its, can stand appeal to the Constitution and its historic purposes. Since both are the starting points of an interdependent doctrine, both should be, as I assume them to be overruled this day. Whether Congress may, by express legislation, relieve its functionaries from their civic obligations to pay for the benefits of the State governments under which they live is matter for another day.

Mr. Justice Butler, dissenting.

Mr. Justice McReynolds and I are of opinion that the Home Owners' Loan Corporation, being an instrumentality of the United States heretofore deemed immune from State taxation, "it necessarily results," as held in *New York ex rel. Rogers* v. *Graves* (1937) (299 U. S. 401), "that fixed salaries and compensation paid to its officers and employees in their capacity as such are likewise immune"; and that the judgment of the State court, unquestionably required by that decision, should be affirmed.

From the decision just announced, it is clear that the Court has overruled *Dobbins* v. *The Commissioners of Erie County* (1842) (16 Pet. 435), *Collector* v. *Day* (1871) (11 Wall. 113), *New York ex rel. Rogers* v. *Graves*, *supra*, and *Brush* v. *Commissioner* (1937) (300 U. S. 352). Thus now it appears that the United States has always had power to tax salaries of State officers and employees and that similarly free have been the States to tax salaries of officers and employees of the United States. The compensation for past as well as for future service to be taxed and the rates prescribed in the exertion of the newly disclosed power depend on legislative discretion not subject to judicial revision. Futile indeed are the vague intimations that this Court may protect against excessive or destructive taxation. Where the power to tax exists, legislatures may exert it to destroy, to discourage, to protect or exclusively for the purpose of raising revenue. See e. g. *Veazie Bank* v. *Fenno* (8 Wall. 533, 548); *McCray* v. *United States* (195 U. S. 27, 53 et seq.); *Magnano Co.* v. *Hamilton* (292 U. S. 40, 44, et seq.); *Cincinnati Soap Co.* v. *United States* (301 U. S. 308).

Appraisal of lurking or apparent implications of the Court's opinion can serve no useful end for, should occasion arise, they may be ignored or given direction differing from that at first seemingly intended. But safely it may be said that presently marked for destruction is the doctrine of reciprocal immunity that by recent decisions here has been so much impaired.

[4] "I dissent from the opinion of the Court in this case, because it seems to me that the General Government has the same power of taxing the income of officers of the State governments as it has of taxing that of its own officers. * * * In my judgment, the limitation of the power of taxation in the General Government, which the present decision establishes, will be found very difficult of control. Where are we to stop in enumerating the functions of the State governments which will be interfered with by Federal taxation? * * * How can we now tell what the effect of this decision will be? I cannot but regard it as founded on a fallacy, and that it will lead to mischievous consequences" (11 Wall. 113, 128–129).

[5] E. g., *Gillespie* v. *Oklahoma*, 257 U. S. 501; *Panhandle Oil Co.* v. *Mississippi*, 277 U. S. 218; *Macallen Co.* v. *Massachusetts*, 279 U. S. 620; *Indian Motocycle Co.* v. *United States*, 283 U. S. 570; *Burnet* v. *Coronado Oil & Gas Co.*, 285 U. S. 393; *New York ex rel. Rogers* v. *Graves*, 299 U. S. 401; *Brush* v. *Commissioner of Internal Revenue*, 300 U. S. 352.

[6] E. g., Mr. Justice Brandeis, dissenting, in *Jaybird Mining Co.* v. *Weir*, 271 U. S. 609, 615; Justice Holmes, dissenting, in *Panhandle Oil Co.* v. *Mississippi*, 277 U. S. 218, 222; Mr. Justice Stone, dissenting, in *Indian Motorcycle Co.* v. *United States*, 283 U. S. 570, 580; Mr. Justice Roberts, dissenting, in *Brush* v. *Commissioner of Internal Revenue*, 300 U. S. 352, 374. See also Mr. Justice Black, concurring, in *Helvering* v. *Gerhardt*, 304 U. S. 405, 424.

[7] *Bank of Toronto* v. *Lambe*, 12 App. Cas. 575; *D'Emden* v. *Pedder*, 1 C. L. R. 91.

[8] Especially is this true of the Australian Constitution. One of its framers, who afterward became one of the most distinguished of Australian judges, Mr. Justice Higgins, characterized it as having followed our Constitution with "pedantic imitation." *Australasian Temperance and General Mutual Life Assurance Co., Ltd.*, v. *Howe*, 31 C. L. R. 290, 330.

[9] *Abbott* v. *City of St. John*, 40 Can. Sup. Ct. 597; *Caron* v. *The King*, (1924) A. C. 999; *Amalgamated Society of Engineers* v. *Adelaide Steamship Co., Ltd.*, 28 C. L. R. 129; *West* v. *Commissioner of Taxation*, 56 C. L. R. 657.

[10] E. g., *James* v. *Dravo Contracting Co.*, 302 U. S. 134; *Helvering* v. *Mountain Producers Corp.*, 303 U. S. 376; *Helvering* v. *Gerhardt*, 304 U. S. 405.

[11] Compare Taney, C. J., in *Passenger cases* (7 How. 283, 470): "I * * * am quite willing that it be regarded as the law of this Court that its opinion upon the construction of the Constitution is always open to discussion when it is supposed to have been founded in error, and that its judicial authority should hereafter depend altogether on the force of the reasoning by which it is supported."

Waterways versus Railways

EXTENSION OF REMARKS
OF
HON. JOHN G. ALEXANDER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1939

ADDRESS BY HON. JOHN G. ALEXANDER, OF MINNESOTA

Mr. ALEXANDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me recently before the National Rivers and Harbors Congress:

I appreciate having been invited to address you on the subject of our inland water highways. It seems best to approach the issue from the angle of our waterways versus our railways.

It seems to me it is high time that we take careful inventory of our several modes of transportation and then acquaint the people of the Nation of the facts or at least broadcast such facts as can be understood by the average citizen and taxpayer of this country.

I think I would start out by stressing the importance of our vehicular highways. These highways, now becoming highly improved over the entire Nation, serve nearly every home throughout the land. They constitute our most important means of transportation by a wide margin. Without our vehicular highways the railways and the water highways and the very life of our Nation could not be of much importance. Life, as we all know it today, just could not exist.

When the people thoroughly understand that our vehicular highways are the most important and vital means of transportation in our scheme of distribution, and when they equally understand that this system of vehicular highways has been developed at public expense and now belong to all the people for their uninterrupted use, they will quickly understand that the waterways and the railways are the auxiliary means of transportation and should be

treated as such wherever the subject of transportation or distribution is under consideration.

The water highways—like the vehicular highways—were developed at public expense and belong to all the people. The cost has been distributed over all the people in the form of taxes. The great improvement work necessary to give us these two arteries of commerce is nearly completed and the producers and the consumers of the Nation are about to realize the convenience and the economy in the use of these highways that was visioned when the work of improvement first started. The tremendous economy of transportation by water is best understood by a simple comparison. That comparison shows that the average cost for moving 1 ton of freight 1,000 miles is—by water, $1; by railway, $10. In other words, the average cost by railway is 10 times greater than the average cost by water. Our inland waters have been improved for the purpose of making lighter and less burdensome the cost of getting the essentials of life from the producer to the consumer. This important and substantial saving in the transportation cost of distribution applied to every article of commerce each producer must sell and every article of commerce each consumer must buy—definitely benefits every producer and every consumer. It has been difficult for some producers and for some consumers to realize the benefit they obtain from low-cost water transportation. This is particularly true where the producer or the consumer is located inland some distance from a water port. There will be a better appreciation and understanding of the economy of water transportation when all the producers and all the consumers become acquainted with the factors that are controlling in the price the producer receives for his production and in the price the consumers pay on their consumption. Educational work on this issue should be vigorously carried forward and it should tell the story in substantial detail. It should unfold the methods and practices involved in the long chain of services between the producer and the consumer. It should show how the price being paid for butter in New York actually determines the price the farmer gets for his raw milk—for his cream and for his butter—even though the said farmer operates in Wisconsin or Minnesota or some other dairy State. It should show how the same controlling factors determine the price every farmer gets for his wheat regardless of where his farm is situated. An educational campaign of this character will show how the prices being paid for butter—for flour and for all other products of the farm—in New York City and throughout the great consuming areas of the East determine and fix the price received by every farmer, no matter what State he calls his home. From these eastern prices there is always deducted the freight cost from the farm. The consumer in New York City does not pay any more or any less for his butter or his flour if it comes from milk or wheat produced within 50 miles of New York City than if it comes from milk or wheat produced west of the Mississippi River. The consumer just pays whatever he can afford to pay or whatever he may elect to pay and the producer farmer gets that price less the cost of freight from his farm. The further the farmer is from his consumer the less he gets for his labor and his production. If the freight cost by railway is 25 cents the same service by water will be 2½ cents on the average or putting it another way the freight by water is generally one-tenth of the cost by railway.

The producers and the consumers must insist upon this relationship within close limits. The producers must be made to understand that the dairy farmers in Wisconsin or Minnesota do not get any greater or different price for their butter fat that is converted into butter and consumed close at home than they get for the same product if consumed in New York City. This will be readily understood through a knowledge of the factors that combine to give the consuming regions their control over all prices throughout the land—except as to some very extraordinary and unusual local situations. Without adding one penny to the consumers' cost for farm products the farmer's income can be increased by hundreds of millions of dollars every year by a full use of the improved water highways of the Nation.

Let us now take a squint at our water highways and see what there is to see in them as a medium of distribution at low cost

Everyone today is quite familiar with the enormous tonnage moving over the Great Lakes waterway system. This has been made possible through improvements at Government expense. Before improvements were made the present harbors serving the Lake ports were shallow and nonapproachable with any of the boats of today. The several Lakes were connected by only shallow rivers that had to be dredged and deepened and must be maintained. The great locks at Sault Ste. Marie, Mich., had to be built before our lake cargo boats could move from Lake Superior to the other Lakes. Several hundred million dollars of tax money, and with common consent of the people, went into these improvements, until today the largest of the lake boats can navigate this chain of lakes from end to end. The westerly ports of Lake Superior are Duluth, Minn., and Superior, Wis. The westerly ports of Lake Michigan are Milwaukee, Wis., and Chicago, Ill., with several other important ports along its western shore. It has been through these western lake ports that the products of the farms from all Western States took to water on their journey to the consumers of the East. Between Lake Superior and Lake Huron the improved St. Marys River must be used for some distance. The next improved river is the St. Clair River, connecting Lake Huron with Lake St. Clair. Between Lake St. Clair and Lake Erie is the improved Detroit River for some distance. Between Lake Erie and Lake Ontario is the great Welland Canal, just west of Buffalo. Then across the State of New York we have the New York State Barge Canal, connecting on the west with Lake Erie at Buffalo and with Lake Ontario at Oswego, N. Y.

The authorized improvement for this canal calls for a depth of 14 feet, and the work is progressing as rapidly as sound engineering will permit. The eastern end of this canal connects with deep water at Albany, N. Y., over the improved Hudson River right down to the heart of New York City and the ocean liners of the world. Another ocean route from Lake Ontario is the St. Lawrence River, over which boats of considerable size can navigate. Some ocean-going vessels traverse this route to Duluth and Chicago. The distance from Duluth to Buffalo by water is almost exactly the same as the distance by railway—both being approximately 1,000 miles. The rate on wheat from Duluth to Buffalo normally is under 75 cents per ton over the water route. Over the railway route it is $6.30. The producers, shippers, and consumers should understand and appreciate the benefits they have derived from the improvements in the Great Lakes Waterway route.

More recently and during the past 20 years the Federal Government has been directing its effort toward the completion of the Mississippi Waterway system. This improvement work is approaching completion and will be completed within the next 2 years if appropriations are made to the United States Army engineers in the amounts they can efficiently handle. The Army engineers want $102,000,000 for the next year—1940. The Commissioner of the Budget, presumably with the approval of the President, is asking the Congress to cut this amount down to $30,000,000. I cannot see the justification for this in view of the other enormous requests totaling upward of $2,000,000,000 for defense and possible war. Why not rather spend $102,000,000 for wise internal practical improvements such as requested by the Army engineers to complete authorized projects? This will delay the completion of the needed work and withhold from the common people, the producers and the consumers, the benefits they should have within the next 2 years. It will mean further that the expenditures already made on these improvements will continue as a frozen investment until the final work is complete. There is no economy in delay, and the Congress should be urged to back up the Army engineers in their ability to do a good job in the right way. It should be your first order of business before you leave this city to call upon every Member of Congress and plead for his cooperation and support to a program that will complete all authorized projects without further delay, and especially the members of the Appropriations Committee.

Some people do not yet know much about the Mississippi Waterway system. I would advise you to adopt a program of education on this water highway. The producers and the consumers should be told some of the more important facts concerning this newly improved artery of transportation. They all should know that informed men, and men of proven vision, regard this waterway as being the most important development of the Government during its existence. The people should know the importance of this waterway as compared with the Great Lakes. They should know that the average lake cargo boats have a capacity of around 8,000 tons, with the largest boats having a capacity of around 14,000 tons. One tow on the Mississippi system moves from 8,000 to 24,000 tons. The cost of floatage per ton per mile is substantially the same where full tonnage cargoes are available. The floating capacity of the Great Lakes system is limited to the maximum capacity of its connecting rivers—the St. Mary's, the St. Clair, the Detroit, and the Welland Canal. The rivers in the Mississippi system are the equal of those connecting the lakes. They are the Father of Waters himself, the Ohio, the Missouri, the Illinois, the Tennessee, and several others. The Mississippi River runs from north to south through the center of the Nation for 2,000 miles from Minneapolis to New Orleans and the Gulf of Mexico. The Missouri runs in an easterly direction from Sioux City, Iowa, to St. Louis while the Ohio runs in a westerly direction to Cairo. These two rivers in an east and west direction run through the very heart of the Nation's productive area for a distance of 2,000 miles. The Illinois River connects this system with the Great Lakes at Chicago. This waterway is nearly 400 miles closer to the agricultural area than is the Great Lakes system. It penetrates the heart of the industrial area of the Pittsburgh district in Pennsylvania. It taps the coal fields of the eastern district. The most of its mileage is navigable for 12 months of the year as compared with 7 months on the Great Lakes. Within its watershed is produced the following important commodities:

	Percent of United States production
Iron ore	98
Coal	82
Petroleum products	72
Zinz	70
Agricultural products	70
Lead	50

This great system as now set up barely penetrates the city limits of my town of Minneapolis. We cannot enjoy its benefits until the authorized project is completed in every particular. Because of this and because of the importance of this improvement in our agricultural and industrial life and stability as well as to the producers and consumers throughout the Nation and even to perpetuation of democracy itself, it is my intention to extend every effort to obtain the appropriation necessary to keep the Army engineers busy for the next 2 years.

Again I want to thank you for the opportunity to lay my views before you and hope you will do your part in the program, and I know you will do this.

Current Observations on Trade Agreements and Foreign Trade of the United States

EXTENSION OF REMARKS
OF
HON. FRANK H. BUCK
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, March 25, 1939

Mr. BUCK. Mr. Speaker, my attention has been called to the debates in the Canadian House of Commons on the new trade agreement with Canada. I was particularly interested in a statement by the Prime Minister of Canada, the Honorable Mackenzie King, in defense of the agreement on that side of the line. In enumerating the value of the new agreement with the United States he detailed the benefits to consumers. On this side we say very little about consumer benefits of lower rates of duty. I think we might well begin to emphasize the importance of import trade to industry and to the consuming public.

An excerpt from Mr. King's address on consumer benefits follows:

Here are some of the other benefits that consumers will derive from the agreement. Let me begin with food products. Important concessions have been made on these. United States fresh fruits and vegetables are made available on easier terms to Canadian consumers in those seasons when domestic products are not on the market, while the Canadian fruit and vegetable grower retains his domestic market in his own producing season. On a large variety of fresh vegetables the basic ad valorem rate is reduced from 15 to 10 percent. United States oranges are admitted free of duty in the 5 months from December to April, inclusive, while a duty of 35 cents per cubic foot is retained for the remainder of the year. The duty on fresh grapes is reduced from 1½ cents to 1 cent a pound in the period from July to January inclusive. Small reductions are made in the duties on dates and figs, and a reduction from 22½ percent to 15 percent is made in the duty on dried fruits, n. o. p. Rates on canned corn, beans, and peas are reduced from 2 cents to 1½ cents a pound, and rates on canned vegetables n. o. p. are reduced from 27½ percent to 20 percent.

Those of us who are interested in exporting our surpluses appreciate the Prime Minister's position. When he points out the benefits to consumers on his side, that means benefits to the producers on our side. The rates of duty on a number of items mentioned by him have been reduced from 20 and 30 to 15 and 10 percent since the beginning of 1936. Practically all of the products which Mr. King mentioned are important exports of my own State.

FOREIGN TRADE IN AGRICULTURAL PRODUCTS

Since there seems to be considerable misunderstanding relative to the exports and imports of agricultural products, the following excerpts from Foreign Crops and Markets, Department of Agriculture, for March 18, 1939, seem significant:

All of the groups of agricultural exports other than cotton for which quantity indexes are separately computed (tobacco, fruits, wheat and flour, grains and grain products, cured pork, and lard) were exported in greater quantity during the first 7 months of the current fiscal year than during the corresponding period a year ago. An increase of 46 percent occurred in cured-pork exports, 34 percent in fruits, and 33 percent in grains and grain products.

The United States foreign trade in butter, which has been the subject of frequent inquiry, shifted from an import to an export basis, as illustrated by the following figures:

	July–January 1937–38	July–January 1938–39
Butter:	*Pounds*	*Pounds*
Exports	394,000	1,445,000
Imports	1,833,000	705,000

It is important to note that this tabulation includes imports for January, ordinarily the month of heaviest butter importation.

The value of agricultural imports during the 7-month period this year was 26 percent lower than in the corresponding period last year. The decline was even greater for supplementary (competitive) agricultural imports, which were 30 percent below their last year's value.

The decline in competitive imports was general, only a very few commodities showing an increase. Of the leading items, sugar and hide imports increased slightly in quantity and leaf tobacco increased considerably in both quantity and value. Vegetable oils, however, decreased considerably as a group. So did wool, flaxseed, feeds, and fodders, nuts, and molasses. Many of the smaller items that have been attracting a good deal of attention, such as hogs, Cheddar cheese, dried eggs, and cream, also declined by large percentages.

EFFECTS OF TRADE AGREEMENTS ON THE FOREIGN TRADE OF THE UNITED STATES

That the trade with the agreement countries has increased by a greater percentage than the trade with nonagreement countries is fairly well understood. This indicates that trade agreements have had an influence in our substantial recovery of foreign trade. I am now speaking of both imports and exports combined. Both sides of the ledger must be examined for a proper perspective of foreign trade. No one is inclined to claim that all of the increased foreign trade since trade agreements went into effect resulted from the agreements. There are always special and varied factors involved in our trade relations with foreign countries. It is realized that in certain individual cases the trade has increased greater with nonagreement than with agreement countries. This, however, does not invalidate the principle that lowering trade barriers inevitably increases the flow of trade. Removing a dam from across a stream always permits a greater flow of water.

The following table shows the total United States foreign trade with agreement and nonagreement countries for 1934 and 1935—a substantial preagreement period—with 1937 and 1938, the 2 latest years. This table also compares 1938 trade with that of 1937:

Total United States foreign trade with trade-agreement countries and with all others

	Comparison of 1937–38 with 1934–35			Comparison of 1938 with 1937		
	1934 and 1935 average value	1937 and 1938 average value	Change	1937 value	1938 value	Change
	Millions	*Millions*	*Percent*	*Millions*	*Millions*	*Percent*
Total imports and exports with agreement countries	$1,553.7	$2,298.4	+47.9	$2,522.8	$2,074.3	−17.8
Total imports and exports with nonagreement countries	2,505.4	3,445.3	+37.5	3,910.2	2,980.3	−23.8
Total all trade, all countries	4,059.2	5,743.7	+41.5	6,432.8	5,054.6	−21.4

Source: Statistical Abstract and Monthly Summary of the United States.

For those who wish to examine the course of imports and exports separately, the following table shows the figures with agreement and nonagreement countries for 2 preagreement years and the 2 more recent agreement years.

[Department of Commerce figures]

	Comparison of 1937–38 with 1934–35			
	1934 and 1935 average value	1937 and 1938 average value	Change	
			Value	Percent
United States exports, including reexports:	*Millions*	*Millions*	*Millions*	
Total, all trade-agreement countries	$759.8	$1,224.8	+$465.0	+61.2
Total, all nonagreement countries	1,448.0	1,996.8	+548.8	+37.9
Total, all countries	2,207.8	3,221.6	+1,013.8	+45.9
United States general imports:				
Total, all trade-agreement countries	793.9	1,073.6	+279.7	+35.2
Total, all nonagreement countries	1,057.4	1,448.5	+391.1	+37.0
Total, all countries	1,851.3	2,522.1	+670.8	+36.2

These figures show that during the 2-year period, 1937 and 1938, the relative increase in value of American exports, as compared with the 2-year preagreement period, 1934 and 1935, was 61.2 percent to the agreement countries and of 37.9 percent to the nonagreement countries. I believe anyone who is willing to view the results from an unbiased standpoint will agree that such figures indicate substantial success as far as exports are concerned.

The figures show that imports from nonagreement countries have increased more than imports from agreement countries. While this may not indicate that agreements have increased the importations, at least it does not indicate that trade agreements are ruining the country by flooding us with foreign goods, as is frequently claimed.

Since there are some who claim to represent the interests of agriculture and who oppose trade agreements, we might examine the trade figures in farm products with agreement and nonagreement countries. These are shown by the following figures:

United States foreign trade with trade-agreement countries[1] and with other countries

[Department of Agriculture figures]

	Year ended June 30—			Increase (+) 1937–38 over 1935–36	
	1935–36	1936–37	1937–38[2]		
United States (domestic exports of farm products):	*Million dollars*	*Million dollars*	*Million dollars*	*Million dollars*	*Percent*
To the 16 countries	186	207	288	+102	+55
To all other countries	580	525	600	+20	+3

[1] Belgium; Brazil; Canada; Colombia; Costa Rica; Cuba; El Salvador; Finland; France, including her colonies, dependencies, and protectorates other than Morocco; Guatemala; Honduras; Haiti, Kingdom of the Netherlands; Nicaragua; Sweden; and Switzerland.
[2] Preliminary.

Farm products exported from the United States to the 16 countries rose by $102,000,000, or increased by 55 percent, from the fiscal year 1935–36—when only three of the agreements were in effect throughout the year—to the fiscal year 1937–38. Farm exports to all other countries rose by $20,000,000, or by 3 percent, for the same period. We realize that our largest farm export is cotton, which has not suffered directly from foreign-trade barriers, and which, therefore, cannot be greatly benefited by trade agreements.

A detailed analysis of the increase in the exports of farm products to agreement countries shows that the major portion was in products on which foreign countries granted concessions. This occurred in spite of the fact that two of the greatest droughts in our history held down farm exports, while these droughts increased competitive imports from 1935 to 1937. The plentiful harvests of 1937 and 1938 have naturally had the reverse effects on imports of agricultural products.

There is one other general phase of our foreign trade which should be examined. So much has been said to the effect that trade agreements have injured agriculture by inducing the importation of farm products, it might be reiterated that no one in the administration desires to increase foreign trade in competitive farm products in such a way that they will have a disruptive effect on domestic markets. The official figures of imports from agreement and nonagreement countries would seem to bear out that general proposition. When I say this I realize that there are claims by this and that group that they have been injured by imports.

The following table shows the imports of farm products by agreement and nonagreement countries:

United States imports from trade-agreement countries[1] and other countries

[Department of Agriculture figures]

	Year ended June 30—			Increase (+) or decrease (−) 1937–38 over 1935–36	
	1935–36	1936–37	1937–38		
United States imports (for consumption) of agricultural commodities:	*Million dollars*	*Million dollars*	*Million dollars*	*Million dollars*	*Percent*
From 16 trade-agreement countries	468	600	454	−14	−3
From Canada and Cuba	204	249	131	−73	−36
From 14 other trade-agreement countries	264	351	323	+59	+22
From nonagreement countries	674	937	701	+27	+4

[1] Belgium; Brazil; Canada; Colombia; Costa Rica; Cuba; El Salvador; Finland; France, including her colonies, dependencies, and protectorates other than Morocco; Guatemala; Honduras; Haiti; Kingdom of the Netherlands; Nicaragua; Sweden; and Switzerland.

A careful examination of the above data shows that where the agreements have tended to increase the importation of farm products, safeguards included in the agreements have prevented increases which have substantially disturbed domestic markets.

It is important to remember that, in evaluating the figures for total imports of agricultural products from countries with which trade agreements have been concluded, except for a few countries such as Canada and Cuba, most of the agricultural products involved consist of such commodities as rubber, coffee, cacao beans, and other tropical products in which the American farmer is interested as a consumer, rather than as a producer.

Defends Veterans' Administration in Wage-Deduction Controversy

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 27, 1939

LETTER BY GEN. FRANK T. HINES, OF VETERANS' ADMINISTRATION

Mr. SHAFER of Michigan. Mr. Speaker, to enable all Members of this Congress to have both sides of the controversy concerning compulsory deductions from salaries of employees of Government institutions for quarters, subsistence, and laundry, I desire to extend my remarks and to include therein a letter from Administrator Frank T. Hines, of the Veterans' Administration.

The letter follows:

MARCH 20, 1939.

Hon. PAUL W. SHAFER,
House of Representatives, Washington, D. C.

MY DEAR MR. SHAFER: Reference is made to the recent consideration and the discussion of the independent offices appropriation bill on the floor of the House. In calling the attention of the Congress to deductions from salaries of employees for quarters, subsistence, and laundry, you stated that some 37,000 employees in veterans' hospitals and facilities were being subjected to compulsory deductions and that the Government had profited.

I appreciate your interest in the situation and your desire that adjustments be made. I wish, however, as I am sure you do, that there be no misunderstanding of the true situation because of the viewpoint that might be gained by one's assuming that all of the employees of the Veterans' Administration facilities are deducted for quarters, subsistence, and laundry. As of June 30, 1938, there were 30,361 employees in the facilities. Of this number, only 16,709, and not the total, had deductions for allowances (quarters, subsistence, and laundry), or for a part of such allowances.

As you are aware, during a period of years the Veterans' Administration has amended policies and instructions relative to allowances in line with our efforts to improve working conditions and requirements that affect employees. A major step was taken in this direction when a revision of rates was approved in 1932. Until then the charges for quarters and subsistence were fixed according to classes of employees. Since then they have been fixed according to actual service and accommodations received. In 1934 provisions were made that were significant as to revision of rates. Adjustments recently have been contemplated that will provide further relief to the fullest extent possible consistent with good administration.

The rates for subsistence now are $27.50 and $22.50 a month with waiter service and cafeteria service, respectively, three meals daily. These rates have been reduced from charges of $30, $27.50, and $25. Rates for quarters have been revised so as to make them equitable in relation to the type of quarters, which takes into consideration the condition of the quarters, size, convenience thereof, etc. This has resulted in lower rates in many instances. For example, prior to 1934, for a class A room without private bath, occupied by two employees, there was a charge of $12.50 a month each; now the rate is $10 each. If occupied by more than two employees, the rate then was $10 each; now it is $7.50 a month each. Another example, for a class C room, occupied by two employees, the charge is $7.50 a month each; $5 each if occupied by more than two; still lower rates prevail if maid service is not furnished. When charging according to classes of employees, there

was a flat rate of $10 a month for nonhousekeeping quarters, for maintenance and operating personnel, the charges for subprofessional, clerical, and administrative personnel ranging up to $15.

It is not considered that a profit is made with respect to allowances. The rates have been established with a view to assuring a sufficient return to cover actual costs. In evaluating the cost of allowances, many factors necessarily must be taken into consideration. In setting a rate for subsistence, for instance, the actual cost of food is not the only item to be figured in arriving at a fair charge. Other items enter into cost, such as fuel, preparation and serving of food, and other service charges.

It appears that your interest primarily centers in making allowances optional with employees. This office approves of an optional feature to the extent permissible. The occupancy of quarters should be required of those whose duties call for their living on the station. It may be optional with others whose duties do not require this. A step in allowing employees to be relieved of quarters was taken in 1936 when instructions were promulgated whereby those in certain classes at facilities, CU–1 to CU–4 and SP–1 and SP–2, and other employees, such as cooks, chefs, and bakers, were given adjustments. It was stipulated that adjustments would be made up to the point of retaining 50 percent of such employees in quarters on the station. This 50-percent quota is still maintained; in making current adjustments, consideration is given to employees with dependents and those who have been in the service a year.

Assuring you again of my appreciation of your interest in these matters, I hope that the above statements will give you a better understanding of the questions at issue. The Veterans' Administration is interested in the welfare of its employees and you may be assured that in line with our past efforts, it is our intention to make other progressive changes as they may be in order and in line with pertinent conditions and factors.

Very truly yours,

FRANK T. HINES, *Administrator.*

We Must Not Let Wage-Hour Act Cut Off Farmer's Telephone Service

For the protection of our rural communities enact H. R. 3842, to exempt operators employed in telephone exchanges having 1,000 subscribers or less from the provisions of the Fair Labor Standards Act of 1938.

EXTENSION OF REMARKS

OF

HON. VINCENT F. HARRINGTON

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 27, 1939

Mr. HARRINGTON. Mr. Speaker, on February 7, at the urgent request of a number of rural telephone exchanges in my district, I introduced this bill in the House, and it was referred to the Labor Committee. A companion bill in the Senate is sponsored by the Honorable CLYDE L. HERRING.

Since introducing this bill I have received hundreds of messages from small-town telephone exchanges all over the country urging enactment of this measure as a means of preserving the very existence of rural telephone communication. Many of my colleagues have had similar messages. These letters supply a mass of incontrovertible evidence that it is economically impossible for these little exchanges to comply with the wage-hour law and still remain in operation.

With all due respect for the wage-hour law, and I voted for it, there is no question but that it imposes an unbearable hardship on the owner of a small telephone exchange. I have heard the answer usually given that if the little fellows cannot comply they should get out of business and turn the field over to the big, successful corporations which are financially able to comply with this act, principally by passing the buck on to the consumer. This is a philosophy with which I am unable to agree.

In the case of the small town and rural telephone exchange, however, this reasoning does not apply anyway. All of us remember that before the Rural Electrification Act was passed it was impossible to get electricity wired to the farm because it simply was not profitable for the private utilities to supply this service. The same thing has been true of farm telephone service. The Telephone Trust finds no profit inducement to enter the rural field, but usually has supplied rural service principally and only to give further value to the town and city telephone, making it possible for people to communicate with the farm.

The job of supplying telephone service to small rural communities has been pretty much left to cooperatives and to small independent exchange operators which furnish very little profit to the owner other than a living to the people employed and to their owners. Mind you, the exchanges affected by this act with which I am concerned are these independent and locally owned exchanges. While the Bell Telephone System has some exchanges this size, the large bulk of them are owned independently and are separate financially from the Bell System.

It hardly seems necessary to impress the United States Congress with the importance of maintaining telephone service in our rural communities. Aside from time-saving convenience and its facility for furnishing a means of social contact in sparsely settled areas, the rural telephone exchange has on innumerable occasions proved of invaluable assistance in giving the alarm of fire, crime, and disaster. All of you know of cases where the lone night operator in the small exchange has been the heroine of a fire, a flood, a robbery, or a similar catastrophe threatening the lives and property of our small-town and rural citizens. And to these same people the telephone on the wall is a symbol of security and protection and freedom from anxiety, both during lonely daytime hours and each night when they retire to their pillows. It is a vital service and a protection to our farm people, and we must not permit the wage-hour law to deprive them of this social and economic necessity.

Another thing, when we passed the Wage-Hour Act it was clearly understood that the farmer was to be exempt, nor was it intended that he should directly bear the burden of this act. We wrote in every possible provision to keep this law from working a hardship on the man who tills the soil.

As I think of it in the size and type of communities in my State to which I am referring there is at the present time only two institutions now interpreted as being subject to the Wage-Hour Act. One is the small telephone industry, to which I am referring, and the other is possibly the local bank. The burden that this means to the telephone company is manyfold emphasized by the fact that it is necessary to have someone on duty in the telephone exchange 24 hours a day, whereas in other lines of endeavor the usual work period is 8 hours per day. Certainly we do not want these little exchanges to go back 25 years to the time when service was rendered only during a limited time of the day, with no telephone service whatsoever at night and until early morning.

We further provided for the exemption of so-called retail and service establishments, yet the Wage-Hour Administrator has ruled that a rural telephone exchange is not a service institution and that it must comply with the law by putting on more operators, and increasing the cost of this service to the farmer, who cannot possibly pay the extra charge and therefore would probably give up his telephone. Surely none of us want this to happen.

I understand that my bill to exempt the small telephone exchanges from the Wage-Hour Act is being given some consideration in the House Labor Committee, and that the Administrator has indicated his willingness to recommend the exemption of telephone exchanges having less than 500 telephones. I sincerely appreciate this recognition on the part of the Administrator and the House Labor Committee to the importance of the problem I am seeking to solve in H. R. 3842. I am even advised that the Administrator and the Labor Committee as a whole have been sympathetic to the acute situation faced by these small telephone exchanges if they are forced to comply with the wage-hour law.

However, to exempt 500 telephones, my friends, is just not enough. When the request for an exemption of 1,000 subscribers was inserted in my bill, it was done so having in mind all of the different sections of the country, and done so in order that relief be given to that group in all sections of the country that could not continue on their present basis if they were to comply with this law.

To exempt exchanges with 500 telephones or less is just the same to the small telephone exchanges in the Middle West, which section of the country I represent, as saying to a man under death sentence, that we have decided not to put you to death but instead we are only going to cut off both legs and one arm.

Here is why this is true, gentlemen. The Middle West is a vast agricultural section. A small telephone exchange in our country has lines running 8 or 10 miles on all sides of town to serve the many farm customers in the town's trade territory. The trade territory of a small town out there is the lifeblood of that small community, and to disassociate its trade territory from the community by creating a situation that would reduce the number of farm telephone subscribers would be a serious blow to the small town.

A telephone exchange of five or six hundred telephones in Iowa means that about one-half of those telephones are out in the country on farms, serving farmers; consequently, to exempt a telephone exchange having 500 stations in the Middle West would exempt exchanges in towns of 1,000 population or less. Whereas the same exemption in States like Virginia, North and South Carolina, Georgia, and others would be to exempt exchanges in a town having a population of five or six thousand people. We must have this same kind of exemption for our section of the country.

For example, the town of Altavista, Va., with a population of 2,367 persons, has a telephone exchange serving 256 subscribers; whereas, George, Iowa, has 592 telephones which is only a town of 907 people. Another one, Statesboro, Ga., with a population of 3,996, has 617 telephones; whereas, Lakefield, Minn., a town of 1,349 persons, has 929 telephones.

Such comparisons could be made by the hundreds. My point is, sir, that 500 is not enough, will not do the job unless it excludes counting telephones serving farm customers; or putting it another way, if 500 stations and less are to be exempted, then the 500 should not include telephones serving the farmers.

It is my further understanding that in the Administrator's research in regard to this question he made inquiry of all State regulatory public-service commissions having jurisdiction over telephone service and that he received 37 replies. Have in mind, these are the regulatory bodies that have for years, and based on fact, been regulating the very telephone exchanges about which I am speaking. It is to be noted that 27 out of these 37 recommended an exemption of at least 1,000 telephones or less. Some others recommended exemptions based on revenues and population.

These commissions that are responsible for the welfare of the public served, the employees, and the owner predominantly recommended an exemption of at least 1,000 telephones. Further, a number of these State commissions said the farm subscribers should not be included at all in this figure, and that the exemption should apply to exchanges having 1,000 or less urban or town telephone subscribers.

One of the most detailed answers to the Administrator's inquiry came from the State Public Service Commission of Wisconsin. I believe everyone will concede that Wisconsin is anything but a reactionary State and that the commission of that State has been a leader and outstanding in strict regulation of its utilities. We can suppose that the Wisconsin Public Service Commission would be hostile to any unfair exemptions under the wage-hour law. Much to my surprise the Wisconsin Public Service Commission not only endorsed my bill but sets the minimum figure up to 1,000 urban or town telephone subscribers, thereby exempting farm telephones altogether, which, in my opinion, is correct.

The Wisconsin statement further shows that the farm service is operated at a loss which must be borne by the town subscribers of the same exchange. Further, they state that even at the present rates a very high percentage of farmers have had to give up their telephones during the depression and still are not financially able to have them reconnected. On the other hand, and in comparison, a great percentage of the urban telephone subscribers who disconnected during the depression have since resumed their service.

A long, detailed letter from the Public Service Commission of Illinois is very similar in sentiment. These regulatory bodies fully appreciate the impossible situation faced by the small telephone exchanges if forced to operate under the Wage-Hour Act. It is up to us to correct this impossible situation.

Many of the Members of this body have called my office to offer cooperation in getting this bill passed. I urge all of you who are interested, and I believe most of you are interested, that you make known your wishes to the Committee on Labor and to the Wage-Hour Administrator. Let them know that we are not interested in saving telephone service for only 25 percent of the farmers, we want the interests of all farmers safeguarded as was promised when we passed the Wage-Hour Act.

Development of the Water Resources of the Columbia River Basin

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 23, 1939

ADDRESS BY HON. COMPTON I. WHITE, OF IDAHO, MARCH 23, 1939

Mr. WHITE of Idaho. Mr. Speaker and Members of the House, under permission to revise and extend my remarks in the RECORD, there is inserted herewith an address to the convention of the National Rivers and Harbors Congress on the Development of the Water Resources of the Columbia River Basin.

The address is as follows:

Mr. Chairman and members of the National Rivers and Harbors Congress, representing the people of a large area in the Rocky Mountain region of the Northwest, where our rivers and water resources have only recently been included in the Government's development program, I esteem it a privilege to join with you in discussing the plans for the future development of our national water resources.

I am certain that most of us appreciate the major part the utilization of our streams and rivers have played in the upbuilding of our great Commonwealth, and if we are to follow the constructive program that has placed our country in its preeminent position, it is apparent that we must continue to broaden and expand the national program for the development and utilization of our streams and water resources.

Let me bring to your attention a program for the development of the empire known as the Pacific Northwest, embracing the States of Montana, Idaho, Oregon, and Washington, which merits your attention because it is only through national cognizance that relief can be secured for the critical situation facing the existing industries and only by the improvement of the water facilities of the area that exercitation of the enormous latent resources of the area can be realized.

A few years ago discussion of the development of the Columbia River and its tributaries could be classed by those not familiar with the possibilities as phantasy, but, with the construction of the Bonneville and Grand Coulee Dams, a part of the dream has been realized. To further dispel doubt as to the feasibility and practicability of improving the Columbia and its main tributary, the Snake River, for navigation purposes the Army engineers made a comprehensive survey and economic study of the question which has been submitted to Congress by the Secretary of War.

The Columbia River, with a length of 1,200 miles, rises in British Columbia and flows southward, crossing the international boundary in northeastern Washington and flowing south to its confluence with the Snake River, and thence west to the Pacific Ocean. The Snake River rises in Wyoming and flows 1,026 miles before it reaches the Columbia. The area tributary to these rivers along that section over which the proposed navigation would be realized consists of 90 counties in the four Northwest States and embraces 54 percent of the gross area of the region.

With its annual production of about 4,000,000 tons of grain, 1,750,000 tons of fruit and vegetables, large quantities of livestock and its products, including poultry and eggs, agriculture heads the list of basic industries of the Northwest.

The enormous forests of western Montana, Idaho, eastern Oregon, and eastern Washington, both privately and publicly owned, are

capable of an annual production of 5,000,000 tons of forest products on a sustained yield basis. Of the approximately 161,000,000,000 feet of merchantable saw-timber now standing in these forests, approximately 75 percent is State and federally owned and it is probable that transportation facilities that would permit an economic harvest of this timber by affording equitable marketing conditions would return to the Government the entire cost of the investment for navigation purposes.

Nor is navigation the only facility that is needed. Cheap power is a necessity for further development in the Northwest. The Government through the Bureau of Reclamation under the Department of the Interior has recently made a survey and examination of one of the best potential power developments in the West at Cabinet Gorge near the Montana-Idaho boundary line on the Clarks Fork River, a tributary of the Columbia. It is located in the center of the vast holdings of federally owned timber and close to the large producing mining districts, and it is apparent that the development and availability of power at Cabinet Gorge would provide the necessary energy for economical manufacture of lumber, pulp, and paper, and the extensive and valuable stands of Government-owned timber, much of which is now mature and wasting due to natural decay. It is easily seen that the development of the potential power at Cabinet Gorge would be of immense direct relief and benefit to the Federal Government and contribute in a large way to the general business prosperity throughout the country.

While mining now ranks as the third major industry of this region, the surface has as yet only been scratched insofar as possible mineral production in that general area is concerned. Gold, silver, copper, lead, zinc, and phosphate rock are mined and the present producers include the famous copper lodes in Montana and the silver lead mines of the Coeur d'Alenes. The area adjacent to the Snake River through the famous Snake River gorge for a distance of 300 miles is known to be highly mineralized but is undeveloped because at present there is no method of transportation in that district. Of tremendous importance to this Nation's welfare is the enormous deposit of high-grade phosphate rock located in western Idaho and allied territory. These deposits account for approximately 57 percent of the known world supply of this material and about 95 percent of the total known deposits on this continent. Development of these deposits is discouraged because existing freight rates make its distribution impossible at any item of profit but a rail-water rate that would be provided through the improvement of the Columbia and Snake Rivers for navigation would entirely change this situation.

That you may vision the plight of this great inland empire of the Pacific Northwest, it must be borne in mind that at the present time its rail lines exact an average charge of 25 mills a ton-mile. This is more than double the national average for a similar service and almost four times the average charge on the rail lines that serve the Ohio and Mississippi Valleys. These exhorbitant freight rates apply to all the products of the basic industries and not only hamper present production but prohibit expansion.

Four million tons of grain from the Northwest interior are marketed through the North Pacific ports. The average charge to move that grain crop to shipside, via rail lines, is 14.5 mills per ton-mile. The average charge for the same service where the benefit of water-borne commerce has been realized in this country is 1.6 mills per ton-mile. Obviously our farmers face bankruptcy if they are forced to continue paying into rail lines a unit cost for moving their wheat that averages nine times the unit cost that competitors pay for similar service performed by water carriers.

It was in June of last year that the Secretary of War submitted to Congress the report of the Army engineers on the plan to improve the Columbia and Snake Rivers for a distance of 400 miles at a cost of $138,000,000. Excerpts from this report state:

"Based upon production data, upon analysis of traffic movements, and upon information submitted by local interests, the total present commerce moving between the tributary area and tidewater is estimated to be 3,352,745 tons. Local interests are of the opinion that the improvements proposed when completed would result in a material reduction in existing freight rates between the interior and tidewater. The resultant average annual savings in freight rates, over the amortization period, creditable to the proposed improvement are estimated by local interests as $25,287,259.

"Indirect benefits, which cannot be reduced to dollars and cents, would accrue to the general public in large measure from the provision of low-cost water transportation and cheap power throughout a vast interland containing large agricultural and industrial resources only partially developed."

And at this point I should like to interpolate that the cheap power has been provided for a large part of the area by the construction of the Bonneville and Grand Coulee Dams, and that such power can only be absorbed by accelerated industrial development which in turn is predicated on reasonable transportation costs. Quoting again from the Army engineers' report:

"The interests that would be directly benefited by improvement in accordance with the coordinated plan presented herein for navigation, irrigation, and power development.

"The electrometallurgical and electrochemical industries that will locate in the lower Columbia River area will require large quantities of raw materials such as iron ore, limestone, silica, clays, magnesites, and phosphates. These raw materials, as well as other valuable minerals, are to be had in the area tributary to the Snake River points. Although the deposits in this area are as yet not fully explored and developed, it is believed that they would be mined and used extensively if they could be shipped out by river transportation. The average volume of this prospective traffic for the Snake River, over a long period of time, is estimated at 1,000,000 tons per year."

There is none who will contravert the exhaustive study or sincere recommendations of the Army engineers. The report of their findings as to the feasibility and practicability of the improvement of the Columbia and Snake Rivers for navigation proves the theory of the advocates of water transportation for the Pacific Northwest as a necessary unit of the economic development of the region. This report is pending before the Rivers and Harbors Committee of the House of Representatives, and there is legislation pending in Congress providing authorization of the project.

It is urged upon the National Rivers and Harbors Congress that a resolution be adopted urging upon the Federal Government the wisdom and necessity for improving the water resources of the Pacific Northwest, and for this purpose I submit herewith the following:

"Whereas existing industries located in the interior of the Pacific Northwest cannot operate with profit nor expand until given the facility of water transportation; and

"Whereas there are many and varied natural resources of the area which now lie dormant awaiting marketing facilities that would be provided through low-cost transportation; and

"Whereas the enormous amount of publicly owned merchantable saw timber located in the interior Northwest can be harvested when the Government provides equitable transportation; and

"Whereas the Federal Government already has large investments in irrigation and reclamation projects in the Northwest, and another huge sum in the power projects of Bonneville and Grand Coulee, and as yet has failed to adopt a unified plan for the orderly development and utilization of the Columbia River and its tributaries; and

"Whereas a physical survey and an economic survey have been made by the Army engineers showing the feasibility and practicability of improving the Columbia and Snake Rivers for navigation which has been submitted to Congress by the Secretary of War; and

"Whereas legislation is now pending in Congress to authorize the construction of the project: Now, therefore, be it

Resolved, That the National Rivers and Harbors Congress urges upon the Members of Congress the adoption of the report of the Army engineers and the enactment of legislation enabling the Federal Government to undertake the construction of locks and dams and channel improvements of the Columbia and Snake Rivers to provide low-cost transportation which will be the means of developing the vast resources of the Pacific Northwest and adding to the Nation's wealth."

"Joe Hess Day" in Danville

EXTENSION OF REMARKS

OF

HON. NOBLE J. JOHNSON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Saturday, March 25, 1939

ARTICLE BY GEORGE WEYMOUTH IN THE INDIANA FARMERS' GUIDE OF MARCH 11, 1939

Mr. JOHNSON of Indiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial of George Weymouth in the Indiana Farmers' Guide for the issue of March 11, 1939:

[From the Indiana Farmers' Guide of March 11, 1939]

"JOE HESS DAY" IN DANVILLE—A PERSONAL TRIBUTE TO THE NEIGHBORLY ATTITUDE OF INDIANA COMMUNITIES

(By George Weymouth)

Joe Hess is dead. Joe Hess, of Danville, Hendricks County, Ind. Perhaps that doesn't mean a lot to you, not knowing much about Danville and the typical kind of Hoosier town it is; not knowing about Joe Hess and his adventures in storekeeping; not aware either of the funeral at the Methodist Church last month or the kindly Hendricks County citizens who followed Joe Hess to his resting place in South Cemetery.

I was over at Danville about a year ago, writing a little history of Hendricks County, which some of our good readers of the Guide may happen to remember. They told me about Joe Hess, then, both the farmers and the town people.

"Why, that is a good story," I said. "A remarkably good story," and I have kept it in mind ever since.

So I was shocked when I read in the Indianapolis Star that Joe Hess had passed away, and felt a little sad about it, as you do when you hear that a good man has had to go, and a little glad also because Joe Hess left something behind him so much more significant than money.

Danville, as you may know, is a little county-seat town 20 miles or so west of Indianapolis on United States Highway No. 36. The population, as I happen to recall because the newspaper editor there made a little joke about it when he told me, was "1,930 in 1930." Just one of those little towns that has been holding its own around the 2,000 mark for a long time. Maybe it will show up with 1,940 people when the census taker finishes his count for 1940.

You know how friendly and cooperative these little towns are for which Indiana is so justly famous. For instance, the editor I was interviewing went next door to get me a copy of a special edition of his rival's paper with some good historial material in it.

"You seem to be on good terms with your competitor," I said, a little surprised, because one paper was loyally Democratic and the other stanchly Republican, and I have seen times and places when they might have hated one another like "pizen."

"Oh, we are good neighbors. Why shouldn't we be?" asked the editor. "We swap conveniences back and forth, type set-ups and so forth. If his press breaks down I print his paper till he gets it fixed. That's the kind of town Danville is." Then he told me about Joe Hess and his big day.

I am featuring the incident here because I have been asked to write an article about community cooperation and my first thought is that "here is the perfect example of what being a good neighbor means." The passing of Joe Hess is fresh in my mind and if you'll forgive me for rambling around I'll tell you about him.

Joe Hess was a German immigrant who came from the old home along the Rhine with his parents 57 years ago, when he was 10 years old. The family settled at Ligonier, and Joe Hess came to Danville 32 years ago to clerk in Joe Schwartz's clothing store, and in the course of time married the boss' daughter. Like a regular romance, isn't it?

Also in the course of time the business belonged to the Hesses and became Danville's largest dry-goods store. Everybody liked to trade there. Joe was friendly and accommodating—too much so for his own good, perhaps. Because after the depression came along and just kept staying and growing worse before it started to grow better, Joe found that he had more on the books than he had on the shelves. He couldn't prese these good neighbors for payment, when their corn and wheat were down to nearly nothing and their livestock hardly worth feeding, even on feed that was hardly worth selling. When folks said, "charge it," the Hesses just charged it and smiled and continued on their kindly and benevolent way.

You can see what was due to happen when the wholesalers began to get restless and the credit men shook their heads and frowned as Joe's orders came in. The worst of the hard times was about over, but it seemed a little late for Joe Hess, who was up in his sixties. He still was cheerful and able to enjoy the cigar he liked to stuff in his pipe and smoke, but it might naturally be hard for him to stage a come-back.

Danville heard about it, of course. They liked Joe Hess and knew that he had always carried his share of the load, and the word went around that something had to be done.

"Let's have a Joe Hess bargain day," they said and such a sale you probably never saw, nor such wonderful bargains. Hendricks County farmers and Danville neighbors came flocking in and took charge of the Hess store. They made Joe go back and sit down when the sale started, and the place was full of volunteer clerks and eager cash customers.

"Here's a pair of cotton socks, good old Joe Hess work socks. How much am I offered? Only $15. Well, take 'em along. And this fine white handkerchief, it was originally marked a dime, but how much will you give? Ten dollars? Sold, and now who wants another one at the same price?"

When that sale was over the Hess store was just as solvent as any retail establishment you would like to own. And old Joe (Mrs. Hess had gone on ahead of him several years earlier) continued to operate the store and smile on customers up until his last brief illness which terminated fatally the first day of February.

Now, isn't that just like Danville and Hendricks County and like the rest of Indiana, where the businessmen and the laboring men and the farming men all work together in building up the finest community spirit ever seen in any nation in the world, or at any period of human history?

I think it is, and I am glad to give you this sketchy account of Joe Hess Day in Danville in this particular issue of the Guide, a progress number devoted to Farm Equipment Week. Enterprising dealers all over the State are holding open house for their neighbors, with the cooperation of local newspapers, distributors, salesmen, and the sponsorship of the Indiana Farmers Guide itself. Farm Equipment Week, March 11–18, is just another example of that helpful community spirit so typical of hundreds of Hoosier communities.

Joe Hess Day in Danville just happens to be one spectacular incident of the neighborly attitude of Indiana people. It is shown everywhere in a multitude of ways—by the churches, lodges, business clubs, women's clubs, farmers as individuals and as groups. If Jones is sick or has fractured a leg, the neighbors come in to harvest his wheat or husk his corn. If somebody has a baby, or dies, or gets sick, or loses his money, or is burned out—here comes help from all directions at once.

Hard luck doesn't have a chance to break the morale or make anything more than the merest dent in the close-knit solidarity of these communities. It may smite the individual now and then, but just watch the group gang up to protect itself against any outside enemy. We are hospitable, of course, and gracious to the stranger within our gates, but he may find it uncomfortable to plot against a member of the clan or to menace the public welfare. If he wants to stay with us and be one of us, we take him to our hearts.

For years it has been amazing to everybody to see how nearly all the nonindustrial communities of Indiana withstood the worst onslaughts of the not-so-recent depression. Business just went along as usual on Main Street and agriculture continued to grow crops—a bit pinched perhaps, but never panicky or downright discouraged. Even when some of our banks caught the Wall Street fever a few years ago and folded up, the farmers and storekeepers went ahead on their own like stout soldiers. I have always thought our agricultural centers fared so well through the hard times mainly because we decided to gang up on Old Man Depression as an unwelcome alien and didn't give him a chance to lick us.

We began this shoulder-to-shoulder movement a century ago when the pioneers took the raw, rich lands from the Indians and laid the foundations for us. We have met the usual obstacles—hard times, wars, droughts, floods, epidemics—but always we go forward and make gains, even while we grumble. I can see the results of this steady progress in my community and you can see it in yours, looking back over the years.

New homes are being built. The schoolhouses and the courthouses and other private and public structures are bigger and better. Merchants have added to their stocks many lines of superior goods and are constantly giving better service. There is a greater degree of comfort in the farm home, thriftier livestock in pasture and feed lot, more abundant crops grown with less labor in fields tilled with magically improved tools.

We call this progress, and it is reflected materially all around us. And right along with it go the cultural and spiritual qualities, still imperfect but evolving always into a better way of life. We send more of our children to high school and college. We have learned new lessons in cooperation, both in business and social affairs. We may complain and not without reason, about politics and our politicians, but even here we find by making comparisons with the past that distinct gains have been made.

Every fellow is out for himself, of course, and is looking after his own profits, but that is one of the ways we make progress. When you work hard, manage well, and keep your own business thriving you are definitely a better asset to your community. When hundreds of other industrious citizens are selfishly promoting each his own welfare in the same manner, you can add the combined results and find that vast reserves have been stored for the common good, and we call this civilization.

The Relief Problem From the Inside Looking Out

EXTENSION OF REMARKS

OF

HON. DUDLEY A. WHITE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Saturday, March 25, 1939

Mr. WHITE of Ohio. Mr. Speaker, on May 12, 1938, I offered an amendment to the relief bill, designed to give unemployed men and women a chance to make up time lost by reason of illness.

The amendment to section 10, page 10, line 10, of that measure read as follows:

Provided further, That any person employed on a project under this appropriation who is unavoidably absent from work because of illness, as certified by a licensed physician, shall be given the right to make up the time lost by reason of such illness, through an assignment of an equivalent number of hours then in effect; provided that such persons shall be required to make up lost time within a reasonable period, and that the amount of leave because of sickness shall not be more than 60 days in any one calendar year: *And provided further*, That no persons shall forfeit eligibility to relief by reason of such illness.

The CONGRESSIONAL RECORD of that date contained the following contentions in support of the amendment:

This amendment corrects a terrible injustice. It affects thousands of unfortunate people in every State and district. It does not deal with new fields of activity—the objection offered to many proposals here this afternoon. It is confined to the question of fairness in relief operations.

When a man or woman becomes sick under present relief regulations, the pay stops the minute he cannot report for work. If a person is out of a job and cannot find one, that is bad enough; but if, on top of that, he or she is stricken ill, certainly that is a whole lot worse. The person who must depend upon relief for an income needs assistance twice as much when sickness adds to his troubles and burdens. His family has to eat just the same, and

he must have medical treatment; and yet, under present regulations, the only wages he receives are shut off.

Under this amendment, a person on the relief rolls who is stricken by real illness would have an opportunity to make up that lost time and restore that lost income. He or she would be given an assignment of an equivalent number of hours of work in addition to the regular monthly schedule then in effect, and would receive pay accordingly. Upon the completion of this process the individual would have the same number of hours of both work and pay that he would receive if the illness had not occurred. Is not that plain justice?

At the present time eligibility is also lost under these circumstances and recertification becomes necessary. Also, under the amendment, such forfeit will be eliminated.

By voting for this amendment you are saying to the jobless man or woman that they will not be penalized by a condition of illness they cannot help; that you are not going to refuse them the opportunity to restore their regular pay and the necessities which it affords, at a time when tough luck has hit them an extra blow.

Furthermore, the amendment is safeguarded against any possibility of playing sick or attempted chiseling. A doctor's certificate must be furnished. If the person fails to make up the lost time by extra work, he fails to restore the lost pay. The cheater cannot cheat, and it saves those who are willing to perform this work from being cheated. In the name of fairness and humane treatment I believe this amendment should be adopted.

Let me emphasize that this amendment was introduced on May 12, 1938, and the Relief Act was finally passed on June 21, 1938. On July 11, 1938, just 20 days later, order No. 65 was issued over the signature of Harry L. Hopkins. Part 3, section 6 (B), is the first instance on record recognizing the very principles outlined in my contentions on the floor just a few weeks prior to this issuance. It is interesting to note that the similarity even extends to the language of this order and those issued by various State headquarters, such as form E–182, dated December 12, 1938, by the Ohio W. P. A. office, entitled "Authorization of Make-up Time for Project Workers Absent Because of Personal Illness."

In the first place, the idea for the amendment which has resulted in this action really belongs to a man who seems to have given as much thoughtful and discerning consideration to relief problems as any one I know. He was then, and he still is, on relief. The problem he presented struck me as being worthy of attention and remedy. As a result I undertook this action. Since he speaks directly from experience and with a degree of logic, worthy of careful thought, I believe his contentions as outlined in the following letter will prove useful to Members of this House. This communication contains references to the authorization of make-up time for project workers absent because of personal illness, showing the value of that principle and why it should be maintained, even though the House did not see fit to adopt it as an amendment to the Relief Act, but since the move in this direction has been successful I would more particularly like to direct your attention at this time to the other problems included in the discussion:

Representative DUDLEY A. WHITE.

DEAR SIR: Because of the fact the nature of my work allows me to center my thoughts on such actions as the Congress may take which would primarily benefit us "reliefers" most, while you have many other items to consider that are of equal import to others of your constituents, besides being concerned with the affairs of the State and Nation at large, it is just remotely possible the information about to be given you herein is new and that I am not presumptuous in believing it may interest and aid in such action as you deem necessary in furthering a cause in which we are mutually interested. I refer to your amendment.

It is quite hard for one of my limited education to properly express himself in an understandable manner, but I'll endeavor to accurately picture the case as it now stands as briefly as possible, so as not to unnecessarily usurp your time.

I got wind that administrative orders had been issued at Columbus by Watson and that they had also been transmitted by Schmuhl to the jobs. It is a fact—orders at last have come to the jobs. But I was not entirely satisfied with that, for there are still ways of defeating the intent, so I wrote to Schmuhl's office, requesting the posting of bulletins on each project. He sent me one only of the bulletins. Next I wrote Watson. Just a short reply; no other action.

I wrote Hopkins in a rather positive vein, certainly not belittling our strength, because it seems to me it has not been their intention to willingly grant this claim, and they have only done so when it appeared they most certainly would suffer more lost prestige by having this brought to the country at large in the next session of Congress.

They had no intention of granting this till it at last dawned on them we are going to win during this session of Congress, and that it would endanger their status to be still on record as denying this humane measure, also in order to take away that credit which is rightfully yours, I am going to cite a few facts:

This injustice was brought to your colleagues' attention by you during consideration of the last relief act, which was finally passed June 21, 1938.

On July 11, 1938, 20 days later, over the signature of Harry L. Hopkins, Administrator, order No. 65 was put out.

Part 3, section 6 (B) of that order is the first instance on record where the "powers that be" were willing to concede anything along that line. Even then I do not believe they intended any good to come of it or else they would have specifically instructed State administrators.

As told in my letter to Hopkins, National Administrative Orders No. 54 and No. 56 granted no actual concession because of the fact 5 days consecutively lost because of illness called for mandatory discharge. Likewise, the bulletin on page 52, State Finance Manual, was a farce.

A State Administrative Order No. 727 was finally issued by Watson on November 29, 1938. And on December 12, 1938, Watson issued order No. E.182. Am going to enclose this form, gotten from Schmuhl. It shows form E.445 as superseding form FA-45. This letter form is the old one they used in allowing make-up time of less than 5 days and then only when they wanted to.

The administrative orders have finally been relayed all the way down till it now appears one point has been entirely won. But appearances are often deceiving. W. P. A. officials could easily rescind their orders or, if the men are not going to be informed of their new rights, most of them will know nothing about those rights unless all W. P. A. officials having any chance to abridge to any extent are absolutely honest and unselfish in their interpretations of the order. The two dates, November 29, 1938, when order No. 72 was issued, and December 12, 1938, when Watson issued order No. E–182, shows quite a lapse of time before part 3, section 6 (B) of Hopkins' order No. 65 became effective in Ohio. And I wonder how many States still have been neglected.

The Washington W. P. A. office seemed to disclaim any knowledge of the "5-day rule." So they forwarded my letter to the Ohio headquarters and I am just in receipt of a letter from Watson informing me the "5-day rule" is in effect in Ohio, but adding it is only in order to "exercise some degree of control over our projects," and that a person who has been laid off because of 5 consecutive workdays' absence is placed on the rolls again when able to work and that the time lost because of that personal illness is carried as allowable time until it is entirely made up.

So you most certainly have done a most wonderful thing—and many are the workers who know it was from your efforts this concession has been gained.

There are none of us who can find fault with the workings of that rule, providing this policy is understood and the proper sequence of forms filled out by those directly in charge of that work. When that is so, a worker is fully protected, in that his actual personal sickness will not cause him nor his family added hardship from lost time. And that certainly is all we can ask along that line. So again I thank you for myself and all other interested W. P. A. workers.

So much for that.

The money earned on W. P. A. is supposed to be to take care of the needs. If, as in our region, $48.40 is what is a just monthly wage for single people, then how can Hopkins or Roosevelt believe that a person supporting wife and numerous children can adequately provide for them at that scale of wages.

I have no kick on the hourly rate; only the monthly rate. If people with large families are forced to reduce expenditures to their earning capacity of $48.40, it will be the children who suffer first. When the children are made to suffer, it means only one thing: A lowering of the mental and physical standards of our future men and women—of our future businessmen, lawmakers, soldiers, nurses, etc. And what could be more harmful than chancing the very future of our country on a standard of living which, for large families, is little less than starvation wages.

I believe it is the intent of the Republican Party to place relief back where it belongs when they become strong enough—back to the local States, counties, and townships, with the help of Federal aid.

When that time arrives, I am certain these moneys will be budgeted according to need, which can only be figured by the size of the family.

It is not that we wish something for nothing—only that an equalization be made in the form of extra duty because of the extent of need. As it is, the life of the Nation (these people who rear children) are penalized in this set-up because of their own good citizenship, their assuming the proper functions of true patriotism and, with each added child, they, and each one of their children, are penalized only the more.

* * * * * * *

We thoughtful people on W. P. A. know that no matter how hard we work for our wages this is "made work," and because it is relief it should be a more just distribution of these funds according to need.

This need, which can only be based on the size of the family and their immediate conditions, is best known by such local agencies having supervision on the grounds—the State, county, and townships.

Because Federal funds would be allotted for that purpose, the Congress itself would set the regulatory rules.

One of the most evident injustices at this time is curtailing the income of heads of large families—granting them less money than smaller families or even single people.

I believe the hours of work, the monthly income, should be based on the size of the family—the need.

* * * * * * *

This would not be either more or less than a budgetary allowance, an allowance for which a person would have to work his full allotted hours to gain the full benefits the size of his (or her) family entitled them.

* * * * * * *

Should this be worked out, I believe adequate relief could be given every case at a substantial saving to the Government.

First. By returning it locally a huge savings could be had, because many high-salaried supervisory employees could be dropped when central offices were either discontinued or personnel sharply reduced.

Second. By returning the supervision to local agencies, chiselers could more easily be caught. Certainly there are known chiselers in every locality, for surely it is chiseling to accept this form of charity and to then spend any portion of that money on other than family necessities. Surely this relief money was not intended as pleasure money for some recipients simply because their need is less than others.

Third. While it may seem the cost of a workable plan of this nature might be more than under present circumstances because of the fact possibly half the W. P. A. workers would be getting some addition to their monthly earnings, it must be remembered that each individual case would be governed by the size of the family, and, with the present monthly wage as a base, for a certain size family the cost of more hours of work to those in that group would be counterbalanced by a reduction in hours of those not in such dire need, or by elimination of chiselers.

* * * * * * *

I have just turned from a radio, where a news broadcast quoted Harrington as saying that in the reduction to come over W. P. A. (if Congress does not appropriate the thrice demanded $150,000,000) he has told the committee that rather than investigate individual cases in order to lay those off first who are in the least need of relief he will shut down an entire project.

In other words the needy and chiselers are to be treated alike.

There could easily be a reduction in both W. P. A. expense and personnel by examining the needs of relief clients, but if they do that it would not create the fear of wholesale reductions in a given area, it would not cause those in need to join forces with those they knew were not in such need and pressure groups would not then have the power to coerce the Congress to submit to the whims of one man.

I think not when the realization of facts become widely known, especially so, when no added money is needed for a just distribution—when the motto "Adequate relief for all; graft for none" is rigidly enforced.

* * * * * * *

Times have changed since last June, and I think the Congress is now anxious to write into a relief bill such regulatory items as seem to them for the best interest of the country in general.

Thanks for your last letter and for your aid.

Very respectfully yours,

P. D. STARK.

The New York Cotton Exchange Is Purely a Gambling Machine Operated and Controlled by Speculators and Manipulators

EXTENSION OF REMARKS

OF

HON. HAMPTON P. FULMER

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Saturday, March 25, 1939

Mr. FULMER. Mr. Speaker, under leave to extend my remarks in the RECORD, I want to quote some excerpts from a statement issued by Mr. Edwin A. O'Neal, president, Farm Bureau Federation, referring especially to the operations of the New York and New Orleans Cotton Exchanges. In doing so I am not proposing to go along with the idea of subsidizing cotton at the rate of 6 cents per pound for the purpose of exporting any part of our surplus cotton to foreign countries at a time when we have millions of people who have very little bedding and not enough clothing to take care of the needs of their families.

I hope to go into this surplus-cotton problem a little later on, offering a program which I believe will help solve this serious problem; but it will be a program whereby we shall be able to consume the cotton in the United States, which will put our cotton mills to work and bring about the employing of a considerable number of the unemployed, all of which will tend to increase purchasing power and home consumption in the way of new uses and the supplying of our own people.

Mr. O'Neal states:

The fight of the New York and New Orleans Cotton Exchanges and other cotton-trade interests, some of which claim at least in part to represent farmers, to protect speculators by killing off the cotton export subsidy plan that would help the farmers and put over some plan to lower domestic cotton prices, is a public scandal.

The fight has as its chief purpose the protection of speculators, including foreign speculators, and American owners of gins, compressors, and warehouses in Brazil who finance the production of Brazilian cotton and who are interested in holding up the world price of Brazilian cotton, which is being harvested at this time, at the expense of the sale of American cotton to foreign mills.

Some days ago I stated that the New York Exchange was nothing but a gambling machine, operating in the interest of speculators, gamblers, and manipulators. For instance, when the news item went out to the country the other day that the Secretary of Agriculture, Mr. Wallace, had a conference with the President about the subsidizing of cotton to foreign countries, on the strength of this rumor speculators proceeded to sell March contracts, putting the price of cotton down to the extent of $2.85 per bale.

A statement was issued in the press by those operating the exchange that the reason for this wholesale selling of March cotton was because of a very prominent partner of a large spot concern had temporarily left the floor of the exchange in New York, and therefore was unable to protect the buying side so as to prevent just what happened.

If this statement is true and, of course, it is not true, just think what you have operating in this country, which is supposed to be operating in the interest of cotton farmers, where one man can take either side, the buying or selling, and control the selling or buying of cotton on this exchange.

As stated by Mr. O'Neal, certainly, the Cotton Exchange is absolutely controlled by speculators, not only in this country, but in foreign countries.

Sometime ago when the Smith bill was being considered seriously it was thought at that time that perhaps some 2,000,000 or more bales of cotton would be placed on the market.

One of the large operators in the South, representing spot cotton people, as well as speculators and gamblers, advised one of his clients that that time, stating:

It is my belief that they are going to put some of this surplus cotton on the market; therefore, I would advise you to sell your March and buy October.

The reason for this is that if even 1,000,000 bales of this cotton should be placed upon the market at the present time, the near months would, naturally, go down, as they did in the case of the rumor some days ago; but, in that the distant months, October, for instance, being 100 points below March, naturally, they would be buying October while selling March and, instead of October going down, perhaps it would hold its own or advance, which was absolutely the case when they sold March the other day, to the extent of $2.85 per bale.

Mr. O'Neal states further:

In order to protect their selfish interests, the cotton exchanges and their satellites are trying to destroy a plan that aims to maintain and increase the price of cotton to American growers.

This is absolutely true. Under all farm legislation passed during this administration, hoping to bring about a decent control of the production of cotton, not for the purpose of bringing about a scarcity of cotton, these various groups who do not produce cotton, including speculators, gamblers, and manipulators, have been doing everything possible to destroy the program for the purpose of having farmers, in that they operate as individuals, to proceed to produce large and small crops over the years, in line with weather conditions and boll-weevil infestation, which is the only control that we have had in the past.

Now, why do I make this statement? It is for the reason that they understand, as in the past, that farmers have no control over their production and marketing, and will have no place to go to borrow on their cotton; therefore, they will be forced to place same on the market, in that they have to sell in order to pay their obligations; and, naturally, during the cotton season, with all of this cotton going on the market, these speculators, gamblers, and manipulators are able to make profits by selling the market, and, in that spot holders are able to carry this cotton, in that they are under these circumstances largely able to control the marketing and distribution of same, they stand a fair chance of making considerably more money out of speculating and the handling of the cotton than farmers can possibly make in producing the cotton crop in the South.

Some days ago I received a letter from the president of several cotton mills in the South, which gives the real picture in dealing with the New York Cotton Exchange, and which would clearly indicate to you that my charges are absolutely correct, all of which is absolutely known to those who administer the Cotton Futures Act.

In other words, when farmers are blessed with good weather, and they are not troubled with the boll weevil, thereby producing a larger crop than the average, instead of it proving to be a blessing it proves to be disastrous, in that very often the smaller crop brings in more cash than the larger crop.

The following is a letter just referred to herein.

I am inserting also at this point copy of my letter addressed to the cotton-mill president, in reply to his letter, and letter written the Secretary of Agriculture, together with his reply thereto:

MARCH 3, 1939.

DEAR CONGRESSMAN FULMER: Whenever the New York Cotton Exchange quotations fail to reflect the actual value of cotton, that exchange ceases to be an asset and becomes a liability to the cotton-textile industry and the cotton farmer alike.

Several days ago the closing quotations on the New York Cotton Exchange which are based on ⅞-inch Middling cotton were:

Spots	9.01
March	8.41
May	8.08
July	7.79

At the same time a large cotton manufacturer asked several important members of the exchange to quote a sizable quantity of ⅞-inch Middling cotton, landed at mill, for each of these four deliveries. The following quotations were received:

	Spots	March	May	July
A	9.31	9.51	9.58	9.64
B	9.36	9.41	9.48	9.54
C			9.73	9.54
D	9.51	9.56	9.68	9.89
Average	9.39	9.49	9.62	9.65

Everyone knows that no single fiber of cotton can be here in July which is not here now. Everyone also knows that if cotton is to be available for July delivery, the cost of storage, insurance, and interest must be added to its present value. Whenever members of the exchange are asked to quote actual cotton, these facts are written clearly into the quotations. On the other hand, when a legitimate hedge is put in against the purchase or sale of cotton cloth, under their own New York Cotton Exchange contract, these fundamental facts are flouted by precisely the same group who demand carrying charges when they are faced with actual physical delivery of cotton.

The reason for this strange situation happens to be quite simple. Under the Cotton Exchange contract, upon which published quotations are based, the seller has the right to make delivery of all or any portion of the quantity involved at any of 8 delivery points, in any of 20 grades, in any of 3 staples, as follows:

Delivery points: New York, Norfolk, Charleston, Savannah, Mobile, New Orleans, Galveston, and Houston.

Grades: Middling, fair; Strict Good Middling; Good Middling; Strict Middling; Middling; Strict Low Middling; Low Middling; Good Middling, extra white; Strict Middling, extra white; Middling, extra white; Strict Low Middling, extra white; Low Middling, extra white; Good Middling, spotted; Strict Middling, spotted; Middling, spotted; Good Middling, tinged; Strict Middling, tinged; Good Middling, yellow, spotted; Good Middling, gray; and Strict Middling, gray.

Staples: ⅞-inch, 15/16-inch, and 1-inch.

This means that on a single contract for 100 bales, a mill may be compelled to accept 60 different kinds of cotton, or that, on a larger contract, a mill may have to take delivery on as many as 480 bales at 8 separate ports scattered along the Atlantic and Gulf of Mexico coasts with no two bales alike at any single port. In practice, it is utterly impossible to spin such a conglomeration of cotton. Whether put there for the purpose or not, this provision of the contract effectively estops any cotton mill from insisting upon actual delivery and forces it, like any pseudo trader, to buy in or sell out whatever transactions it has made on the exchange. Last year the several cotton exchanges dealt in some 42,000,000 bales of cotton. So safe, however, is the seller in the knowledge delivery is only a remote possibility that the most recent report shows at all 8 ports only 36,360 bales of cotton ready for delivery. This "certificated" stock, like the wooden sandwiches of Raines law days, is used over and over again.

After it leaves the farm cotton may change hands many times, but the final purchaser is ever and always a cotton mill. It naturally follows that when the possibility of this final purchaser demanding delivery is effectively destroyed a seller's market is created and quotations are chalked up which no longer reflect the real value of the commodity. Such distorted quotations can never be above real value because under any such circumstance shippers immediately would deluge the market with actual cotton.

On the other hand, the buyer has no such remedy at hand. When delivery is threatened, he dares not call the bluff by saying, "Ship me the cotton." He has to step up and settle. The cotton exchange collects another commission. The same lot of cotton is used to threaten another buyer, and quotations, so far below real value that they constitute a commercial joke, are allowed to stand unchallenged.

The present "inverted" cotton market supported by these misleading quotations is published by the daily newspapers throughout the land. Buyers naturally regard it as authentic and expect mills to price their cloth on this commercially impossible basis. Such buyers find it hard to believe that July cotton costs a mill 2 cents a pound more than these perfectly reputable newspapers report it to cost. Skeptical by nature, they press, press, press for lower levels or simply decline to lay down the forward commitments so necessary to the proper functioning of the textile industry and to the intelligent distribution of a cotton surplus which has become a major headache.

The vagaries and failings of the administration cotton program have come in for a lot of unfavorable criticism. Much of it is richly deserved; but a goodly portion of this criticism should be laid where it justly belongs, at the doors of this inequitable cotton contract. Furthermore, some effort should be made to prohibit the publication of cotton quotations which mislead the public, injure the farmer, and damage a great industry.

Sincerely yours,

——— ———.

HOUSE OF REPRESENTATIVES,
Washington, D. C., March 3, 1939.

MY DEAR MR. ———:

I appreciate your letter of March 3 which, in a great many instances, is absolutely in line with the contention that I have had all along, and which I have expressed on many occasions, that is, the operations of the New York Cotton Exchange is an absolutely one-sided proposition.

In the Smith-Lever Act we have two sections governing the selling and the buying of cotton. One of them would give the buyer equal rights with the seller, but it is not operative for the reason that those dealing on exchanges will not operate under that section.

We all know that the buying and selling of cotton on the exchange does not take into consideration seriously the delivery of any actual cotton, and, if, as stated by you, a buyer should call for the actual cotton, the seller is able, under the transactions now permitted on the New York Exchange, to offer such a type of cotton, or at such delivery point, or various delivery points, that it would be impossible for the buyer, regardless of what line of business he is engaged in, to accept such delivery; and, therefore, it amounts to nothing but a paper transaction.

However, when you would attempt to amend legislation or write legislation, having in mind the functioning of the cotton exchange, in the interest of buying and selling actual cotton, which is claimed now by those who speculate on the exchange, that this is the purpose of the exchange, it is impossible to get favorable consideration.

If it were possible for your mill to purchase a contract for cotton on the New York Exchange for delivery, writing into that contract the type of cotton that you desire to purchase and naming the place of delivery, you would then tend to make this operate as a real medium of buying and selling, as well as legitimate hedging, instead of it being as operated today, nothing but a speculative, gambling machine.

If those who speculate on the cotton market had any assurance whatsoever that from two to four million bales of the present surplus would be put on the market commencing within the next 30 days, then you would see just the reverse of the quotations in New York. That is, they would sell the nearer months, which they have been buying under the present program, and hedge on the distant months.

I note in your third paragraph that several of the members of the exchange have quoted on a sizable quantity of ⅞ Middling cotton landed at the mill for certain delivery months. In these quotations they have completely turned the picture around. In the first place, they do not deliver spot cotton. In the second place, they gave you these quotations, because they knew that if they had to go out on the market today and actually buy spot cotton for delivery, they would be unable to do so unless at the quotations contained in your letter, under the various months listed therein.

I regret exceedingly that, should I call on the Department of Agriculture to thoroughly investigate this matter, and submit the facts to the Congress, which would do the thing stated in your last paragraph, I would be unable to get anywhere for the reason that it appears that those connected with the Department in charge of the administration of the grain and cotton exchanges are more interested in the folks who are operating all of these exchanges than the producer of cotton, and the actual buyer and manufacturer of same.

With best wishes, I am,

Yours very sincerely,

H. P. FULMER,
Member of Congress.

HOUSE OF REPRESENTATIVES,
Washington, D. C., March 3, 1939.

Mr. H. A. WALLACE,
Secretary, Department of Agriculture, Washington, D. C.

MY DEAR MR. WALLACE: I am enclosing herewith a letter just received from Mr. ———, who is deeply interested in cotton manufacturing in the South, together with my reply to his letter.

Mr. ——— is absolutely right, and just why we permit exchanges in the country to operate as purely gambling machines with every advantage over the buyer, as far as buying cotton is concerned, taking every opportunity to either put cotton up or down, even on a slight rumor, is beyond me.

It is true that they have southern delivery, but it is a joke. In the first place, they buy and sell millions of bales of cotton during any 1 year, and the amount of actual cotton for delivery is a joke.

Some days ago I saw a letter from a party who has considerable business with the New York Exchange, addressed to one of his customers in my State. He advised this customer that it was very apparent that Congress was going to turn loose some cotton. That was when they had a conference over in the Senate, talking about turning loose from two to four million bales. He advised this customer to sell his March contract cotton and buy October.

Now, the reason for this is very simple. He knew that spot cotton turned loose on the market would cause the present months to go down, and in that October is over 100 points before March, it would put his customer in a much better position as far as speculating is concerned.

I am wondering if you would care to comment on Mr. ——— letter, and whether or not you would suggest any legislation which might remedy this purely speculative gambling outfit, so that it might be made to operate in the interest of those who produce and who actually buy cotton, as well as manufacture actual cotton.

With best wishes, I am,

Yours very sincerely,

H. P. FULMER, M. C.

DEPARTMENT OF AGRICULTURE,
Washington, March 22, 1939.

Hon. H. P. FULMER,
House of Representatives.

DEAR MR. FULMER: Your letter of March 3 has been received, in which you comment upon a communication received from Mr. ——— relative to certain features of the New York cotton futures contract.

Mr. ——— correctly states that the inverted position of the market is a deterrent to the cotton manufacturing business. It is detrimental also to all branches of the cotton industry, a view subscribed to by mills, merchants, cooperatives, and exchanges generally. Meetings have been held by these trade groups to consider proposals to modify the futures contract and improve it. Exchange officials are now giving serious thought to these proposals and it is expected that modifications will be made which will be helpful.

It is not believed that the current market situation is due principally to artificial and uneconomic provisions of the futures contract. The loan program with the loan level above the price the world is willing to pay for American cotton has resulted, as you know, in the accumulation of large stocks of cotton. This is an important factor in the present market. It has placed a premium on cotton future quotations in near positions. The advance of the futures prices to equal that of spot cotton as the futures mature is evidence of the sustaining effect of the loan upon price. The possibility of changes in the loan program is necessarily reflected in the more distant futures.

Mr. ——— contends that the inverted position of the futures market is caused by the advantages of the seller over the buyer because of the multiple quality and delivery point provisions of the futures contract. During the Senate investigation in 1936 it was brought out that these multiple features tend to depress the near futures prices rather than the distant months. This is directly contrary to the views expressed by Mr. ———. The multiple provisions have been in effect for several years, during which there have been years of normal markets with carrying charges between futures.

You refer to the volume of speculation on the cotton exchanges. There is always some speculative trading, but it is interesting to note in this connection that as of a recent date reports made to the Commodity Exchange Administration on large accounts (those accounts long or short holding positions of 5,000 bales and over in any future) showed that long speculators held 2.7 percent of the long positions and short speculators only one-half of 1 percent of the short positions. Hedgers accounted for 15.3 percent of the long positions and 55.8 percent of the short positions. Spreading accounted for 3.1 percent of the long positions and 6.1 percent of the short positions. The remainder of the open positions was held by small accounts (those holding less than 5,000 bales) who held 78.9 percent of the long side and 37.6 percent of the short side. It is evident from these percentages that the volume of speculation upon the cotton exchanges is exceedingly small, as has been the case for some time.

The present market situation is most unsatisfactory for all concerned, but the enactment of proposals before Congress to release additional cotton now held under the loan should go a long way toward adjusting the pattern of the present inverted market.

Mr. ——— letter, as well as the copy of your reply, is returned herewith for your files.

Sincerely,

H. A. WALLACE, *Secretary.*

You will note that the Secretary of Agriculture, Mr. Wallace, in his reply, is simply in a large measure quoting the language of those who are operating the cotton exchange, who, when questioned along this line, make similar statements. In other words, these statements would lead you to believe that actual cotton is involved in these transactions, which is absolutely untrue, in that practically every transaction winds up in a paper settlement, without any delivery of actual cotton from anybody to anybody.

I make the further charge that some days ago when these speculators and gamblers sold March to the extent of $2.85 per bale, not a bale of spot cotton was delivered to anybody in connection with these transactions. As previously stated, all of these sales and purchases were absolutely paper transactions.

If it is, as stated, a good thing for farmers to have the type of operation that we now have on these exchanges, why would it not be a good idea to permit the buying and selling of farm machinery, tractors, and automobiles, in like manner on an exchange?

Oh, no; this would not work, because these well-organized and well-financed groups do their own fixing of prices, which are absolutely monopolistic, and which have been and which still are destroying the cotton farmer on account of these high, fixed prices, in comparison with the very low prices that farmers receive for that which they produce.

If farmers were able to organize and control their own production, marketing, and distribution, then you would not find this type of speculating and gambling on the farmers' crops, because farmers would then be in the same position of these well-organized groups; but it is a known fact that farmers cannot within themselves do these things, and we in Congress permit these organized groups to dictate to the Congress just what type of legislation they want or do not want, so that they may be able to continue, purely on a selfish basis, to bring about poverty and misery to millions of honest American citizens, because of their hopeless and helpless condition.

It appears to me that the time has come, if we ever expect to bring about real recovery, that we should take out of the hands of these speculators and manipulators, as well as thousands of middlemen, operating as commission merchants and brokers, many of whom are real parasites, operating between producers and consumers, sapping the very lifeblood out of both of these groups, the marketing, distributing, and fixing of prices of farm products, and establish by legislation an up-to-date marketing and distributing system from the county, State, on through National agencies, where farm products may be properly graded and properly distributed, with some opportunity of having the same type of price-fixing and bargaining power that all of these other groups have.

All of this would tend to bring about equality on the part of agriculture with price-fixing groups, including labor, and in line with what is actually done by these other groups, which are able to do that which farmers will never be able to do.

If we were just as anxious to do these constructive things as we are to create new activities and appropriate millions to be spent by and through these new activities, millions of which are absolutely wasted, then we would put these unorganized groups in a position to take care of their own interests in line with these other groups, and, certainly, this should tend to bring about increased purchasing power, employment, and a much higher standard of living for the masses of the people, and prosperity all the way up the line.

War or Peace?

EXTENSION OF REMARKS

OF

HON. DAVID I. WALSH

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Tuesday, March 28, 1939

ARTICLE BY DR. JOSEPH F. THORNING

Mr. WALSH. Mr. President, I ask unanimous consent to have inserted in the CONGRESSIONAL RECORD an article entitled "War or Peace?" written by Joseph F. Thorning, Ph. D., Litt. D., chairman of the department of social sciences, Mount St. Mary's College, of Emmitsburg, Md.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WAR OR PEACE?

(By Joseph F. Thorning, Ph. D., Litt. D., chairman, department of social sciences, Mount St. Mary's College, Emmitsburg, Md.)

The theory upon which the Roosevelt administration's foreign policy appears to operate is that the best way to avoid war is to accord every favor "short of war" to Great Britain and France, the two empires which were eminently successful in procuring American soldiers for European combat in the last world conflict.

Furthermore, it may be assumed that the French and British, although they now insist that their privileged purchases of arms and munitions will continue on a "cash and carry" basis, will be perfectly willing, at a later stage in the negotiations, to permit the taxpayers of the United States to finance the high-minded venture in "collective security."

The term "collective security" reminds us that Josef Stalin, of Soviet Russia, has his own interpretation of that protective phrase. His satellites all over the globe are popularizing the notion that "to make the world safe for democracy" is to maintain the stability of the Soviet fatherland. Stalin and his mouthpieces no longer attack British, French, or American "imperialism."

On the contrary, the "democracies" are reproached from Moscow for their failure to "make a stand" against the dictatorships, overlooking the fact that the Communist paradise is, if anything, more "totalitarian" and more savagely "dictatorial" than Nazi Germany or Fascist Italy. The Moscow newspapers do not play up the apt description of Soviet Russia as "a species of tyranny tempered by assassination."

The Czar Stalin also soft-pedals the fact that he can have ready access to the war planes, siege guns, and tanks which we may be persuaded to ship to Paris or London. The experts in the United States Department of State know as well as the Review that the French-Soviet alliance has never been denounced. To be sure, it creaked a little in the hinges at the time of the Czechoslovak crisis.

Walter Winchell to the contrary notwithstanding, it was the Soviet Union that curled up on that contract. But Leon Blum and his Socialists are still the largest bloc in the French Chamber of Deputies, and they have not yet been disillusioned as to the doubtful benefits of the Moscow pact. Nor do they have to worry about the attitude of the 72 Communist members of the Parliament at Paris. The French "popular front," although weakened by the defection of the Radical-Socialists, has by no means repudiated the "Trojan horse" policy dictated by Georgi Dimitroff and the Third International.

This is as good a time as any to remember that the Daladier government, however well intentioned at the moment, has no mandate or lien on permanent power. How many votes would be required to overthrow the rightist regime? How large is the majority upon which M. Georges Bonnet, Minister of Foreign Affairs, can rely in case of emergency? What would happen in another general election?

Although the leftists, embittered by jealousy and strife, are in retreat in France as in many other parts of the world, they are fighting a stubborn rear-guard action. Plucking a leaf from the history of Russia, they assert proudly, defiantly: "The last stand of an embattled host need not always mean a catastrophe."

A world war is the last desperate card of these world criminals. In France, Great Britain, and the two Americas their ranks will be swollen by refugees from the international brigades, whose valor, be it acknowledged honestly, saved Madrid in November 1936.

It has just been revealed that in November 1938, 200 ex-members of the international brigades who fought for communism in leftist Spain occupied the Renault automobile factory outside Paris in defiance of the Garde Mobile. The "veterans" of the American battalions who were organized to fight foreign wars are the loudest, most active proponents of "a preventive war by the democracies."

Of course, Communists, "liberals" and "leftists" are not the only warmongers. Many sincere conservatives are supporting the movement to grant Great Britain and France "every facility and means short of war" in order to back up the foreign policy of these two nations. The attitude of these groups is predicated upon reasons of alleged self-interest. The "nonisolationists" claim that, if we stand idly by while Germany and Italy revise the map of Europe, Africa, and Asia, we will constitute the "dessert" on a menu which had Czechoslovakia and the Ostmark as "hors d'oeuvres."

The argument has a measure of plausibility. The utter defeat of the French and British empires would clear the European boulevards for the wheels of the Rome-Berlin axis. The prospect of the Swastika Ueber Alles is not a subject for supernatural contemplation.

Happily, the conclusion of French and British collapse is not one that we have to accept. According to the most responsible British statesmen themselves, the air force of the empire is formidable enough to bombard the Rhine. The French general staff The Swastika Ueber Alles is not a subject for supernatural conline.

The European war, if it comes this year or next, will be a replica of the last; a war of attrition. Both sides, unfortunately, will suffer terribly for every success. The game is not worth the candle. No one will win. No one did win. No one can win. The balance is even, unless we encourage the allied empires to "defy" the dictators—except Stalin!

"Steps short of war," it may be noted, usually facilitate active participation in armed conflict, sometimes in cruel frustration of the hopes and intentions of those who urged the unwarlike preliminaries.

"Steps short of war" led directly to United States entrance into the World War. The munitions traffic, loans, financial understandings led from neutrality in 1916 to warfare in 1917.

A Permanent Agricultural Program

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 28, 1939

ADDRESS BY HON. EDWARD CORNEABY

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD a most interesting address by Hon. Edward Corneaby entitled "A Permanent Agricultural Program." Mr. Corneaby formerly served as director of the department of agriculture in the State of Minnesota, division of markets and marketing, and it was while serving in this capacity that I first had the pleasure of making his acquaintanceship through our then mutual friend the late Floyd B. Olson, three times Governor of Minnesota, when Governor Olson and Mr. Corneaby visited Washington in behalf of the farming and agricultural interests of their great Commonwealth. Today, as secretary to my colleague the junior Senator from Minnesota [Mr. LUNDEEN], Mr. Corneaby is one of the most capable and popular secretaries on Capitol Hill. I know something of his career. He was instrumental in the establishment of municipal markets that spread from his progressive State over the entire Nation. As director of the department of agriculture in Minnesota, he designed and aided in the pas-

sage of laws that proved of great assistance to the farmers. He also assisted in the passage of laws that protected the farmer from "chiseling" buyers. I know that he is heart and soul interested in farm legislation. He has spent the best years of his life in the study of markets and farm problems. He is an "America first" American, who believes in saving our own people first. He says, "Keep out of the quarrels and wars of Europe and the lands beyond the seas." I am confident his address will prove interesting and informative to those who peruse the lines which I have requested to be printed in the pages of the Appendix.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The tragedies of the economic depression which the American people have been compelled to tolerate, in the midst of plenty, for the past 6 years have caused many intelligent people to wonder if our representatives really want to adjust our economic structure in such a way that it will function in accordance with the needs of all humanity.

When you prime a well, whether it is in the kitchen or the barnyard, you expect to get more water out of the well than the amount used in the process of priming. If you don't get a substantial water supply, the well isn't worth priming, or else you have pumped the water up before it made connection with the source of supply.

Something certainly has been fundamentally wrong with the priming processes which our Federal Government has used in an effort to restore economic prosperity. One reason for this fact is that both Congress and the industrial East do not and apparently will not agree that agriculture is America's basic industry.

A little incident which occurred in 1920 will illustrate my point of view. We had what appeared to us then a serious business and agricultural depression.

For example, corn which sold in 1919 for $1.75 per bushel was selling in 1920 for 40 cents per bushel. A group of about 50 farmers, business and professional men, representing the agricultural Northwest, were called to Washington for advice and counsel. While there they listened to an address by an outstanding eastern industrialist. During his address he made these remarks: "The United States is, principally speaking, an industrial nation. In order that our industries can succeed it is necessary to have cheap food products, and in order to have cheap food products it is necessary to have an agricultural peasantry." This attitude has been, and still is, characteristic of the industrial East. It explains in part, at any rate, the pump-priming policy practiced by our Federal Government.

Our priming policies have benefited big business for the most part. Our railroads, public utilities, the steel industry, and large construction corporations have been the principal beneficiaries of all Federal and State grants used in an effort to stimulate business.

The aid given agriculture has not been an intelligent aid nor has it resulted in any permanent benefits to agriculture. When the Government grants seed loans to the farmers only to create a surplus at the time of harvest, which under our present system demoralizes the price of agricultural commodities, it is difficult to identify any benefits. A 5-percent surplus under our present system of marketing, subject to the manipulation of vicious, crafty, exploiting grain speculators, often demoralizes the price of grain from 50 to 70 percent.

The A. A. A. was a gesture on the part of the Federal Government to guarantee the benefits of monopoly price for agricultural commodities. They hoped to accomplish this by arbitrarily curtailing the production of farm products.

It soon became evident that the benefits of an economy of scarcity would not function with the same degree of accuracy in the case of agriculture as occurred when this policy was applied to monopolized industries. There were too many unpredictable factors, consequently the policy was abandoned. It demonstrated, however, that our industrial structure is at present built on two vastly different economic policies. Our monopolized industries operate in accordance with what the economist terms the paradox of values, or the monopoly price, meaning that a small output artificially controlled is worth more in dollars and cents to the manufacturers than a larger unit production. Agriculture, on the other hand, operates in accordance with the laissez faire policy when a small surplus completely demoralizes the price of the commodities produced.

The criticism of the A. A. A. presented a strange paradox. People often said it was un-American to curtail the production of wheat, cotton, and hogs when mothers and children and many groups of deserving citizens in this country were in need of these commodities. Their interest, however, in the needs of society seemed to vanish rather abruptly because they failed to apply the same logic and say that it was un-American for the textile mills, the flour mills, and the packing plants not to make these commodities available for the public at a price at any rate not in excess of the cost of production.

A nation such as ours, with a population of 130,000,000 people, should not encourage an economy of scarcity, especially when it applies to necessities of life. In a democracy the men and women who produce the raw materials used in food, clothing, and homes should share equitably in what they produce and enjoy the advantage of an economy of abundance.

A permanent, healthy prosperity in America will never be realized until agriculture is established on a sound economic basis. Present methods may check the depression, but at best they only allow our industrial structure to "mark time." In priming the industrial well and only priming the railroads, the public utilities, the construction enterprises, so to speak, and not have the priming apply in an intelligent and substantial way to agriculture, will never restore prosperity. Agriculture is the only industry in America possessing the potentialities to sustain and to put in motion our entire industrial structure.

The annals of the commercial history of the United States demonstrate that whenever the prices of agricultural commodities fall and become demoralized it results in chaos in every phase of industrial activity, while, on the other hand, if agriculture is in a healthy economic condition all industry in America flourishes. Our railroads, mines, public utilities, large construction companies don't carry and perpetuate agriculture. It is, rather, agriculture that makes these activities prosper.

It is good, shrewd, practical business to guarantee a certain rate of income and profit for our railroads, telephone companies, electric-light companies, insurance companies, etc. Why shouldn't the same economic principles apply to agriculture? Why should agriculture be asked to shift for itself when other industries have a price structure which guarantees an income based on capitalization and services rendered? (In many instances the capitalization reflects a high-water mark. Earnings and dividends allowed being based on actual investment plus watered stock.) How long would our railroads and public utilities last if they were compelled to absorb the price fluctuations characteristic of agriculture?

If an insurance company receiving $20 per thousand for a certain life-insurance contract would be compelled to sell that contract for $12 six months from now, it wouldn't be long before such extreme price variations would completely cripple the industry. The American farmer, however, is expected to thrive under such a system. Wheat may sell for $1 per bushel today, and 3 months from today the same grade of wheat sells for 60 cents per bushel, with the price of all other farm commodities produced by the farmer varying accordingly, and the farmer is expected to pay the fixed charges guaranteeing a profit and the cost of production for all services and articles he requires, freight rates included. Such an unfair condition just can't continue without making paupers and peasants out of our agricultural population. The American farmer deserves and rates something better.

The solution lies entirely in a practical, scientific, and intelligent handling of the surplus of farm commodities produced in the United States. Some feeble, unsuccessful, impractical attempts have been made to control the surplus.

The Hoover administration used the empty-bin storage method plus buying of grain futures. The empty-bin storage method refers to the practice of buying and storing grain, but allowing the same grain to be constantly on the market for others to buy and sell. The storage actually exists only in the form of a bookkeeping transaction. This attempt to stabilize the grain market in reality had a demoralizing effect because the grain trade didn't know from one day to the next when these large grain holdings on paper would be turned back on the market. The present method of attempting to control the surplus and encourage an orderly marketing of grain by making available loans at the rate of one-half or less of the cost of production helps, but it is far from a permanent solution of the problem.

A practical solution of the surplus problem can be intelligently accomplished by having the Federal Government establish Federal elevators and buy and sell the surplus grain and thereby actually take the surplus grain off the United States market.

Such a system has many advantages. In America we have approximately 130,000,000 people. As a Nation with a basic necessity like wheat, we should never begin to think in terms of a surplus until we have at least 1 year's supply in storage. We use approximately 650,000,000 bushels of wheat in the United States annually. If there is a carry-over of over 200,000,000, it demoralizes the price, especially if there is a good wheat crop in the offing. If the Federal Government would actually purchase and store in Federal elevators a year's supply of the basic cereals and deal with the surplus over a period of years in a businesslike way, thereby stabilizing the price of agricultural commodities, this devastating depression would be at an end. The Federal Government has an oil reserve, why wouldn't it be even more sensible to have a wheat and cereal reserve? Such a policy would provide security and stability throughout the country, both in times of peace and times of war alike.

It would only be necessary for the Federal Government to buy, store, and dispose of the surplus of the basic grain crops, because if this was done, the farmer could easily adjust the balance of what he produces, such as livestock and special crops.

Some people may react to this plan and say that Canada tried this system and it failed. The situation in the United States and Canada is, however, not at all comparable. In the United States we have over 130,000,000 people compared with Canada's population of 10,376,786. The United States has a substantial domestic market while Canada is forced to rely for all practical purposes on a foreign market.

The policy recommended provides that the Federal Government would buy all grain of specified grade and quality offered for sale at the basic minimum price.

In reality, under such a system, the Federal Government would only be required to purchase a fractional part of the surplus due to the fact that as soon as the price increased above the minimum basic price, the Federal Government would cease purchasing grain. A price structure would be determined by a national agriculture board as a result of a scientific study by agricultural experts, establishing a price schedule guaranteeing a reasonable income based on efficient farming.

Example of price schedule

	Basic price [1]	Minimum crop-year price [2]	Selling price to farmers for seed and feed, 10-percent increase [3]	Selling price, open market, 25-percent increase [4]	Import price, 30-percent increase [5]	Export price [6]
Wheat	$1.00	$1.00	$1.10	$1.25	$1.30	(7)
Corn	.75	.75	.83	.93	.98	(7)
Oats	.32	.32	.35	.40	.42	(7)
Rye	.65	.65	.72	.81	.84	(7)
Barley	.50	.50	.55	.63	.65	(7)

[1] The basic minimum price after once being established would remain fixed. The Federal elevators would never pay less for established grades of grain than the basic price.

[2] Minimum crop-year price: Under ordinary conditions, the minimum crop-year price would be exactly the same as the basic price. If, however, the value of the dollar fluctuated and we had inflation or cheap money, the National Agricultural Board could establish an increase in the minimum price for that crop year.

[3] Selling price to farmers: It would be the policy of this plan to sell grain to bona fide farmers for seed and food purposes at an increase of 10 percent over the minimum price.

[4] Selling price open market: In the event of a poor crop year, the plan provides for selling the grain on the open market at an increase of 25 percent of the minimum price. Large fluctuations in the price of grain are disturbing and damaging to the farmer. Whenever there is a shortage of grain, the farmer is one of the largest purchasers.

[5] Import grain price: No grain would be imported until the domestic price was 30 percent above the minimum price. A substantial tariff on all farm commodities would apply. The price structure above the basic minimum price could vary in a normal way without any interference on the part of the Government.

[6] Export price: If after a period of 4 or 5 good crop years, a year's supply of basic food cereals had accumulated in Federal elevators, the National Agriculture Board would be empowered to dispose of any additional surplus to the best advantage of all countries concerned. In handling the surplus, it is not intended that the Federal Government would make money on the undertaking, rather it is anticipated that a deficit would be incurred each year. If, however, agriculture is placed on a sound, sensible businesslike basis, the benefits would be tremendous, and offset any deficit which might occur.

[7] Price to be adjusted in accordance with best possible advantages of all countries concerned.

This plan would not only restore confidence in agriculture but it would affect in a positive way every phase of our industrial life. The banker could consider agricultural paper as a good investment and experience no difficulty in rediscounting it to his advantage. The businessman, contractor, and implement man could extend credit to the farmer and know, as was the case in years past, that the bill would be paid. The wheels of industry would be set in motion from a natural cause and all business as a result would prosper.

The farmer likes to see his prosperity manifest itself in a physical form. He likes good equipment, fine stock, well-painted and furnished buildings, and clothes for his family. The farmers are the best group we have in America to put money to work and get it in circulation.

It is because the buying power of the farmer has been substantially curtailed that all industry is in a state of stagnation and requires artificial stimulation periodically.

Handling the surplus of basic grains through Federal elevators would restore stability to the entire price structure of agricultural products. Under the plan suggested, there would be only one transaction between the farmer and the Government. No corps of inspectors would be required to travel from farm to farm and examine corncribs and granaries. The Federal Government would buy just like any elevator whenever a farmer decided to sell at the basic minimum price and the grain trade and domestic market would purchase all grain sold above this price. It is conspicuously evident that the first step in the restoration of normal business conditions in the United States is to establish a permanent, sensible, businesslike policy for agriculture. After such a program is placed in operation the other steps in a recovery program will be more discernible. The farmers of America will find that if they unite on a definite agricultural program that organized labor will render substantial assistance by way of having such a program crystallize into law and put in operation.

Organized labor has had years of experience in promoting legislation and, if given an opportunity, would stand shoulder to shoulder with the American farmer in sponsoring a national agricultural program. The welfare of America would be greatly benefited by immediate action establishing a long-time agricultural policy. Whether we have a limited or unlimited production in the agricultural industry this sensible method of surplus control is necessary.

Suggested Amendment of Bituminous Coal Act

EXTENSION OF REMARKS

OF

HON. HARRY S. TRUMAN

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Tuesday, March 28, 1939

LETTER FROM COMMISSIONER WALTER H. MALONEY, OF THE NATIONAL BITUMINOUS COAL COMMISSION

Mr. TRUMAN. Mr. President, I ask unanimous consent to have printed in the RECORD a letter addressed by Commissioner Walter H. Maloney, of the National Bituminous Coal Commission, to the Kansas City Star concerning the so-called Allen bill proposing to amend the Bituminous Coal Act.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

GENTLEMEN: On March 21 you gave considerable space to the statements of Mr. E. M. Douthat regarding the Allen bill, recently introduced in the House of Representatives, to amend the present Bituminous Coal Act. Those statements are by no means correct. They also lack substantiating facts and data.

He mentions the great losses of the coal industry this year which may aggregate $75,000,000, and blames them on "demoralized prices caused by provisions of the act." Those losses are the result of the need for the present coal law, which will be in effect when our Commission establishes minimum prices, which now are in the final stages of compilation. Therefore, the loss in the coal industry cannot be the result of any law; but when minimum prices are made effective by this Commission, they will prevent such losses, because the coal industry must then sell its coal at or above the cost of production.

However, until the minimum prices are made effective, the coal industry likely will continue to sell its coal below the cost of production, which has resulted in the losses mentioned by Mr. Douthat. It must be observed that this law does not fix prices of coal; it only sets a base below which coal may not be sold at the mines.

While in Kansas City the other day I found records of coal being sold at the mines for 25 cents and 50 cents a ton that cost about three times the sale price to produce. Effective minimum prices under our law will prevent sales at such prices.

The Allen bill apparently eliminates any cure for the above-mentioned conditions. Briefly, it may be said to be an effort to avoid the effect of the present antitrust laws with no corresponding benefit to the coal industry. It provides for the establishment of marketing agencies—so does the present law provide for marketing agencies. To date our Commission has approved many of them, and they may now perform many of the acts permitted under the proposed Allen bill, but they are not doing it, and coal is now being sold at cutthroat prices regardless of marketing agencies. It is very similar to the law which was a failure in England until basic coordinated prices were established. This Commission has cooperated completely with the marketing agencies, some of which have existed for years; but marketing agencies cannot prevent the sale of coal below the cost of production. The only cure for that is a minimum-price system, which this Commission will establish shortly. Such was the experience in England.

Mr. Douthat complains about the cost and expense of administering the present law. That cost and expense is part of the cost of production which is always, in the course of good business, passed along by the producer to the consumer. However, it is only a drop in the bucket compared to the enormous losses suffered by the coal industry for many years, all because there has been no law to save the industry from itself and prevent it from selling its product below cost. He likewise complains of the limitations of the 30-day clause upon the right to contract. That limitation is removed automatically when minimum prices are established.

Practically all features of the proposed Allen law have heretofore been discussed in Congress and have been found insufficient. It is a plan advocated by low-cost producers who produce only a small percentage of the coal necessary to supply the needs of the people in the United States, and it is apparent that the Government must protect the balance of the producers in order that there will be fairness in the opportunity of producers to market their product and insure an adequate supply of fuel. With few exceptions, those who are supporting the Allen bill opposed the present law.

It should be observed that the minimum-price provisions of the present law were declared constitutional by the circuit court of appeals in the District of Columbia at or about the time this committee became active. It was apparent then, and is now, that a system of minimum prices in the coal industry is entirely legal and

constitutional, so the only remaining move for enemies of the present law is to repeal it. This statement is made for the reason that members of the so-called committee to reorganize the coal law are engaged in soliciting support from producers and distributors of coal in various parts of the country by representation such as you published, and it is feared they may be misled unless they are correctly advised. Any charge or complaint made by that committee has been and can be exploded with facts and data now in the possession of this Commission and generally known in the industry. It is also generally known minimum prices would now be in effect if it were not for the resistance offered by some large producers and some large consumers.

In support of my statement, may I quote from a letter of Mr. J. D. A. Morrow, leader of the so-called committee for amendment of the Coal Act, under which Mr. Douthat works. The letter was written to Chairman Tetlow, of our Commission, on January 23, 1939, in explanation of a speech Mr. Morrow made at Birmingham, Ala. I quote from Mr. Morrow's letter:

"In order that you may have a clear understanding, first, that my criticism is directed toward the price-fixing provisions of the act only; second, that I am not in favor of repealing the act (nor abolishing the Commission), but of improving it and trying to make it of really practical help to the industry; and third, that in no sense was I criticizing the Commission or its personnel."

The entire letter is available for publication if you want it. Therefore, in the light of these facts and a mass of data available in this Commission to establish the truth, I hope and trust you will give my statement as much publicity as you gave to those of Mr. Douthat.

Conservation in Missouri River Basin

EXTENSION OF REMARKS

OF

HON. ERNEST LUNDEEN

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 28, 1939

ARTICLE ON CONSERVATION

Mr. LUNDEEN. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "Conservation—the Missouri River—Progress and Prosperity for North Dakota and South Dakota." It has to do with the water resources of the great Missouri River.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

The development of the Missouri River Basin must be considered a definite and integral part of any program for the rehabilitation of the Northern Great Plains. The importance of this great area to the Nation is so vital to our economic structure that any plan of water utilization that will tend to rehabilitate large sections of this area must transcend State lines in its interest to the Congress. It is true that the Missouri River Basin embraces only all or parts of Kansas, Nebraska, the Dakotas, Montana, Wyoming, and Colorado, but this section of the country plays a most important role in the welfare of the Nation.

It is generally agreed that the fundamental need of this basin is the conservation of the available water resources. I consider conservation a process of making available water in an area for use where and when needed. It is a tragedy indeed to witness on the one hand devastating floods and on the other hand a starvation of water by our people when remedies for both of these conditions are available.

The Northern Great Plains area is one of the problem areas of this country. This area is capable, under normal conditions, of providing an ample livelihood for the thousands of its inhabitants if proper use is made of the land and water resources. But recurring droughts, dust storms, and water shortages have laid waste to thousands of acres of soil capable of high productivity.

One of the areas that has been especially hard hit has been the States of North and South Dakota. The story of the hardships of the peoples in this area is too well known to need elaboration here. They now ask of this Congress help that they rightly deserve.

I have given considerable study to the proposed Missouri River diversion project in North Dakota, and I concur with the Honorable JOSEPH J. MANSFIELD that this project is definitely one of conservation and should be rightfully considered as a major part of the ultimate development of the Missouri River Basin.

It has been estimated that an area of about 40,000 square miles or 25,600,000 acres in North Dakota, South Dakota, and Minnesota would be directly benefited by this project, which has for its objective the diversion of water from the Missouri River into Devils Lake and the Sheyenne and James Rivers. This area is capable of producing livestock and crops annually valued at $250,000,000. The importance of this area to our Nation cannot be dismissed.

In some sections of this area over 50 percent of the population are presently or have been on Government relief. The industry of the area here is in peril of going under. Cities have for years been treating sewage for their water supplies because the streams have stopped flowing. One section of the area that receives its water supply from wells because of lack of water in the streams has been subjected to a serious health hazard because of dissolved fluorides in the water.

It has been shown that over 22,000,000 acre-feet of water passes through the Missouri annually in North Dakota. It is proposed to divert only about 2 percent of this water into the James and Sheyenne Rivers and Devils Lake. Surely the welfare of nearly a million people should deserve our careful consideration of such a project.

Civil Liberties

EXTENSION OF REMARKS

OF

HON. CHARLES H. LEAVY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1939

ADDRESS BY HON. FRANK MURPHY, ATTORNEY GENERAL OF THE UNITED STATES

Mr. LEAVY. Mr. Speaker, the Honorable Frank Murphy, Attorney General of the United States, last night in his first Nation-wide broadcast since becoming Attorney General, very completely and fully expressed his views upon matters of vital concern to the Nation as a whole, and in the expression of those views he disclosed his philosophy of democracy clearly so no fair-minded person can longer doubt for a moment that the head of the Justice Department is a man of rare attainments, sound judgment, and great courage, and typifies the ideal of American citizenship.

I feel it is a privilege and an honor to make this extraordinary address a part of the permanent records of this body by having it placed in the CONGRESSIONAL RECORD.

The address of the Attorney General is as follows:

Democracy today is in a fight for its life. Wherever we look we see determined efforts to tear down the things that the masses of mankind have been painfully struggling to achieve all through the ages. The right of self-government, the right of every man to speak his thoughts freely, the opportunity to express his individual nature in his daily life and work, the privilege of believing in the religion that his own conscience tells him is right—all these precious things that men have won through blood and anguish are hanging in the balance.

We must not let the scales drop the other way. If we do, we shall have betrayed civilization itself. We must fight to keep these treasures just as bravely and vigorously as those who have gone before us fought to gain them. Democracy will not save itself. It isn't something automatic that will go on and on by its own power. We can't just be dreamy and sentimental about it. We must bestir ourselves and see that it works smoothly and efficiently in every respect. We must actually apply the principles of democracy to the world we live in—give them life and substance and meaning.

It will not be enough to do just half the job. We will have to be thorough and conscientious, because those who would like to destroy democracy are doing a thorough job of it wherever they have the chance. They are giving no quarter; neither must we.

The phase of democracy that I have in mind particularly tonight is civil liberty. But I want to emphasize once more that our fight will not be won by half-way measures. Not only must we make civil liberty a living reality but the democratic ideal must be applied in every part of our life—social, political, and economic.

Perhaps it would be helpful to start at the beginning and ask, "Why have civil liberties at all?" Generally speaking, we believe in them because we are convinced they represent the best possible compromise between the governmental regulation that is necessary for an orderly society and the absolute freedom that has no limits except the laws of nature. But there is another reason that comes closer home. We who are devotees of democracy believe in civil liberties because we know that without such rights as freedom of religion, freedom of speech and press, freedom to assemble peacefully and to petition our Government for the correction of wrongs, democracy cannot possibly exist.

If this, in brief, is the reason for our faith in civil liberties, what is our present situation?

It is common for orators on patriotic occasions to point to the early years of our Union as the period in which love of civil liberty was at its height. They remind us that it was the denial of liberty that drove the fathers into violent revolution. They point out that the Colonies refused to ratify the Constitution until they were assured that a Bill of Rights would be added. From such good evidence, they picture the period surrounding the Revolution as a "golden age" of liberty from which, for one reason or another, we have steadily declined.

There is another view—which, I suspect is held by a considerable number of people today—that seems to take civil liberty pretty much for granted. Those who subscribe to it look back over 150 years of political democracy in this country and conclude that what has existed so long will continue to exist. If they see any present danger to their liberties, it is at best a long way off.

There is a good deal to be said for both these attitudes, and particularly the first. Certainly none of us can forget or ever cease to revere the spirit of those who wrote and embraced the Declaration of Independence. We cannot forget how bravely they took up Patrick Henry's challenge of "liberty or death" and fought their way to liberty at such terrific cost.

But if we examine these attitudes closely, we will find that neither is entirely accurate. The first, which views the present with alarm, is unrealistic because actually we have made progress in public tolerance since those early days. As evidence, we need only to recall the notorious Alien and Sedition Acts, legislated and enforced by the last Federalist administration which preceded the term of Thomas Jefferson. Under the Alien Act, noncitizens could be deported or could be imprisoned for 3 years without trial or hearing. Under the Sedition Act, a newspaper editor or public speaker or, for that matter, a person in private conversation, could not utter any word which might be interpreted as a reflection on the administration. Violation of this law could be punished by Presidential order without trial, hearing, or the right of appeal. Unbelievable as it may seem today, the proprietors and editors of the four leading anti-Federalist newspapers of the day were prosecuted under this statute for sedition. One man was given a sentence of 2 years for erecting a sign which read, "Downfall to the traitors of America."

In 1800 public feeling against the Alien and Sedition Acts resulted in the election of a new administration. But political persecution was by no means at end. From time to time in the history of the succeeding years we find strong evidence that the group in power or in the majority was actively intolerant of those whose political views differed from their own.

In those days, as now, it needed a broad mind and a great heart to be tolerant of a political philosophy utterly opposed to one's own. Here was an infant nation embarking on a political experiment without equal in the history of the human race. The principle of government by the people was on trial before a world committed almost entirely to government by kings. What could be more natural than that men of strong convictions, each convinced that his way was the best and each one determined that the new experiment must succeed, should come to disagreement over policies and methods? In fact, every ingredient of a period of great stress in the national life was at hand. And it is a time like that when men are most sorely tempted to look upon civil liberty as a protection only to themselves and not to those with whom they disagree.

Obviously we are in a period of that kind today. The danger of class consciousness—something for which the vast majority of Americans have little sympathy in normal times—has been increased by unemployment and insecurity. The danger is not a theoretical one. It is not something invented in the mind of the social psychologist. It is an actual condition evidenced by happenings that come almost daily to my attention.

Only recently I received a letter from a wife and mother complaining that the small business conducted by her husband and son had been ruined because they opposed the political principles of the city administration. Intimidation had driven their customers away. Here is a form of persecution without benefit of an alien and sedition act.

In another community a young man who actively opposed the boss of the local political machine was indicted on a false charge. He was tried and convicted by a jury consisting entirely of persons connected politically with the leader of the machine. He was denied bail on appeal. After several postponements the case came to the appellate court but not until after the defendant had served his term.

Reports have come to the Department of Justice that persons who have testified before congressional committees have been beaten or discharged from their employment. In other words, for exercising the elementary right of conveying their views to their Government they were subjected to physical cruelty or loss of their jobs.

I believe most of you will remember the recent Harlan County prosecution which brought to light widespread denial of the rights of workmen to organize and bargain collectively. That unfortunate condition is steadily being corrected, and I believe that as time goes on there will be less and less of it.

Events such as these are the reason for my earlier statement that the casual attitude which takes civil liberties for granted and recognizes no danger to them is just as unrealistic as the view that the American people are steadily leaving their love of liberty behind them.

I do not wish to appear to you as an alarmist. I have the greatest confidence that the American people will ride through this storm with their liberties and their faith in those liberties unharmed.

I only want to repeat, and to stress as strongly as I can, that warning which John Curran uttered 150 years ago for his generation, for our own, and for all that are to follow: "The condition upon which God has given liberty to man is eternal vigilance." My purpose is to emphasize that if we wish to keep what we have gained and so long held, we must be alert. We must be on guard against those tendencies and attitudes, in ourselves as well as others, that open the door to one denial of liberty and then another.

The Government, of course, can help us keep watch. It can take the initiative and lead the way. But we must remember—and this is important—that government cannot do the whole job.

I am afraid that a great deal of the present apathy toward civil rights traces back to the notion that their protection is the sole responsibility of the Federal Government. I am afraid there is considerable misunderstanding as to the meaning and effect of the Federal Bill of Rights, which includes the first 10 amendments of the Federal Constitution.

Students of law know, of course, that the Bill of Rights in the Federal Constitution is a prohibition on the Federal Government. In other words, its forbids the Federal Government to deny to the people those liberties of speech and assembly, of religion and the press, that are so vital to our freedom. Each State having its own constitutional bill of rights, it was assumed by the authors of the Federal Constitution that the State governments would protect their own citizens from infringement of these liberties not caused by the Federal Government.

Since the Federal Constitution was adopted, however, another amendment—the fourteenth—has been added, which provides that no State shall make any law abridging the privileges and immunities of United States citizens or deprive any person of life, liberty, or property without due process, or deny to him the equal protection of the laws. Under this amendment it has been held that a citizen may invoke the aid of the Federal courts when he is denied full protection by the courts of his State.

I do not wish to give the impression that the Federal Government is powerless to protect civil liberty. For, although most of a citizen's rights are created and protected by the Constitution and laws of his State, there are certain rights which he obtains not from his State but because he is a citizen of the United States. The distinction should be kept in mind, however, when the Federal Government fails to act in situations that seem to call for its intervention. It serves to explain why it does not take action in every situation where some liberty has been abused.

The Federal Government today is determined, nevertheless, to protect civil liberties by all means available to it. It will not be for this faction or that, this class or that class, this nationality or that one, but for all the people. We propose to protect civil liberties for the businessman and the laborer alike, for the Jew and the gentile, and people of all racial extractions in our midst. We believe it must be done consistently and with a fine impartiality, otherwise it cannot be truly democratic.

In this determination we have recently created a separate unit on civil rights in the Criminal Division of the Department of Justice. One of the first duties of this unit has been to consider and determine just where the Federal Government can act and to define the limits of its jurisdiction. Within those limits it will exercise its second duty of ordering investigation and prosecuting for violations of rights which the United States Government is charged with protecting.

The unit is now at work under my supervision. The complaints of citizens which have already reached me have been given careful consideration. In many cases we have had to reply that the matters complained of were so completely outside of the Federal Government's jurisdiction that we could do nothing. In other cases we have proceeded to obtain the facts and to determine whether or not a Federal law has been violated.

Yet when all this is done, when the Federal Government has done its part, and when the State has given all the portection it can, something more is required. The courts cannot review every denial of civil rights that may occur in our midst. Year by year since the Constitution was adopted it has become more and more obvious that tolerance cannot be enforced by law. No government, however strong, can guarantee complete observance of the spirit of the Bill of Rights. The Golden Rule cannot be made effective by United States marshals. The great protector of civil liberty, the final source of its enforcement, now and always is the invincible power of public opinion.

No court or law can make wholly inviolate the right of freedom of speech. Once it is denied by ordinance or some arbitrary exercise of power, what decree or court award can restore to the citizen denied his right to speak on that occasion? Only the insistent will of a tolerant and informed people can insure freedom at all times to the voice that utters an unpopular view.

What injunction of law can undo the murder of the mob that acts by no other authority than its passions? The victim, lynched and lying dead has no appeal. It is only the spirit of restraint and tolerance deeply abiding in all our people that can prevent this type of trespass.

And so it is with the secret vigilante and the guerilla organizations that carry conviction by fear and persuasion by tar and

feathers. The courts can provide a remedy for their lawlessness, but for its complete prevention there is only one place to look, and that is to an overwhelming public determination that it must not happen here.

It is anything but an easy job, this task of protecting civil liberty, and it is made twice burdensome by the fact that there is little pleasure in enforcing liberty for those who would deny liberty to others if they were in power. It is not easy to detest an extremist philosophy and yet insist on the right of any man to advocate it freely.

Yet, apparently we must do just this if we are to practice our faith in democracy. We must remember that America was founded by men who came to these shores to escape intolerance in other lands. We must remember that the political system which they advocated, fought for, and established under the Constitution was heresy in the eyes of the government that ruled them. We must never forget that the democratic way is not to crush the alien view but to let it be heard and to defeat it by demonstrating that our own way of living contributes the most to human happiness.

Only in this way—through the vigilance of a citizen body thoroughly schooled in the meaning and purpose of civil liberty—will we achieve the general enjoyment of civil liberty. Government, by precept and example, and by providing remedies in individual cases of denial of liberty, can make a large contribution. But in the last analysis, the American tradition of individual freedom, handed down to us by Roger Williams, Thomas Jefferson, Abraham Lincoln, and many other devotees of liberty, will be carried forward only if each of us practices every day that faith in which Voltaire declared to his adversary, "I disapprove of what you say, but I will defend to the death your right to say it."

Difficulties of the New Deal Agricultural Program

EXTENSION OF REMARKS

OF

HON. J. ROLAND KINZER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1939

Mr. KINZER. Mr. Speaker, under leave to extend my remarks in the RECORD, may I state that one of the greatest difficulties of the agricultural program of the New Deal during the past 6 years is that it has not distinguished the problem of relief of persons situated on farm land from the basic problem of agricultural recovery. There are a large number of persons cultivating farms that are not and never could be financially successful agriculturalists because the land they cultivate is distinctly submarginal. The existence of such submarginal farms and the rendering of public assistance thereto has confused and complicated the problem of the development of a sound public policy in relation to what would normally be successful agricultural enterprises. The present policy of restricting agricultural production blanketwise on good land as well as bad land and of stimulating the artificial increase of prices of agricultural commodities has had the undesirable effect of stimulating the spread of agricultural enterprise to additional submarginal land areas.

DIFFICULTIES

After 6 years of the New Deal literally nothing has been done to treat separately these two problems: First, the rendering of public relief to persons cultivating submarginal farms; and, second, the development of a sound agricultural policy relative to farms that can be successful agricultural enterprises. In order to effectuate such a differentiation of policy it is necessary to have detailed information concerning the extent of submarginal land in the United States. Where is this land located? How much is there? Is this land concentrated in specific problem areas or is it generally scattered throughout the country? What is the value of the land? What crops are produced on such land? What is the value of those crops? If we are producing a surplus of any commodity, is it not desirable to limit the production of such surplus on submarginal land rather than in the more efficient areas of production? What is the record of farm tenancy in each of these areas? Are the farms mortgaged or do the owners possess an unencumbered title? Are the people cultivating these submarginal farms on relief? What has been the total amount of public money spent for relief purposes in such areas during the past year? After 6 years of the New Deal and the spending of billions of dollars, I surmise that the Department of Agriculture has already gathered, correlated, and synthesized this information, and that it is merely waiting an opportunity to present it to the public. It is my wish to afford them such an opportunity, and I have therefore requested the Secretary of Agriculture for detailed information by which an intelligent consideration could ge given by the Congress to these highly important matters.

Political Significance of the Word "Appeasement"

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1939

Mr. MASON. Mr. Speaker, the word "appeasement" has become quite hackneyed the past few weeks, so much so that a discussion of the word and its present-day application should be of interest to the Members of the House. I therefore submit the following illuminating discussion of the word "appeasement."

THE OLD GRAY SQUIRREL

My little friend Stuffy, the old gray squirrel of the White House lawn, greeted me this morning with the following: "Congressman, when the word 'appeasement' is used within the hearing of the President, it has the same effect upon him as a red flag has upon a Spanish bull. What does 'appeasement' mean?" I chuckled and answered as follows: "The word 'appeasement' came into prominence with Prime Minister Chamberlain as the word that best expresses his policy toward the so-called aggressor nations of Europe. In substance it means 'to pacify,' to 'humor,' 'to give in to,' 'to placate'—in order to avoid the effort necessary to control or to check. It is the attitude that short-sighted parents take in dealing with their children, and it inevitably results in spoiled, badly behaved youngsters." Stuffy grinned at me and said, "It's easy to see you have been a schoolteacher. I'll bet there weren't many spoiled children around your school." Wondering what my bushy-tailed friend had in mind when he asked me to define "appeasement," I asked, "Why should the President see red every time the word 'appeasement' is used?" Stuffy's answer was enlightening, to say the least. Here it is: "Do you remember the President's Madison Square Garden campaign speech when he said rather boastingly, 'During the past 4 years big business has met its match. During the next 4 years big business will meet its master'? Well, in an effort to carry out that boast, business has been handicapped and hamstrung by restrictive legislation, shackled with crippling taxes, strangled with unfair Government competition, and reformed(?) almost to death.

"As a result of this ill-considered treatment, recovery, that was once 'just around the corner,' has been frightened away until no one knows just where, or how, or when we can locate it again. By these tactics business has been prevented from employing idle men; has been discouraged from making any effort to expand and create jobs for the unemployed; while capital has been driven into bulging bank vaults and industry has been allowed to stagnate. At the same time our Government's spending program has been carrying the Nation toward bankruptcy, repudiation, or inflation. Today the real statesmen of the Democratic Party are trying to get the President to change his advisers, to change his policies, to change his attitude toward business. They want him to forget his reform crusade for awhile and adopt a recovery program. They want him to reverse this downhill trend before it is too late; and this whole effort is being called 'appeasement.' Just who is to be appeased is not very clear.

Some think it is business; some think it is the President; and some think it is the worried Democratic statesmen. The great question, however, is whether as a result of these 'appeasement efforts' we are to have permanent peace and resultant recovery, or whether the best we can hope for is another short breathing spell, followed by another 'reform crusade.' This wonder and uncertainty is demoralizing to business and a real deterrent to recovery. Our economic future is about as uncertain as the political future of middle Europe, and for the same reason, because each depends very largely upon the whims or caprices of dictator-minded leaders. Don't you think so, Congressman?" I refused to hazard a guess. What do you think?

Southern Problems—Freight Rate Discriminations

EXTENSION OF REMARKS

OF

HON. DAN R. McGEHEE

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1939

ARTICLE BY LOUIS M. JIGGETTS IN WASHINGTON POST OF MARCH 5, 1939

Mr. McGEHEE. Mr. Speaker, on March 5 there appeared in the Washington Post the first of a series of six articles by the Honorable Louis M. Jiggetts, national Democratic committeeman for the State of Mississippi, the title of which is "Southern Problems—Freight Rate Discriminations."

The series of articles that is being written by this distinguished gentleman have appeared in the Post each successive Sunday, and the last will be in the issue of April 9.

These articles are timely and will give to the Membership of the Congress an idea of the problems of the South, as well as a portrayal of the thoughts of the people of that section.

Mr. Speaker, under leave granted by the House to extend my remarks, I have the pleasure to include the article above referred to.

[From the Washington Post of March 5, 1939]

SOUTHERN PROBLEMS

(By Louis M. Jiggetts, vice chairman, Democratic National Committee)

I. FREIGHT RATE DISCRIMINATIONS

The South doesn't need uplifters, professional or amateur, to diagnose its ills, economic and otherwise. We of the South know very well where the principal trouble lies. For over half a century this section has been the milk cow of the Nation, with the economic status of a colony. We have suffered from continuous economic and political discrimination. And, after having been exploited these many years, is it to be wondered that southerners are more than a little skeptical over the belated interest in their welfare?

To say that we are appalled at the display of ignorance on the part of those who profess to know our ills is to state it mildly. But this ignorance, of course, is of long standing. Nor is it, unfortunately, a monopoly of the uplifters.

Assuming that the South presents a problem for the Nation as a whole, certainly an intelligent approach to it can best be obtained by an understanding, not only of economic conditions but also of southern psychology. It is time that the citizens of other sections should know that much of what they have been reading about the South of today is fiction, pure and simple; a great deal is unadulterated venom; and a large portion of the remainder of it is just plain nonsense.

The professional uplifters harp upon the alleged ignorance and supposed laziness of southerners. They invade the South in the spirit of crusaders, determined to foist their theories upon its citizens willy-nilly. These uplifters, agitators, and plain, ordinary buttinskies serve only to impede the progress toward a practical and orderly solution of our problems. For of this we are certain—life in the South isn't going to be recast in the mold of any impractical and visionary uplifter's pipe dream. We are not going to be sacrificed to make a reformer's holiday.

We know that industrial development in the South has been retarded principally by freight-rate discriminations and tariffs. The very fact that the Northeastern States are opposing the removal of the present freight-rate discriminations because it will supposedly give this section an advantage is in itself strong evidence in support of the contention that this has been one of the reasons for the lack of industrial development in the South.

Discrimination in freight rates is indefensible. The theory upon which it is based—that is, density of traffic—is, in our opinion, pure hokum. We believe this freight-rate discrimination is now being continued solely for the purpose of giving advantage to the Eastern States as against the South and the West. As a matter of fact, there are some areas in the South where the traffic density is greater than in some areas in the East where the lower rates prevail.

There is no logical reason why the freight rate shouldn't be the same mile for mile from the South to the East as it is from the East to the South. To demonstrate further that the South has been treated as a colony from which raw materials are gathered for manufacture in Eastern States, there is the fact that the rate level on raw materials has been kept uniformly low. In fact, no restriction on the movement of raw products from the South to the East has been tolerated. The discrimination exists principally as to manufactured goods. For example, it costs a southern manufacturer approximately 40 percent more to ship his goods to the North than it costs the northern manufacturer to send his goods south.

An idea of the discrimination may be obtained from considering a few examples. On first-class goods the rate from Boston, Mass., to Toledo, Ohio, a distance of 759 miles, is $1.30 per hundred. From Grenada, Miss., to the same destination, a distance of 749 miles, the rate is $1.85 per hundred. From Boston, Mass., to St. Louis, Mo., a distance of 1,174 miles, the rate is $1.75 per hundred; while from New Orleans, La., to St. Louis, Mo., a distance of only 687 miles, the rate is $1.90 per hundred.

In other words, while the distance from New Orleans to St. Louis is 487 miles less, the rate is actually higher. And from Memphis, Tenn., to Louisville, Ky., a distance of 399 miles, the rate is $1.35 per hundred, while from Pontiac, Mich., to Louisville, Ky., the rate is 96 cents per hundred, and the distance is 375 miles; in other words, the rate going north is 40 percent higher than the rate coming south.

From Fort Smith, Ark., to Cincinnati, Ohio, a distance of 755 miles, the rate on first-class goods is $2.04 per hundred; but from Cincinnati, Ohio, to Pittsfield, Mass., exactly the same distance of 755 miles, the rate is only $1.37 per hundred. Likewise, from Shreveport, La., to Cincinnati, a distance of 808 miles, the rate is $2.15 a hundred, while from Cincinnati to Holyoke, Mass., with the same mileage of 808, the rate is only $1.43 a hundred.

As a matter of fact, the book investment per mile of road in the East is $184,274, as compared to $81,435 in the South. On this ground alone the rates, to provide return on the investment, should actually be higher in the East. Furthermore, the average tax per mile of road is $2,600 in the East, compared with $850 in the South. On this ground, too, the eastern rates should be higher.

I could continue almost ad infinitum, and certainly ad nauseatum, with such statistics, but since the purpose of these articles is to cover the southern viewpoint on several matters, space will not permit an elaboration of this subject. Suffice it to say that the South has been severely throttled by the discrimination in freight rates.

A survey of freight rates was made by the T. V. A. and published as House Document No. 264, Seventy-fifth Congress. First, the letter of Arthur E. Morgan to President Roosevelt, dated May 28, 1937, is interesting. A quotation from part of the letter follows:

"This survey shows that the present freight-rate boundaries, which are the outgrowth of tradition, constitute barriers against the free flow of commerce which are hampering and restricting the normal development of the Nation as a whole by preventing a full utilization of the varied natural resources that exist in the different regions of the country. It reveals that the existence of these barriers tends to retard substantially the commercial and economic development of the Tennessee River drainage basin and adjoining areas in the South. The report suggests that the establishment of a uniform principle of making interterritorial freight rates will aid the commercial development of such regions as the Tennessee Valley and redound to the benefit of the Nation as a whole."

The South has no desire to harm the East industrially or in any wise. There is no feeling of enmity against the East or any other section of the country. The South is no longer concerned with the prejudices of the Civil War. It is a part of the whole Nation and in seeking its own advancement it wishes to advance for the good of the whole.

With the possibility that the mechanical cotton picker will become perfected, there is the specter of unemployed millions. Something must be done to provide employment for those who will be affected by mechanization of the farm in the South. A great part of this labor can be absorbed by industry.

Unless the South is permitted to develop industrially the Federal Government is going to have to continue relief for unemployed in the South with the constant threat of growing unemployment. To furnish such relief will require taxation that will touch the pocketbooks of citizens throughout the Nation. Certainly it is for the good of the country as a whole that some kind of employment be found for these people. Furthermore, it is perfectly obvious that the more prosperous the South becomes and the greater its purchasing power the more benefit it will be to the Nation as a whole. We of the South do not view industrial development here as one of competition with other sections of the country. Rather we are anxious to take our part of the industrial load so that the country may be economically balanced. We have no intention of deserting agriculture, but we are going to balance agriculture with industry.

The report made to the Interstate Commerce Commission during the past week substantiates the claims of southerners in respect to existing rate discrimination. It is an encouraging sign and should prove a distinct step forward in the fight to abolish trade barriers between sections of our country. It should be realized that a victory for the South and the West in their fight for lower freight rates will be a victory for the entire country.

Indian Claims

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1939

Mr. BURDICK. Mr. Speaker, the gentleman from Missouri has several times brought up the question in this House that he was opposed to Indian jurisdictional bills for the reason that during his absence from the House three jurisdictional bills were allowed to pass and that the recovery under these authorizations was something like $10,000,000 and that the attorneys received approximately $800,000.

Standing alone, without any explanation, this statement, especially when repeated so often, might prejudice the House against the passage of all Indian jurisdictional bills. There is no doubt in my mind that the gentleman from Missouri has repeated these statements on the floor of this House for the very purpose of creating a prejudice against Indian bills.

Let us see what these bills were and whether or not this House committed a wrong in allowing them to pass, or whether this House did allow the Indians involved to receive a fair measure of justice under the facts. Let us also look into the matter of attorneys' fees.

The first case is Docket No. H–219, the Shoshone Tribe of Indians against the United States.

Here are the facts: Under the terms of the treaty with the Shoshone Indians entered into July 3, 1868, the Shoshones were to have set aside for their use and occupancy a reservation in Wyoming of 3,054,182 acres. Later the United States appropriated half of this reservation for the use and occupancy of the Northern Arapahoe Tribe of Indians, while the Shoshones were unwilling to this procedure.

In this case there was no dispute about the taking—that is admitted. It is admitted that the Government never paid the Shoshones for this land. The only question in the case was as to when the "interest" should begin to run.

The Government was allowed to offset every claim it had, and the Court of Claims found the Shoshone Indians entitled to recover $6,364,677.91, and that the Government could offset an amount of $1,956,233.68, hence, judgment was entered for the difference, or $4,408,444.23, with interest at 5 percent since June 1, 1937. The Court started the interest to run only from the date of the judgment.

In this case the matter has been pending since 1878, the date of the Arapahoe invasion under law, or a period of 60 years. It is unnecessary to review the procedure, the protests, the petitions of those Indians from 1891 to the date of the passage of the jurisdictional act. It is enough to say that this Congress refused to authorize any suit against the Government until March 3, 1927. The suit was filed May 27, 1927, and at the time of entry of judgment had been pending 10 years and 11 months.

There is absolutely no doubt that the work of these attorneys did not begin when the jurisdictional act was passed in 1927 but years before that, and I am reliably informed that some of these attorneys have been connected with this case for 18 years.

Their contract for attorney fees was passed upon by the Secretary of the Interior and finally fixed by the Court. Their total fee amounted to $449,490, plus an expense of $9,517.65.

Anyone can at once see what an undertaking one of these cases is. In this case before judgment was entered these attorneys had expended over $9,000 in expenses. The gentleman from Missouri would no doubt have stopped this act from passing had he been present. He has the power to do that, inasmuch as most Indian cases come up on the Consent Calendar. Had he prevented this act from passing you can see what an injustice would have been done. In this case there was no dispute at all concerning the facts. The gentleman from Missouri says these Indians never received a cent of this money. He knows better than that. The Indians' share of the money, approximately 90 percent of it, was deposited in the Treasury of the United States for the benefit of these Indians. It is still there, less what the Government has expended for them.

I am not in favor of disposing of the Indians' money in this manner. I have been for sometime and am now in favor of abolishing the Indian Bureau altogether, pay the Indians in cash what we owe them, and let them become full citizens of this country, with the same freedom of action as any other citizen. If we must hold lands in trust for them, or some of them, let the States where the land is located hold the trust. The States then, where the Indian lives, would be responsible for the proper protection of the estates. If this Government would pass one single jurisdictional act and let the Indian claims—all of them—be presented and adjudicated and settled, it would be a simple matter to abolish the Federal protectorate over the Indians. As long as the autocratic Bureau remains, the money due Indians will be deposited in the Treasury of the United States and doled out as the Bureau thinks just. The Bureau will continue, however, to use enough of this money to perpetuate itself. If the gentleman from Missouri will join me in passing H. R. 794, then any recovery will be paid to the Indians.

Taking the number of years this case has been pending, and the great amount of work and expense involved, I do not think the Court was wrong in fixing the fee at 10 percent. This fee was passed on three times. First, by the Interior Department; second, by the Court of Claims; and last, by the Supreme Court of the United States. I hold no brief for any lawyer in an Indian case. I have never acted as a lawyer for Indian claims. I never have had personally a matter pending before the Congress of the United States. I am not associated with anyone who has, and what I say in this case is dictated by my own sense of justice and right.

I have not examined into the other cases the gentleman from Missouri complains of, but I will as soon as I can get to it, and then present them to this House. As a part of my remarks here, I refer the membership and the country to the decision of the Court of Claims in this case, a copy of which may be secured from the court. It is too long to print as a part of my remarks. The printing expense would not justify the printing, and I have not therefore asked to include it.

The gentleman from Missouri bemoans the fact that the interest accumulations in this case were stupendous. I refer him to the fact that no interest was found in this case, except the interest accumulations at the date of judgment, June 1, 1937. In finding 9 of the opinion of the Court of Claims, this language is used by the court:

> The above-mentioned additional amount of $4,683,392.92 is arrived at by computing interest, not as interest, but as a part of just compensation, on the value of the property rights taken from March 19, 1878, to June 1, 1937.

Good-Neighbor Policy

EXTENSION OF REMARKS
OF
HON. JAMES A. SHANLEY
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1939

Mr. SHANLEY. Mr. Speaker, in view of the efforts of our good-neighbor policy to strengthen our relations with our South American nations I am anxious to call the attention of the Congress and the people to the report of the

Eighth Annual Conference of the American States at Lima in December of last year. The resolution of that body with regard to the approaching four hundred and fiftieth anniversary of the discovery of America presents, in my estimation, an excellent opportunity to cement the feelings of our Latin American cousins in a joint effort to commemorate the incomparable discovery.

I have introduced a resolution asking for the formation of a committee to work in conjunction with whatever agencies may be available or may be necessary by the action of the other American states.

Undaunted by the fact that the ordinary dictionary has not a word to govern the four hundred and fiftieth anniversary, I have obtained from the Library of Congress a compound that may describe the period. It is quadrietsemicentennial, which I believe will bear the inspection of students of words and word structure. I hope that the enthusiasm and strong approbation of the conference in wording these resolutions will not be missed by those who are concerned with the outlook for a better day in South and Central America.

The American Farmer Wants a Fair Price and His Home Markets

EXTENSION OF REMARKS

OF

HON. GERALD W. LANDIS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1939

Mr. LANDIS. Mr. Speaker and my colleagues, the present agriculture program has been a failure. During the last 6 years of the present administration the farmers have received over a billion dollars less each year for farm products than they did during the previous 6 years.

The American farmer is entitled to a fair price for his products and the advantage of the American markets.

Business, industry, and labor are, therefore, as vitally concerned with agricultural prosperity as our farmers themselves. Every real patriot is vitally concerned in agricultural prosperity and stability, whether he be a farmer or not.

The cost of production to the farmer is the remedy. The cost-of-production bill will give the American farmer his home markets and a decent price for his products.

This bill is primarily designed to regulate interstate and foreign commerce in agricultural products, having an annual value of $10,000,000 or more. It makes it unlawful for dealers to purchase such farm products from farmers at less than the average cost-of-production price on the percentage and quantity needed for domestic consumption.

It provides for the handling of the surplus, if any, without expense to the Government. For the surplus the farmer is to receive world price less cost of handling and marketing and administration. The cost of handling and administration is charged to the proceeds from the sale of the surplus in the world market.

It protects the home market by prohibiting the importation of competing farm products at prices less than our domestic price level.

It puts farm products now owned by the Government in the classification of surplus to be sold abroad.

This legislation calls into use the same Federal power and applies it in the same manner to the aid of agriculture as the same Federal power has been used in the aid of business, transportation, and industry.

This bill will repeal the crop-control features of the Agricultural Adjustment Act of 1938. It specifically saves the provisions of that act for soil conservation, for adjustment in freight rates, for new uses, and new markets for farm commodities, for continuing Federal Surplus Commodity Corporation, for loans on agricultural commodities, and section 32 of the A. A. A. to aid agricultural exports.

It will stabilize the minimum price level for agricultural products needed for the domestic market on the basis of cost-of-production prices.

It will export when necessary that portion of excess farm production for which there is no market in the United States.

It provides the means of selling the surplus, if any, in the world market at world prices.

This bill will protect the price level of farm commodities sold in the domestic market against fluctuations caused by the importation of cheaper competing farm products, and to protect the domestic price levels from the violent fluctuations caused by gambling in the futures market on farm products of this country.

It will provide that the total cost of administration be charged to the proceeds from the sale of exportable surpluses.

It will enable the farmers to produce freely and abundantly without restriction, fully supplying the home market and producing as much or as little as the farmers themselves may choose to produce.

It will provide the simplest machinery with no cost to the Federal Government, no restriction or regimentation of the farmers, and assuring a cost-of-production price to farmers of this Nation.

BENEFIT TO SMALL FARMER

In 1938 under the A. A. A., the wheat farmer that had an acreage allotment that produced 1,000 bushels of wheat received 60 cents per bushel for 69 percent, or 690 bushels, which would bring this farmer $414, plus a 10-cent bonus on each bushel, $69, making his total under the A. A. A. for 690 bushels $483.

Under the cost-of-production program, with 69-percent allotment and a price established at $1.50 per bushel, this same wheat farmer would have received 690 bushels times $1.50, making $1,035, or $552 more than he received under the A. A. A. He would also be entitled to some revenue for his 31-percent surplus that would be placed on the world's market.
